It is clear that there do exist many alternative investments yielding 6 percent and more per year. One might ask, however, whether these differ substantially from typical Government projects in their degree of riskiness, so as to warrant a substantially different rate of return. I cannot help but feel that Federal projects are highly similar in their degree of riskiness to many private projects. Both power and irrigation facilities are provided by the private market, side by side with Federal installations, as are, from time to time, river and harbor improvements, flood-control facilities, etc. These rank, to the best of my judgment, neither as especially safe nor especially risky investments. It therefore seems reasonable to expect that Federal investments in these activities should pay off at least at 6 percent, which, as we have seen, appears to be somewhat below the average return on investments in the private sector of the economy. The purpose of Federal investment is, I believe, to improve our level of living and that of our children; the measure of this improvement is provided in dollar terms through the estimation of benefits. There seems little or no justification for the Government's withdrawing resources from the private sector unless these will yield as much improvement in levels of living as ordinary private investments.

My recommending the use of a substantially higher interest rate in cost-benefit analysis does not imply any prejudgment that serious mistakes were made because a lower rate was used. If estimated benefits were 5 times costs using a 2½ percent rate, they would likely turn out to exceed costs, though by a smaller margin, when a 6 or 8 percent rate was used. It is the projects which are marginal in the first place that look bad when a higher rate is used. It is accordingly of interest to inquire whether projects actually undertaken could pass the test of a higher interest rate. A group of investigators at the University of Chicago have looked into this question, using the same benefit and cost estimates as were presented by the agency in question, but simply applying different interest rates for time discounting.

---

[2] U.S. Department of Agriculture, The Farm Cost Situation, May 1957, p. 19, table 8.

Out of 24 Bureau of Reclamation projects which were in fact undertaken, only 8 would have been judged acceptable at a 5-percent rate, and only 2 at a 7½-percent rate, and only one at a 10-percent rate, if only primary benefits are taken into consideration. Counting secondary as well as primary benefits, 16 projects would pass the test at the 5-percent rate, 9 at the 7½-percent rate, and 4 at the 10-percent rate. Similar results emerged from a study of 29 Corps of Engineers projects. However, in the case of 27 Department of Agriculture watershed programs, practically all of the projects would stand up under a 5-percent rate, and two-thirds would be acceptable at a 10-percent rate, although one must add that the estimates of benefits, which are the raw material of benefit-cost analysis, appear to be subject to substantial possible error in these cases.[3]

Thus it appears that the use of a higher rate would have precluded some, but by no means all of the projects actually undertaken. I strongly recommend and urge that future Federal investments receive scrutiny in terms of a rate of interest comparable to the return to capital in the private sector. This will lead to a better use of our resources, and in the bargain may provide some possibilities for budget limitation.

[From the Southern Economic Journal,
April 1962]

The Magnitude of the Discount Rate for Government Projects

(By William L. Miller, Auburn University)

(This paper, part of a project begun during the 1960 Ford Faculty Research Seminar at Vanderbilt University, has profited from criticism by Rendigs Fels, director of the seminar, and John V. Krutilla. Neither of these obliging critics nor the Ford Foundation necessarily agrees with opinions expressed in this paper; they are not responsible for the shortcomings of the final draft.)

I

The number of Government projects which appear desirable varies inversely to the magnitude of the rate at which their time streams of benefits and costs are discounted. Appropriately enough, the question of the proper size of the discount rate for Government enterprises has received and is receiving considerable attention from economists.[1] This paper does not review recent work on this subject but concentrates on some matters which have not received their quota of attention.[2] Because Otto Eckstein raises the issues with which this paper is concerned and because he is highly specific in setting forth his general solution, point-of-departure use is made of his work.[3]

Eckstein assumes that government succeeds in preventing widespread unemployment or severe inflation. Government finances itself by taxation, and enough is known of the incidence of taxes to enable economists to specify to what extent a particular tax reduces consumption or investment. Furthermore, the traditional competitive model provides a usable approximation to the American economy.

In the traditional competitive model there is one capital market ruled by one rate of interest, which is the price of capital and which brings into equality plans of savers and investors. Unfortunately for the economist, the American economy has no single capital market and no one rate of interest. Instead the capital market consists of quasi-independent sectors. Partly because of differentiation and partly because of variations of risk premiums, there is a welter of interest rates, no one of which can be used for discounting by government.

Despite the existence on a complex of interest rates, averaging provides a way out. The social cost of taxation depends on whether taxes curtail consumption or investment. If taxation reduces consumption, social costs are in Eckstein's system discoverable by averaging rates of interest, net of tax reductions permitted borrowers and net of taxes paid by recipients of property income, applicable to householders primarily in their role as debtors. If taxes come out of investment, social costs are computed by averaging interest rates and returns, net of taxes paid, on investment. By using chiefly 1955 data for the United States, Eckstein found that taxes which curtail consumption involve a social cost of 5.79 percent, that those reducing investment cost society 5.44 percent, and that the weighted average of costs resulting from both forms of taxation lies between 5 percent and 6 percent.

Interests of underdeveloped regions may justify reduction of the discount rate in order to subsidize their development.

This brief sketch is not designed to present the full flavor and content of Eckstein's contribution, but merely to raise the issues which I wish to discuss. In what follows I shall argue in the manner and sequence indicated:

1. An average of rates of interest and returns in the private sector sets too high a minimum for a number of reasons. First, it requires of public enterprise higher standards than are demanded of private firms. Second, this average at times reflects some private rates of return that are too high. Third, the range of from 5 percent to 6 percent embodies short-run influences and perhaps an inflation premium which should be eliminated. The range of helpful discount rates seems narrow, and the number of fields of useful application appears limited.

2. Substantially the same discount rate appropriate for projects financed by taxation under circumstances of full employment should be used during mild or moderate inflation but not hyperinflation.

3. Substantially the same discount rate should be used regardless of the level of employment. Unemployment does not justify a lower rate than used during full employment.

4. Until all alternatives have been investigated and found wanting, the discount rate should not be lowered to promote development of lagging regions.

I shall not attempt to answer the question whether or not prospective returns on government projects can be computed and shall assume that one discount rate is appropriate for a given project throughout its life.

II

With Eckstein let us assume full employment and balanced governmental budgets. Can we with confidence use discount rates in the 5-percent to 6-percent range? I shall develop three reasons why we should not so limit the range and then present a substitute range of discount rates and indicate in broad outline the type of projects to which these rates may be applied.

(1) Eckstein notes that a discount rate of between 5 percent and 6 percent would rule out most water resource development projects as outlined in plans sponsored and under consideration in 1953–55.[4] Perhaps less rigorous standards would eliminate almost as many, but at least the minimum of the 5–6 percent range seems too high. The canons of economic efficiency do not require that Government projects meet higher standards than private business firms. It is in the nature of an average "internal rate of

[1] See especially the following: O. Eckstein, "Water Resource Development" (Cambridge, Mass.: Harvard University Press, 1958), pp. 94–104; J. Hirshleifer, J. C. De Haven, J. W. Milliman, "Water Supply Economics, Technology, and Policy" (Chicago, Ill.: University of Chicago Press, 1960), pp. 139–174; J. V. Krutilla and O. Eckstein, "Multiple Purpose River Development" (Baltimore, Md.: Johns Hopkins Press, 1958), chapter IV; R. N. McKean, "Efficiency in Government Through Systems Analysis" (New York: John Wiley & Sons, 1958), pp. 74–95; P. O. Steiner, "Choosing Among Alternative Public Investments," American Economic Review, December 1959, pp. 893–916.

[2] No attention is paid in the body of this paper to the contributions of McKean and Steiner and to the possibility of using as the rate of discount the average of rates of return on long-term Government obligations.

For circumstances in which Government budgets are subject to change, McKean favors discounting at the market rate of interest (McKean, op. cit., pp. 76–81), but he fails to say just what market rate is to be employed. If budgets are fixed, McKean thinks discounting should be at the marginal internal rate of return for Government projects (ibid., pp. 81–88). This suggestion has little use because budgets in practice are fixed only in the short run, and, even if they were fixed in the long run, the issue of their proper size would still demand attention. See Hirshleifer, De Haven, and Milliman, op. cit., pp. 149, 169–172; J. Margolis, "The Economic Evaluation of Federal Water Resource Development," American Economic Review, March 1959, pp. 104–105.

In the article cited in footnote 1, Steiner discounts internal rates of return of private and public enterprises by the "opportunity cost of deferred consumption" or "social time preference." Though this rate performs an analytic need for him and enables him to perform an interesting integrative operation on his predecessors' work, not enough information is available on its nature and the method by which it might be computed to render it usable for solving problems other than purely conceptual ones.

Eckstein rejects use of the average rate of return on long-term governmental obligations on the ground that it does not reflect risks inherent in individual governmental projects (Eckstein, op. cit., pp. 95–96; Krutilla and Eckstein, op cit., p. 124). Three reasons why this average may not reflect these risks are (1) Government taxing power supports the bonds, and losses on projects will be paid out of tax proceeds; (2) the Federal Government can create its own money and act as both buyer and seller of bonds; (3) central bank operations designed to reduce interest rates may, during transition periods at least, depress rates on Government bonds more than other interest rates. Because rates on Government obligations fluctuate, however, it may be that at times an average of such rates would be of appropriate magnitude.

[3] See especially Krutilla and Eckstein, op. cit., ch. IV, which chapter is primarily the work of Eckstein.

[4] Eckstein, op. cit., p. 99. As Krutilla makes clear, however, use of the 5–6-percent range would not always mean that the resources could not be developed to a smaller scale. See Krutilla and Eckstein, op. cit., p. 274.

return" that its use as a discount rate will render negative the present value of private firms for which the internal rates of return are below average.

For information on small and medium business firms Eckstein turned to data compiled by R. A. Foulke and published in issues of Dun's Review and Modern Industry for October, November, and December, 1955.[5] As indicated in table I, these issues of Dun's Review report results for 29 lines of manufacturing, 24 wholesale lines, and 12 retail lines—a total of 65 lines of business. It is interesting to see what would happen to these medium and small businesses if they were subjected to discount rates of 5 percent and 1954 profit rates were taken as internal rates of return. The profit rate on tangible net worth was below 5 percent for between one-half and three-fourths of the firms in 17 of the 65 lines of business; it was below 5 percent also in from one-fourth to one-half of the firms in 39 other of these lines. More than three-fourths of the firms in 2 additional lines could not meet the minimum Eckstein standard. Only in 7 lines were more than three-fourths of the firms able to show profit rates in excess of 5 percent of the tangible net worth. These data tell in favor of a lower minimum discount rate for Government projects than Eckstein provides. It seems reasonable that many business firms receiving less than average profits are judged successful and socially desirable, and from the standpoint of economic efficiency it is equally reasonable to regard many Government projects as worthwhile though their internal rates of return are below averages computed according to Eckstein's method.

TABLE I.—*Small and medium businesses with less than 5 percent profit on tangible net worth, 1954*

Percentage of firms with less than 5 percent profit	Number of lines of business			
	Manufacturing	Wholesaling	Retailing	Total
More than 75	1	1	0	2
50 to 75	6	8	3	17
25 to 50	17	13	9	39
Less than 25	5	2	0	7
Total	29	24	12	65

Source: Dun's Review and Modern Industry, October, November, December 1955. Data compiled by R. A. Foulke.

(2) During prosperous periods manufacturing corporations as a whole show returns on stockholders' equity in excess of 5 percent, and the size of these rates varies with that of the firms concerned. For example, in 1949 on the average a manufacturing firm with rates of return below 5 percent would have been one with total assets of less than $250,000; for in that year manufacturing corporations in this class averaged only about 5 percent on stockholders' equity, but larger firms did better. Similarly in 1955 and 1957, manufacturing corporations with assets in excess of $1 million generally showed returns on stockholders' equity considerably in excess of 5 percent.[6] We should not allow these high profits of larger manufacturing firms to influence the discount rates employed in connection with Government projects, for these firms have notoriously failed to expand until the marginal efficiency of capital has been made equal to the rate at which buyers of corporate securities are willing to make funds available.[7] Since data averaged by Eckstein included the earnings yields on common stock, which are at times abnormally high because returns on stockholders' equity are unduly large, we again conclude that an average computed according to his methodology is somewhat biased against Government enterprise. Restrictive policies of manufacturing corporations should not be built into other types of economic activity, public or private.

(3) Eckstein's method by which he arrived at the range of between 5 and 6 percent does not exclude certain intertemporal influences which should be eliminated in the interests of longer run economic efficiency. Computation of averages for other years indicates certain defects in the procedure. I have followed Eckstein twice through his statistical netherland and have arrived at results for 1949 and 1957. According to my computations, a tax reducing consumption would have involved a social cost of 6.7 percent in 1949 and 6.6 percent in 1957; a tax-reducing investment would have cost 7 percent in 1949 and 6.3 percent in 1957.[8] Because of the influence of central banking and fiscal policies, the volatile nature of such items as earnings yield on common stock, changes in the extent to which various rates of interest and return mirror anticipation of inflation, speculation on security exchanges, and so on, considerable fluctuation of averages computed after Eckstein's manner is to be expected.

If anticipated benefits and costs are to be computed in terms of constant prices, use of Eckstein's method for arriving at a discount rate will cause much mischief. A project which would be attractive within the 5–6 percent range for 1955 will be eliminated by the 6–7 percent range appropriate for 1957. If the rise in the rates for 1957 over those for 1955 represented changes in long-run normal returns, this fact would support use of Eckstein's methodology, but it is unlikely that such justification exists. Clearly we need a rate which will be valid for more than 1 year.

What we need is a "real" rate of return or perhaps a set of such rates, which in equilibrium will satisfy both the marginal rate of time preference and the marginal return from investment. Unfortunately this goal represents an unattainable ideal. We have only the prospect of a compromise solution.

One proximate solution attempts to remove the inflation premium and short-run influences allegedly incorporated in market rates. A recent example of this approach is G. L. Reuber and R. J. Wonnacott's computation of the cost of social capital in Canada.[9] These authors regard the 1959 rate on Government of Canada bonds, 5.5 percent, as the upper limit of real return to investment in Canada and the dividend rate on common stocks, 4.25 percent, as the lower limit and estimate that the riskless real rate of return to Canadian investment in 1959 was 4.75 percent. Since the gap between 4.75 percent and 5.5 percent is 0.75 percent, the combined effect, of impending inflation and short-run factors is judged to be equal to this difference. After removing this amount (.75 percent) from each available rate of interest and return and averaging, Reuber and Wonnacott conclude that the opportunity cost of borrowing in Canada in 1959 was 5.6 percent if borrowing were done by the Federal Government and 5.64 percent if it were undertaken by the Province of British Columbia. Thus, the opportunity cost of borrowing is approximately the same whether securities are sold by the Federal or provincial governments and is within the range computed by Eckstein for the social cost of taxation in the United States in 1955.

For the United States Reuber and Wonnacott estimated that the interest rates during 1959 also were abnormally high because of the influence of inflation and short-run factors. According to them, these pressures accounted for a premium of 0.75 percent. Hirshleifer, et al., think that inflation alone was responsible for a premium of between 0.5 percent and 1 percent.[10] Reduction of rates in my computations for 1949 and 1957 by 0.75 to allow for this alleged premium, would in general bring them into the range derived by Eckstein on the basis of 1955 data for the United States.

A kindred but preferable approach begins with estimates of the long-run risk-free real rates of return. For the United States and Canada, informed opinion places this rate between 3.5 percent and 4.5 percent.[11] This position gains support from the general willingness of buyers of corporate securities to make funds available for between 3.5 percent and 4.5 percent when they think that risks are comparatively low.[12] If we assume that these rates reflect preferences of householders and other lenders and that their wishes should be followed, the marginal efficiency of capital should have been driven down to about 4 percent.

According to this line of thought we are well advised to settle for a discount rate of between 4 percent and 4.5 percent where benefits and costs are highly certain of realization. If circumstances warrant, we may add a risk premium of from 0.5 percent to 2 percent.[13] At present higher premiums appear unwarranted, for a discount rate of from 6 percent to 6½ percent is high enough to eliminate undesirable projects where discounting according to the foregoing pattern can be helpful.

---

[6] Information for 1949 based on Federal Trade Commission and Securities and Exchange Commission, Quarterly Industrial Financial Report Series, for all United States Manufacturing Corporations, Fourth Quarter, 1949, Table 6, p. 17, as computed and reported by C. B. Hoover in "On the Inequality of the Rate of Profit and the Rate of Interest," Southern Economic Journal, July 1961, p. 11. Data on profit rates in 1955 and 1957 are in Federal Trade Commission and Securities and Exchange Commission, Quarterly Financial Report, Fourth Quarter, 1955, Table 3, p. 3; Fourth Quarter, 1957, Table 3, p. 5.

[7] For development of this thesis, see Hoover, op. cit., pp. 1–12.

[8] My rates are higher than Eckstein's primarily because earnings yield on common stock and business income were higher in 1949 and 1957 than in 1955. Among minor factors is the fact that Eckstein's estimates of marginal tax rates seem too high. Compare his rates in Krutilla and Eckstein, op. cit., p. 109, with those of C. H. Kahn in his "Personal Deductions in the Federal Income Tax" (Princeton, N.J.: Princeton University Press, 1960), p. 104.

[12] "Historical Supplement to Federal Reserve Chart Book on Financial and Business Statistics" (Board of Governors of the Federal Reserve System, 1960), pp. 44–45, 51.

[13] Cf. Hirshleifer, De Haven, and Milliman, op. cit., pp. 141–142, 144–146. Hirshleifer, et al., set up two discount rates as bench marks. One is the pure long-term rate of interest, believed in 1959 to be just over 4 percent. The other benchmark is an "opportunity" rate of about 10 percent. This "opportunity" rate is arrived at by taking as point of departure the average earnings for public utilities, taken in 1959 to be 5.2 percent on the assumption that equity and debt are of about equal importance. This rate is raised to over 9 percent to allow for Federal, State, and local taxes. If risks associated with government projects are generally greater than those connected with private endeavors, a marginal rate of at least 10 percent is indicated. Thus, novelty is

Discounting after this pattern has only limited usefulness in connection with government activity and should be confined to comparatively routine projects like post offices, highways, hydroelectric plants, irrigation schemes, and even schools. About the nature and likelihood of benefits from such ventures we know a great deal, though not enough, from both private and public experience. Furthermore, for such projects government can reasonably be expected to have aversions to risk similar to those of private enterprise.

The discount policy favored in this paper has nothing to contribute toward evaluation of projects in many fields of government action, such as interplanetary travel and atom smashing.[14] While we know little or nothing ex ante about the nature and likelihood of a favorable outcome from these activities, we as people are overwhelmingly of the opinion that government should engage in them. Economists can add nothing by recommending a discount rate of 40 percent or some higher rate that might measure response of private investors to risks and uncertainties involved.

III

Let us assume that we have settled upon a range of discount rates between 4 percent and 6.5 percent for projects financed by taxation during a period of full employment. Should this range be modified downward (1) to promote the interests of posterity, (2) to evaluate projects whose financing involves deficit spending, (3) to relieve unemployment, and (4) to aid lagging regions? Since, to my thinking, the problem of the interests of future generations has received adequate consideration elsewhere,[15] I shall confine discussion to the other three items.

First, can the 4–6.5-percent range be applied to a world of high level employment and deficit financing by Government? Full employment deficit models in which Government obtains resources from domestic sources are of two broad types, those in which the quantity of money remains constant and those in which it rises. First, let us suppose that Government borrows monetary savings of householders and private business firms. If borrowing is from a wide range of householders, business firms, or both, the social cost of this borrowing should approximate that of taxation. Any computation indicating that it costs different amounts to take the same resources from the same people should raise doubts as to the worth of the basic method for evaluating social costs. Only in marginal cases, in which additional taxes would hinder production but borrowing would not, would social costs vary between the two methods of getting resources.

Inflation is a substitute for taxation; it transfers resources to the Government as a result of two developments. To set either or both of these afoot, the Government causes new money to be created and in effect offers attractive prices to producers, who sell. Goods are removed from the market and additional money is injected. If output can be increased, as will be possible under conditions of unemployment induced by a deficiency of effective demand not associated with low marginal productivity, prices need not rise.

If, however, spending rises faster than output, prices move upward. Government gets resources; the private sector gets higher prices. The other way in which increases in output or prices shift resources to government is by increasing its real take from taxation. For example, with a progressive income tax more and more people pay higher taxes because they are driven into higher tax brackets. From the standpoint of economics, inflation transfers resources to the Government which could be obtained by taxation.

For analysis of the social cost of inflationary finance, one must use a minimum of two models, one for hyperinflation and one for lesser varieties. Since a large number of factors influence the distribution of income, isolation of the effect of each during a period of mild inflation is very difficult, but investigations of the post-1939 inflation in the United Kingdom and the United States indicate that inflation experienced in these countries did not significantly affect the distribution of income among broad social groups—laborers and owners of property, recipients of high and low incomes.[16] Consequently, as a first approximation we may conclude that in real terms the cost of obtaining resources by mild inflation approximates the cost of securing the same resources by taxation. On this assumption, the same discount rate should be used for projects involving either taxation or mild inflation. This solution assumes, of course, that moderate inflation involves no social costs except those which would result from taxation; and for broad social groups this assumption appears reasonable, for in general a mild or even moderate inflation allows time for adjustments which prevent some or even most of the harmful effects of hyperinflation. However, even during mild inflation older families and retired persons and others whose incomes lag suffer at least during transitional periods before institutional adjustments are made to eliminate redistributional effects. If society thinks that those hurt by mild inflation should not bear this burden, it may be helpful to call attention to this judgment by requiring a slightly higher discount rate for projects financed by inflation than is demanded of those brought about without it.

Hyperinflation is another matter. In the first place, severe and rapid inflation results in drastic changes in distribution of income. Thus, in the great German inflation of the 1920's, labor's share in the national income declined but only after prices began to rise at the rate of 20 percent a month.[17] Similar results accompanied the Hungarian inflation of 1945–46, but the evidence from Greek inflation of the same period is not clear.[18] In addition, hyperinflation imposes other costs on society, which are commonplace. Clearly a discount rate suitable for ventures financed by taxation cannot be applied to those whose execution is associated with hyperinflation.

IV

Up to this point we have been concerned with a discount policy suitable for domestic programs under conditions of full employment. We shall continue with domestic policy but turn our attention to the matter of a proper policy during unemployment attributable primarily to some source other than a shortage of cooperative factors of production. Should the discount rate used during full employment be applied to a situation of widespread unemployment? I think so.

Though in the presence of unemployment Government spending can be increased without curtailing output in the private sector, this happy result is not inevitable. Whether Government employment of resources in this situation involves a cost to the private sector depends in part on the method of finance used. Taxation during periods of unemployment certainly involves a cost to the private sector by curtailing consumption, preventing debt reduction, reducing money balances which later will in part be spent to increase consumption and investment, and—probably most important of all—excluding deficit financing which would stimulate employment.

During unemployment deficit financing is less costly to the private sector than taxation. When there is unemployment, Government can raise income and employment by deficits created by either or both of two ways, cutting taxes and increasing expenditures. As long as tax cuts will increase income, otherwise worthless increases in governmental outlay cannot be defended simply on the ground that they will raise national income. Government projects that are really worthwhile take a long time to get under way. Hence, it could be argued that, in the early days of the New Deal, boondoggles were justified in the short run. The reply is that reductions of taxes can be instituted as fast as boondoggles, provide jobs almost as quickly, and result in more efficient use of resources. The opposition may counter that reduction of taxes in the early days of the New Deal would have gone in large part to increase the size of hoards held by wealthy individuals. What merit this argument may once have had has been removed by the tendency of the personal income tax to become everybody's tax and not a tax paid almost exclusively by people in very high income brackets. More than ever, prospective increases in Government expenditures must offer a return greater than zero over and above their contribution to employment.

At least two factors indicate that this return must be considerably in excess of zero. Alternatives available to Government normally will provide services considerably above zero worth. Even if resources transferred from the private sector do not at that moment reduce its efficiency, the Government cannot afford to make frivolous use of these resources unless it has no alternative. Generally long before frivolous use becomes attractive, rising employment will lift the opportunity cost of removing resources from the private sector to a positive figure, regardless of the method of finance employed by the Government.

In times of severe unemployment government intervention should aim toward full employment. When governments are committed to drastic intervention in the case of rapid falls in income, the presumption is that this state will be quickly attained.

---

attained by including taxes in the discount rate, whereas most economists would count them as reductions of benefits. In essence these authors take the basic rate of 4 percent, add a risk premium of 2.2 percent, and then adjust the discount rate upward to allow for taxes.

Like Margolis, I was at first surprised at the smallness of the range of discount premiums suggested by Eckstein (0.5 percent to 2 percent), but I have become convinced that a much larger range can have little use. (Eckstein, op. cit., p. 86; Margolis, op. cit., p. 101.)

[18] Brown, op. cit., pp. 114–115.

Government use of resources for a little needed airport instead of for a more needed school will impair efficiency in the subsequent state of full employment.

In short, the full employment model cannot be discarded simply because of unemployment. Instead, it probably provides the best answer, not always to the question whether government should increase expenditures but at least to the problem of allocating the budgeted aggregate of governmental outlay. Accordingly, a discount rate appropriate for full employment does not lose its relevance during unemployment.

V

Lagging regions are characterized by unemployment and underemployment of labor resulting chiefly from two sources—(1) a deficiency of cooperating factors of production and (2) high net reproduction rates coupled with failure or inability of richer regions to drain off excess population directly by immigration or by proxy through imports of produce. Champions of lagging regions may favor employment of low rates of discount in order to subsidize development. Involved is the debatable proposition that this type of subsidization is the best policy for stimulating advance of these regions.

According to the late Ragnar Nurkse, world trade was much more an engine of growth in the 19th century than it has been in the 20th, for during the earlier period growth in income in the rich countries was accompanied by a greater expansion in imports from poor countries, whereas in the 20th century growth in the advanced countries has resulted in a relatively smaller growth in imports from backward countries.[19] The contrast while Nurkse found between the 19th and 20th centuries exists in the world today. Currently there are two types of lagging regions, those which can be eliminated by more rapid development of richer areas and those which cannot be removed in this way. The first category consists of regions already comparatively well off and poor areas which supply items in great demand in rich countries. The southern part of the United States provides an example of this first category; Indonesia probably falls in the second.

The southern part of the United States already ranks high among the richer regions of the world and can be regarded as poor only in comparison to the remainder of the United States. In periods of overemployment, as during World War II, per capita income in the South grows at a rate surpassing that for the rest of the United States.[20] If our impatience demands it, Government action to drive the economy beyond full employment to World War II levels for a period of 5 years would probably eliminate most if not all economic inferiority of the South. Even this line of action might prove cheaper than prolonged subsidization of enterprises located in the South. Patience may enable us to use less drastic remedies.

During periods of high level activity but less than overemployment, the South tends to advance at a rate approximating that of the rest of the country. Eventually, however, the South probably stands to gain relatively during such periods. The average age of those employed in its sickest industries is rising,[21] so that in the future mere maintenance of a high level of employment is likely to result in a rise in per capita income in the South which will surpass that in the rest of the country. Aging of the farm population helps in two ways. First, it reduces the crude birth rate. Second, because of rising death rates among aging farmers, more and more of them will migrate to some part of the hereafter. With help from these two sources, a lower net migration from agriculture into other industries is required than would otherwise be the case. Because of the rising age of farm operators, a future policy designed to maintain simply a high level of employment may well provide an even cheaper way to promote the relative advance of the South Success of this policy would make overemployment an unquestionably submarginal alternative.

To the extent that labor is immobile because of ignorance of job opportunities or because workmen cannot afford transfer costs, Government provision of job information, migration and resettlement loans, and even subsidies for those unable to migrate without this form of assistance, provide alternatives to subsidization of manufacturing, trade, and transport in the lagging regions.[22]

The problem of lagging regions within a country is only one among many rivals, all with their claims for governmental support. National Government should be concerned with the country as a whole. Accordingly, even if Government does not elect to promote a high level of employment to drain lagging regions of excess population, Government may give priority to a venture in an advanced region, for this project may have a higher internal rate of return than one in a poorer region even though a positive value for improvement is included among benefits derivable from the project in the backward area. Even if presumption lies in favor of subsidizing lagging sections of the United States, ignoring a part of the social cost of this policy leads only to confusion.

Because many poor countries have a high rate of population growth, a slow rate of technological advance, a scarcity of entrepreneurship, lack of skilled and disciplined labor, discontinuities in the accumulation of these resources and of capital, and so on, per capita income in these economically backward countries may not rise as a result of growth of rich countries and is even less likely to rise enough to remove much of their economic inferiority. Quite properly, development of a poor country like Indonesia may be judged to have value in its own right. In fact, aid to a poor country like Indonesia may be worth more to us than it is politically or even economically able to repay. In order to promote economic development in a poor country, subsidization may be consistent with economic efficiency in the United States because no alternative presents itself; but the worthwhileness of this policy provides no ground for ignoring the social cost to the people of the United States.

VI

We have dealt with the problem of the proper discount rate for use in evaluating certain government projects under four sets of circumstances—(1) full employment and balanced governmental budgets, (2) full employment and governmental deficits, (3) unemployment attributable to some factors other than a deficiency of complementary factors of production, and (4) unemployment and underemployment, characteristic of lagging regions, which are associated with a relative deficiency of complementary factors of production. In general, we have concluded that the same range of discount rates should be used in all circumstances. The major exceptions result from hyperinflation and from the apparent existence of poor regions where reduction of the discount rate is the only tool available for promoting development.

Often if not always, averaging rates of interest and returns in the private sector does not provide a satisfactory discount rate for governmental projects. Because of year-to-year fluctuations, such averages make projects attractive in some years but uneconomic in others. Indications are that we should look for a longer run real rate of return comparatively free of inflationary and short run influences. Estimates by economists and rates at which buyers of corporate securities are willing to make funds available to private business indicate that the minimum riskless rate is in the neighborhood of 4 percent. This rate might well be used for government projects for which risks are low. When circumstances demand, we may add risk premiums of from 5 percent to 2 percent, but at present we probably cannot develop helpful rates at higher levels.

That the minimum discount rate should be below 5 percent, the minimum of Eckstein's range, gains support from two additional facts. First, use of average rates from the private sector demands higher standards of public than of private enterprise. Enterprises with rates of return below the average are tolerated in private but not public ventures. Second, at times some private rates of return are too high because of restrictive practices in the private sector.

Finally, discounting in the manner indicated is most helpful in evaluating projects about which we have considerable knowledge of the nature and likelihood of success. It has little or nothing to offer when activities like interplanetary travel, certain types of research, and much military planning are in question.

EXCERPT FROM PRACTICAL LOGIC OF INVESTMENT EFFICIENCY CALCULATIONS

3. THE INTEREST OR DISCOUNT RATE

It is not often realized how sensitive efficiency calculations are to the rate of interest or discount assumed. Since in water-supply projects the bulk of the expenses are normally incurred early in the history of the development, while benefits are stretched over a relatively long period, a low interest rate makes projects look good, while a high interest rate makes them appear bad. In the previous chapter we have seen that typical Government procedure—on Federal, State, and local levels—is to use in efficiency calculations the relatively low rates in the range of 2 to 4 percent at which governments can borrow. Also, we have seen that, for private utility corporations, the influence of the corporate income tax requires a project to promise somewhere in the range of 10 percent pretax yield before it can be considered profitable, implying the use of a discount rate in this higher range.

In recommending practice for public works, Grant urges the use of a "minimum attractive rate of return," which would normally be higher than the borrowing rate. For this he adduces two different types of considerations: (1) That, if there are projects that are economic but are not being adopted because of limited budgets, the discount rate should be the marginal opportunity rate (the prospective return from alternative investments), and this will be higher than the borrowing rate; (2) that there should be allowance for such factors as risk, tax exemption of State and local bonds, and the value of money to taxpayers.

McDonald, "On the South's Recent Economic Development," Southern Economic Journal, July 1961, pp. 30–33; B. U. Ratchford, "Patterns of Economic Development," ibid., January 1954, pp. 219–226.

[21] For example, between 1930 and 1954 the percentage of farm operators in the United States under 35 years of age declined from 23 to 15; during the same period the percentage over 55 rose from 28 to almost 40. U.S. Department of Agriculture, "Family Farms in a Changing Economy," Bulletin No. 171, March 1957, p. 31, cited by P. Dorner, "The Farm Problem: a Challenge to Social Invention," Journal of Farm Economics, November 1960, p. 825, fn. 28.

[22] F. T. Bachmura, "Man-Land Equalization Through Migration" American Economic Review, December 1959, p. 1013.

We regard these points as generally well taken[1] though requiring some discussion. The first consideration refers to the "capital rationing" situation mentioned earlier. In this case the limited budget of an agency may require it to stop investing when it still has marginal projects capable of yielding, say, 10 percent, despite the fact that the market rate of interest is lower, say, 3 percent. Here discounting at the market rate may lead to the adoption of a project yielding barely 3 percent, which would be a mistake if alternative investments yielding more are available as assumed. The natural solution to this problem, and the one urged by Grant (and others), is to use the marginal opportunity rate—in this case the internal rate of return on the marginal project—as the discount rate. Unfortunately, this solution is not a generally correct one, as will be shown in the appendix to this chapter. A preferable procedure, which will always lead to correct results so long as only funds of the current period are assumed to be rationed, is to compare projects on the basis of their present value as of time 1 (the value of the time stream for periods 1 through n, calculated back to time (1) per dollar of current funds. The formula to use is V_1/c_0, where

$$V_1=s_1+\frac{s_2}{1+i}+\ldots+\frac{s_n}{(1+i)^{n-1}}$$

(assuming a constant market rate of interest, i), and c_0 is the fund input for the current period. The formula is only applicable where a fund input for the current period is required (where no current input is required, the rationing of current funds is irrelevant). The rule is successively to adopt projects with the highest values of this ratio until the fixed budget is exhausted or until the alternative use of funds elsewhere becomes more desirable than further investments. Which of these conditions will apply depends upon whether the rationing requires exhaustion of the budget on investments or merely limits the total current funds so as not to exceed the budget made available, without ruling out shortfalls. A general treatment of the problem is investment decision under capital rationing appears in the appendix to this chapter.

We have relegated the technical discussion of optimizing under capital rationing to an appendix because we do not believe that this represents a practically important situation. The size of Government budgets for water supply, or for other types of projects, should not be considered fixed but should be determined by the efficiency of the projects that might possibly be undertaken. For this reason, we believe that cases will only rarely arise requiring use of the rather complex efficiency calculations described in the appendix as strictly necessary under conditions of capital rationing.

With regard to the second type of consideration raised by grant (allowance for risk, tax advantages of public projects, etc.), we indicated in our theoretical discussion of the previous chapter that risk should ideally be handled by expected-value estimation of costs and benefits, plus risk-aversion adjustment, if any, rather than through the interest rate. The discount rate to use would then be an estimate of the riskless marginal productivity of capital in the private sphere, which we estimated as currently near 5 percent (including allowance for property taxes). It is vital to emphasize that so low a discount rate is appropriate only if the cost and benefit estimates have been made so conservatively as to be certainty-equivalents as far as decisions are concerned. Unfortunately, we know that a degree of overoptimism is almost inevitably involved in the selection and evaluation of investment projects. Even for utility investments in the private sphere, we have seen that the capital market will supply funds only for projects promising (with the average degree of riskiness experienced in that sector) to yield around 9 or 10 percent. Unfortunately, public investment decision processes have on the whole a far worse record of overoptimism, so that the lowest discount rate for public projects we would recommend in practice, unless and until their record improves, is around 10 percent.

EXCERPT FROM INVESTMENT IN ADDITIONAL WATER SUPPLIES

D. RISK, TAXES, AND THE DISCOUNT RATE

1. The discount rate and financial feasibility

In the calculation of both benefits and costs, the rate of discount is typically a critical element. Costs are incurred, predominantly, in the early years of a project, while benefits may be stretched out into the relatively distant future. The arithmetic of compound interest so works out that a benefit of $1 50 years from now has a present value of $0.37 at a discount rate of 2 percent, $0.14 at a rate of 4 percent, and $0.03 at a rate of 7 percent. High discount rates make projects look undesirable; low discount rates make them look desirable.

In the earlier portion of this chapter we distinguished between financial feasibility and economic feasibility. Conservative critics of Government investment projects have typically been anxious to insist on a criterion of financial feasibility, that is to say, a showing that a project will lead to revenues sufficient to cover all costs including interest on the capital borrowed for the project.[1] Supporters of enlarged Government programs, on the other hand, have typically attempted to justify projects by showing that there are economic benefits over and above the financial revenues which the project might bring in.

It is essential to the logic of the idea of financial feasibility that the discount rate be equal to the rate at which the Government can borrow. If the Government can borrow $1 million at 2.5 percent, then a project yielding net revenues of $25,000 a year is financially feasible, because the Government's interest cost is $25,000 a year. Any return over 2.5 percent represents a good project, that is, one that yields a financial profit to the Government, permitting a reduction in taxes or an increase in other Government expenditures.

The school of thought that maintains that the financial feasibility requirement is too stringent tends to favor the use of a lower rate of interest than the Government borrowing rate for evaluating public projects. All such low-interest schemes (compare the artificially low rates on loans to such groups as veterans) are typically defended by certain distributional arguments which we will not attempt to analyze. Abstracting from the distribution question, we argued above that such a procedure must lead to the construction of inefficient projects if in some sectors of the economy a standard of perhaps 5 percent is insisted on while in others projects yielding only, say, 2.5 percent are permitted. Even if the Government uses a constant rate (lower than the market) for all its projects, the market rate will be the rate used as a standard by private interests, and so again there will be inefficiency.

2. Risk

In the opposite direction, an important argument to evaluate is the contention that what is financially feasible may not be economically desirable and, specifically, that a rate higher than the Government borrowing rate should be used in discounting costs and benefits of Government projects—primarily to allow for risk, though, as we shall see, taxes and certain other considerations may also enter in. In private and public investment decisions, considerations of risk must obviously play an important role. In fact, for wide classes of investments the risk premium insisted upon by lenders exceeds in magnitude the pure interest charge for the use of the capital. It is of great importance to recognize that there are two different kinds of risk premiums.

Consider, for example, a debt instrument of a given maturity for which the riskless rate would be 5 percent but where there is a one-half chance of default of the interest (repayment of the principal is assumed to be certain). The quoted interest rate would then have to be 10 percent to give the investor the same "expected" or average return as the 5 percent rate on riskless instruments. If there were some risk of default of principal as well, a still higher quoted rate would be required to yield 5 percent after allowance for average loss through default. This risk premium we shall call the expected-value adjustment.

The second factor to be considered is "risk aversion"—that the investor might dislike risk for its own sake and might be unwilling to lend in the case just discussed (a 50 percent chance of default of interest) until the quoted rate reached, say, 12 percent. That is, he is indifferent between a riskless return of 5 percent and a one-half chance of getting 12 percent. On the other hand, an investor who liked to take chances might be indifferent between a riskless rate of 5 percent and a one-half chance of 8 percent. The risk-aversion premium can thus be either positive or negative. Whether on balance investors demand a positive risk premium over and above the expected-value adjustment is a question on which evidence is conflicting.

The distinction between the two kinds of risk premiums is relevant for an argument often made about the comparative superiority of Government when it comes to bearing the risk of large projects. Since the Government is in a position to pool the risks of many such projects, the law of large numbers permits it (so it is argued) to act purely on the basis of the expected return, whereas private capital may insist on a risk-aversion premium in addition. We cannot evaluate this argument until we know something more about whether in fact investors do demand such premiums.[2]

---

[1] We disagree, however, with one of Grant's points—that investments reducing government costs should be accepted with a lower required rate of return than investments reducing private costs. This departs from the fundamental principle of equating the productivity of capital on the margin in all employments.

[1] See, e.g., Task Force on Water Resources and Power for the Commission on Organization of the Executive Branch of the Government ("Hoover Commission"), Report on Water Resources and Power (Washington, D.C., 1955), I, 104–6.

[2] If they do, the expected rate of return (after expected value adjustment) on capital invested in risky industries and enterprises should be greater than in relatively safe industries and enterprises. The existence of insurance is some evidence in favor of the existence of risk aversion, since insurance is not mathematically fair and involves a sacrifice of expected return for greater security of return. On the other hand, not all insurable risks are in fact insured, so the existence of insurance does not prove that the capital market as a whole insists on a positive risk-aversion premium. The existence of gambling provides some

Even if they do, however, the corporate form permits investors to spread their risks by buying small shares in many different enterprises, so it is still by no means obvious that Government has any such advantage in engaging in risky projects as that claimed. It is vital to remember, however, that this entire argument relates to the risk-aversion factor and not to the expected value adjustment, though in fact the two are often confused.[3] If Government is in a position to make an investment that will double with 50-percent probability, or else be lost entirely, the expected gain is zero. The fact that Government can pool many risks does not in any way permit it to ignore the effect of the risk of failure upon the expected return for this or any particular project or group of projects.

Let us suppose that a certain project might be built by the Federal Government or by a private corporation, the risks of failure of the project being the same in either case. (By "failure of the project" we mean that the actual outcome reveals either an overestimate of benefit or an underestimate of cost, or both, sufficient to make the net balance of economic considerations a negative one.) The Federal Government can at times borrow, say, at 3 percent when the corporation would have to pay perhaps 5.5 percent (assuming a balance between debt and equity capital). Because of its unlimited repayment ability, the borrowing power of the Federal Government is essentially unaffected by the riskiness of the projects engaged in. Nevertheless, the Government should use as its discount rate the one effective for private borrowers engaged in projects of comparable risk (in this case, 5.5 percent, ignoring any tax adjustments) if the marginal productivity of capital is to be equated between the private and Government sectors. The pooling-of-risks argument does not apply here unless the higher private borrowing rate incorporates an element of risk aversion (which we believe to be small at best).

If there were on balance positive risk aversion, there would in fact be a kind of natural advantage of large enterprises over small and, particularly, of Federal enterprises as compared with any others, since the Federal Government could engage in more pooling of risks. In the case of States or local authorities, again there is generally some ability to borrow at favorable rates because the taxing power provides a protection to the investor over and above the prospective profits of the projects engaged in. (Even for private corporations there will typically be a fair amount of reserve ability in the corporation to pay debts over and above that based on the prospective success of particular projects.)

One interesting point here is the existence of the institution of the revenue bond, for which the repayment power is limited to the prospective revenues of the projects borrowed for. Revenue bonds, of course, typically must be sold at prices yielding higher interest rates than general obligations of the Government unit involved. The market rates involve investors' estimates of the real riskiness of the projects. Our present argument really comes down to saying that ideally all projects should be evaluated as if they were to be financed by revenue bonds. Only if this were done would the principle of financial feasibility be appropriate, so far as the discounting rate is concerned.

ESTABLISHMENT OF SELECT COMMITTEE ON THE ECONOMIC IMPACT OF NATIONAL DEFENSE

Mr. HART. Mr. President, recently on the Senate floor we had another go-around on the subject of the distribution of defense contracts. We continue to have acrimonious charges and countercharges. Increasing numbers of us express concern at the seeming overconcentration of defense contracts in a few selected areas of the country, while labor-surplus areas with idle industrial capability are bypassed.

Additionally, we are now alerted to the fact that where research and development goes, there also tend to go the defense contracts. And defense expenditures for research and development are likewise being concentrated in a very few areas.

Those of us who do not think this is healthy for the economy of the Nation—and a strong economy is essential to the national defense—have many unanswered questions:

First. Why has this concentration of nonprofit research and development effort occurred?

Second. Is such concentration desirable from the defense viewpoint?

Third. Does this concentration tend to foreshadow the geographic location of future production awards?

Fourth. If there are areas with useful potential in research and development, not now fully utilized, are there suitable means by which defense can take advantage of these resources?

These are just a few of the most recent unanswered questions. There are many others. Essentially, Mr. President, the problem boils down to this: There exists nowhere to my knowledge—and I have been grappling with this daily since I have been a Member of this body—a comprehensive review and analysis on which to answer these questions. That we should spend our billions for defense with complete logic and in the Nation's best interest, all agree; we want to and perhaps we are but, admit it, we do not know; we only hope. We have no way of judging. We need a thorough blueprint, and there is none.

In the 86th Congress and again last year I submitted resolutions to create a Senate Select Committee on the Economic Impact of National Defense. These were referred to the Senate Banking and Currency Committee and no action has been taken on them. I am more convinced as each day passes that we must have such a fundamental study. Therefore, I have revised somewhat the scope of the resolution in the hope of removing objection to it. I emphasize that the composition of the committee as suggested here is just that, a suggestion; certainly any modification developed by Banking and Currency Committee members which would still meet the objective would be welcome.

May I urge that before adjournment we set up the study group contemplated here, in order that we may have at hand without further delay this much needed information.

This is not advocated as a device to get contracts to or away from anyone. It is proposed so that, hopefully, a total evaluation can be made.

Joining me in submitting the new resolution are Mr. Case, Mr. Clark, Mr. Douglas, Mr. Gruening, Mr. Hartke, Mr. Humphrey, Mr. Javits, Mr. Lausche, Mr. McCarthy, Mr. Muskie, Mr. Pell, Mr. Proxmire, Mr. Randolph, and Mr. Williams of New Jersey.

Mr. President, for myself and the Senators named, I submit the resolution, for appropriate reference.

The PRESIDENT pro tempore. The resolution will be received and appropriately referred.

The resolution (S. Res. 375) was referred to the Committee on Armed Services, as follows:

Whereas a strong economy is essential to the continued welfare of the Nation, to its agricultural and industrial development, and to the national security; and

Whereas Congress has recognized the need for controlling inflation and providing maximum production and employment; and

Whereas the spending of the Department of Defense is the largest single item in the national budget at the present time; and

Whereas the world situation indicates that this situation will continue into the foreseeable future; and

Whereas the impact of this spending has a direct relationship to the Nation's economic well-being; and

Whereas the defense expenditure policy could have significant bearing on business competition and monopoly; and

Whereas the termination, modification, or increase of the major defense undertakings frequently result in serious dislocation of the Nation's labor force; and

Whereas maximum return for defense expenditures is essential to our continued prosperity; and

Whereas the Senate, in connection with provision of funds adequate for national defense and maintenance of a sound economy, desires to have recommendations relative to methods to achieve these essential goals: Now, therefore, be it

Resolved, That there shall be established a select committee of the Senate which shall make exhaustive studies of the extent to which defense procurement policies in the United States are related to the national economy, to the end that such studies and the recommendations based thereon may be available to the Senate in considering defense procurement policies for the future. The committee shall be designated "The Senate Select Committee on the Economic Impact of National Defense."

Sec. 2. (a) The committee shall be composed of three members of the Committee on Armed Services, three members of the Committee on Banking and Currency, three members of the Committee on Labor and Public Welfare, three members of the Committee on Finance, and three members of the Select Committee on Small Business; all said members to be designated by the chairman of the respective committees, at least one member designated from each of the above committees being selected from the minority membership thereof. In addition, there shall be three Members of the Senate designated by the President of the Senate, at least one being from the minority membership thereof. The committee shall cease to exist at the close of business on January 31, 1964.

(b) Any vacancy in the membership of the committee shall not affect its powers, and any vacancy in the membership of the committee shall be filled in the same manner

---

evidence in the opposite direction—that some people are willing to sacrifice expected return for insecurity of return.

[3] The discussion in Krutilla and Eckstein (op. cit., pp. 122–24) does not clearly distinguish between the two concepts in making the pooling-of-risks argument.

as provided for determining the original membership.

(c) Nine members of the committee shall constitute a quorum.

(d) The chairman shall be chosen by the members at the first meeting.

Sec. 3. The committee shall conduct a comprehensive study and investigation with respect to the following matters:

(a) The impact of defense procurement spending on the national economy from 1946 to the present time;

(b) The extent to which this spending is currently affecting our economy;

(c) Estimate of future trends in defense spending and their effect on the economy;

(d) Steps which could be taken consistent with the defense effort, to minimize the inflationary and deflationary effects of defense spending;

(e) The character of legislation that may encourage the adoption of new methods and improved processes of defense procurement which will result in the least depletion of our national strength; and

(f) Such other factors it may consider necessary to attain a full and complete understanding of the impact of defense spending and defense procurement policies upon our national economy, our foreign policy, and the national defense.

Sec. 4. (a) For the purposes of this resolution, the committee is authorized to (1) make such expenditures; (2) hold such hearings; (3) sit and act at such times and places during the sessions, recesses, and adjournment periods of the Senate; (4) require by subpena or otherwise the attendance of such witnesses and the production of such correspondence, books, papers, and documents; (5) administer such oaths; (6) take such testimony orally or by deposition; and (7) employ and fix the compensation of such technical, clerical, and other assistance and consultants as it deems advisable, except that the compensation so fixed shall not exceed the compensation prescribed under the Classification Act of 1949, as amended, for comparable duties.

(b) Upon request made by the members of the committee selected from the minority party, the committee shall appoint one assistant or consultant designated by such members. No assistant or consultant appointed by the committee may receive compensation at an annual gross rate which exceeds by more than $1,200 the annual gross rate of compensation of any individual so designated by the minority members of the committee.

(c) With the prior consent of the executive department or agency concerned and the Committee on Rules and Administration, the committee may (1) utilize the services information, and facilities of any such department or agency, and (2) employ on a reimbursable basis the services of such personnel of any such department or agency as it deems advisable. With the consent of any other committee of the Senate, or any subcommittee thereof, the committee may utilize the facilities and the services of the staff of such other committee or subcommittee whenever the chairman of the committee determines that such action is necessary and appropriate.

(d) Subpenas may be issued by the committee over the signature of the chairman or any other member designated by him, and may be served by any person designated by such chairman or member. The chairman of the committee or any member thereof may administer oaths to witnesses.

Sec. 5. The expenses of the committee under this resolution, which shall not exceed $175,000, shall be paid from the contingent fund of the Senate upon vouchers approved by the chairman of the committee.

COMMUNICATIONS SATELLITE ACT OF 1962—AMENDMENT

Mr. CLARK submitted an amendment, intended to be proposed by him, to the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes, which was ordered to lie on the table and to be printed.

ADDRESSES, EDITORIALS, ARTICLES, ETC., PRINTED IN THE RECORD

On request, and by unanimous consent, addresses, editorials, articles, etc., were ordered to be printed in the Record, as follows:

By Mr. WILEY:

Excerpts from address prepared for delivery by him over Wisconsin radio stations, August 4–5, 1962, relating to the homecoming of the 32d Division, Wisconsin National Guard.

Excerpts from address prepared for delivery by him over Wisconsin radio stations, August 4, 1962, relating to programs to meet the challenges of agriculture.

CONGRESSIONAL FRINGE BENEFITS

Mr. CARLSON. Mr. President, last week the distinguished senior Senator from Delaware [Mr. Williams] placed in the Congressional Record a letter he had writeen to Worth Bingham, Washington correspondent for the Louisville Courier-Journal, regarding an article on congressional fringe benefits. The article written by Mr. Bingham was factually analyzed by the Senator from Delaware.

Joe Lastelic, Washington correspondent for the Kansas City Star, wrote an article regarding Senator Williams' letter. The article, entitled "Senator Gives Other Half of a Half-Truth Exposé," was printed in the August 3 issue of the Kansas City Star; and I ask unanimous consent that it be printed in the Record as a part of these remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

Senator Gives Other Half of a "Half-Truth" Exposé

(By Joe Lastelic)

Washington, August 3.—Senator John J. Williams, Republican, of Delaware, who opened his files and bared his soul to a correspondent for a series of articles about how much Members of Congress make financially is sorry he did.

Williams is not much of an orator, but he is a meticulous man and when he speaks on the Senate floor his colleagues and members of the galleries listen carefully. For beneath all the facts and figures the Senator from Delaware comes up with the full, complete, and truthful picture of any point he has investigated.

Today Williams inserted a letter into the Congressional Record which he had written to Worth Bingham, Washington correspondent for the Louisville Courier-Journal, taking up paragraph by paragraph Bingham's copyrighted stories on congressional fringe benefits.

The series was widely printed throughout the country and appeared in part in the Kansas City Star.

"Oftentimes the printing of a half-truth can be even more misleading than a lie," Senator Williams said. "What Mr. Bingham failed to point out was that these allowances to operate an office do not accrue to a Member if the funds are not actually spent in the official conduct of his office. He failed to explain that the unused portion of any allowance reverts to the Treasury as unexpended funds."

Williams said he furnished Bingham an itemized breakdown of his own accounts of allowances and expenditures for office rental in his home State, telephone, telegraph tolls and stamps, and stationery. That totaled $16,894 in his own case, the Senator went on, but he only spent $891.56 of it. The unexpended part remained in the U.S. Treasury and did not and does not accrue to the Senator as compensation.

"There is no excuse for these errors," Williams wrote to Bingham. "I opened the records of my office for your examination and therefore I know that you had the correct information in your possession; but in writing your story you used only a part of this information and thus, quoting half-truths completely distorted the picture."

Williams went on to point out he is the author of several laws to correct expense abuses. He urges the requirement of itemized expense accounts by Members on junkets, a law prohibiting free rides on ships, and tightening regulations on junk mail.

He had this parting shot for Bingham:

"I am not trying to claim that there has been no abuse of some of these expense allowances by some Members; but I will state that in my opinion those abuses are the exceptions rather than the rule, and while any abuse should be criticized when discovered, a blanket indictment against any group is never justified. I review this record to show you why I so strongly resent the inferences in your articles that every Member of Congress is a crook and that he is chiseling on his expense account to the tune of $15,000 to $20,000 a year."

GIFTS TO MINORS IN THE DISTRICT OF COLUMBIA

Mr. MANSFIELD. Mr. President, during the call of the calendar yesterday afternoon, S. 3146, a bill to amend the act concerning gifts to minors in the District of Columbia, was amended by the adoption of certain committee amendments.

H.R. 11018, a companion House bill, received from the House yesterday, was then taken up and passed without amendment.

Two of the committee amendments to the Senate bill should have been incorporated in the House bill. Therefore, in order to harmonize the House bill with the Senate bill, I ask unanimous consent that the vote on the passage of H.R. 11018, together with the vote ordering its third reading, be reconsidered and that it be amended by substituting for section 5 the language of the committee amendment in the Senate bill relating to the subject matter of that section, and also be amended further by adding on page 14, after line 23, a subsection, both of which amendments I send to the desk.

The amendments are as follows:

Strike out all after line 12 on page 10, down to and including line 14 on page 11, and in lieu thereof insert the following:

"Sec. 5. (a) A custodian shall be entitled to reasonable compensation for his services and to reimbursement from the custodial property for his reasonable expenses incurred in the performance of his duties: *Provided*, That a custodian may act without compensation for his services.

"(b) Compensation shall be according to:

"(1) Any statute of the District of Columbia applicable to custodians;

"(2) Any statute of the District of Columbia applicable to guardians;

"(3) An order of the court.

"(c) Except as otherwise provided in this Act, a custodian shall not be required to give a bond for the performance of his duties.

"(d) A custodian not compensated for his services shall not be liable for losses to the custodial property unless they result from his bad faith, intentional wrongdoing, or gross negligence or from his failure to maintain the standard of prudence in investing the custodial property provided in this Act."

On page 15, after line 7, insert the following:

"(c) Nothing herein shall be deemed to repeal or modify the Internal Revenue Code of 1954, as amended, and the District of Columbia Income and Franchise Tax Act of 1947, as amended."

The **PRESIDENT** pro tempore. Without objection, the request is agreed to; and, without objection, the amendments will be engrossed, and the bill read the third time and passed.

NOMINATIONS OF JAMES T. RAMEY AND JOHN G. PALFREY TO BE MEMBERS OF THE ATOMIC ENERGY COMMISSION

Mr. **PASTORE**. Mr. President, in accordance with section 22 of the Atomic Energy Act of 1954, as amended, the President on August 7, 1962, submitted to the Senate the nomination of James T. Ramey, of Illinois, to be a member of the Atomic Energy Commission, to fill the unexpired term of former Commissioner John S. Graham. This term expires on June 30, 1964. The President on August 7, 1962 also submitted to the Senate the nomination of John G. Palfrey, of New York, for a full term ending June 30, 1967. The nominations have been referred to the Senate section of the Joint Committee on Atomic Energy. As chairman of the Senate section of the Joint Committe, I wish to advise that a public hearing will be held in room AE–1 of the Capitol on Tuesday, August 14, 1962, beginning at 10 a.m., to consider both nominations.

Mr. President, I ask unanimous consent that the background résumé of each of the nominees which was submitted to the Senate along with the nominations be printed in the Record at the conclusion of my remarks.

The **PRESIDENT** pro tempore. Without objection, it is so ordered.

(See exhibit 1.)

Mr. **PASTORE**. Mr. President, I also wish to say how pleased I am with both of these selections by the President. Mr. Ramey has been executive director of the Joint Committee on Atomic Energy for the past 6 years, and prior thereto he served 9 years as an employee of the Atomic Energy Commission.

Mr. President, I ask unanimous consent to have printed at this point in the Record a list of Mr. Ramey's particular accomplishments as executive director of the Joint Committee on Atomic Energy.

There being no objection, the list was ordered to be printed in the Record, as follows:

Accomplishments of James T. Ramey as Executive Director of Joint Committee on Atomic Energy

1. Under the general supervision of the chairman, he organized and directed the study and report on NATO nuclear weapons custody problem which was submitted to the President in February 1961. Initiated effort to improve technical means of safety and control of U.S. nuclear weapons. Called attention to important security problems.

2. Initiated series of Joint Committee hearings and reports on hazards of fallout and other radioactive hazards, including radioactive waste disposal, employee radiation hazards, reactor safety, and radiation standards. These hearings and reports—mostly held by Congressman Holifield's Special Subcommittee on Radiation—have been cited for their objectivity and usefulness, both to the lay public and scientists as textbooks.

3. Initiated series of hearings and reports on basic research and advanced concepts, including series on "Frontiers in Atomic Energy Research" in 1960. Played leading staff role in pushing Rover nuclear rocket program.

4. Initiated studies in 1957 and 1960 on AEC organization and administration of regulatory program. Conducted series of investigations on redtape involved in AEC contract and budgetary administration.

5. Developed and provided staff leadership on Joint Committee version of accelerated power program in 1956. Initiated and directed preparation of staff report on expanded atomic power program in 1959, with assistance of a distinguished panel of consultants.

6. Provided staff leadership in connection with authorization of additional plutonium for small weapons program in 1958–59.

Mr. **PASTORE**. Mr. President, Mr. Palfrey, who presently is dean of Columbia College, for many years has been closely associated with the atomic energy field. From 1947 to 1950 he was with the Office of the General Counsel of the Atomic Energy Commission. From 1952 to the present he has been associated with Columbia University, first in the school of law, and then as dean of Columbia College. During this time he periodically has served as a consultant to the Joint Committee on Atomic Energy.

I am certain, Mr. President, that both of these men are well qualified to serve on the Atomic Energy Commission, and that in due time their nominations will receive the advice and consent of the Senate.

Exhibit 1

James T. Ramey

Born: December 5, 1914, Eddyville, Ky.

Education: 1933, Nicholas Senn High School, Chicago; 1937, Amherst College, Amherst, Mass.; 1941, Columbia University School of Law, New York City.

Marital status: Married; two children.

Experience: 1956– , executive director, Joint Committee on Atomic Energy, Washington, D.C.; 1952–56, assistant to manager, Chicago Operations Office, Atomic Energy Commission; 1947–52, assistant general counsel, AEC; 1941–47, successive positions from management assistant to a senior attorney, Tennessee Valley Authority.

Teaching experience: 1944–46, assistant professor, University of Tennessee, College of Law; 1943–44, lectures in political science, University of Tennessee, College of Liberal Arts; 1955–56, lecturer, Northwestern University Law School.

Present position: Executive director, Joint Committee on Atomic Energy.

Address: 6817 Hillmead Road, Bethesda, Md.

John Gorham Palfrey

Born: March 12, 1919, Boston, Mass.

Education: 1936, graduate, Milton Academy; 1940, B.A., Harvard; 1946, LL.B., Harvard; 1948, admitted District of Columbia bar.

Experience: 1947–50, staff officer of General Counsel, AEC; 1950–52, Member Institute of Advanced Study, Princeton, N.J.; 1952–54, lecturer, Columbia School of Law; 1954–56, associate professor; 1956–58, professor. Also member of New York bar.

Present position: Dean, Columbia College (since 1958).

Residence: 1165 Fifth Avenue, New York, N.Y.

Office: Columbia University, New York, N.Y.

BASIC PRINCIPLES IN U.S. SPACE POLICY

Mr. **DIRKSEN**. Mr. President, Mr. Robert D. Crane, director of the Space Research Institute at Duke University, and a top-ranking specialist in the space field, has prepared a very excellent monograph on some basic principles in U.S. space policy.

This is a somewhat neglected field; and I am sure his views will prove timely, important, and of great interest to many people. I believe this article merits the widest possible diffusion, and for that reason I ask consent that it be made a part of my remarks.

There being no objection, the article was ordered to be printed in the Record, as follows:

U.S. Space Legal Policy—Some Basic Principles

(Condensed from the articles, "Law and Strategy in Space," Orbis, a quarterly journal of world affairs, July 1962, and "Soviet Attitude Toward International Space Law," American Journal of International Law, July 1962)

(By Robert D. Crane, director, Space Research Institute, Duke University)

The United States has been forced to give increasing weight to military and political considerations in the formulation of space policy. These considerations, however, do not necessarily require opposition to the development of international space law. On the contrary, U.S. initiative in formulating space law can serve not only to promote scientific research and economic progress and to facilitate the growth of a free and peaceful world order, but to implement on a higher moral level American military and political strategies. This initiative would provide the United States with greater freedom to employ necessary military defense and deterrent measures in outer space and would help the free, democratic countries to secure victory in the current war of ideology which is a primary goal of their military and political policies. The development of international space law oriented toward these strategic goals can help the United States to deal with the Communists on a higher moral level by making it politically more acceptable to counter military threats with military measures and by reducing the necessity of using military means to counter threats which are essentially ideological, political and economic.

MILITARY DETERRENCE

The realization that neither side can, in the old sense of the term, win a modern war and that there may be small consolation even in prevailing in such a war has resulted in the development of deterrence as the principal aim of U.S. military policy. The development of space law can contribute to this military mission, first, by providing a political atmosphere more conducive to the implementation of U.S. deterrence strategies, and, second, by helping to add another order of magnitude to the deterrence mix.

The United States can provide a political atmosphere more conducive to military deterrence strategies principally by taking the initiative in developing a realistic conception of "peaceful purposes" or "peaceful uses." The dedication of outer space activities and of space research to peaceful uses has always been the basic criterion of American space policy.[1] But the United States has failed to fit the concept of "peaceful uses" into the context of international law. As a result, it has encountered difficulty in gaining for these space activities broad support of the statesmen of the world.

The need for the development of international law to determine the legality of new types of activity such as space reconnaissance and various types of military deterrence results from the fact that in the age of the atom and space such concepts as war and peace, as well as the distinction between offensive and defensive actions, between active and passive weapons, and between aggression and self-defense, have become blurred. Objective standards to determine the difference between these increasingly relative concepts have become largely outmoded or inapplicable.

The Soviets have capitalized on this situation, which is made to order for the propagandist, and have tried to make the space defensive systems of the United States politically untenable by asserting that these systems are incompatible with a policy of peaceful purposes. The Soviets appeal to the desires of the world for peace and to the hopes of the world that in outer space an area devoted exclusively to peaceful purposes can be created. They strengthen their appeal by threatening war against all who would oppose peace,[2] and by interpreting the meaning of peace so that all Soviet actions fall within its scope and all adverse actions fall outside. The Communists have taken advantage of the lack of objective standards to assert that all military uses of outer space are ipso facto contrary to peaceful purposes. This serves to create a burden of proof against the United States so that the latter is under a constant obligation to prove its peaceful intentions. The fact that all Soviet space vehicles are sponsored by military organizations and are thus military, and the fact that Soviet rockets were used in the fall of 1961 in systems testing of nuclear weapons at altitudes in excess of 100 miles, are simply ignored.

The most effective way to eliminate the distorted views of U.S. space activities prevalent in much of the world would be to take the initiative in developing space legal principles to determine the legality of activities which are neither clearly peaceful nor clearly aggressive, but in a third area in between. The result of such initiative would very probably be either the recognition that the term "peaceful uses," particularly as developed in the various United Nations space resolutions, permits adequate provision for defensive measures, such as space reconnaissance, or the recognition that peaceful purposes as a meaningful term in international space discussions must be replaced by a broader term to encompass activities which have as their purpose the preservation of the peace.

Initiative in developing international space law to gain understanding and support for the true nature of U.S. space policies would also help to overcome extremist reactions even in the United States either against or for military space policies. Many consider that emphasis on military interests must inevitably result in a spiraling arms race which will prove self-defeating and will forever preclude the development of international space law. In this regard we should clearly recognize that every major proposal the Soviets have made to develop international space law has been part of a process of bargaining for strategic advantage, and that the future of space law development therefore may depend on the creation of sufficient American strength in space to remove the advantages which the Soviets can expect to gain from a continued state of military competition and lawlessness.[3] It is very likely that the Soviets must first conclude that they can no longer afford the enormous expenditures necessary to keep abreast of the United States in space before they will agree to the gradual disarmament of the principal military weapon, namely, their policy of maximum secrecy, and to the effective disarmament, space regulation, and extensive space cooperation which could then result.

Others consider that lack of emphasis on military interests and, in fact, even the use of the term "peaceful" inhibits the maintenance of national security to a dangerous degree. This argument stems from concern that the future allocation of funds and resources may not give sufficient emphasis to the development of space defense systems for the acquisition (in the communications sense of the word), tracking, identification, neutralization, capture, and destruction of hostile Soviet space vehicles; to the related problems of rendezvous, maneuver, reentry, and man-in-space; to the rapid development of solid-fuel rockets and super boosters, including those with nuclear power units, to achieve velocities and sustained power many times greater than required for scientific research or for projects designed to serve directly the economic benefits of man; and to the most rapid possible development of new generations of defense systems, such as those based on beam-directed energy weapons, which might render ICBM's obsolete. Despite much misunderstanding, the arguments for long-range space-military planning and development in support of the objective of national security through effective space-military deterrence need not be at all incompatible with the space policy objective of scientific and economic development. These arguments for long-range space-military planning and development may be valid insofar as they are necessary to support the objective of national security through effective military deterrence. These arguments do not require the incorporation of space control and space offense into U.S. space policy.

A campaign to develop international space law could help to make it clear that the two space policy objectives of military deterrence and economic development are not mutually exclusive, and that it is possible to prevent planning for space policy and space strategy from becoming bipolarized. Such a campaign would point out that the United States relies neither on what President Kennedy terms the "diffuse desire to do good" nor on the sterility of merely "talking tough."

IDEOLOGICAL DETERRENCE

Initiative in the development of international space law can provide a better political atmosphere for deterrence strategies and also add another order of magnitude to the deterrence mix. Policies of deterrence have evolved slowly from the strategy of "massive retaliation," which is widely regarded as inadequate, to counterforce strategies, which have many drawbacks, and finally to strategies of balanced deterrence and of the deterrence mix, both of which also have their limitations. Probably the principal defect both of balanced deterrence and of the deterrence mix, however, is their failure to deter what seems to be the predominant form of future military conflict, namely, local wars of attrition, particularly those that start as revolutionary uprisings. Since there seems to be no completely effective strategic military deterrent to local war, the only way to deter its outbreak is to convince the enemy that he cannot hope to win. In the modern age success in local war, and therefore the gains to be obtained, seems to be determined as much by superior ideological support by the peoples of the world, particularly those in the theater of military operations, as by superior firepower. President Kennedy recently stated:

"We all know that it is wholly misleading to call this the nuclear age (because during the past few years we have become increasingly involved in) another type of warfare—new in its intensity, ancient in its origin—war by guerrillas, subversives, insurgents, assassins—war by ambush instead of by combat, by infiltration instead of by aggression—seeking victory by eroding and exhausting the enemy instead of by engaging him."[4]

The deterrent powers in the modern world include therefore not only military force but also superiority in ideology and in the political and economic building blocks out of which ideology is made.

The ideological deterrent not only serves to deter local war but can also play a part in deterring strategic nuclear war.

This is made clear by the recent Soviet article entitled "The 'Absolute Weapon' and the Problem of Security," which states:

"In conditions of nuclear rocket warfare, the first to attack would usually be the aggressor. In the final analysis, the outcome of a nuclear war would depend on such decisive factors as the superiority of the social and economic system, the political soundness of the state, the morale and political understanding of the masses, their organization and unity, the prestige of national leadership. In these respects the superiority of socialism over capitalism is beyond any doubt; this gives Communists grounds for maintaining that a third world war would be the doom of imperialism and would therefore be the last.[5]

---

[1] The documentation of U.S. space policy may be found in "International Negotiations Regarding the Use of Outer Space, 1957–60," prepared for the Senate Committee on Aeronautical and Space Sciences by the Historical Office, Bureau of Public Affairs, Department of State, and published in S. Doc. No. 26, 87th Cong., 1st sess., Mar. 1961.

[2] See the chapter on "Political Goals and Implications" in the study "Soviet Space Programs: Organization, Plans, Goals, and International Implications," a report for the Committee on Aeronautical and Space Sciences, U.S. Senate, 87th Cong. 2d sess., May 31, 1962.

[3] A detailed account of Soviet space legal strategy may be found in the author's study entitled "Soviet Attitude Toward International Space Law," prepared for the Committee on Aeronautical and Space Sciences, U.S. Senate, and published in the American Journal of International Law, July 1962.

[4] John F. Kennedy, commencement address, West Point, June 6, 1962.

It therefore becomes necessary to develop a strong ideological deterrent to convince the Communists that they cannot win local, guerrilla-type wars either before or after a third world war.

This new ideological deterrence is not merely one more element of the deterrent mix, but rather a higher stage in the evolution of strategic deterrence itself. Ideological deterrence, in fact, may be the ultimate stage in this evolution because it goes beyond military deterrence to a psychological and economic offensive aimed at making the benefits of political and economic freedom available to all the peoples of the world. If workable disarmament can ever be achieved, this ideological deterrence will also assure the free societies a vital means of defense in a disarmed world.

GENERAL PRINCIPLES OF SPACE LAW

One of the most efficacious steps in building ideological deterrence and achieving ultimate victory in the ideological conflict would be to embark on a carefully prepared and politically integrated campaign to develop international space law.

The most basic requirement is the development of general principles of space law to overcome the passivity which has characterized much of American space legal thinking in the past.[6] This emphasis on general principles would strengthen the function and impact of law in international relations and would overcome the Communist ideological offensive and its embodiment in the campaign of peaceful coexistence.

A basic guide for the selection of these general principles was given by the Chairman of the Policy Planning Council of the U.S. State Department, Walt W. Rostow, who summed up the problem of modern history and, incidentally, the guiding principles of space law, in the following statement:

"We are engaged in an historic test of strength—not merely military strength but of our capacity to understand and to deal with the forces at work in the world about us. The ultimate question at issue is whether this small planet is to be organized on the principles of the Communist Bloc or on the principles of voluntary cooperation among independent nation states, dedicated to human freedom.[7]

The general principles of space law should include therefore not only self-defense and preservation of the peace, but such basic principles as freedom, legality, and cooperation. The essence of the principle of freedom, particularly in the field of space exploration, is freedom for diversity, because freedom for diversity and respect for the interests of every participant is at the heart of international space cooperation. In March 1962, President Kennedy stated:

"A cooperative Soviet-American effort in space science and space exploration would emphasize the interests that unite us instead of the conflicts that divide us and would remind us on both sides that knowledge, not hate, is the passkey to the future—that knowledge transcends national antagonisms—that it speaks a universal language—that it is the possession, not of a single class, a single nation or a single ideology, but of all mankind. The pursuit of knowledge itself implies a world where men are free to follow out the logic of their own ideas. It implies a world where nations are free to solve their own problems and to realize their own ideals. No one can doubt that the wave of the future is not the conquest of the world by a single dogmatic creed, but the liberation of the diverse energies of free nations and freemen. No one can doubt that cooperation in the pursuit of knowledge must lead to freedom of the mind and of the soul."[8]

The principle of freedom for diversity has broad philosophical connotations which make it basic to all other space legal principles.

A related space legal principle would be the principle of impartial settlement of disputes, or third-party adjudication. Acceptance of third-party adjudication would support one of the oldest, one of the most fundamental, and one of the most widespread of all legal principles. In a period of ideological war, rejection of such a principle would be rejection of law itself. Once the principle of impartial adjudication is accepted, there remain the problems of selecting the proper tribunal[9] and drafting a set of principles to guide the tribunal in its work. One of the primary sources on which we could rely in order to develop the support of the peoples of the world for the decisions of the tribunal, and one which the Soviets themselves could not very well reject, would be the general principles of law accepted by the peoples of the world, particularly as evidenced in their domestic legal systems.[10]

This source of international law can be made available by establishing through legal research what the leading legal systems of the world have to say, for example, about the elements and function of sovereignty or the legality of slander and of incitement to harm. By establishing a consensus within the domestic or municipal context, one derives the general principles of law recognized by the nations of the world and, by analogy, can then determine the rules governing sovereignty and illegal propaganda in international law. By conducting the research on a worldwide basis, it may be possible to secure the support of the majority of the world's countries, which can then consider the new international law to be of their own making, and in the process the scope and variety of law which is available to support the welfare of the free world can be enlarged.[11]

Another basic space legal principle might be the principle of peaceful cooperation. This would establish the right of the developing countries to share in the benefits of space science, and would recognize a corresponding moral duty on the part of the nations possessing space capabilities to make the benefits of these capabilities available on a nondiscriminatory basis to all the peoples of the world. We should emphasize that these benefits include not only those of direct use, such as global communications and weather prediction (and possibly control), but also the indirect benefits which will result from improved engineering and managerial know-how, from metallurgical technology and medical research, and from basic advances in physics and chemistry, which give rise to branches of industry entirely unrelated to space.

This principle of peaceful cooperation in sharing benefits of space progress derives from the Christian social teaching that economic prosperity is to be measured not so much by the sum total of goods as by the distribution of these goods according to norms of justice.[12]

---

[5] N. Talenskiy, "The 'Absolute Weapon' and the Problem of Security," International Affairs, April 1962, pp. 25–26. Dr. Talenskiy is a doctor of military sciences and one of the most knowledgeable Soviet commentators on space political strategy. This thesis may be compared with similar statements by the Chinese Communists. See Alice Langley Hsieh, "Communist China's Strategy in the Nuclear Era" (Englewood Cliffs, N.J.: Prentice-Hall, for the Rand Corp., 1962).

[6] In formulating general principles of space law it is necessary to realize that the development of detailed understandings to facilitate virtually automatic decisions on existing legal rights is possible only on a limited functional basis and that the development of space law does not exclude but rather presupposes the preparation of political solutions to expedite, not the clarification of legal issues, but actual change, whenever necessary, in the applicable law.

[7] Walt W. Rostow, Department of State Newsletter, April 1962, p. 6.

[8] John F. Kennedy, Charter Day address, University of California, Berkeley, Mar. 23, 1962.

[9] One might consider a court established especially for space matters. Although the Soviets have accepted the compulsory jurisdiction of the ICJ in several international organizational treaties (WHO in 1946, WMO in 1947, UNESCO in 1954, and IAEA in 1956), they have indicated that the proportion of judges in the ICJ from Communist countries (2 out of 15) must be increased before they can accept its jurisdiction on a more general basis.

[10] One of the elements of the recent revolution in Soviet international legal theory is the acceptance of domestic legislation as a source of international legal norms and principles. The Soviets have begun to emphasize this source in an attempt to transform international law into an instrument of Communist world revolution more rapidly than might be possible by the growth of custom and treaty law alone. Although the Soviets' support of this new source of international law emphasizes the contribution of the domestic law of the Soviet Union, the Communists cannot reject the laws and principles of the legal systems in other countries without at the same time affronting their self-respect. See Crane, op. cit., note 3 above.

[11] The methodology of such an approach to the development of international law is described in the new book by Prof. Arthur Larson, "When Nations Disagree" (Baton Rouge: Louisiana State University Press, 1961). Professor Larson, formerly head of the U.S. Information Agency and now Director of the World Rule of Law Center at Duke University, shows the potentialities and promise of the general principles approach in relation to seven major concepts having specific application to the problem of peace and war: sovereignty within the law; the limits on the right of self-defense, as applied to the problem of aggression, and the necessity of independent third-party judgment on the necessity for and reasonableness of the use of force in self-defense; the circumstances under which one party can terminate an agreement; liability for illegal harm, including use of words to harm, as in propaganda; protection of acquired rights, with its application to international investment in satellite communications; the duty to consult before affecting the rights of others, which has developed particularly in international river law; and the principle of third-party determination of disputes, with implications for the subject of judicial independence and of recognition of international judicial processes. All of these problems have direct application to space activities, and some of them are the subject of books which have been or are being prepared at the World Rule of Law Center.

[12] "Mater et Magistra," Encyclical of Pope John XXIII on "Christianity and Social Progress," 1961, par. 74. See also pars. 157–184 on "Requirements of Justice as Between Nations Differing in Economic Development." The relevance of economic ethics to our global strategy was cogently summarized by the Methodist elder, Rev. William J. Cook, at the Conference on Christian Ethics and Nuclear Warfare held in Washington, D.C.,

Support of this principle would testify to the belief of free societies that lasting stability, lasting security and lasting peace are to be found only within change; it would prove that the changes now taking place in the social and economic life of the world's peoples result not from the automatic operation of Marxist economic laws as interpreted by the Communist Party of the Soviet Union, but from new technologies and the moral initiative of free men. Such a principle would make it clear to the peoples and governments in the underdeveloped areas of the world that the maintenance of their economic and political independence against outside interference will come not from their acceptance of the monolithic Communist system of peaceful coexistence, but from the freedom of diversity and from peaceful cooperation of all peoples and states under law.

COMMUNIST ALTERNATIVES

The efforts of the peoples of the free democratic countries to develop a world of freedom under law has been accompanied by a Soviet attempt to develop space law, and international law generally, into a strategic instrument of world revolution. The Soviets are attempting to exploit the political potential of space law by emphasizing the great importance of space-research and space-related activities to the peoples of the world, especially to those in the underdeveloped countries, and by attempting to integrate the development of a legal framework for these activities into the overall Communist scheme of global conquest.

The Communists stress the direct value of communication satellites as a powerful global mass communication medium which will "bring even the remotest peoples close to one another," and "could very well serve in the fight against illiteracy in underdeveloped countries assisting humanity in combating the situation where some countries exploit the lack of know-how of others." [13] The Communists recognize the direct value of weather satellites particularly in view of the agricultural needs of the underdeveloped countries in areas of insufficient or unreliable rainfall and state:

"If the benefit mankind could gain from improved weather forecasts were to be measured in terms of money, it would run to an annual saving of thousands of millions of rubles. This sum is so large that it could more than compensate for all the money spent on space research." [14]

The Soviets emphasize not only the direct benefits of space activities but the indirect benefits as well,[15] and contend that these benefits will be made available to the world as a result of the triumph of Soviet space science. This in turn "is a remarkable expression of the advantages of the Soviet Socialist system, a result of the great achievements of our people in the development of the economy, science, technology, culture, and education.[16] For the peoples of the world, Soviet space rockets are not only a means of exploring the cosmos, they are first of all indisputable proof of the vitality of socialism. Soviet rocketry shows what the workingman will do under communism." [17]

The Soviets are appealing to what has been termed "the revolution of rising expectations," and are trying to control this revolution by asserting that it was made possible by and can be successfully concluded only under communism.

More significantly, the Soviets are trying to ideologize their space success by asserting that the politico-legal framework for the revolutionary advances in the welfare of mankind resulting from space activities must be integrated into and therefore support the Communist policies of world revolution.

This strategic interest of the Communists in space law can be properly understood only within the context of recent developments in general Soviet international legal theory. These developments stem from the injection of nuclear armaments and modern delivery systems into Communist world strategy, together with shifts in the balance of world political and economic power, which have caused the Soviets to turn increasingly from a defensive to an offensive strategy, and to do so not only in the economic and political fields, but in the field of international law. In fact, the past 5 years have witnessed the most radical revolution in Soviet international legal thory since the Russian Revolution.[18] The problem for the Communists is no longer, as it was just a few years ago, whether or not one should rely on international law as an instrument of foreign policy. The value of international law is now beyond question. Nor is the problem basically even what elements of traditional international law can serve the political requirements of the moment. The problem for the Communists now is whether and to what extent they can create and rely on an entirely new Communist international law.

Despite the economic and political resurgence of Europe, the failures of Communist China, and the seeming rejection of communism by most of the newly independent countries, the Communists consider that the longrun forces of history have shifted the balance of world power far enough in their favor to enable them to begin to replace in its entirety traditional international law, designed to serve capitalist interests, with a new Communist international law, designed to serve the interests of Communist world revolution. The transformation of the function of international law from static defense to dynamic offense has been pressed with particular vigor in the space field, because the Soviets have considered that the balance of space power is strongly weighted in their favor and that accordingly the possibilities here of developing Communist law are very great.

The mechanism by which the Communists hope to transform international law in general and space law in particular into an instrument of world revolution is the doctrine of peaceful coexistence. This doctrine was once a primarily defensive doctrine which prescribed the coexistence of hostile powers in an unstable period of peace. Since the Communist summit conference in November 1960, and particularly since the issuance of the new program of the Communist Party of the Soviet Union in July 1961, and its acceptance shortly thereafter at the 22d Party Congress, however, the doctrine of peaceful coexistence has become a highly complex and very precise ideological program intended not only to forestall a military response to the Communists' political and economic strategies, but to legalize their policies of world revolution.

The Communists are trying to develop Communist law as an integral part of the social and political consciousness of mankind and to create thereby a new reality in the minds of men. In the words of Premier Khrushchev:

"Ideological activity deals with the consciousness of man and with his psychology; it acts upon his thoughts and emotions. It is necessary, comrades, to emphasize particularly that the peaceful coexistence of states with different social systems has never signified and will never signify the peaceful coexistence of the different ideologies, Socialist and capitalist. In the field of ideology, a class struggle, a struggle for people's minds and hearts has been and will be waged.[19] The time is not far away when Marxism-Leninism will possess the minds of a majority of the world's population.[20]

To accomplish these purposes the Communists have elevated peaceful coexistence to an all-encompassing doctrine and term of art which contains not only the famous five principles announced in 1954, but all the other principles of international law as component and reconstituted parts.

This all-inclusive nature of peaceful coexistence was expressed last year by the Chairman of the Scientific Research Commission on Space Law and corresponding member of the Soviet Academy of Sciences, Yevgeniy Korovin, who ranks among the leading Communist spokesmen on international law. In an address to the advisory council of the University of Moscow Law School, Professor Korovin stated that the entire program and method of teaching and studying international law in the Soviet Union should be revised and integrated into the ideological system of peaceful coexistence, because: "Premier Khrushchev, in his address at the Conference of Communist and Workers Parties [in November 1960] stated that as representatives of the most advanced ideology we should not occupy a defensive position. Premier Khrushchev emphasized that the Soviet Union and the Socialist countries now hold the initiative in the international arena, whereas the imperialist states and their governments are on the blind defensive. One asks, however, to what extent our scholarly work shows this initiative and evidences an offensive attack. We usually merely explain the position of the enemy, and then begin to correct and criticize it. Would it not be more correct to proceed from our own concepts, from the democratic principles of international law, and then, having proclaimed their binding character and universality, to show that any theories hostile to them constitute a violation of the generally recognized and therefore generally binding principles of international law."

---

in June 1961. Reverend Cook concluded that if we are faced with the mutual destruction of the United States and the U.S.S.R. "it will probably be the result of a prior moral failure to develop morally acceptable and politically relevant instruments and resources of policy."

From this Professor Korovin concludes:

"Without exaggeration one can designate all contemporary generally recognized international law, as it exists today, as a code of peaceful coexistence. From this it follows that everything which is incompatible with the principle of peaceful coexistence does not exist juridically in international relations. Conversely, all the old and new principles which contribute to the development and consolidation of peaceful coexistence can with complete justification lay claim to legal validity.[21]

In an edited version published at the same time in the principal Soviet journal on international affairs and distributed around the world in several languages, Professor Korovin omitted the above background explanation and stated:

"Contemporary international law may be defined as the international code of peaceful coexistence. One does not have to be a qualified lawyer to understand the elementary truth that no prescription or rule of international law can now be considered as being generally recognized—that is binding upon all states—if it is rejected by a larger part of mankind, i.e., by the countries of socialism and the neutral states." [22]

Although peaceful coexistence is all inclusive in that it controls all relations of Communist states and parties throughout the world with their class enemies, peaceful coexistence is itself controlled by a still higher principle known as proletarian internationalism, which can best be summarized in the phrase "coordinated world revolution." The supreme principle of proletarian internationalism determines the meaning of peaceful coexistence because it controls all relations among the states within the Communist bloc (through the new international legal doctrine known as socialist internationalism) and all relations among Communist parties everywhere in the world.[23]

The content of proletarian internationalism is controlled, now as always, by the Communist Party of the Soviet Union. The international legal significance of this critical fact was brought out by Professor Korovin in his above-quoted address:

"The Socialist countries are states which are led and directed by the Communist and workers' parties. It naturally and necessarily follows therefore that the inspirers and organizers of the new stage in the progressive movement of mankind, and particularly in international relations and in international law, are the Communist Parties—the advance guard of the working class. These Communist and workers' parties in the person of their representatives (81 parties were represented at the Moscow Conference in November 1960) unanimously declared that the vanguard of the world Communist movement was and remains the Communist Party of the Soviet Union. Furthermore, they noted the principle of the great significance of the Communist Party of the Soviet Union in the progressive development of democratic principles of international law." [24]

The potential significance of this new doctrine of peaceful coexistence in the development of space law was clearly indicated at the meeting of the U.N. Committee on the Peaceful Uses of Outer Space in March 1962. In reference to the resolution on international cooperation in the peaceful uses of outer space adopted on December 20, 1961, the Soviet representative to the U.N. Space Committee stated that the General Assembly's unanimous adoption of the principle that international law, including the U.N. Charter, applies to outer space and celestial bodies "signif[ies] in our view, that the activities of the states in outer space research should be conducted in keeping with the recognized principles of peaceful coexistence, sovereignty, equality, nonaggression, and noninterference in domestic affairs. These important principles and provisions should be studied and should become a basis for the work of the juridical subcommittee." [25]

ANSWERS TO COMMUNIST ALTERNATIVES

The failure of the doctrine of "peaceful coexistence" to express the desires and needs of the world's peoples is evident from the most cursory analysis of its elements, particularly those listed by the Soviet representative of the U.N. Space Committee.

The first element is coexistence itself. Its essence is the attempt to maintain a rigid bipolarity in the world designed to eliminate all opposition to the strategists of the Soviet Communist Party. This bipolarity serves to maintain monolithic unity within the bloc,[26] and to deny the possibility of diversity outside it.[27] According to the Communists:

"Peaceful coexistence is a dialectical process which unites the sharpest class warfare between socialism and capitalism with the cooperation of states of two opposing systems in the name of preservation of peace." [28]

And again:

"Peaceful coexistence is inconceivable without international legality [as the Communists conceive it], for peaceful coexistence is international law in action. An essential task of the science of international law is the struggle against any deviations whatsoever from the Leninist doctrine of peaceful coexistence, the struggle against manifestations of bourgeois ideology [including traditional international law], revisionism [i.e. Titoism, especially in its opposition to bipolarity], dogmatism and sectarianism [i.e., Chinese communism and personal animosity], as well as against the harmful consequences of the cult of the individual.[29]

The attraction of the Communists' position derives from their insistence that this combination of monolithic unity and bipolarity is the best and, in fact, the only means for the peoples of the world to achieve and strengthen both freedom and peace. The answer to this argument seems obvious to those who have been educated in free societies. The only longrun solution to the maintenance of peace is not the reform of human nature by pressing it into the Communist mold or into any other exclusive system, but rather the release of human nature from the bonds of hunger and ignorance so that both nations and the individuals within them can develop in accordance with their self-determined needs and aspirations. For this, monolithic unity and bipolarity will not serve nearly so well as the right to diversity, which is the very essence of freedom. For this, too, there must be a realization that the problems of the world result not from the existence of capitalism, as the Soviets would have us believe, but from the materialist orientation of the world, of which both communism and the unworthy elements of capitalism are the only unfortunate and temporary manifestations.

With the advent of the space age, the superior science and technology initially made possible by the capitalist system of competition will enable man, for the first time, to eliminate hunger and ignorance everywhere, and thereby to promote throughout the world the conditions necessary for freedom of mind and spirit and for the kind of moral progress which alone can make for peace. It is this freedom for moral progress, and the personal nature of this freedom, which ultimately distinguishes free democracy from communism. Whether on a global or national level, whether in the secular order or in religion, liberty belongs to the individual or it does not exist at all. Without this liberty there can never be lasting peace among men.[30]

[22] Yevgeniy Korovin, "International Law Today," International Affairs, July 1961, p. 19.

[23] The most recent authoritative announcement on the subsidiary function of peaceful coexistence stated: "The principle of peaceful coexistence presents the most subtle and most effective expression of the party principle of proletarian internationalism. Peaceful coexistence of states with different regimes is not the abondonment of the class struggle in the world arena, but the selection of such deployment areas for this struggle as are best suited for the interests of all mankind." I. Inozemtsev, "Peaceful Coexistence—The Most Important Contemporary Problem," Pravda, Jan. 17, 1962, p. 5.

[24] Korovin, op. cit., note 16 above, pp. 70–71.

[25] Platon D. Morozov, "Verbatim Record of the Third Meeting of the Committee on the Peaceful Uses of Outer Space," Mar. 20, 1962 (A/AC. 105/PV. 3), pp. 23–25.

[26] A recent article on proletarian internationalism in the leading Soviet law journal states: "Cooperation of Socialist states has as one of its principal purposes the securing of peaceful coexistence. To achieve this worthy goal it is necessary to continue the battle to strengthen fraternal cooperation of the Socialist countries against any attempts whatever to weaken their monolithic unity [monolitnoye yedinstvo]." N. V. Zakharova, "Bilateral Treaties of Friendship, Cooperation and Mutual Aid Among Socialist States," Sovetskoye Gosudarstvo i Pravo, February 1962, p. 90.

[27] According to this element of peaceful coexistence, there are only two forces operative in the world—communism and anticommunism. The final acceptance of neutralism at the 20th Party Congress in 1956 resulted from the defensive concept of peaceful coexistence, which dominated prior to 1960. Under the new "peaceful coexistence," neutralism is only a temporary expedient which is to be replaced by a "world socialist system." See Rodolfo Mosca, "The 'New Ways' of Communism," Orbis, April 1962, p. 69.

[28] Inozemtsev, loc. cit., note 18 above, p. 5.

[29] Yevgeniy Korovin, F. I. Kozhevnikov, and G. P. Zadorozhnyy, "Peaceful Coexistence and International Law," Izvestia, Apr. 18, 1962, p. 5. The basic errors of the cult of the individual in the field of international law are noted in Crane, op. cit., note 3 above. The Soviet view of international scientific cooperation within the framework of peaceful coexistence is best expressed by the following opinion published recently in the leading Soviet law journal: "In capitalist countries the creativity of the leading scholars and scientists is cynically appropriated by capitalist monopolies. In these countries one cannot speak of giving disinterestedly to another state the results of this or that scientific research." A. I. Poltorak, "Legal Forms of Cultural and Scientific Cooperation of Socialist Countries," Sovetskoye Gosudarstvo i Pravo, October 1961, p. 162. Further: "Contemporary international law, which regulates the relations both of socialist and capitalist states, does not require the establishment among such states of relations of broad and full cooperation and fraternal mutual relations, because by virtue of the very nature of capitalist states such relations are impossible," Zakharova, loc. cit., note 26 above, p. 83.

[30] "Without liberty there is no peace, but rather a violent imposition of things, an unstable order, not accepted by the human mind." Amleto Cardinal Cicognani, Papal Secretary of State, address to the National Press Club, Washington, D.C., Dec. 4, 1961.

Recognition of the universal right of all individuals, peoples and states to the freedom of diversity would destroy the artificial concept of bipolarity inherent in peaceful coexistence, would fragment the Communist bloc, relativize Communist ideology, and provide one of the essential elements of permanent peace and progress.

The second and third elements of peaceful coexistence which the Soviet representative to the U.N. Space Committee considered most critical are "sovereignty" and "equality." These words have many doctrinal functions in Soviet international legal theory. In the context of the debates in the U.N. Space Committee, their principal function is to require acceptance of Soviet veto power over international space cooperation so that the Soviet Union may "rightly play the leading part in the international efforts in space research" in the interests of "consolidating peace." [21]

The principle of equality, if it is to have any meaning, requires not veto power, as the Soviets insist, but equal rights both in accepting proposals and in rejecting them. This elemental truth is particularly true in the context of international space cooperation and stems from the fact that every country of the world has an equal right with others to benefit from space science. If the countries of the world desire to use the benefits of space science in a particular way, then the exercise of veto power by any single state to prevent the other states from obtaining these particular benefits would be an imposition of the will of one state upon the other states and the denial of equality for all of them.

If one state claims that the adoption of a particular program would infringe upon its existing rights, the solution is not resort to veto power but to some dispute-settling mechanism. The Soviets contend that the only dispute-settling mechanism capable of guaranteeing national sovereignty is diplomatic negotiation. Prof. John N. Hazard has cogently pointed out the basic fallacy of this argument as follows:

"It is no answer to argue that disputed matters should be resolved by diplomatic negotiation, for these negotiations necessarily favor the stronger state. The result is violation of the sovereignty we are all seeking to protect, for diplomatic negotiations make possible in many cases dictation of the stronger over the weaker. Protection of sovereignty requires that each party to a dispute be treated equally without dictation of an inequitable result by the stronger." [22]

The only dispute-settling mechanism which can guarantee both sovereignty and equality is the impartial decision of judicial bodies, i.e., third-party adjudication.

The fourth element of peaceful coexistence emphasized by the Soviet representative to the U.N. Space Committee is the principle of nonaggression. The term "aggression" is used by the Soviets to stigmatize any military, political, or economic action or alleged preparation for such action which is adverse to Soviet strategic interests. Perhaps the best example of this tactic is the Soviet assertion that the principle of nonaggression requires the demilitarization of outer space.

The Soviets use the concept of "demilitarization" of space primarily to gain ground superiority for the U.S.S.R. by removing U.S. oversea bases and U.S. continental-based ICBM's. Ever since the Soviets launched their first artificial satellite, and particularly since they proved their ICBM capability by launching luniks, they have wanted to trade this Soviet superiority in space for U.S. superiority in more conventional nonspace strategic delivery systems, consisting in U.S. bombers and IRBM's stationed overseas within range of the Soviet Union. The Soviets say this may be accomplished by U.S. agreement to the dismantlement of all of its oversea bases, which would eliminate the U.S. strategic delivery systems located on these bases, and by U.S.S.R. agreement to the demilitarization of outer space, which would eliminate the Soviet strategic delivery system by rendering illegal the passage of Soviet ICBM's through outer space.

According to the Soviet international legal scholars:

"The integration of the problems of prohibiting the use of outer space for military purposes and the prohibition of oversea bases is completely correct from the military/political point of view as well as from the position of international law. From the military/political point of view such a position is correct because it guarantees the security of all interested states belonging to two diverse social-economic systems. From the international law point of view such a position is in accordance with law and justice for it is based on the principles of peaceful coexistence and corresponds fully with these principles, and in particular it corresponds with the principle of sovereign equality and reciprocal advantage of states, which is a principle of peaceful coexistence." [23]

The most critical factor in this "equality," which all Soviet propagandists scrupulously ignore, is the powerful land army of the Soviet Union, which could overrun Western Europe if it were not protected by the deterrence force of American air and missile bases. Instead of advocating equality, which already exists, the Soviets are, in fact, advocating the abolition of equality, so that their land armies and still existing strategic delivery systems, or the threat of their use, could influence the relatively defenseless allies of the United States to accept and even support Soviet actions in furthering the interests of world communism.

More recently, the growth of American ICBM capability has caused the U.S.S.R. to suggest that the elimination of the Soviet ICBM's by means of space demilitarization must be met by the removal not only of U.S. oversea bases with their conventional strategic delivery capability, but primarily by removal of U.S. ICBM's and their nuclear warheads as well. This policy is reinforced for bargaining purposes by Soviet refusal to respond to U.S. proposals to ban the stationing in orbit or in space of weapons of mass destruction without at the same time declaring illegal mutual ICBM deterrence power. This Soviet refusal represents merely a second generation of the traditional policy of equality which demands the coupling of space demilitarization with demilitarization on earth. Now, however, the Soviet bargaining is directed at the use of their superior bombs in orbit and similar space potential to eliminate both U.S. oversea bases and U.S. ICBM's.

The Soviets use the concept of space demilitarization not only to gain ground superiority by removing U.S. oversea bases and continental-based ICBM's, but to gain space superiority by removing U.S. defensive systems in outer space. The Soviets have attempted to remove these space systems, particularly the U.S. reconnaissance satellites, by asserting that they are contrary to "peaceful purposes" and are, in fact, inevitably aggressive in nature.

At the same time the Soviets consider that any actions by the Soviet Union against these satellites would be exclusively defensive in nature.[24] The Soviets have labeled as "aggressive" even U.S. nuclear testing in outer space, at a time when the Soviets had just completed secret nuclear testing in outer space themselves.

In answer to this fourth element of peaceful coexistence, as outlined by the Soviet representative to the U.N. Space Committee, one may point out that Communist opposition to effective inspection reduces Soviet use of the term "nonaggression" to a propaganda weapon designed to render politically untenable the defensive and deterrence measures of the West and at the same time to assure that similar or identical Soviet capabilities both on the ground and in outer space may remain undiminished. Confusion of terminology may be reduced by Western initiative in developing international law to clarify the status of activities which at present are in a kind of limbo. The result might be the creation of a new legal concept of activities designed to preserve the peace.

The fifth element of peaceful coexistence which the Soviet representative to the U.N. Space Committee considered important is the principle of noninterference in domestic affairs. This principle has two functions: First, to defend the isolation and monolithic unity of the Communist bloc against capitalist aggression, and, second, to accomplish indirectly outside of the Communist bloc exactly what it ostensibly prohibits.

The Communist term of art noninterference in domestic affairs, when used in this second sense, is similar to the Communist doctrine of self-determination, and functions to prevent interference with Communist-directed revolution in underdeveloped countries, and to prevent the free-democratic states from assisting the underdeveloped peoples to accomplish their own revolution in pursuit to their own best interests. This latter aspect of the Communist strategy is perhaps best evidenced by the Pravda comment that, as a result of increasing American foreign aid and investment, American technical aid and fraternity with Africa is unparalleled in scope and hypocrisy.[25]

The true nature of the Communist principle of noninterference could best be tested by U.S. initiative in the development of the space legal principle of peaceful cooperation. The Communists alleged fear of capitalist imperialism could best be countered by U.S. initiative in developing peoples capitalism in space, to demonstrate that capitalist free enterprise, as it has developed in the United States, can use space science and space technology to help revolutionize the daily lives of the underdeveloped peoples of the world. This would demonstrate as nothing else could the superiority of free enterprise in bringing forth the best efforts of individual men and in making the results available in equal measures to the greatest number of people throughout the world.[38]

---

[21] At the Moscow Space Policy Symposium in May 1961, the future-weapons specialist, Gen. Georgii I. Pokrovskiy, stated: "Soviet scientists, engineers, and workers who have created the most advanced rocketry in the world have secured for their country the leading place in space studies. Hence it is natural and inevitable that the Soviet Union should rightly play the leading part in the international efforts in space research. This role in no way infringes the interests or prestige of other states. On the contrary, this should be one of the forms of disinterested scientific and technical mutual assistance in consolidating peace and international cooperation." G. I. Pokrovskiy, "Space Exploration and International Relations, A Discussion." International Affairs, June 1961, p. 62.

[23] M. Lazarev, address to the Second Annual Meeting of the Soviet Association of International Law, Sovetskiy Yezhegodnik Mezhdunarodnogo Prava 1959, Moscow, 1960, p. 409.

[24] See the section entitled "Reconnaissance and Anti-Satellite Warfare" in the author's article "Soviet Attitude Toward International Space Law," note 3 above.

[25] Pravda, Apr. 6, 1962, p. 5.

American initiative in the development of international space law should serve first of all to make clear to ourselves and to free men everywhere the requirements and limits of effective military defense and disarmament. This objective is of particular importance because both military defense and arms limitations are necessary to the continued security of free societies. In addition, the United States should take the initiative in developing space legal principles to strengthen freedom, legality, and cooperation. This would make clear the basic superiority of peaceful cooperation under law as contrasted with peaceful coexistence as an ordering principle of international relations; would serve as an efficacious step in building the ideological deterrence necessary to support the military defense of the free world; and would serve as a powerful aid to the ultimate victory of free democracy.

THE TRADE EXPANSION BILL—STATEMENT BY DAVID KENDALL

Mr. DIRKSEN. Mr. President, Mr. David Kendall, who at one time was on the White House staff, under President Eisenhower, appeared before the Senate Finance Committee and made what I thought was a well reasoned, constructive, and timely statement in regard to the trade expansion bill. I believe his statement will be of great interest, in view of that measure pending in the committee. Therefore, I ask unanimous consent that the statement be printed at this point in the RECORD, in connection with my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY DAVID W. KENDALL BEFORE THE SENATE FINANCE COMMITTEE AUGUST 6, 1962

Mr. Chairman, your consideration and that of the members of the Finance Committee in giving me this time is appreciated very much. I am David Kendall, a member of the law firm of Cummings & Sellers, and am here representing and making a statement on behalf of our clients, a majority of the corn starch industry, General Time Corp., and the Book Manufacturers' Institute.

First of all, despite obvious differences in background, all of these people believe deeply in extension of U.S. trade throughout the world, they believe in the obvious facts of greater ease of communication and commerce in the world in which we live today, and they believe, above all, in maintenance of U.S. leadership of the free world and its peoples.

Secondly, in order to preserve the high economic plane and standards of this country, they recognize obvious difficulties in the achievement of this aim of freer intercourse and less restricted trade.

Thus, on the one hand they had hoped that legislation to broaden the executive power with regard to tariff and customs and to give the President the elasticity which is so necessary in prompt and intelligent trade and tariff negotiations, would be forthcoming at the earliest possible date. This was their hope in the light of fast-moving events in the world today.

On the other hand, however, they have been cautioning care and foresightedness in the drafting of legislation and measures in this regard.

Also, over and above the foregoing balancing factors, this committee must be aware that the climate of consideration of this legislation is far different in August than it was in March and June. Enough problems within the nations of the Common Market have already developed to indicate less than the rosy atmosphere promised by some of the more vigorous of the proponents. The Cotton Textile Agreement has been discovered to be no agreement and not even much of an arrangement. The status of the United Kingdom and the participation of her Commonwealth have not been resolved.

The headlines of yesterday, indicating solution of the difficulties of Great Britain and her Commonwealth at Brussels, when measured against those in today's papers announcing another apparently final failure of negotiation, do not lead toward confidence that all is well.

All in all, there is a rising tide of sentiment doubting the necessity of haste. The heretofore few suggestions that the United States await a clearer atmosphere in Europe and throughout the world, while more carefully fashioning the legislation desired, have now become more widespread—almost to the proportion of insistent demand.

Against this entire background, however, we have come to the conclusion that the desirability of moving toward freer trade overweighs reasons for delay, provided the sort of careful amendments which are here suggested can be achieved. By way of illustration of what we believe is necessary and how we believe it may be accomplished, we call your attention to the following:

The business of tariff and customs duties cannot be carried on in a vacuum. Many other facets of trade, of the economy, and of political factors must be kept in mind.

To name a few which had been thought of utmost importance are the differences amongst nations in central banking policies; with regard to taxation—both Federal and otherwise—as the same is used to varying degrees to foster domestic trade and industry, to raise revenues or to actually erect protective walls which we do by duty, and of course the differences in commercial laws, our own antitrust and monopoly statutes as opposed to lack of control and indeed the fostering of cartels in our sister ally nations.

All of these historic and present facts influence our approach to lowering or raising tariff walls. And these differences, enough in themselves, are minimal when compared to differences in wages, even after allowance for greater productivity in the algebraic equation which some think to be important.

Hence, it was the source of great disappointment—indeed surprise—to some of American industry which feels, as I have just expressed it, that we should move forward positively in the field of freer trade, when H.R. 9900 was examined as it was sent to the Congress.

In all fairness, too, a great deal of the confusion and lack of planning can be laid at the door of American industry as a whole. For haste in desiring exports and equally unthinking protectionist antidotes have not led to either helpful discussion, wise language, or other than complete confusion.

That there is good reason for all of these hopes and beliefs and fears, and for the consequent concern over the complete lack of catholic consideration of tariff together with the other equally important aspects of international economic understanding is probably better understood by the members of this committee than by any other group anywhere.

It is axiomatic that the United States, with her gigantic burden of fiscal responsibility in the maintenance of defense for the free world, with her almost equally heavy assumed expenditure for less developed peoples of the neutral world, and with her positive high burden of domestic Federal responsibility, can ill afford to risk any dislocation of the economy, of the tax base, of tax sources at this particular moment of history.

There has been real disappointment that, in the interests of expedition of the passage of legislation, what seems to us too little time has been given to a careful consideration of the pitfalls which might result.

Without going into the history of activity before the Ways and Means Committee and in the House of Representatives in attempting to bring about a more careful and lawyerlike solution to the twin problems of necessity for the legislation and care in design, almost everyone agrees that H.R. 11970, now before this committee, is a somewhat better bill and contains more thoughtful provisions than H.R. 9900. At the same time it should be pointed out that the legislation still leaves a great deal to be desired.

1. It lacks, in its delegation to the President of the constitutional power of the Congress to tax and to regulate commerce, appropriate and well-planned guidelines.
2. It does not provide for true reciprocity.
3. It overlooks the time-honored and well-understood machinery of both peril-point and escape clause.
4. It ties down the United States to most-favored-nation responsibilities without concomitantly requiring them of others.
5. It still contains adjustment measures open to real doubt.

We strongly believe that many, if not all, of the objections outlined above can be overcome by the rather simple expedient of reinstating updated versions of the foregoing omissions.

The apparent necessity to plan tariff in a vacuum, with its attendant imponderable problems, can, we believe, be overcome to a large extent by thoughtful adoption of such safeguards.

It is believed that traditional and well-charted guidelines of former law will almost automatically take care of differentials in wages, tax structures and aims, banking practices and all the gamut of putting different domestic commercial policies and traditions into a common denominator, more easily handled and certainly more readily understood.

On behalf of those widely divergent portions of American industry which we represent, and others, a small group has been working earnestly and, I hope, intelligently, certainly broadly, trying to piece together various amendments of substance and of form, to the end that the real objective—twin objectives if you will—of the people who believe in U.S. leadership based upon economic strength as well as political wisdom, may be attained.

Before the committee is a group of amendments introduced by Senator BUSH, of Connecticut, who is also the ranking member of the Joint Economic Committee, and a group of other Senators, including Senator BENNETT.

Mechanically and legislatively, these amendments are designed to be interlaced throughout H.R. 11970; are severable to permit elasticity in discussion, persuasion in adoption; are aimed at distinct objectives of the legislation; and have the tremendous advantage of being considered not from the standpoint of any single industry or area of the United States, but approaching the problem in its entirety.

---

[38] Communist fears of free enterprise in space development were indicated by the Communist statement during the meetings of the U.N. Space Committee in March 1962: "In setting up a world telecommunication system by means of artificial earth satellites it is imperative to insure that the programs should be in harmony with the principles of peaceful coexistence and that the operation of such a system should not become a subject of private business or a resource of private profits." Verbatim Record of the Fourth Meeting of the United Nations Committee on the Peaceful Uses of Outer Space, Mar. 21, 1962 (A/AC. 105/PV. 4), p. 32.

They are particularly urged upon you for your consideration.

They answer many of the constitutional questions which have arisen from the delegation to the President of the power of Congress to tax and to regulate commerce. They propose a clear statement of the principles by which the President is to be guided in the use of the delegated power and require findings of fact by him in his use of such power and thorough publication of such findings and the moves based thereon.

This, to the end that the people, to whom the President is ultimately responsible, and the Congress, to whom he should be directly responsible in such cases of delegation, will be kept fully and clearly advised.

The amendments in their entirety restore some of what are believed to be the necessary traditional principles of selective tariff reduction, which will avoid the threatening of serious injury to workers, to agriculture, and to domestic industries.

They are designed especially to prevent the impairment of growth industries.

And these amendments, so threaded throughout the present bill, also would reestablish certain basic negotiating principles which have been the cornerstone of enlightened, though somewhat shaded, American trade policy since the days of Cordell Hull and Arthur Vandenberg.

Basic negotiating principles insure true reciprocity. The maintenance of the integrity of duty concessions by the Common Market, equal treatment by beneficiaries of concessions as required by the principle of most favored nation, and carefully thought-out safeguards and guidelines will insure to American exporters, all American industries, and the American economy, gradual and well-planned tariff accommodation. Such is the framework of this approach to the tariff and customs portion of guaranteeing American leadership in the whole structure of foreign trade and economy.

As your consideration deepens, as you think through individually and collectively the many amendments which will be pointed toward this or that imagined or real improvement of the bill before you, it is hoped that the clear purpose of the Bush amendments will be appreciated for their singleness of purpose as well as their wisdom of choice.

By incorporating these amendments in the bill as passed by the other House, speed and effectiveness can be achieved.

Better than that, the Bush amendments are so written and arranged as to achieve a balance of the present with the past, of modern expediency tempered with bedrock experience, using escape and peril mechanisms improved by trial and error.

In conclusion, I would like to say one more thing. It is based on the philosophy of government itself, but is just as applicable to tariff problems or international trade as it is to domestic policy.

I have long felt that we should not pit, in our political philosophy, conservatism against liberalism.

Rather should we think and plan in the context of fundamentalism versus expediency—constitutionalism versus convenience—basic thinking versus opportunism.

The application here is clear. Before taking steps which will have repercussions not only in Bonn and Brussels, but Tokyo and all South America—not only in 1962 and 1963, but for many years to come, in Detroit as well as Des Moines, in Wilmington as well as Winchester—not only here, but abroad and affecting the firm base of U.S. strength economically, politically and spiritually, we had better use a little fundamentalism—look a little bit to constitutional principles.

ACCOMPLISHMENTS OF THE POLICY COMMITTEES

Mr. DIRKSEN. Mr. President, the other day, when the legislative appropriation bill was before the Senate, the Senator from Wisconsin [Mr. PROXMIRE] made some comment in regard to an item of increase for the policy committees of both the Democratic and the Republican sides. I helped to author that increase, because I thought it was necessary. I am even more secure than ever in my conviction on that point in view of the type of staff work which has been done; and I submit, for printing in the RECORD in connection with my remarks, a statement showing the reports in great variety which have been made by the staff of the minority policy committee and the other work which has been undertaken.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

MINORITY POLICY COMMITTEE—PROJECTS, REPORTS, STUDIES, PREPARED FOR USE OF REPUBLICAN CONFERENCE SINCE APRIL 1, 1962

Policy statement, May 8, 1962: Republican Conference endorsement of amendment to Smith Act (H.R. 3247).

Report to all Republican Senators, June 13, 1962: Federal Government in general, finance and taxation, Federal personnel, Congress.

Medicare: Comparison of major health care insurance proposals for the aging, 1962, April 19, 1962 (a study and comparison chart for all Republican Senators).

Report on devices other than tariffs and duties being used by foreign nations to discriminate against imported products, June 26, 1962.

Background information on national stockpiling program (completed, pending distribution).

Loans and grants to States under Area Redevelopment Administration as of June 18, 1962, June 27, 1962.

Policy committee statement, May 1, 1962: Opposition to financing provisions of the Standby Public Works Acceleration Act of 1962.

Policy statement urging Congress to adopt legislation providing adequate benefits to American troops serving in areas overseas where conflict is possible, May 22, 1962.

Report of research material available in policy committee, June 25, 1962.

Big Government: A statistical survey of the dimensions of the Federal Government today, July 1962.

Study of Presidential requests for money and delegation of power; a continuing report.

Conference statement endorsing legislation containing the principle that future Directors of the FBI should be Presidential nominees, by and with the advice and consent of the Senate.

The following supplemental services have been performed for the 36 members of the conference:

1. Analysis and distribution of record votes.
2. Calendar monitor: Analysis report on each bill.
3. Official biography of each Republican Senator.
4. Official minutes of policy meetings.
5. Preparation of agenda, policy meetings.
6. Specialized research library.
7. Distribution to press, TV, and radio of official policy statements.
8. Analysis and preparation for discussion by policy committee of Republican positions on spending legislation.
9. Liaison with senatorial staffs.

One hundred and ninety-two special studies and reports have been made for the 36 members of the conference in the 4 months since April 1, 1962. In addition, a weekly memo describes the issues involved in current legislation and Executive actions.

JAPANESE GOVERNORS EXPRESS THANKS

Mr. BOGGS. Mr. President, on May 21, 1962, the U.S. Senate was honored by a visit of distinguished Governors of the Japanese Prefectures. This visit to the Senate and to the U.S. Capitol was in conjunction with an exchange visit with American Governors.

I have today received a very warm letter from the distinguished leader of the Prefectural Governors visiting the United States, expressing hearty thanks for the kind reception they received during their tour of our country. I am sure all of us are happy that our distinguished friends enjoyed their visit with us; and we are most appreciative of this kind letter of thanks.

For the information of all, I ask unanimous consent to have the letter printed at this point in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

NATIONAL GOVERNORS' ASSOCIATION,
Tokyo, Japan, July 26, 1962.

Hon. CALEB BOGGS,
Washington, D.C.

DEAR SIR: Allow me to express our hearty thanks for the kind reception given to our group of Prefectural Governors of Japan during our inspection tour of the United States in May of this year.

We are very grateful indeed for your cordial welcome shown us by you and by the Government and the people of the various places we visited.

We were deeply impressed by the friendship and understanding shown to us by you and in all of the other places of your country where we visited. I am sure these deep impressions will remain in our hearts for a long time as pleasant memories filled with gratitude.

It is our hope to convey the sincerity of your Government and people to the Government and the people of Japan to further strengthen the ties of friendship between our two countries.

We are convinced that the mutual visits made by the Governors of Japan and the United States have been truly pleasant and profitable. We earnestly hope that these mutual visits will be continued in future, and that the friendship and understanding of the two countries of Japan and the United States will be deepened.

Having completed the inspection tour of North and South American countries we safely returned to Japan one after another on or around June 15, 1962. This is due to the thoughtful consideration of you and all those concerned and we must thank you once again for all your trouble and kindness.

On behalf of the party of undermentioned Prefectural Governors visiting the United States I wish to express our sincere gratitude and respect to you and pray for your health.

I am, dear sir,
Yours sincerely,
IWATARO UCHIYAMA,
Governor of Kanagawa Prefecture and the Leader of a Party of Prefectural Governors Visiting the United States.
TOKICHI ABIKO,
Governor of Yamagata Prefecture.
MIKINE KUWAHARA,
Governor of Aichi Prefecture.
HITOSHI SHIBATA,
Governor of Chiba Prefecture.
SUNAO IKEDA,
Governor of Saga Prefecture.
CHOEMON TANABE,
Governor of Shimane Prefecture.
WATARU MIYAUCHI,
Executive Secretary of the National Governors' Association.

TRIBUTE TO PVT. ROBERT H. PUCKETT OF D.C. POLICE IDENTIFICATION BUREAU

Mr. BEALL. Mr. President, in today's newspapers is the report of the capture of the man who allegedly stabbed a congressional secretary as she knelt in prayer in a Capitol Hill church. According to the report, the man captured has confessed to numerous other cases of assault and rape. Apparently, this man is a dangerous criminal, and his capture is a distinct credit to the Washington Police Department.

Special tribute is due Pvt. Robert H. Puckett, of the Police Identification Bureau, who, I understand, is a resident of my State of Maryland. The dangerous criminal was tracked down through the efforts of a special 50-man detective squad established to investigate a series of crimes which occurred in the Nation's Capital about the time of the horrible stabbing in the Capitol Hill church. It was a team effort, and good organization work. However, I feel that the exceptional work of Private Puckett should receive special praise, for it was the meticulous work of Private Puckett which made the capture possible.

Private Puckett, who worked with the Federal Bureau of Investigation for 5 years before coming to the police department, spent many weary hours trying to match weak thumbprints left at the scenes of two previous crimes with juvenile fingerprint records, and finally his efforts were crowned with success. He found that these thumbprints matched the prints of a man who had a long criminal record going back to juvenile days. The rest of the story was routine.

It is the careful work of these "behind-the-scene" technicians which solves so many otherwise unsolvable crimes, and I feel that we are all grateful to Pvt. Robert H. Puckett and his coworkers in the Washington Metropolitan Police Department, of which I am proud.

DEVELOPMENT OF RANGE RESOURCES

Mr. METCALF. Mr. President, last year the majority leader, Senator MANSFIELD, and I appeared before the Appropriations Committee and called for a national inventory of our grazing lands as the basis for a program to foster range development. We pointed out that proper management of our hundreds of millions of acres of rangeland is important for watershed protection, livestock and mineral production, recreation, and fish and game. We stated that to plan and develop these resources we must know what we have.

The chairman of the committee, Senator HAYDEN, concurred, and directed the Departments of Agriculture and Interior to submit jointly a program "with specific objectives covering such phases as protection of the range from misuse, providing better vegetative cover, water management, and related measures from which to develop an improved range management program which will bring about the full productive potential of these lands."

On July 18 of this year, Secretaries Freeman and Udall submitted the initial product of the Nation's first public land range appraisal. One part is an illustrated report of trial programs conducted in Colorado, Montana, and Oregon. The other is a prospectus on the need for a much more comprehensive range appraisal program.

This initial report, filed by the two departments, will be a landmark contribution to the management of land resources.

On July 25, 1962, I introduced Senate Resolution 367, authorizing the printing as a Senate document of this important study.

Yesterday, in Bozeman, Mont., Mr. Karl Landstrom discussed this pilot survey as part of his participation in a panel on soil and water conservation research at Montana State College.

Mr. Landstrom, who is Director of the Bureau of Land Management, pointed out to the panelists:

> Public lands and their resources represent a great inheritance—supporting wealth, health, and national progress.

He assured his listeners:

> The Federal Government is well aware of the critical condition of many of these properties.

Mr. Landstrom prefaced his outline of a nine-point program for range planning and development with the estimate that 10,000 acres of rehabilitated public range would support a $270,000 ranch investment, add a means of livelihood to two families and maintain 12 jobs in the dependent community. He said:

> We think that there is an excellent cost-benefit ratio.

I ask unanimous consent that Mr. Landstrom's statement be printed in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

LAND AND WATER CONSERVATION RESEARCH NEEDS FOR PUBLIC LAND ADMINISTRATION

(Remarks of Karl S. Landstrom, Director, Bureau of Land Management, U.S. Department of the Interior, in panel discussion on soil and water conservation research at Conference of Directors of Western Agricultural Experiment Stations, Montana State College, Bozeman, Mont., August 8, 1962.)

Today's panel discussion gives me an opportunity to bring to your attention the needs for research in land and water conservation as we view them from the standpoint of public land administration.

The findings of research, I am sure, are essential to the effective conduct of public land management in the interests of the people of our country. On the other hand, there are times when action should not be postponed to await further research.

This is a particularly significant time to bring the research needs of public lands before you who are western experiment station directors. On July 2, there was celebrated the centennial of the grants of public lands which gave rise to the land-grant system of higher education. The Hatch Act of 1887, providing for the establishment of agricultural experiment stations, was a logical extension of the original land-grant college idea.

This topic of land and water conservation research is large and complex. I must abbreviate in some way to keep within manageable bounds. So therefore I should like to bring to you in outline form the land and water conservation problems of major concern to our agency. Then I shall attempt to relate these problems to the needs and opportunities for research of interest to the experiment stations.

Within the relatively recent past, many people have thought that the public lands and resources outside the national forests, national parks, and other specific reservations were inferior, with relatively little value or utility.

Time and careful study have shown that their potential is very large. This potential can be developed—by improvement, conservation, and wise use under an effective program of land and resource management.

I need not tell you—since you are all westerners—that public lands and their resources represent a great inheritance—supporting wealth, health, and national progress. But the full destiny of this heritage cannot be attained if neglect or waste is allowed to continue.

The Federal Government is well aware of the critical condition of many of these properties—land, water, minerals, forests, range, recreation, wildlife, and other resources. The urgent need is recognized for developing and conserving all of these resources—not only to use them now, but also to maintain them for the benefit of future generations.

This concern is shared in specific terms and with perhaps greater emphasis by the Department of the Interior and by its component directly charged with a major share of the administration of public lands and resources: the Bureau of Land Management.

While accomplishments thus far have been impressive, they are well below present needs and the potential of future development, improvement, and conservation of these resources.

About one-third of usable land in Federal grazing districts is in poor or bad condition. Poisonous range weeds contaminate many areas that once produced rich forage and vegetation for livestock and wildlife. Millions of gallons of water are lost every year. Tons of topsoil are transported daily through erosion by wind and water. Thousands of acres of forests and woodlands—devastated by fires, insects, and other depredations—need rehabilitation and reforestation.

These facts have been known by some people for a long time, and many people have contributed commendably toward their alleviation. But the facts seemingly have not impressed enough people at the right places or the right time.

Some of these facts were verified only recently. They were verified in a trial program of public land range appraisal just completed by the Bureau of Land Management and the Forest Service. The report, prepared at the request of the Senate Committee on Appropriations, shows results such as the following in the three areas sampled:

Colorado (San Luis Valley): Vegetation conditions were largely fair or poor. The pattern held true through all major vegetation types with the exception of the meadows.

Soil stability conditions were fair on about one-half the area. Most of the remaining acreage was good or poor—in about equal proportions. Soil stability was good on one-half or more of the meadow, conifer, and broadleaf type acreage. However, nearly all of the grassland and half shrub types displayed fair or poor soil stability. Excellent vegetation and soil stability conditions were found only in large cattle allotments. Summer ranges showed a greater proportion in poor or very poor condition than spring-fall or winter ranges. Very poor conditions were confined entirely to summer allotments.

Ranges in poor or very poor vegetation condition and others in a downward trend made up 40 percent of the total acreage.

Existing range improvements represent an investment averaging $1.15 per acre of Federal lands suitable for domestic livestock grazing. Needed improvements will cost an average of $2.45 per acre.

In the past, stock trails, access roads, and fences received the most emphasis. Range seeding, plant control, and water runoff measures are now considered to need more emphasis.

The average current capacity was 64 animal unit months per section of suitable range. Average potential capacity was estimated at 71 animal unit months per section.

Montana (Beaverhead and Madison Counties): Vegetation and soil stability conditions were rated good or fair on 90 percent or more of the range sampled. Meadow and conifer types had higher proportions in good condition than did other major types. Grasslands and meadows were the only types having an excellent vegetation rating, but all major types had a small proportion displaying excellent soil stability conditions.

The large allotments and summer ranges had a higher proportion in the poorer condition classes than did the small allotments and spring-fall ranges.

Ranges in poor or very poor vegetation condition and other ranges with a downward trend made up 34 percent of the total acreage.

Existing improvements represent an investment averaging $2.50 per acre of suitable rangeland. Needed improvements will cost an average of $5.65 per acre.

In the past, most of the improvement dollars were spent on fencing and sagebrush control. These practices will continue to receive the most emphasis, but large investments are also needed for stock water development, construction of roads and trails, and for allotment boundary marking.

Fences received most of the past investment dollars on cattle allotments, while most of the funds expended on sheep allotments were for sagebrush control. In the future, plant control as well as fencing will be emphasized.

The average current capacity was estimated at 194 animal unit months per section of suitable range. Upon attaining potential capacity an average of 278 animal unit months per section will be available for grazing.

Oregon (Lakeview area): Most of the vegetation was in the less desirable condition classes. Soil stability conditions were somewhat better, a large proportion being in fair or good categories.

Poor or very poor vegetation conditions predominated in all major types with the exception of the conifer. This type, although having a large proportion in poor condition, also had a sizable proportion in fair and good condition and a small amount in the excellent class.

The conifer type, with one-half of its acreage displaying good or excellent soil stability, was in the best condition in that respect. However, all of the major types in the Oregon area showed a preponderance of fair or better soil stability.

Ranges in poor or very poor vegetation condition and others with a downward trend made up 70 percent of the total acreage.

Existing improvements represent an investment averaging 35 cents per acre of suitable rangeland. Needed improvements will average 65 cents per acre. The report states, however, that these estimates appear unrealistically low.

In the past, fencing received the most emphasis. Fencing will continue, but other improvement needs including seeding, plant control, stock water development, and roads and trails will receive increasing emphasis.

The average current capacity was 44 animal unit months per section. Upon reaching potential capacity, an average of 60 animal unit months per section will be available for grazing.

Let us not pass over these estimates too lightly. We estimate that 10,000 acres of rehabilitated public range would support a $270,000 ranch investment, add a means of livelihood to two families and maintain 12 jobs in the dependent community. We think that there is an excellent cost-benefit ratio.

And it goes without saying, of course, that the work contemplated in all of these range areas will benefit wildlife, outdoor recreation, watershed protection, and other elements of value to the people.

These and related findings have pointed to the values that would flow from an intensified program of public land range appraisal by our Bureau and the Forest Service. A prospectus for this work has just been submitted to the Congress by the two Departments.

This, of course, is only one phase of our many public land management responsibilities.

There are many other jobs to be done. Orderly, progressive accomplishment depends upon an adequate and effective program for all phases of public lands and resources.

To insure future benefits, we believe that a nine-point program is required:

1. Public-land laws responsive to conditions which now exist.
2. Survey or resurvey of a large portion of the public lands, under the rectangular system.
3. Improvement of the land tenure pattern in many areas.
4. Substantial reduction in annual resource losses from fire, insects, unauthorized use, waste, and other hazards.
5. Restoration of vast areas of public lands to full productive capacity.
6. Expanded soil and water conservation.
7. Sizable capital investments for outdoor recreation sites and facilities.
8. Other improvements and extensions of access roads, structures, and facilities on public lands.
9. The determination of service fees, user charges, and appraisals for sale of public lands and resources within the concept of fair market value, except as modified for special considerations in the public interest.

A program to provide direction and guidance in accomplishing these objectives has just been released by the Department. Copies may be had upon request.

What, then, are the research implications of these needs and this program? I am sure that they are very large.

As former researcher and collaborator with experiment station personnel, I realize the impracticability of answering this question definitively in all its details at any one place or any one time.

Fortunately for all of us, the field of range research has just been surveyed by a joint committee of the American Society of Range Management and the National Research Council. I for one concur with the committee when it stated that range research is complex and that the problems needing research are wide and varied.

I shall therefore try to convey the outlines of some specific research problems as some of our technicians have suggested them to me.

Our technicians still don't know, for example, the ecological indications for choices between range improvement by management alone as opposed to direct investment in seeding, spraying, or other improvement practices.

This problem is not as simple as it seems at first.

Time is a crucial element.

Our technicians need to know how long it takes to rehabilitate a range from a given ecological condition by each alternative method. Comparisons of time and costs of achieving a desired level of improvement can yield an answer, but first they need to know how ranges respond and how long it takes.

No single level of ecological condition will suffice, as the "break-even point" between methods varies as prices and costs vary.

Our technicians need to know a great deal more about alternative methods for the control of mesquite, creosote bush, and other desert shrubs in the Southwest. They need to know much more about brush species throughout the Western States. They need studies on the invasion or reinvasion of so-called "undesirable" species. They need more effective chemical and mechanical weed control measures.

An especially pressing problem is the reinvasion of wheatgrass seedings by sagebrush and rabbit brush. One of the needs mentioned to me is an economic comparison of the costs and returns of alternative methods of preventing the invasion of seedings by brush.

Increased emphasis is being given to wildlife management on the public lands. Our technicians report a void in the available knowledge concerning habitat manipulation. Suggested topic of research is the rehabilitation of depleted game ranges, including revegetation which adapted species on the lower ranges and protection from hazards such as overgrazing and insects.

Others are the influence of game use on plantings of forage plants and forest trees, and provisions for control of use, and the effect of brush control by chemical and other means on wildlife habitat.

Still another is the effect of livestock fences on game production, especially the influences on migration and population.

Our technicians also say that they would like to learn of methods of evaluating benefits from removal of undesirable species from watersheds in the Southwest and California. They are concerned with the relationship between plant cover, grazing use intensity, infiltration rates, runoff, and sedimentation; also the effect of fire on watersheds, including changes in plant cover, runoff, and sedimentation and means of rehabilitating various types of sites.

Another question is the relation of rodents and rabbits to rangeland production. I am told that little has been developed concerning the basic ecology of these animals in relation to predators and land management practices.

Under the heading of range economics were listed such standard topics as the evaluation of on-site and off-site benefits from improvement work, such as brush, woodland or tree manipulation on watersheds; and benefit-cost analysis of watershed improvement projects.

It occurs to me that these needs for economic analysis, rather than appearing at the end, probably should have appeared at the beginning. The opportunities for social science research in relation to public lands seem to be almost unlimited.

Our Bureau and the Forest Service have just received a report of research on the economic relationship of grazing fees to the incomes of western ranches. We sincerely appreciate the efforts of the agricultural experiment stations personnel who cooperated with the Economic Research Service on this project.

Our forestry program is also vitally concerned with research and the development of new program approaches and methods. All programs are undergoing major changes: Purposes are adjusting to the needs of an industry which is in turn adjusting to changing resources and markets; scarcity also is forcing a great refinement in our controls, understandings and methods of managing the forests.

A great deal of silvicultural research tailored to western Oregon conditions is needed. For example, research in timber growth acceleration is needed.

Methods for second growth management also need development or improvement. For example, what is the best type of road network for thinning second growth? As the problems and methods become more complex it is inevitable that the margin of return per dollar spent will shrink. Therefore, it is important that economic and cost factors be incorporated in this research and development effort.

The question of dissemination of research results has been raised.

My observation is that it is not difficult to translate research findings into action programs in our Bureau. The personnel acquainted with a particular cooperative research project normally follow the work closely. When they receive the reports, they tend to disseminate the information. The professional societies perform yeoman service in this regard.

At the same time, I am sure that there is room for improving communications. We have a duty to communicate to interested researchers our research needs. We ask that research agencies bring the results of research to our attention.

By working compatibly in this manner, I believe we can do our part to help meet the conservation crisis of the 1960's.

HERBERT HOOVER AT 88: A LEGITIMATE AMERICAN LIBERAL

Mr. MUNDT. Mr. President, all good Americans unite in congratulating former President Herbert Hoover on the occasion of his 88th birthday. This great American is destined to go down in history as one of America's outstanding public servants and one of our country's greatest Presidents. Even at 88, he continues to be active in his country's service to which he has already devoted over 48 years of his adult life.

Perceptive George Sokolsky is one of the current observers of the American scene who has correctly appraised Herbert Hoover for the true American liberal that he is. I ask unanimous consent that his column in today's Washington Post be printed in the body of the RECORD at the conclusion of my remarks.

In saying "Happy birthday, President Hoover," I wish to associate myself with George Sokolsky's praise of President Hoover. Unlike today's "20th century Tories" who interpret "liberalism" to mean the concentration of political and economic power in the hands of the central state in a direct throwback to the concepts of yesteryear's reactionaries, Hoover has always been an advocate of expanded freedoms and opportunities for the individual citizen. In other words, the Hoover brand of liberalism—true American liberalism, if you please—puts its faith in the individual citizen instead of in the central state. Hoover believes in the people rather than in the politician as the element in our American life which should be protected, preserved, and promoted.

No other American President since Teddy Roosevelt has been more progressive in his thinking and his programs than Herbert Hoover when the record is examined on the basis of American liberalism and American progress.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

HERBERT HOOVER AT 88

(By George E. Sokolsky)

It is now 48 years that Herbert Hoover has devoted all the hours of his life to public service. It is the record of a man whose acceptance of public responsibility has been almost priestly in character. He has asked for no return, for no thanks, for no recognition for services done.

Not all of Herbert Hoover's efforts have been successful; but they have all been motivated by selfless recognition that each man is his brother's servant.

It is not surprising that reaching the great age of 88, Herbert Hoover should be an honored and beloved man. Even those who bore him enmity for the depression of 1929 have long come to recognize that in Herbert Hoover, as President, we had not a politician who twisted and turned with the tides of popularity, but one who was guided by the foundation principles of our civilization, by the natural law and by the Constitution of the United States.

Herbert Hoover has never been a radical or a reactionary. In the 19th century, he would have been regarded as a moderate liberal, of the order of John Stuart Mill; in the 20th century, he would be called a conservative.

The 19th century liberal believed in the expansion of individual human rights and benefits. He put an end to child labor, he gained the vote for an increasing number of persons; he attacked the concept that women were chattel; he fought against slavery and abolished it in most places. His slogan was equality of opportunity for all of mankind.

But the 19th century liberal differed from the 20th century liberal in one basic essential: the 19th century liberal believed that by the expansion of the liberties of the individual, by increased access to education, by equality of economic opportunity, the individual would contribute his share to the perfection of society.

The 20th century liberal has found this process too slow. He has turned to Government as the vehicle of achieving all good. He has expanded the powers and activities of Government. He has reduced the possibility for equality of opportunity by burdening the individual with taxes which, in America, are bringing the economy to a standstill.

In his anxiety to solve all human problems speedily, the 20th century liberal has lost the meaning of the family system. He has substituted for parental solicitudes a pseudoscientific sociological intervention in the family and a psychiatric supervision of morals. The evil results of this are statistical in increased divorces, broken homes and juvenile criminality.

In 1962, dissatisfaction with the product of 20th century liberalism is widespread. Young people do not like the world in which they find themselves. Many become Communists; others declare themselves to be various types of conservatives (some without definition); still others have joined various extremist rightist radical movements. Others, like the beatniks, turn to sexual escapism as a way of life.

These are manifestations of youthful reaction to an unsatisfactory way of life.

In this changing and confusing world, Herbert Hoover stands as a monumental moral force, the solid representative in our land of the basic principles of 19th century liberalism. He has brought into the 20th century the Quaker ideal of the goodness of man in the love of God. This concept is not humanistic; it is deistic, for man cannot stand alone in a changing world.

Herbert Hoover's life is a Horatio Alger story. The orphaned son of a blacksmith and a seamstress, he became a great engineer, the feeder of the human race, Secretary of Commerce and President of the United States. He heads the Boys Clubs of America, perhaps to help give other boys what he missed as a boy. He is the author of many important historical volumes and is now engaged in a great work on international relations.

COOPERATIVE EXPANSION IN THE EDUCATIONAL SYSTEM

Mr. MORSE. Mr. President, in the July 25, 1962, issue of the Portland Oregonian there is an article setting forth the objectives of the Oregon State Board of Higher Education which will guide the institutions which make up the State system through the vast growth of responsibilities which can be expected in the years ahead.

The need to provide adequate academic facilities to train our young people is not peculiar to the State of Oregon alone. Rather, it is a condition which must be faced in every State in the decade ahead. I have called attention to the 11-point program of Chancellor Roy E. Lieuallen as set forth in this article because of my belief that these objectives are such as might be reviewed with profit by educational authorities in other States.

Mr. President, I ask unanimous consent that the news article containing Chancellor Lieuallen's draft statement be printed at this point in my remarks.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

EDUCATORS VIEW PLANS TO EXPAND PROGRAMS

SOUTHERN OREGON COLLEGE, ASHLAND.—The State board of higher education plans to adopt a statement of objectives reflecting the vast growth of college and university responsibilities in recent years.

The proposed statement recognizes among other things the explosion of knowledge, the increasing importance of graduate study and research and the development of cooperation among institutions and between them and other education agencies.

The board received a draft of the statement at its meeting here Tuesday and heard endorsements from several institutional presidents. It expects to study the statement further at its next meeting in September.

MILLAR EXPLAINS CHANGE

Portland State College President Branford P. Millar noted that when Oregon's unified higher education system began operations in the early 1930's it had a restrictive role in avoiding duplication of educational programs.

Today, Dr. Millar said, there is instead a sense of cooperative expansion in the system.

Chancellor Roy E. Lieuallen, the board's executive officer, discussed these 11 objectives in the statements:

1. To provide higher education opportunities "for as many as can profit therefrom," and maintain admission standards, tuition charges and scholarships accordingly;
2. To provide a general education for all students throughout the 4 undergraduate years instead of just in lower division programs, in response to the world's increasing complexity and rate of change;
3. To be selective in allocating undergraduate and graduate professional education among the State institutions;
4. To continue the rapid expansion of graduate study opportunities;
5. To make significant contributions to the advancement of knowledge through encouraging and developing scholarship and research;
6. To maintain a favorable climate of free inquiry and learning;
7. To make available to Oregon citizens the results of research, various services and such resources as libraries and museums;
8. To develop a comprehensive program of self-study to assure efficient and effective programs and to provide a basis for future planning;
9. To provide Oregon's citizens with opportunities, both formal and informal, for continuing education throughout life;
10. To coordinate the system's education program in such respects as avoiding unneeded duplication, encouraging cooperation between institutions, recognizing regional needs, and the institution's varying roles and encouraging as much institutional autonomy as needed;
11. To develop cooperative ties with public schools, community colleges and private colleges and universities.

The statement also includes thumbnail sketches of each institution's role in the system. The University of Oregon, for example, will remain the citadel for liberal arts, while Oregon State University, though offering some liberal arts, will be oriented primarily toward the sciences.

Portland State College's primary role will be to meet the needs of the Portland metropolitan area.

WE ARE SAVING OUR VANISHING SHORELINES

Mr. ENGLE. Mr. President, in the July 24 issue of the Sacramento Bee an excellent editorial appeared under the heading "This Could Be Greatest Heritage We Can Leave." The article contains an encouraging account of the progress that has been made in conservation and recreation programs under the leadership of President Kennedy and Secretary of the Interior Udall.

Last year Congress established under the national park system the Cape Cod National Seashore. Final approval is expected soon on the bill I introduced to authorize the Point Reyes National Seashore in California. And the prospects are excellent for passage this year of the legislation establishing the Padre Island National Seashore Park on the gulf coast. It has been 24 years and an increase of 52 million in population since a portion of our rapidly vanishing ocean shorelines has been set aside for the recreational use of the people.

Approval of the three national seashore projects clearly demonstrates that there is a strong resurgence of interest in the conservation of our country's natural resources. Credit for the projects can be shared by Congress and the administration with the large number of civic organizations who have played an important part in stirring up concern for our disappearing wilderness areas and shorelines.

I commend the editorial to the attention of my colleagues and ask unanimous consent that it be printed in the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

This Could Be Greatest Heritage We Can Leave

Tens of millions of Americans are vacationing this summer in the wooded mountains and at lakes and seashores and if they find things are a bit crowded in spots it is only a sketchy preview of what conditions will be come the year 2000.

Not only will the population of the United States have doubled by then but it is almost certain people will have more leisure to spend in the recreational areas and better means of transportation to get to them.

This is the principal reason why President John F. Kennedy, Secretary of the Interior Stewart L. Udall and others in the administration are putting forth one of the most concentrated efforts in history to embark the Government on a program designed to meet the recreational needs of the people in the years to come.

The preservation of the primitive mountain areas, the lakes and the seashore may be the greatest heritage the present generation can provide for those to come.

Future generations will make their own civilization, build their own monolithic skyscrapers, pave their own roads, develop their own transportation and write books and music. But once the forests are denuded, the lakes and rivers despoiled and the seashores turned into subdivisions and honky tonks, these great national assets will be lost beyond recovery and restoration.

In Congress, with administration backing, are a bill to create wilderness areas which has been passed in the Senate and is pending in the House, another to establish a land conservation fund for setting aside new lands for recreation and a third providing for an appropriation of $50 million to aid the States in planning recreation areas for the weekender as well as the vacationer. Also, on the way to final approval are measures designating some seashore areas, including Point Reyes in California, as national parks.

All of the proposals should be approved before the zero hour for the preservation of these areas arrives. And those who ride through the forests or enjoy an unspoiled mountain lake or fish on the bank of a river should be concerned in seeing that America is not defaced and that generations to come will have the opportunity to find solitude and recreation.

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The Chief Clerk proceeded to call the roll.

Mr. PROXMIRE. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDENT pro tempore. Without objection, it is so ordered.

McGRAW-HILL EXPERT DEMOLISHES ARGUMENT THAT BUSINESS HAS LOST CONFIDENCE IN KENNEDY ADMINISTRATION

Mr. PROXMIRE. Mr. President, Douglas Greenwald, manager of the department of economics of the McGraw-Hill Publishing Co., which publishes Business Week and many business trade journals, appeared before our Joint Economic Committee yesterday and demolished the argument that has been used on the floor of the Senate this week that business is losing confidence in the Kennedy administration.

In the course of a very excellent presentation Mr. Greenwald said:

> Our special checkup in late June points up the fact that business in general had not cut back or canceled plans for investment in new facilities in 1962 as a result of the sharp drop in stock prices in May and June or the so-called loss of business confidence. * * * In most cases where investment plans were lower than they were earlier, the reasons given had absolutely nothing to do with a lack of business confidence or the drop in the stock market.

Greenwald went on to point out that in many cases business plans for expansion had improved in recent weeks.

Incidentally, Mr. Greenwald concluded that a tax cut now is unnecessary.

Confidence in the administration of President John F. Kennedy is a great asset of the free world. The inquiry by this topflight business publishing organization should lay fears to rest.

I ask unanimous consent that the statement by Mr. Greenwald be printed in the Record at this point.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Statement to the Joint Economic Committee of Congress, August 8, 1962, on the State of the Economy, With Special Reference to Business' Plans for New Plants and Equipment

(By Douglas Greenwald)

My assignment is to discuss the current and short-run health of the economy with particular reference to the key area of the economy—private investment in new plants and equipment. My contribution, for the most part, will be based on recent important factual information from McGraw-Hill's surveys of business' anticipations. And results of these surveys indicate that capital investment intentions by business constitute an element of strength in the business outlook.

In my department of the McGraw-Hill Publishing Co. we have made surveys of plans for business' spending on new facilities for 15 years. We also maintain a monthly index of new orders for nonelectrical machinery which reflects the new incoming business of producers of capital equipment, and a quarterly forecast index of machinery orders, which reflects the new incoming business of for four quarters ahead. The indexes cover a relatively small number of large manufacturers of machinery.

We generally survey business on its plans for domestic investment twice a year—in the spring and in the fall. The spring survey is very comprehensive and is geared to longer-range plans; the fall survey covers fewer questions and is geared to short-range plans.

In October 1961 we carried out our fall survey of business' plans for 1962 and 1963 Our comprehensive survey of business' plans for 1962 to 1965 was made during March and early April of this year. At the end of June we carried out a special checkup of plans.

The McGraw-Hill checkup of spending plans showed that business, in general, is planning to invest approximately the same amount in new plants and equipment in 1962 that it reported to us in our comprehensive survey taken earlier this year, and a considerably higher amount than it anticipated last fall. The table below shows the results of the three McGraw-Hill surveys and actual 1961 capital expenditures as reported by the U.S. Department of Commerce.

Business plans for capital spending in 1962

[In billions]

Industry	1961 actual [1]	1962 planned—		
		As of October 1961	As of March and early April 1962	As of end of June
All manufacturing	$13.67	$14.50	$15.41	$15.30
Mining	.98	.99	1.09	1.08
Railroads	.67	.64	.85	.87
Other transportation and communications	5.07	5.03	5.50	5.50
Electric and gas utilities	5.52	5.87	5.74	5.82
Commercial	8.46	8.72	9.39	9.39
All business	34.37	35.84	37.98	37.96

[1] U.S. Department of Commerce.

Our fall 1961 survey indicated that business had plans to invest $35.84 billion in 1962, an increase of about 4 percent over 1961. Over the past several years our fall surveys of business' plans have always provided the correct direction of change in investment as well as fairly reliable indications of the degree of change.

The McGraw-Hill comprehensive survey of business' plans for new plants and equipment taken early this spring indicated that business firms had raised their investment sights significantly from the fall. Planned investment for 1962 was $37.98 billion, up 10.5 percent over 1961. During the years that we have been making these spring surveys, they have proved remarkably accurate in indicating the trend of over-all investment for the year ahead, except in 1950, when all plans were altered by the Korean war. During the last decade, the average error between the McGraw-Hill survey's planned percentage change and the Department of Commerce's percentage change for actual data is only 3.5 percent. We do not conclude from this experience, however, that we have a sure-fire forecasting device. We claim nothing for the results of our surveys except that they report present plans. We heavily emphasize the proposition that our surveys are not promises of what is actually going to happen.

Our special checkup in late June showed that business planned to spend $37.96 billion on new plants and equipment this year, up 10.4 percent over 1961. This checkup was based on plans of a substantial cross section of business, accounting for 35 percent of total capital investment. For the most part the results reflect the plans of large companies. This recheck provided no indication of what small companies were doing about their investment. To begin with, investment plans of small companies were not up as much for 1962 as those of larger companies. The downward movement of the stock market in May and June may have had some impact on their investment plans. However, small companies account for a relatively small percentage of total capital investment.

Our checkup pointed up the fact that business in general had not cut back or canceled plans for investment in new facilities in 1962 as a result of the sharp drop in stock prices in May and June or the so-called loss of business confidence.

Manufacturing industries overall planned to invest $15.3 billion this year, down about $110 million from plans reported to us in the spring. Steel, machinery, electrical machinery, stone, clay and glass and miscellaneous manufacturing industries plan to invest less in 1962 than they did earlier. However, transportation equipment—aircraft, railroads, and shipbuilding—fabricated metal products and instruments, chemicals, rubber, and food industries plan to increase their capital expenditures this year more than planned originally.

Among nonmanufacturing industries, railroads and utilities planned slightly higher capital investment for 1962 than they did earlier, while the mining industry cut its plans.

About 80 percent of the companies that answered in our recheck indicated they had made no change in their 1962 plans for new plants and equipment. The remaining 20 percent indicated some changes in their planning. But this group was split right down the middle, with half increasing plans and half cutting them.

Among the companies indicating investment cut-backs, only a very few cited economic conditions as the reason. In most cases where investment plans were lower than they were earlier, the reasons given had absolutely nothing to do with a lack of business confidence or the drop in the stock market. Instead, technological delays and construction delays were the reasons given.

We should point out that in past years of high and rising business activity a large number of companies increased investment plans during the year. This has not been the case so far in 1962.

This recheck was taken before stock market prices began to recover, before margin requirements were reduced from 70 to 50 percent and before Revenue Procedure 62–21, with its more realistic depreciation guidelines regarding lives of machinery and equipment, became effective. It is conceivable that these three factors, along with the 7 percent tax credit for new machinery and equipment purchases, which Congress may soon make a part of the Nation's law, could result in higher capital expenditures at the end of this year than are now anticipated by companies and by business economists in general. However, it is my opinion that their impact on capital spending may be slow in coming.

We have some factual evidence on this point. In our spring survey, we asked the question: "If the administration's program of tax incentives for investment were enacted, how much would this increase your capital expenditures in 1962?" Business as a whole indicated that it would raise its 1962 plans by only 1 percent, or about $300 million. Nine out of every ten companies replying indicated that they would not use such a program at all in 1962.

The fact that American business is going ahead with its investment plans for 1962 was not a surprise to us. It confirmed our belief that business' plans for new plants and equipment, once made for the year ahead, are generally carried out. In the past, wars, recessions, and booms have led to significant changes in investment plans. But in my view, we are not likely to be in any of these three situations this year.

Also, it makes good sense for businessmen to go right ahead with their modernization programs in 1962. Business firms reported to us in our recent checkup that this year's capital investment programs are stressing modernization, with the hope that these cost-cutting projects will result in better profit margins. In our earlier survey this year, manufacturers reported that they planned to devote 70 percent of their 1962 investment dollar to modernization. The reason for their concern is obvious. About 40 percent of U.S. plant and equipment dates back to before 1951, and nearly 25 percent goes back to World War II or even before that. These significant statistics were also revealed by our spring survey.

Only a very small percentage of investment is going for new capacity this year. Most of this is going for capacity for new products which are an important part of the payoff of industry's tremendous expenditures on research and development during the last decade. Little investment is going for additional capacity for existing products.

Based on the McGraw-Hill measures of manufacturing operating rate, we estimate that manufacturers, on the average, are currently utilizing 84 percent of their capacity, whereas they prefer to operate at about 90 percent. Therefore, it is true that industry has a modest amount of excess capacity at present. And the gap between the operating rate and the preferred rate may widen if manufacturing output were not to continue to expand during the rest of the year.

As this committee well knows, my Department compiles the only direct measure of manufacturing capacity. Only a few months ago I testified on the McGraw-Hill measures of capacity before the Subcommittee on Economic Statistics of the Joint Economic Committee. In its report on "Measures of Productive Capacity," the committee recommended and I quote, "an exploration of the McGraw-Hill techniques would offer an excellent opportunity for a joint public-private project in which McGraw-Hill, the pioneer of this technique, might work in cooperation with a suitable government agency." We at McGraw-Hill are giving this project serious consideration.

Another piece of evidence that confirms our belief that investment will continue to expand throughout the rest of this year is provided by the quarterly McGraw-Hill Nonelectrical Machinery New Orders Forecast Index. For today's hearings, I have had computed, earlier than usual, a preliminary estimate of our forecast index for the four quarters ahead. Although this index does not provide a precise gage of the future level of new orders, it provides an indication of relative changes in the confidence of machinery manufacturers.

Capital goods manufacturers now expect to book a far bigger dollar volume of new orders in the current quarter than they ever did before. They anticipate that new orders will subsequently fall off and that the decline will continue into the first quarter of 1963. They forecast that the second quarter of 1963 will see a slight pickup in their new orders.

The group of machinery manufacturers reporting forecasts to us in our current quarterly survey are slightly less optimistic about prospects for new orders for the last two quarters of 1962 than they were 3 months ago. One reason for decreasing optimism about the immediate future among this particular group of companies is the fact that their actual incoming new orders in June dropped by about 10 percent. But despite this sharp drop for 1 month, their anticipations for the last half of 1962 are only off about 2 percent from what they were back in April. And most of the returns for this calculation arrived in my office before the new procedure for depreciating machinery became effective.

Corporations now have a high enough rate of cash flow to finance a considerably higher level of investment than is now planned for 1962. Our comprehensive survey taken early this year showed that businessmen anticipated increasing their volume of cash flow, composed of retained earnings and depreciation, at a faster rate than their investment in new plants and equipment. At that time they expected to increase cash flow by 14 percent and investment by only 10.5 percent.

It is my belief that the McGraw-Hill data on plant and equipment expenditures indicate that this key segment of the economy will continue to expand this year. If plans hold up for the year as a whole, then the quarterly rate of capital expenditures may be expected to reach $39 billion in the fourth quarter compared with a rate of about $37 billion in the second quarter.

I now turn briefly to other major areas of the economy: Inventories, consumer spending, housing, the net export balance, and Government spending:

Inventories are currently being built up at a much more moderate pace than earlier this year. In the first quarter, business was accumulating inventories at an annual rate of about $6.7 billion. In the second quarter the rate dropped to about $3.5 billion. In the current quarter, it probably is still lower. The rate of addition to inventory will continue to slow down during the rest of the year. However, considering the relatively low inventory-to-sales ratios, it is unlikely that business will reverse its policy soon and let its inventories run off. However, a declining rate of inventory addition means that the negative impact on our Nation's total dollar volume of business has already taken place.

Consumer expenditures, which are by far the largest sector of the total business picture, are dependent on many psychological factors. I will leave the discussion of this sector to George Katona, except to note that as long as personal income rises, and at this time we cannot see any reason to expect it to turn down before year end, consumer spending on goods and services may be expected to follow the same general path.

Housing is booming. Private starts in the second quarter were exceedingly high at an annual rate of nearly 1.5 million units, despite a drop in June. And because of the lag between a start and put in place construction, we can look for the dollar volume of new housing construction to break through previous record highs.

The net export balance is just about holding its own. Exports have been holding up very well, while imports have not increased significantly. We do not expect to see a significant change from the current rate of surplus of exports over imports during the rest of the year. Thus the net export situation will have a neutral effect on the economy in the months ahead.

This year's Federal budget guarantees a modest rise in Federal spending right through the end of the fiscal year, June 30, 1963. However, the increase during the current fiscal year will be considerably smaller than the big gain registered during fiscal 1962. Meanwhile, State and local spending on highways, schools and other projects is due for a large increase over the coming months. States and cities are taking advantage of relatively easier money markets to issue a record volume of construction bonds.

In conclusion, the pluses and minuses of the various sectors of the economy add up favorably for the rest of the year. There is nothing now in sight which clearly indicates that in the next few months there will be a marked change in the direction of the economy.

FIRM AND ALOOF POLICY TOWARD RED CHINA VINDICATED

Mr. PROXMIRE. Mr. President, the evidence that the free world is beginning to win, is increasing daily in East Berlin, Cuba, and throughout the Communist world, where failure is becoming more and more constant.

Red China is perhaps the best example, Mr. President, and yesterday on the front page of the New York Times, the brilliant correspondent Tad Szulc spelled out, as he put it, the "apathy, dejection, and demoralization in the midst of economic disaster of the Chinese people under Communist China."

The most heartening part of the Szulc report is this passage:

> In the opinion of the officials surveying the situation, China's internal difficulties justify the continuance of a U.S. policy of firmness and aloofness.

In view of the further report that Red China, in spite of the terrible hunger of its people, is diverting grain shipments to Cuba for "political reasons," and, most importantly, that revolutions come from just this kind of popular desperation, this policy of firmness and aloofness makes abundant sense.

I ask unanimous consent that the article be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHINESE FOUND APATHETIC AS ECONOMY DETERIORATES

(By Tad Szulc)

WASHINGTON, August 7.—The mood in Communist China is one of "apathy, dejection and demoralization" in the midst of economic disaster, U.S. Government experts on Chinese affairs reported today.

In the most up-to-date available assessment of the situation on the Chinese mainland, these officials said that the Chinese economy continued to deteriorate.

Moreover, the officials indicated, there was no immediate sign of a leveling off, even if this year's grain crop is slightly improved.

The official stressed that affairs in China might be worse than was realized abroad. The delay in communications and the absence of reliable statistics to guide the Peiping regime as well as foreign observers were believed responsible for "the assessment lag."

In the opinion of the American experts, there probably is no starvation in China. However, they believe that food shortages have lowered the life expectancy in many regions.

POPULATION GROWTH HALTED

The officials said that the Chinese population, now estimated at 700 million might have ceased to grow in some parts of the country and might be decreasing.

They expressed the view that the psychological and political impact of the failure of the 1958 "great leap forward" might be more serious than the economic hardships.

Because the Chinese people had been led to expect so much, officials said, the letdown has caused "apathy, dejection, demoralization, despondency and despair."

They said the impact of this despondency on the national production was "tremendous." The incentive of allowing farmers to cultivate small private plots is producing only limited results, they said, because "runaway inflation" in some areas and the absence of purchasable goods gives the people "nothing in return."

As a symbol of China's economic failure, the U.S. exports cited the regime's policy of forcing people to return from the cities to the countryside. These young people originally had been moved into the urban centers to participate in the industrial expansion.

Despite the hardships, it is believed here that there is "no mood of rebellion" in China. Officials said that the population, though it would welcome a change of regime was "cowed" by the military and security apparatus.

However, the U.S. experts said, "it is conceivable" that the Communist regime may fall in time. These officials expressed the belief that a change might be "evolutionary" rather than revolutionary. The key to the whole situation, the officials said, is how much punishment the Chinese people can take despite their traditional stoicism.

FIRM POLICY BACKED

In the opinion of the officials surveying the situation, China's internal difficulties justify the continuance of a U.S. policy of firmness and aloofness.

These officials indicated that it was useful to keep open the contacts between the United States and Communist China through the periodic meetings of the Ambassadors of the two countries in Warsaw. These conversations have been going on for 8 years.

The estimate by American officials of the differences between Communist China and the Soviet Union is that, although the two powers recoiled from an open break, relations "are apt to stay bad."

NATIONAL INTERESTS CLASH

Basically, the problem between Moscow and Peiping was regarded as one of conflicting national interest. The widely publicized ideological differences were believed to be merely the trappings for the dispute.

The experts noted that under agreement, as well as under the 1961 Soviet-Chinese trade 1962 protocol negotiated several months ago after long and obvious difficulties, China was required to export to the Soviet Union much more than it would receive in Soviet shipments. The Soviet Union is extracting these payments, officials said, to settle outstanding debts.

Communist China's foreign-exchange position is deteriorating badly and it needs all its exportable products for sales on world markets. However, statistics made available today in London disclosed that last year China had to ship $185 million worth of goods to the Soviet Union over the level of its imports.

Officials here commented that this imbalance demonstrated the degree to which Moscow was pushing its Chinese associate.

Communist China desperately needs foreign exchange to purchase grain abroad to make up in part its food deficits. Last year China bought grain in Australia, Canada, and France. Officials here said that Peiping foreign-exchange position was so bad that its world credit was being impaired.

However, the belief here is that, despite food and currency shortages, China will continue to divert grain shipments to Albania and Cuba because of political reasons.

Last year, the Chinese diverted some of their Canadian and French purchases to Albania following Albania's break with the Soviet Union. The interruption of trade and aid programs from the European Soviet bloc to Albania placed China in the position of the principal food supplier to Albania.

Also in 1961, China shipped 100,000 tons of rice to Cuba in exchange for sugar. The Chinese political interest in maintaining an economic presence in Cuba and possibly widening Peiping's ideological influence in Latin America were seen as the reason for sacrificing precious rice reserves in helping the equally chaotic Cuban economy.

ADMINISTRATION TURN TO HIGH INTEREST RATES DEPLORABLE

Mr. PROXMIRE. Mr. President, in one of the most significant economic newspaper accounts in a long time, the New York Times reported that the administration appears to be intent on a policy of tight money now and at least in the near future.

In writing this article, Paul Heffernan documents it in spades. He shows how the administration is not only following a policy of hiking short-term interest rates, but long-term interest rates also. He shows that the Treasury, as well as the Federal Reserve, is pursuing this policy by "financing far more long-term debt than any other postwar administration effectuated in a comparable period."

Mr. President, the excuse for following this policy that is sure to exert a drag on the economy and slow down employment is that it is necessary to protect our balance of payments. Yet not a single study has been made, despite constant urging of our Joint Economic Committee, to establish that the level of our interest rates significantly affects our balance of payments. Indeed, both Chairman Martin, of the Federal Reserve Board, and Mr. Roosa, of the Treasury, the two men most responsible for our monetary policy, have indicated in statements and writing, which I have frequently cited on the floor and elsewhere, that the effect of interest rates on the balance of payments is secondary and not of serious significance.

Mr. President, I ask unanimous consent that the article by Mr. Heffernan be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

KENNEDY REVISES HIS FISCAL GOALS

(By Paul Heffernan)

Financial specialists eager to make true readings of the economic mind of President Kennedy are beginning to sense that their Rosetta stone may be found in the bond market.

There has been no deviation in the generalizations about economic affairs that President Kennedy has made since he took office in 1961. At that time he was concerned about unemployment. Still, he disavowed any idea of devaluing the U.S. dollar and he pledged that any growth-promotion enterprises of his administration would not cause serious inflation. These White House commitments stand today.

But there are significant changes in emphasis. And the shifts in the Presidential accent are perhaps registered most emphatically in the bond market, where changes in the interest rate—that is, the earning power of savings—are communicated at once to the going value of bonds and other fixed-income debt investments.

Basic interest rates in the United States today are not tending lower, despite the pause in business and the persistence of the 5,300,000 unemployment float that attended the Kennedy inauguration. If anything, interest rates seem fated to hold at levels measurably above those of World War II or to work even higher.

EFFECT OF REFUNDING

The interest of the Kennedy administration in a steady or even higher interest structure—both at short and long term—was attested last week by the outcome of a $8,800 million financing operation, most of which was intended to refund maturing debt, and the rest to raise about $1 billion in new money.

All of the money could have been raised readily at short term at a cost of 3½ percent, as was $6,750 million on 1-year certificates of indebtedness. Still, the Treasury saw fit to borrow $1,695 million of the total on bonds due in 6½ years at a cost of 4 percent, and $316,524,000 on bonds due in 30 years at a cost of nearly 4¼ percent.

The reason for the long-term borrowings at rates closely approaching the highest incurred by the Treasury in the postwar period is perhaps best summed up in the declaration made by the Federal Reserve Bank of New York last February in its annual report.

"As an objective of monetary policy," the influential Second District Reserve institution said, "the defense of the international value of the dollar has come to occupy a position alongside of the goal of stable economic growth."

"OPERATION NUDGE" NOTED

In retrospect, it is hard to realize that only a brief year before the New York Reserve Bank made this declaration, the Reserve System had made an ineffectual effort to nudge the long-term interest rate downward. This effort, it was widely suspected, was in deference to White House advisers who held that business enterprise stands to be stimulated by an abundance of cheap money and to be discouraged by any rise in the wages of saving above a token minimum.

It is likewise hard to realize that in the brief period since the futile trial of "Operation Nudge" in early 1961, the Kennedy administration has contrived the sale, through advance refunding or otherwise—of more than $7,500 million of long-term debt.

This is far more long-term financing than any other postwar administration effectuated in a comparable period. In the 16 years since the end of the war, the Treasury has effectuated long-term financing totaling $20 billion. More than one-third of this was done in the 19 months of the Kennedy administration.

A close reading of the language of the Presidential declarations will confirm the shift in emphasis that has been taking place since the 1961 inaugural.

THE 1961 POLICY STATEMENT

In February of 1961, for example, the President spoke this way about monetary policy and the economic situation:

"We have the problem of whether the only way we can prevent an increase in the cost of living is to have 5½ million people unemployed and have a substantial percentage of our capacity unused. The question is whether we can maintain a reasonable purchasing power and the cost of doing business with full employment. * * * I'm not satisfied to have the cost of living remain constant only by having the economy restrained. * * * We have no intention of devaluing the dollar.

"In all of the programs that we have put forward we will pay due care to the problem of preventing any stimulation of the economy resulting in an excessive increase in the cost of living."

This 1961 language, with its reference to "reasonable" purchasing power and an "excessive" increase in the cost of living, was not reassuring to disciples of monetary rectitude.

NONINFLATIONARY EXPANSION

Any inflationary overtones of the 1961 diction were muted significantly, however, in the President's annual economic report, submitted about a year later. He said in January 1962:

"We must seek full recovery without endangering the price stability of the past 4 years. The experience of the past year has shown that expansion without inflation is possible. With cooperation from labor and management, I am confident that we can go on to write a record of full employment without inflation. * * * Monetary and related policies can be used to assure a flow of investment funds which will transform the economy's present capacity to save into future capacity to produce. Monetary and debt management policies must continue to protect the balance of international payments against outflows of short-term capital."

President Kennedy's Yale commencement speech last June, again disclaimed inflation, but saw fit, nevertheless, to classify as a "complexity" the conflicting current theories as to the usefulness of low and high interest rates in achieving domestic and international financial stability.

Of all the Presidential statements about money, the most reassuring to the fiduciary institutions that hold the savings of the American public in Treasury securities and other fixed-income investments was that that he gave at his July 24 press conference.

ROLE OF THE DOLLAR

The significant statement was not so much the President's renewed disavowal of any intention of devaluing the U.S. dollar as was his insistence that the U.S. dollar must stay on as the world's chief reserve currency. He said:

"If the United States refused to cash in dollars for gold, then everyone would go to the gold standard * * *. We would all be dependent upon the available supply of gold, which is quite limited. Obviously it isn't enough to finance the great movements of trade today and it [a U.S. refusal to pay out gold to foreign holders of U.S. dollars] would be the most backward step that the United States has taken since the end of the Second World War."

The implication of this latest Presidential commitment is that the U.S. dollar, if it is to continue to do the work of gold throughout the world, must be maintained "as good as gold."

This must be reassuring to foreign interests holding dollar balances. It must be reassuring, too, to pension funds and life insurance companies here who, as custodians of the public's savings, keep most of the funds invested in fixed-income securities.

Economic indicators

WEEK ENDED AUG. 4, 1962

	Last week	Prior week	1961
Commodity index	80.6	80.3	84.7
Money in circulation (thousand dollars)	33,811,000	33,901,000	32,450,000
Commercial, industrial, and agricultural loans (thousand dollars)	34,368,000	34,434,000	32,488,000
Steel operating rate (percent)	51.5	48	62.2
Steel production (tons)	1,504,000	1,398,000	1,818,000
Motor vehicle production	136,914	161,812	45,469
Daily oil production (barrels)	7,262,560	7,264,810	6,945,210
Freight carloadings	567,131	558,246	591,301
Electric power output (thousand kilowatt-hours)	16,635,000	16,759,000	16,061,000
Business failures	269	286	319

Statistics for commercial-industrial-agricultural loans, carloadings, steel, oil, electric power and business failures are for the preceding week and latest available.

Commodity index, based on 1957–59=100, and the consumers' price index, based on 1957–59=100, are compiled by the Bureau of Labor Statistics. Industrial production is Federal Reserve Board's adjusted index of 1957=100. Manufacturers' inventories and personal income, at annual rate, are reported by the F. W. Dodge Corp. Imports and exports as well as employment are compiled by the Bureau of Census of the Department of Commerce. Money supply is total currency outside banks and demand deposits adjusted as reported by Federal Reserve Board. Business failures compiled by Dun & Bradstreet, Inc.

THE GOVERNMENT COPYRIGHT RACKET

Mr. PROXMIRE. Mr. President, the principles of copyrighting undoubtedly are a mystery to most citizens. Yet copyrighting plays an important role in the rights, privileges, and practices of publishing printed and other material. One of the functions of the copyright is to protect the rights of the author of the material. Permission to copy or reproduce a work must be given by the author of a copyrighted work, or by his agent. In that sense, the copyright is primarily restrictive. It restricts the ease and extent to which printed matter or other material may be copied. Hence the term "copyright."

Under the 1909 copyright law of the United States, which is still in effect, one category of published material is specifically withheld from copyrighting. It is publications of the U.S. Government. The law states (17 U.S.C. sec. 8):

> No copyright shall subsist * * * in any publication of the U.S. Government, or any reprint, in whole or in part.

In spite of this provision of law, there has been a growing tendency in recent years to copyright publications of the Government, publications paid for by the Government, or publications prepared by officials of the Government using information or material available to them in official capacities. I view this trend with some concern. A great many important publications prepared "of, by, and for" the U.S. Government have been copyrighted. The official Army military history of World War II, the history of the Atomic Energy Commission, and a huge number of publications prepared at Government expense by consultant organizations like the Rand Corp. are among these. Most recently, the official illustrated guide to the White House has been issued under copyright.

What the copyright does is limit the use that can be made of a publication. Permission to copy is restricted. It must be requested from, and granted by, the holder of the copyright. Interestingly enough, the copyright holder is not listed as "U.S. Government" as such, in these cases. Rather, a Government official, or the firm that published the book (at Government expense) or an organization composed of Government officials by virtue of their positions, holds the copyright. In each case, however, all the restrictions and safeguards intended to protect private authors apply.

Because of my concern about this matter, I recently wrote to the Register of Copyrights asking him to comment on these questions. In his reply to me, he indicated that the questions are significant, and that a careful study and review of the law is now underway. I would strongly hope that any copyright revision that is undertaken will very carefully consider the implications of permitting a variety of official or semiofficial publications to qualify for copyright. The answer to the question may not be a simple one. Where the rights of private individuals are affected, certainly any reform of the present law should be careful and cautious. But it is quite plain to this Senator that the present practice of freely granting copyrights to a broad range of publications of the Government, or financed by the Government, should be curtailed.

An article in the August 11, 1962, Saturday Review discusses this subject in some detail. I ask unanimous consent that it be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PROFITS FROM PUBLIC PAPERS: THE GOVERNMENT COPYRIGHT RACKET

(By Herbert Brucker)

(NOTE.—This article by Mr. Brucker appeared in the Saturday Review, August 11, 1962. Mr. Brucker is the editor of the Hartford Courant and chairman of the Freedom of Information Committee of the American Society of Newspaper Editors.)

It was November 19, 1863. An official procession, with President Lincoln on a horse too small for him, struggled out from Gettysburg toward the cemetery where lay the thousands who had died in the 3-day battle in July. When after 2 hours Edward Everett had finished his polished oration, the President arose, put on his spectacles, and looked down at a single sheet of paper in his hand. Fifteen thousand persons, or as many of them as could get near enough, for the first time heard the words: "Four score and seven years ago our fathers brought forth. * * *" The unexpectedly brief speech, varyingly received at the time, in due course took its hallowed place in the literature belonging to the Nation and, indeed, to the whole world.

Suppose it had been 1963 instead of 1863. Soon there would have appeared a book reproducing the Gettysburg Address among the papers, speeches, and statements of the President. And it would be marked up front, "Copyright 1963, by A. Lincoln."

Copyright? Doesn't that give an individual exclusive right to what is written? It does. How then can a public paper that belongs to the Nation become the private property of the man who happens to be President at the moment? It's impossible.

It should be impossible, that is. The 1909 copyright law still in effect today specifically says (17 U.S.C. sec. 8): "No copyright shall subsist * * * in any publication of the U.S. Government, or any reprint, in whole or in part. * * *" But despite what the law says, public papers are being copyrighted every day, in ever-increasing numbers. And nobody seems to care.

If you don't believe it, go down to your library or bookstore and take a look at a book published last January. Its title is "To Turn the Tide," and its author is John F. Kennedy. The subtitle reads: "A selection from President Kennedy's public statements from his election through the 1961 adjournment of Congress, setting forth the goals of his first legislative year." Two pages later you will find the notice, "Copyright 1962 by John F. Kennedy," and the statement, "No part of this book may be used or reproduced in any manner whatsoever without written permission except in the case of brief quotations embodied in critical articles and reviews."

That public papers should thus be transmuted into private property, which may be sold or withheld from the public at will, seems a contradiction in terms. Nevertheless it is being done, eagerly and widely, not only by Presidents but by officials and functionaries all the way down through the ranks of the bureaucratic hierarchy.

Please don't blame President Kennedy. The chances are that he did not even know it was being done in his name. He did not know about it, that is, until there appeared in the Washington Post of last January 3 an advertisement addressed to the President that asked: "What's the point of placing any type of restriction on the quotability of the public statements of a President of the United States?" Sure enough next day, from temporary White House quarters at Palm Beach, there came the report that this copyright on a book of the President's public papers "was a mistake that is being corrected in future editions."

How could such a mistake be made? Because violation of the law has grown so fast and so far that even the expert staff of the President seemed to have been unaware that there was anything inappropriate, let alone illegal, in thus quietly turning public papers into a source of private revenue. Book publishers take out a copyright as a matter of course. Naturally—since they benefit if their collections of public papers can have the same protection as private creations. And often the matter is made fuzzy because original and copyrightable material has been added. The Kennedy book, for example, has background comments by the editor and a foreword by Carl Sandburg.

The relevant point, however, is the copyrighting of what is plainly public property. And probably this practice would have gone on unnoticed to this day had it not been challenged by an individual who squawked, and who keeps right on squawking. He is M. B. Schnapper, editor of Public Affairs Press in Washington, a publishing house that issues pamphlets and books on contemporary social, economic, and political affairs. Understandably, Mr. Schnapper wants to make use of public papers when appropriate. And he has every right to do so, just as does any other citizen.

It was Mr. Schnapper who put the ad in the Washington Post that smoked out the error in copyrighting the Kennedy papers. He has been at this kind of thing for years, and by now his cry in the bureaucratic wilderness has been heard by a number of individuals who have taken alarm at what is going on.

There are two principal reasons for the burgeoning practice of putting a private copyright on the taxpayers' property. The first and most obvious one is the possibility of making money. And there is ample evidence that individuals in government service have in fact made money by acquiring property rights in, and then selling, the products of their official duties.

The other reason is that a copyright provides a means of censorship: "No part of this book may be used or reproduced * * *." As Maj. Gen. C. G. Dodge, the Army's Chief of Information, wrote Mr. Schnapper earlier this year, "The (Army historical) works were copyrighted at that time to prevent quoting of material out of content." In other words, if we in officialdom don't like the use you make of this public property that's yours as much as anyone else's we'll stop you.

Happily, General Dodge added that it would henceforth be the Army's policy that military histories issued in the name of the American people would no longer be copyrighted. But the incident serves as a reminder of the increasing tendency of people in government to regard the information they produce in the name of the public, and at the public's expense, as having somehow mysteriously become something other than public property. If it is valuable, it can be sold. Or if the records are better concealed—Billie Sol Estes is but the latest brilliant star in an expanding universe of government boners—then a copyright is one means of concealing them.

This practice of suppressing news generated by the Government accounts for the contemporary battle for freedom of information, or the right to know. It is the ancient battle for freedom of the press in modern trappings. For of what use is it to be free to print anything you like, if you can't get anything to print?

To answer that the copyright holder will remedy this by publishing is to miss the point. There shouldn't be any copyright. In fact, what is startling about the whole development is that the Government people who copyright public documents, when reminded that the law forbids the practice, tend to hold that they are right and the law wrong. The Office of Copyright in the Library of Congress actually has in the legislative works a report urging a change in the copyright law, one provision of which gets the camel's nose well under the tent. There should be, it says, "exceptions in unusual cases."

This turn of mind is a fairly recent development. The first time anyone dreamed that such a thing as the prohibition of Government copyright might be necessary was at the turn of the century. At that time one Representative James D. Richardson, a prominent Democrat from Tennessee, put together the addresses of the Presidents, including, of all things, Washington's Farewell Address and the Gettysburg Address. Yet, though the printing plates of his "Messages and Papers of the Presidents" had even been manufactured at public expense, Representative Richardson had the work published under his own copyright—and then took in $11,320 in royalties.

So unusual was this kind of thing—at that time—that there was a row in Congress. In the end there was a Senate investigation. The report said:

"Your committee thinks that copyright should not have issued in behalf of the messages, and that the law as it stands is sufficient to deny copyright to any and every work once issued as a Government publication. If the services of any author or compiler employed by the Government require him to be compensated, payment should be made in money, frankly and properly appropriated for that purpose, and the resulting book or other publication in whole and as to any part should be always at the free use of the people, and this, without doubt, was what Congress intended."

So virtue triumphed. But copies of the messages survive to this day, and researchers who find what they seek in the book may well be frightened about quoting because of the copyright. So it is with President Kennedy's "To Turn the Tide." The copyright is there, in print. Even if there are subsequent editions without it, the original notice that this is private property is in the libraries to warn the scholars of the future against using what it is their clear right to quote.

Another trouble is that, though the law specifies that there shall be no copyright on any "publication of the U.S. Government," it does not say what such publication is. Therefore the first need in any revision of the copyright law is a broad and precise definition that will prevent what the existing silence of the law encourages aggressive public servants to try to get away with.

Fortunately the issue has come to a head in a suit brought in 1958 by Mr. Schnapper and his Public Affairs Press against Adm. Hyman G. Rickover. Admiral Rickover, of course, is one of the outstanding public servants of our time. Without him we would have no atomic submarines. But that does not change the fact that he, too, has taken statements that he made as a public officer and thrown the mantle of private copyright over them.

The suit is not yet adjudicated. It went up through the ranks to the Supreme Court, and was sent back for more thorough review. The Supreme Court found that there were involved "matters of serious public concern" and "delicate problems" whose solution "is bound to have far-reaching import." The Court held further that the original judgment had been based not on the "adequate and full-bodied record" demanded by the complexities involved, but on a record "woefully lacking." Hence the trip back to the lower courts.

Pending the outcome, some facts are known. The Public Affairs Press asked Mr. Rickover for copies of some speeches he had made in his official capacity. Among them were speeches that had been publicly distributed in the usual manner as press releases from the Department of Defense or Atomic Energy Commission. Later on, however, when the admiral took out the copyright, he submitted verbatim copies of these speeches without indication that they had originally been official press releases, and without the insignia of the DOD or AEC on them. Admiral Rickover then warned the Public Affairs Press against quoting from these speeches in any way. Whether there is a connection or not, the admiral had 3 months earlier sold his copyrighted speeches to another book publisher.

The matter is not one of black and white because all of us wear two hats, whether we are in Government or a private job. Suppose, for example, that Admiral Rickover were a poet. Suppose he had been so moved by an early cruise on an atomic submarine that he had sat down, even on Government time and in the Government's submarine, to compose a poem on the experience. Presumably this personal creation would be his private property despite the circumstances of its composition.

However, isn't such a poem or other personal literary or scientific work, especially if done out of hours or on subjects not connected with the official's job, quite different from a speech or other public document issued as official Government business?

Perhaps until the suit against Rickover is adjudicated, we have no right to an opinion about it. But it does seem on the face of it that official papers by Government servants are ipso facto in the public domain. There is no more reason why such material should become the private property of the Government official who wrote it as part of his job than that Representative Richardson should copyright Washington's or Lincoln's addresses. We might as well allow an enterprising individual to take out an original copyright on Shakespeare or Mozart.

Mr. PROXMIRE. I also ask unanimous consent that a letter to me from Mr. Albert Kaminstein, the Register of Copyrights, be printed in the RECORD at this point.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

COPYRIGHT OFFICE,
THE LIBRARY OF CONGRESS,
Washington, D.C., June 1, 1962.

The Honorable WILLIAM PROXMIRE,
U.S. Senate, Washington, D.C.

DEAR SENATOR PROXMIRE: I was glad to have the opportunity to discuss with Mr. Sieverts, on May 29, the problems involved in the prohibition in the copyright law against the copyrighting of Government publications, referred to in your letter of May 17.

This is one of the many subjects covered in a series of studies conducted by the Copyright Office and printed by the Senate Judiciary Committee preparatory to a general revision of the copyright law. It was also dealt with in our report on general revision which was submitted to Congress on July 10, 1961, and printed by the House Judiciary Committee. Copies of the pertinent study and the report have been given to Mr. Sieverts.

As we see it, there are three areas involved in the problems relating to Government publications, with a variety of fact situations in each area:

1. Where a work is produced by a Government officer who claims copyright on the ground that the work was outside the scope of his official duties and was produced in his private capacity. This is essentially the situation in the pending suit by Public Affairs Associates against Admiral Rickover.

2. Where a work is produced for the Government by a Government officer pursuant to his official duties. This is what we have understood is meant by the present prohibition against copyright in Government publications.

3. Where a work is produced by a private person or organization under a contract with or grant from the Government. This has been an area of rapidly expanding importance.

We have considered that in revising the law, two questions concerning the present prohibition need to be resolved: (1) What should constitute "Government publications" to which the prohibition applies, and (2) whether provisions should be made to permit exceptions from the prohibition.

The operation of the present law and the problems it presents were reviewed in the study and summarized in the report referred to above, and the report makes recommendations for the provisions in a new law.

We shall be glad to discuss this further with you and Mr. Sieverts. We also hope to have an opportunity to discuss the program for revision of the copyright law with you in the future.

Sincerely yours,

Abraham L. Kaminstein,
Register of Copyrights.

Mr. PROXMIRE. I also ask unanimous consent that an editorial from the July 11, 1962, Record-Herald, of Wausau, Wis., on this subject be printed in the Record at this point, along with a statement signed by more than 20 leading writers, editors, and publishers, challenging the legality of governmental copyrighting.

There being no objection, the editorial and statement were ordered to be printed in the Record, as follows:

[From the Wausau (Wis.) Record-Herald, July 11, 1962]

Uncle Sam Abuses Copyright

Government can assume new powers in many ways, some of them comparatively minor and seemingly insignificant, but yet with harmful implications for the future. Such a case is the copyrighting of the new White House guidebook, which is called the Official Guide to the White House.

The book was written by the White House curator, copies are to be sold by employes of the National Park Service, and income will go for refurbishing the White House. The copyright owner is the White House Historical Association.

Because it is copyrighted, the material about the White House is restricted and cannot be used or reproduced without permission of the copyrighter.

Editor and Publisher magazine asks two good questions about the case: "If it (the historical society) is an official body of the Government or of the White House then the law expressly prohibits such copyright. If it is a private organization, then what right does the Government have to grant a restrictive copyright on material that belongs to the people at large?"

It is traditional in free America that Government institutions belong to the people, because this is a government of, by and for the people. Facts about official Washington, including the White House, therefore belong to all the people and Uncle Sam has no right, we would think, to assign exclusive use of facts about the White House to anyone.

[From New York Times, July 9, 1962]

Legality of Governmental Copyrighting Challenged by Leading Editors and Scholars

We the undersigned view with apprehension the rapidly growing tendency to place copyright restrictions on the contents of Government publications and documents.

The situation seems alarming in that such restrictions now apply to literally hundreds of official works despite the fact that section 8 of the copyright law expressly stipulates that "No copyright shall subsist in any publication of the U.S. Government, or any reprint, in whole or in part thereof * * *." (Details and lists are set forth in the Washington Post, March 12–16, 1962, and "Constraint by Copyright," by M. B. Schnapper.)

Also disregarded is the fact that Government curtailment of freedom of press via copyrighting is contrary to the guarantees of the Constitution's first amendment. This amendment is rendered meaningless when Government officials employ or authorize copyright procedures as a means of placing restrictions on information amassed to promote "the general welfare and secure the blessings of liberty to ourselves and our posterity."

Anyone who has the legal right to copyright has the legal right to restrict and censor. In recently justifying copyright restrictions on a score of official military histories Gen. C. G. Dodge stated, "The works were copyrighted * * * to prevent quoting of material out of context." Another Army officer has explained that copyrighting has been employed in order to prevent "sensationalizing." These are disturbing admissions. Any attempt to control the manner and extent to which Government information can be quoted by the press or by the public is censorship.

The original and continuing purpose of the prohibitions in section 8 of the copyright law is, of course, to assure maximum availability and dissemination of informational material prepared by or for the Government at the expense of the public.

The right of Government officials to copyright that which is private is not at issue in this connection—except in the sense that this essential right is bound to be greatly vitiated if a clear line isn't drawn between what is personal and what is official.

The situation that troubles us is particularly serious in that the Federal Government is today the major source of information in practically every field of endeavor. Significantly, although $12 billion is currently being expended on Federal research only a negligible portion of unclassified findings is being made accessible to the public through noncopyrighted media. (Unfortunately it is popularly assumed that copyrighted works are available to the public. Strictly speaking, a copyright, a legalized form of monopoly, can be obtained by merely registering two typed copies of a work.)

In view of the improprieties and dangers noted herein the undersigned herewith urge the executive and legislative branches of the Federal Government to take appropriate corrective action.

Among those who have agreed with the above statement: Robert U. Brown, editor of Editor and Publisher; Graham DuShane, editor of Science, weekly publication of the American Association for the Advancement of Science; Herbert Brucker, editor of the Hartford Courant and former chairman of the Freedom of Information Committee of the American Society of Newspaper Editors; Edward Bernays, New York publicist; M. B. Schnapper, editor of Public Affairs Press and author of "Constraint by Copyright"; E. Wilder Spaulding, historian and former editor of State Department publications; Wesley Maurer, chairman, Journalism Department of University of Michigan; Walter Gellhorn, professor of law, Columbia University and author of "Civil Liberties Under Attack"; R. B. Downs, dean, library administration, University of Illinois; former president of the American Library Association; Harold Fey, editor of Christian Century; Virginius Dabney, editor of Richmond Times-Dispatch; E. C. Pulliam, publisher of Indianapolis Star; David Williams, research director of Americans for Democratic Action; Bernard S. White, Washington attorney; V. M. Newton, editor of Tampa Tribune and chairman of the Freedom of Information Committee of Sigma Delta Chi; Lowell B. Mason, former member, Federal Trade Commission; William F. Buckley, Jr., editor of National Review; Ruben Levin, editor of Labor; Daniel A. Poling, editor of Christian Herald; Roger Baldwin, founder of the American Civil Liberties Union; Fred Siebert, dean of journalism, Michigan State University and author of "The Rights and Privileges of the Press"; John Stempel, chairman, Journalism Department of Indiana University; Ralph Ellsworth, director of libraries, University of Colorado.

Others opposed to copyrighting of official material by Government agencies and officials: Bernard Perry, director of Indiana University Press; James S. Pope, executive editor of the Louisville Courier-Journal; William Bridgewater, editor-in-chief of Columbia University Press; Gerald W. Johnson, historian; Gerard Piel, publisher of the Scientific American; Sylvan Gotshal, New York attorney; Quincy Howe, journalist; B. M Huebsch, editor of Viking Press and treasurer of the American Civil Liberties Union; James Bracken, editor of the Spokesman Review; Thorsten Sellin, editor of the Annals of the American Academy of Political and Social Science; L. B. Heilprin, council on Library Resources; J. Edward Murray, editor of the Arizona Republic; Harold Cross, late counsel for the American Society of Newspaper Editors.

COLUMBIAN SQUIRES ACTIVE IN NEW YORK

Mr. KEATING. Mr. President, 37 years ago the Reverend Brother Barnabas, F.S.C., organized a Junior Order of the Knights of Columbus, the Columbian Squires. Since that time, this international fraternity of Catholic high-school boys has grown in both size and stature all across this country and in many other parts of the world. The purposes of this organization are spiritual, cultural, social, and also involve dedicated service on all sorts of civic projects of benefit to the community in which each circle is located.

Today in the United States there are 25,000 Columbian Squires with 41 State groups and 700 local groups. My own State of New York has approximately 13 percent of the total membership, about 20 percent of the total number of circles of the order. New York State, in fact, has the largest State membership and the greatest total number of local Columbian Squire groups.

Recently, Mr. President, Robert W. J. Wysocki of Brooklyn was elected to the highest position in the New York State Circle, State chief squire. This is an achievement and an honor of which I am sure his family and circle are very proud. I, too, am proud of this young New Yorker and am happy to call attention to his fine organization and to the high position which Mr. Wysocki has achieved.

THE SUBTLE SCIENCE OF PACKAGING

Mrs. NEUBERGER. Mr. President, my education evidently has been neglected, because I have not before seen a magazine which I understand is in rather general circulation. The name of the magazine is "Mad."

There is an item in the current issue of this magazine which I wish to bring to the attention of my colleagues, even though I am not able to include in the Record the interesting sketches on the subject matter, which I think would be of special interest.

I quote from the magazine:

The Subtle Science of Packaging

In grandmother's day, neither the manufacturer of consumer products, nor the storekeeper who sold them gave much thought to the packages. Thus was born a new species in industry's growing menagerie of experts—the package designer. Many items were not even packaged at all, but were dipped, shoveled, or doled out by hand from barrels, bags, boxes, bins, and like that.

Today's supermarket shopper zooms up crowded aisles piled high with hundreds of competing products—and has to choose from among them. For years, these fellows had been assigned lowly tasks like drawing dotted lines along which to tear, or figuring out how big to make the window in a box of macaroni.

And when it came to brand names, grandma could always rely upon her friendly neighborhood merchant to advise her from his own experience.

And so, in order to sell their wares, manufacturers now know that it isn't enough to merely put their products on the shelves * * * they know they've got to catch the eye of the shopper. But practically overnight, they moved from the bullpen to the executive suite as the packaging revolution got into full swing.

Then comes a most illuminating series of cartoons which illustrate the various points the article makes.

Once the package designers got together, they figured out that if people were too lazy to open bottles and preferred to squeeze, they would prefer having the squeezing done for them even more, so they developed the spray can. Then the manufacturers made a "mint" with the little item of the aerosol can, because only half of the contents are product and the rest is air.

Mr. President, I ask unanimous consent that the remainder of the captions for these cartoons may be printed in the Record.

There being no objection, the captions were ordered to be printed in the Record, as follows:

The New Secret Ingredient: Air

It figured that if people were too lazy to open bottles, and preferred to squeeze, they would prefer having the squeezing done for them even more. Thus, the spray can.

The manufacturers have made a mint with this little item because half the contents of a spray can is plain old air.

The user never knows how much goo is left until just before a heavy date, when he presses the trusty old button and gets nothing but an empty sigh.

Air is an important ingredient in "whipped" products, too, enabling the manufacturer of a "whipped" pound of butter to market a bigger lump of the stuff than his competitor.

You can see where this trend will lead. If one outfit can offer "36 more pats per pound" then a competitor can offer "50 more pats" by whipping his margarine more—and so on.

MECHANICAL PACKAGES

We all love those handy little tubes of stuff that pop up to do their work with a twist of the knob—and their manufacturers love them, too, because most of the space inside the tube is taken up with inexpensive machinery.

INDIVIDUALLY WRAPPED FOR FLAVOR AND FRESHNESS PACKAGES

Doesn't it make you happy to see your cookies all snug in their own little wrappers sealed in outer wrappers which are in turn covered by an allover liner wrapper which is surrounded by a nice box?

Try saving all those wrappers some time. You'll find you're buying an awful lot of paper at cookie prices these days.

FROZEN NOTHING

The advent of frozen foods gave processors a new gimmick. A handful of limp, scraggly spinach is frozen in a block of ice to fill out the package. When it's thawed, there's a handful of spinach, and a big puddle of expensive water.

THE INCREDIBLE SHRINKING CANDY BAR

As if afflicted by some mysterious tropical disease, the American candy bar shrinks almost imperceptibly in size year by year. At this rate, people will soon be popping them in their mouths like pills, downing them in one gulp.

One of the favorite camouflage devices now being used by candy magnates is the tray package. This little gimmick enables the manufacturer to shrink the candy itself while maintaining the illusion of the same sized outer wrapper.

BIGGER LOOKING PACKAGE DESIGNS

A packaging man at a big breakfast food company, in a burst of enthusiasm over his new status, came up with the idea that they could overcome the competition by giving more cereal in a bigger box for the same money. After they got rid of that nut, the company adopted half his idea: They put the same cereal in a bigger package.

Soon all the cereal companies were putting out boxes that were higher and wider—but shallower from front to rear.

In fact, cereal boxes are getting so high and so wide and so shallow, that we might soon see cereals in envelopes.

DISPOSABLE PACKAGES

Then there's the "no-deposit-no-return" school of packaging, which in close cooperation with the trash-hauling interests, tries to see to it that no child is emotionally scarred by the humiliating experience of having to cash in the "Old Man's" empty beer bottles to get lunch money.

Besides beer—milk, soft drinks and other beverages now come in "throwaway" containers * * * making it a cinch to spot the family that subsists largely on a liquid diet.

THE HANDY "TAKE-HOME" PACK

The principle behind this cunningly devised package is that the cans or bottles are so tightly packed, you can't get one loose * * * so you've got to take all of them, or none.

The first "handy take-home's" contained six of something or another, but lately there have been "12-packs" appearing on the market. And there's no limit.

"SQUEEZE" AND "SQUIRT" PACKAGES

Packagers learned a long time ago that we are a nation of lid-losers and top-droppers, so they came up with the self-dispensing package.

Pretty soon the whole country was "poofing" and "puffing" to its heart's delight.

One trouble with squeeze containers is that they sometimes clog and develop lung trouble. Once squeezed, they stay squoze, unable to inhale enough air to become squeezable again. This phenomenon has accounted for a lot of unnecessary cursing in recent years.

TEST BAN NEGOTIATIONS

Mr. HART. Mr. President, I call attention to two consecutive articles on the front page of this morning's Washington Post and Times-Herald. The first headlines the fact that our Secretary of State, the Honorable Dean Rusk, "Nudges Reds on Test Ban Talks; Urges Soviets to Study New U.S. Proposal." The article goes on to say:

> This move by the United States was part of a general policy of encouraging the Soviets to keep open the prospects for agreement on major East-West differences.

And the second article, immediately following is headlined: "Rockefeller, Dirksen Assail Kennedy for Concessions at Test Ban Talks; New Proposal Called Dangerous."

Mr. President, at the very moment that we are trying to persuade the Soviets to keep an open mind with respect to our proposals, so that some constructive start may be made toward halting nuclear testing, our position is assailed from within our own country.

Would these critics argue that we should make no "concessions" in negotiation, even when new data indicate that the facts of the situation may have changed—if they have changed?

We used to have a point of view around here that "politics stops at the water's edge." I would like to suggest, in all seriousness, that the very moment when our representatives are in Geneva, trying to urge the Soviets to give a fair hearing to our proposals, is hardly the moment to hurl broadsides against our Nation's position.

Mr. President, we have adequate and orderly procedures for both political parties and all interested citizens to make their views known in any decisions that might be made at Geneva. If, by any miracle, a treaty should be negotiated there, it could only go into effect with the advice and consent of the Senate. Hopefully, while the negotiations are going on, and are indeed at a delicate stage, the utterances of party leaders might be tempered by a realization of the need for our speaking as "one nation, indivisible" in our negotiations.

SATELLITE COMMUNICATIONS

Mr. KEFAUVER. Mr. President, we are all familiar with the recent course of events on the Senate floor during the debate on H.R. 11040, the communications satellite bill. The past debate on this bill has sometimes centered about procedural matters and has not always been addressed directly to the merits of the bill.

Presently the bill is before the Foreign Relations Committee. During the short time allotted to it under a unanimous-consent agreement, the committee has been inquiring into the important questions of foreign policy raised by this bill. Because of the status of the bill before the committee, I shall not make any comments on the international implications of the bill at this time. I think that several of my colleagues and I may want to discuss these matters at some length after the bill has been reported back to the Senate.

What I would like to do today is to take this opportunity during a period of relative calm to review the important issues other than those involving foreign policy questions which I feel are involved in this debate. Some Senators have other objections to the bill or to parts thereof.

BILL ENDANGERS NATIONAL INTEREST

There is universal agreement that the U.S. position of preeminence in space and in satellite communications must be maintained. We must have the best possible satellite communications system at the earliest possible date.

The President of the United States has proposed a bill which would create a private corporation to own and operate the U.S. portion of a worldwide communications system using space satellites. Those of us in the Senate who are opposing the President's bill believe that it represents a step in the wrong direction—that it is an ill-advised approach to an important problem vitally affecting our national interest.

It is our belief that this bill, if enacted into law, would endanger U.S. progress toward the most rapid development of a truly global satellite communications system.

To make matters worse, the philosophy embodied in this bill violates the principles of free competitive enterprise which have been the foundation of our Nation's economic and political strength.

THE GIGANTIC GIVEAWAY

The first point which I would like to make is that the administration's bill proposes the most gigantic giveaway in the history of this country. It would turn over to a governmentally created private monopoly the benefits of hundreds of millions of dollars of taxpayers' money which have been invested in the development of space and satellite communications technology.

Proponents of this bill have argued that it is not uncommon for the benefits of Government-financed research and development to be turned over to private enterprise. As examples, they cite the cases of atomic energy, jet aircraft, and even agricultural research. These situations are far from analogous. In each previous instance the benefits of Government investment have been made available to competing firms and in a way that could encourage the development of competition.

The bill before us, on the other hand, proposes the creation of a single private monopolistic entity which would be the beneficiary of this huge taxpayer investment. Clearly this situation is without precedent in the history of our Nation.

ANTITRUST EXEMPTION

The private monopoly which this bill would create is likewise unique in our history. This bill proposes to allow all existing and future communications common carriers to join together and participate in the ownership of a private satellite corporation. Without the special legislative immunity provided by this bill, such action by the communications carriers would be in clear violation of the antitrust laws. In fact, when the FCC originally requested the communications carriers to get together and suggest a plan for the ownership and operation of our satellite communications system, the Justice Department advised that the representatives of these carriers could not even come together to discuss the matter without violating the antitrust laws.

Here we see one of the primary purposes of this bill. It is intended to provide the exemption from the antitrust laws which the communications carriers must have before they can undertake this joint venture.

SEPARATION OF COMPETING FORMS

Another fact which we should keep constantly in mind is that this bill represents a departure from our wise and time-tested policy of not allowing common carriers in the fields of transportation or communications to own or control competing carriers. For example, the railroads are prevented from owning airlines or the trucking lines. Similarly, the airlines are prohibited from owning the railroads. The barge lines have not been allowed to own or control the railroads nor have the railroads or airlines been allowed to control barge lines. We have also found it desirable to keep separate the ownership and control of telephone and telegraph communications.

This philosophy of separate ownership of competing forms of transportation and communications is founded on the belief that the economy and the public will benefit from a maximum degree of competition in these fields. We expect this competition to provide rapid development and early introduction of the newest developments in all fields.

CONFLICT OF INTEREST

The bill before us would turn over our satellite communications system to the very companies which now operate our existing communications facilities. The new facilities will be competitive with the older communications facilities. In many instances a satellite communications system will make existing facilities obsolete. We cannot afford to turn over control of this wonderful new development to companies with huge investments in existing facilities which may soon be rendered obsolete. This would create an inevitable conflict of interest with respect to the full development of the satellite system.

The problem goes deeper because virtually all of the communications carriers of any size have their own manufacturing subsidiaries or divisions. There would be a natural tendency for the carriers to use their representation in the satellite corporation to influence its procurement policy. They would, of course, favor themselves and thereby restrict competition in the supplying of goods and services for the satellite system.

NO REIMBURSEMENT TO GOVERNMENT

The private monopoly which this bill would create would receive free of charge the benefits of millions of taxpayer dollars and would be under no obligation to reimburse the Government for any of this. The only requirement is that the corporation repay NASA for the cost of launching the corporation's satellites into orbit.

NEED FOR PREFERENTIAL RATES

This bill does not even provide that the Government and its agencies are to receive preferential rates for the use of the satellite system. There is adequate precedent in the field of communications for insuring preferential rates to the Government. Certainly the Government and the taxpayers are entitled to some special consideration from this proposed private monopoly in return for the huge subsidy the corporation would receive.

PROBLEM FOR USIA

The testimony of Mr. Edward R. Murrow, head of USIA, that his agency might not be able to afford to use the facilities of the private corporation at commercial rates is dramatic evidence of the problem involved.

OWNERSHIP

On the question of ownership of the proposed private corporation, there are some points which need to be clarified. The proponents of this bill and the press have frequently stated that the bill provides for 50 percent ownership by the public and 50 percent ownership by the communications carriers. This is a half truth which can be very misleading.

The bill provides that 50 percent of the voting stock of the corporation shall be reserved for the carriers but makes no reference to the distribution of nonvoting securities, bonds, debentures, or other securities of the corporation. There is nothing in the bill to indicate what part of the financing is to be through the use of voting stock.

A.T. & T. DOMINANCE

It is entirely possible that the corporation could be financed largely through nonvoting securities, bonds or debentures. If this procedure were followed, and there are good reasons to suspect that it will be, the carriers could easily end up with far more than 50 percent of the corporation's securities. As a matter of fact, the way the bill is worded, it would be entirely possible to finance the corporation in such a way that A.T. & T. alone can own 99 percent of the total of all securities issued by the corporation.

The proponents of this bill have suggested that the public interest is to be protected through the medium of stock ownership by the public at large. The bill simply does not provide any safeguards to insure that this result will follow. If public participation is important, the bill should be drafted in such a way as to insure that protection.

FURTHER INADEQUACIES

The shocking inadequacy of this bill and the absence of real protection of the public interest is evident on every important issue. The administration has stated that the American taxpayers who have made the system possible should have an opportunity to buy stock in the proposed private satellite corporation. Compare this statement with the language of the bill. The bill provides only that the shares of voting stock initially offered shall be sold in such a way as to encourage the widest distribution to the American public. No reference is made to subsequent offers of voting stock or to any other form of securities.

It would be perfectly lawful under this bill to have a small initial offer of voting stock in which the public could share, then use subsequent offerings for all major financing. The subsequent offerings could go directly to large corporations, banks, insurance companies, and the like, with the general public excluded completely.

PROBABLE METHOD OF FINANCING

Let me point out why it appears likely that the corporation will be financed to a significant extent through the use of securities other than voting stock.

In the first place, the carriers do not have to buy any minimum amount of voting stock in order to have their right to elect their six directors. In the second place, all nonvoting securities, bonds, debentures, and so forth, which a communications carrier may buy are eligible for inclusion in the carrier's rate base.

THE DOUBLE RETURN

By purchasing securities other than voting stock, the carriers lose nothing in regard to their rights to elect directors and at the same time can earn a double return on their investment. Any nonvoting securities, bonds, or debentures would naturally pay either interest or dividends to the holder. At the same time, through their eligibility for inclusion in the carrier's rate base, they would provide the carrier an additional increment on which it would be allowed to earn the going rate allowed by the FCC, or the appropriate State regulatory commission.

I have not yet had it explained to me why the communications carriers should be entitled to earn a double return at the expense of the taxpayers and the consuming public. Indeed, it is a puzzle why a carrier should be allowed to include any of the satellite corporation's securities in its own rate base at all. If A.T. & T. wants to buy stock in General Motors, it is entitled to under the law, but its investment in General Motors stock does not become a part of its rate base. Why should stock ownership in a private satellite corporation entitle A.T. & T. or the other communications carriers to any special privileges which are not available to any other purchasers of the satellite securities?

THE TYPE OF SYSTEM

Experiments are currently underway with low-orbit and high-orbit—synchronous—satellites. An operational system using either type is still at least a few years away. It is generally agreed, however, that the high system is ultimately the most desirable and most economical.

In order that we may have the necessary flexibility to take advantage of the best system, I believe the President should have certain powers not presently included in the bill. He should have the authority to determine which system will be put into operation in the first instance and the authority to require adoption of a high system at some future date even if a low system is adopted first.

NO SPACE LAW

At the present time there is no general body of international law which governs outer space. This fact alone creates many serious problems which the legislation before us leaves unanswered. There are inherent dangers in any attempt by one nation to appropriate for its own use or for commercial purposes any new development of this sort. We do not even know as yet what position the United States might take if other nations were to protest our use of outer space for commercial purposes through a privately owned corporation operating for profit. Similarly, we do not know what possible liabilities the U.S. Government might incur as a result of sanctioning American monopoly satellites in outer space.

It would be far wiser to keep these satellites as American-flag satellites until this uncertainty has been removed.

PARTICIPATION OF PRIVATE ENTERPRISE

Those of us who are opposing the administration's bill believe that ownership and control of the satellite system should remain in Government hands for the benefit of all the people. We understand fully the importance of cooperation between Government and business in this important area. The record shows that we have repeatedly stated our belief that the facilities of the satellite communications system might appropriately be operated by private enterprise under contract or lease arrangements with the Government. This arrangement has worked successfully before and is currently working with success in important areas. There is no reason why it should not work with success and to the satisfaction of both the Government and private business in the field of satellite communications.

QUESTION OF GOVERNMENT EFFICIENCY

Statements have been made on the floor and elsewhere concerning the comparative efficiency of government and private enterprise. I think it is very important to remember that efficient, capable operation is not a characteristic reserved for private corporations while being unattainable by the Government. Private enterprise, like the Government, has a record containing both successes and failures, but the strength and freedom of our country attest to the fact that both business and Government are capable of doing fine jobs.

For those who find it a popular pastime to berate Government efficiency and operation, I would like to point out that it was not the Federal Government which built the Edsel—it was the Ford Motor Co. It was not the Government which built the 880–990 jet aircraft; it was the General Dynamics Corp. I only cite these examples in the hope that they will help us all maintain a proper perspective.

CONCLUSION

Mr. President, I have attempted to point out some of the major issues which will confront the Senate during its debate on H.R. 11040. It is my belief that this is a bad bill, that it is poorly drafted, and that its passage would do irreparable harm to the national interest of the United States.

CONVEYANCE OF CERTAIN PROPERTY IN THE CITY OF SAN DIEGO, CALIF.

The Senate resumed the consideration of the bill (S. 1108) authorizing the conveyance of certain property in the city of San Diego to the regents of the University of California.

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). The hour of 12:30 p.m. having arrived, under its order of yesterday, the Senate will now proceed to the consideration of S. 1108, which the Clerk will state by title.

The LEGISLATIVE CLERK. A bill (S. 1108) authorizing the conveyance of certain property in the city of San Diego to the regents of the University of California.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Oregon [Mr. MORSE], on which there is a limitation of debate of 30 minutes, the time to be equally divided.

Mr. KUCHEL. Madam President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator will state it.

Mr. KUCHEL. I assume that 15 minutes will be under the control of the senior Senator from Oregon.

The PRESIDING OFFICER. The Senator is correct.

Mr. KUCHEL. Under whose control will the other 15 minutes be?

The PRESIDING OFFICER. The time will be under the control of the majority leader, if he is opposed to the bill.

Mr. MANSFIELD. Madam President, I ask unanimous consent that the time allotted to me be allotted to the two Senators from California.

The PRESIDING OFFICER. Without objection, it is so ordered.

ANNOUNCEMENT OF THE SHOWING OF FILMS TAKEN IN RUSSIA

Mr. ELLENDER. Madam President, will the Senator yield a minute and a half to me?

Mr. KUCHEL. Madam President, I am glad to yield 2 minutes to the distinguished Senator from Louisiana.

Mr. ELLENDER. Madam President, on Tuesday, August 14, at the New Senate Office Building auditorium, there will be a showing of five reels of motion pictures which I took in Russia. There will be two showings on Tuesday, one beginning at 12:30 p.m., and the other at 3:30 p.m. Then on the following Monday, August 20, there will be a showing beginning at 7:30 p.m. I invite not only Senators and Senate staffs, but all Representatives and their staffs as well as anyone else who desires to see the pictures to be present at any one of those showings. The pictures were taken by me on trips that I have made to Russia and include areas of Asia and Siberia that have been seen by very few Western observers. Life in 13 of the 15 so-called republics in the Soviet Union will be shown.

I am today mailing an announcement of these showings to all Senators and Representatives and ask unanimous consent that a copy of the announcement be printed in the RECORD at this point.

I thank the Senator for yielding.

There being no objection, the announcement was ordered to be printed in the RECORD, as follows:

SENATOR ELLENDER'S PICTORIAL "INSIDE RUSSIA"

Senator ALLEN J. ELLENDER will present a series of narrated films, made by him during his visits through the Soviet Union, in the auditorium of the New Senate Office Building, Tuesday, August 14, at 12:30–2:00 p.m. and 3:30–5:00 p.m.; and Monday, August 20, at 7:30–9:00 p.m.

You, and any of your friends you think might be interested, are cordially invited to attend. Two of the 15-minute films will feature Asiatic and Siberian Russia, areas which have rarely been seen by any representatives of the West.

THE VALUE OF CULTURAL EXCHANGE

Mr. JAVITS. Madam President, will the Senator yield 1 minute to me?

Mr. KUCHEL. I yield 1 minute to the Senator from New York.

Mr. JAVITS. Madam President, considerable benefits have come to our country through our cultural exchange program which has enhanced America's image in oversea countries and helped promote good relations with them. Many of the artists we have sent to Latin America, Europe, Asia, and the Middle East have met with great success whenever they have performed and their reports should be encouragement for Congress to take action at this session on legislation now pending for a nationwide program of assistance to the visual and performing arts.

I ask unanimous consent to print in the RECORD excerpts from a report sent to me of the 15-week Latin American concert tour recently concluded by Paul Winter Jazz Sextet.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

MONTEVIDEO, URUGUAY.

As a write this we are finishing the 15th week of our State Department tour of Latin America, and we are now beginning the northward trek home up the east coast of South America. We have to date played in Haiti, Mexico, Central America, Panama, Colombia, Ecuador, Peru, Bolivia, Chile, Argentina, and Paraguay. We next spend a month in Brazil, and we return to the United States on July 20.

Our tour is an experiment in cultural exchange, this being the first time a student jazz group has ever been sent out. It is also the longest tour ever set up, covering 23 countries in 6 months. We feel, from our experiences, and from what we've been told by Foreign Service officials in 16 countries so far, that this tour has been one of the most successful in the 8-year history of our cultural exchange.

We have played some 85 concerts thus far, to predominantly student audiences. Only three of these were not standing-room-only. The response and enthusiasm for our concerts and seminars everywhere has been overwhelming, and we have drawn record-breaking crowds in many places where name artists have flopped. This we feel is a credit to the popularity of jazz, and even more to the great curiosity students have about other students.

In many cases where audiences have come with hostile attitudes we have been able to turn them completely around with our music, and Spanish. (Four of us learned Spanish for the tour, and we announce all concerts in Spanish.)

Accompanying us on the tour, as manager, is Gene Lees, noted jazz critic and former editor of Down Beat magazine. He has conducted, in Spanish, many university and television lectures, and he moderates our student seminars. A top-rate journalist of 15 years' experience, he has done a superb job of handling discussions on many different and difficult subjects, especially politics, which inevitably comes up. Most of these seminars have proved to be very valuable, to all parties concerned.

We have made contact with many Latin musicians, and adapted much of their music to jazz. Our second record album for Columbia Records, which we are recording in August, will include many of these arrangements.

Upon our return, we hope to crystallize plans we discussed with Sargeant Shriver for sending jazz musicians with the Peace Corps to teach and play jazz in different countries.

And since the new American-Soviet cultural agreement has arranged for the first American jazz group to play in Russia, we hope to be able to go ourselves in several months in an exchange of student groups. We think that groups like ours can show peoples of other countries a great deal about America, in addition to jazz. All the members of our sextet, besides being good musicians, have majored in other fields of study. And the group is perfectly integrated, with three Negroes and three Caucasians.

As we work our way through Latin America we have become increasingly concerned, and alarmed, about the future of democracy in all the Western Hemisphere. Time and time again we're told by responsible observers that the victory of communism in Latin America is inevitable. True or not, we can see for ourselves that things are not good. Many of these same people have also said that cultural exchange is one of the best hopes we've got, and that among all the culture the United States has to export jazz is far and away the best for the most extensive and consistent results. Our tour has proved this, following many others like Helen Hayes, etc.

Jazz can reach everyone—it can be appreciated, if not understood completely, by people of every level of education and society. It is also the only art form native to the United States, and the only one we have that no other country can export.

As a musical analogy of individualism and freedom, and as our one native art, jazz has become a very significant cultural asset for the United States. We are very optimistic about the future growth of jazz as a most successful good will ambassador.

We appreciate greatly your interest in this, and the help you gave us to create this tour and be given the opportunity to demonstrate the effectiveness of jazz in the student world. We are sincerely hopeful for your continued interest in this kind of cultural exchange.

Yours respectfully,

PAUL WINTER.

CONVEYANCE OF CERTAIN PROPERTY IN THE CITY OF SAN DIEGO, CALIF.

The Senate resumed the consideration of the bill (S. 1108) authorizing the conveyance of certain property in the city of San Diego to the regents of the University of California.

The PRESIDING OFFICER. The Senator from California is recognized.

Mr. ENGLE. Madam President, I desire to speak briefly on the pending question a little later. I reserve my time.

The PRESIDING OFFICER. What is the will of the Senate?

Mr. MORSE. Madam President——

The PRESIDING OFFICER. The Senator from Oregon is recognized.

Mr. MORSE. Madam President, I think I digest and summarize the bill which is before the Senate accurately when I say that it proposes to make available to the University of California now, in the year 1962, instead of 1966, approximately 554 acres of land, without any cost to the University of California.

I should like to state the salient factual points I would like Senators to keep in mind, because the bill in its present form is a clear violation of the Morse formula, for which, as Senators know and as I said in the debate last evening, I have battled on the floor of the Senate since 1946. I have made no exceptions to it. I intend to make no exceptions to it, because if I ever make an exception to it, the formula will be destroyed.

The application of the formula has saved the taxpayers of our country well over $600 million—possibly several hundred million dollars beyond that—in the form of requests for the giving away of property that would have been made to the Senate had not the Morse formula been the policy of the Senate as I have applied it.

I point out that the 554 acres in question is not excess to the Government at the present time. The property has not been declared surplus at the present time. It is not excess to the Navy at the present time.

What the Senators from California are seeking to do is to have determined now, in the year 1962, a grant of the property to the University of California on the ground that they hope they might get it in 1966 for nothing. I point out that there is provided a legal procedure, which I discussed last night—Senators will find it in the CONGRESSIONAL RECORD—for getting property for nothing for educational, public health, or civil defense purposes.

What the Senators from California are seeking to do, in effect, is to strike from the law in regard to a particular piece of property any possible need by 1966 for the use of such property for public health or for civil defense purposes. In other words, they are seeking to telescope the whole procedure, and have fixed and determined now a disposition of that property to the University of California without any Senator knowing what the conditions may be in 1966.

Let me state the procedure that would be followed under the operation of the law as it is on the books. The property would remain in the possession and entitlement of the U.S. Government until 1966.

The Senators from California say, "Oh, it was given to the U.S. Government in the first place."

Certainly it was. But I point out that San Diego, Calif., was very desirous of obtaining that marine area in San Diego at the time. It is the old story of chambers of commerce, cities, States, and counties always willing to offer to the Federal Government for nothing a location for a Federal operation because they know it is in their economic benefit to do so. They know it would bring in personnel. They know it would bring dollars into the cash registers of the businesses of that community.

But when the property was given to the taxpayers of the United States, it was in fee simple, without a single condition attached to the transfer. This is just so much money in the Treasury of the United States. What California is now seeking to do is to put its hand in the Treasury and get for nothing in 1962, in my judgment, what it clearly is not entitled to under the law. In order to get the land California must have special legislation passed by the Congress.

Last night I pointed out that none of us knows what the conditions may be in 1966. Let us assume a hypothetical situation. Who can tell us the hypothetical will not become a reality by 1966? Suppose we have a nuclear attack on the Pacific Coast between now and 1966. Who among us can say that the best use of that property might not be to build beneath the surface of that land a hospital in order to meet the health needs of our country?

Do not forget the law also mentions the third possibility, which is civil defense.

Also, Madam President, let us keep in mind that we do not know what other Government agencies in 1966 may need this property. All I am saying is that the law requires, first, that the property must be declared surplus. This property is not surplus property as of now. Second, other Government agencies have a right to make the decision, when it becomes surplus property, as to whether or not they need it for Federal purposes. None of us knows what Government agencies may need it in 1966.

Lastly, Madam President, there are three purposes for which the property can be given away in 1966 if it is declared surplus property: One is for educational purposes. Then the University of California would qualify, but would not then get it as a matter of right, because it would still be up to the Department of Health, Education, and Welfare to decide whether it should give it away, in 1966, if it is surplus, for educational purposes, for health purposes, or for civil defense purposes.

The law ought to run its course. If we accept this bill as legislation today we will create a dangerous precedent, and we will, in my judgment, open a Pandora's box for similar legislation whenever a Senator feels that he has an opportunity to get for nothing, ahead of schedule, a piece of Federal property for an educational purpose in his State.

As I said last night in a jocular way and repeat now, I am a great supporter of Federal aid to education, but I want it to be on uniform basis, on a basis of equality. I do not want it on a basis of special exceptions.

Madam President, I reserve the remainder of my time.

Mr. ENGLE. I yield 5 minutes to my senior colleague from California.

Mr. KUCHEL. Madam President, the distinguished senior Senator from Oregon inveighs against what he alleges the Senators from California are trying to do. I should like to set out for the record now what the Government of the United States is trying to do. It is trying to effect a transfer of Federal property, which is no longer needed, to a public educational institution which happens to be located in our State, and which needs it. The Navy Department is in favor of the proposed legislation; so is the Department of Health, Education, and Welfare; so is the General Services Administration. The Bureau of the Budget has interposed no objection. All the members of the Armed Services Committee, both Democratic and Republican, have unanimously approved and sent this bill to the Senate.

I suggest that the opposition comes from my good friend from Oregon, and perhaps from him alone. I believe that on occasions the Morse formula has served a useful purpose. The Morse formula would perform a regrettable disservice if it were applied to the proposed legislation now before the Senate.

The senior Senator from Oregon talks about the horrible precedent that would be established. I deny it. I have before me a carefully prepared memorandum, which has been sent to me by the Legislative Reference Service. It indicates a number of instances where the Senator from Oregon failed to offer his so-called formula, or, when he offered it, the Senate, in its wisdom, overruled the position of the Senator from Oregon.

I say that this is one bottle of Morse formula which has gone a little rancid. I suggest that the public interest would be best served by passing the bill in its present form. I say for the record, as I said yesterday, first, the city of San Diego made a gift of the property to the Government of the United States. The Senator from Oregon can criticize that gift and say that there were some evil, selfish motives behind the gift, by reason of suasion or pressure from the local chamber of commerce. I deny it. The fact remains that a gift was made. It was made in good faith, without charge to the Federal Government. The fact remains that the Navy Department, which has utilized that property, is now prepared to turn the property over to the University of California under legislation which provides that title shall vest in the University of California only so long as the University of California utilizes the property for educational purposes.

Under all those circumstances, I hope and I pray that the unanimous decision of the Armed Services Committee, based upon the unanimous recommendations of the agencies in the executive branch of the Government, will be upheld in the Senate when we vote in another 15 minutes.

I ask unanimous consent to have printed in the RECORD at this point a list of bills passed by the Senate without the Morse formula.

There being no objection, the list was ordered to be printed in the RECORD as follows:

BILLS APPROVED IN SENATE WITHOUT MORSE FORMULA

EIGHTY-THIRD CONGRESS

S. 122 (Public Law 155): Directing the conveyance of certain property in Rupert, Idaho.

H.R. 163 (Public Law 145): To provide for the conveyance of certain land in Monroe County, Ark., to the State of Arkansas (donation.)

S. 3187 (Public Law 708): Authorizes the United States to quitclaim all its right, title, and interest in and to certain lands in Arizona.

H.R. 8038 (Public Law 652): Authorizes conveyance to the Hot Springs School District and to Garland County for school purposes (35 acres).

EIGHTY-FOURTH CONGRESS

H.R. 727 (Public Law 252): To authorize the conveyance of certain land to the Pecwan Union School District (California) for use as the site for a school.

S. 266 (Public Law 77): Authorizes the Secretary of Interior to transfer certain property to the State of Wyoming for National Guard purposes.

S. 535 (Public Law 261): To provide for the conveyance to North Dakota of the land where Chief Sitting Bull was buried (for historic site).

S. 2822 (Public Law 572): Authorizes Secretary of Interior to transfer 9 acres of land to School District No. 8, Mohave County, Ariz.

EIGHTY-FIFTH CONGRESS

S. 556 (Public Law 85–193): To provide for the conveyance of certain real property of the United States situated in Clark County, Nev., to the State of Nevada for the use of the Nevada State Board of Fish and Game Commissioners.

S. 999 (Public Law 85–205): Authorizes the Secretary of the Interior to convey certain land to North Dakota for the use and benefit of the North Dakota State School of Science.

EIGHTY-SIXTH CONGRESS

H.R. 5270 (Public Law 86–407): Authorizes the Secretary of Interior to convey to the Metropolitan Water District of Salt Lake City, Utah, all right, title, and interest of the United States in certain lands located in Salt Lake County, Utah (without consideration).

Mr. ENGLE. Madam President, I concur completely in the remarks of my distinguished senior colleague from California. I wish to summarize briefly the points on which we rest our case:

First. The Federal Government got this property in 1916 for nothing. Not a plugged nickel did it pay for it.

Second. The Federal Government used the property for 46 years as a rifle range; not as a great plant which contributed to employment or to the tax base. They had to abandon it because of the danger that a marine might be shooting into a schoolhouse or someone's residence.

Third. The property has therefore become surplus to the needs of the Federal Government. The rifle range is being moved out to Camp Pendleton. In the recently passed military construction bill we authorized approximately $5 million for that purpose.

Fourth. In 1966 we can get this property for nothing under existing law through the General Services Administration, because the State of California, for educational purposes, has a priority.

Let me go back through these reasons.

First, the Federal Government got the property for nothing.

Second, they used it for 46 years at no cost, for a rifle range.

Third, it is no longer needed by the Federal Government.

Fourth, in 1966 we can get it for nothing, if we wait.

Madam President, why is this bill necessary? It is necessary because we cannot wait. We need now to plan this great university campus. The State of California has acquired 500 acres of land for this campus, and it needs a commitment as to this area now, in order that the University of California may proceed with its plans to educate approximately 27,500 students.

The Senator from Oregon says that we ought to pay $4 million for the 4 years, or a million dollars a year. We would not have any objection to that, if we had the money, but we are building three university campuses in the State of California, and we are building six junior colleges there.

When Governor Brown became Governor, he was faced with a deficit of more than $250 million. He raised taxes and he balanced his budget. In the preceding fiscal year his surplus was $12 million. What the Senator from Oregon is trying to "soak" the State of California for the piece of land, which was given to the Federal Government and used by the Federal Government for 46 years, would be one-third of the total surplus. We simply do not have the money.

We believe the bill is fair and equitable and right. It dedicates to a public use superior to any in the land, public land of the United States; namely, for a great university in southern California. I hope that the amendment will be voted down.

Mr. MORSE. I say to my good friend from California [Mr. ENGLE] that what I am seeking to do is to prevent California from acquiring some rights to which it is not entitled under existing law. The Senators from California cannot erase facts from the RECORD. I shall cite two or three facts which, in my judgment, are controlling.

The Senators from California speak about the Federal Government having got the land for nothing. The Federal Government has spent $3,100,000 on this property since it acquired it. It is used in connection with Marine operations. The presence of those Marines in that part of California has not been to the economic disadvantage of California.

But the important fact that the RECORD must show is that California is not entitled to this property as of now, and it would not be entitled to the property until 1966. There is no assurance that California would get the property even in 1966 for educational purposes. That is only one of three possible uses to which the property could be devoted in 1966. If HEW, in 1966, found that the public health needs were greater than the educational needs, with respect to the use of the property, HEW would then have a clear legal obligation to see to it that the property was used for health needs.

If in 1966 HEW found that the greatest need for the property was civil defense, then the property would have to be used for civil defense, not for educational purposes.

The Senators from California are seeking by the bill to eliminate any possibility of this property being used in 1966 either for health purposes or for civil defense purposes. That is why I say they are trying to telescope the disposal of this property into 1962, whereas, under the law, the statute would have to run its course until 1966.

There is a fourth possible use which could be made of this property in 1966 which the Senators from California are trying to wipe out now, because the property is not surplus now. It has not been decreed to be surplus now. If it were surplus now, the disposition of the property would be in the hands of the General Services Administration. In 1966 there might be some other department of the Government which could use the property. It might very well be the Air Force; it might very well be the Army; it might very well, in 1966, be the Navy again. It might be any of the Government departments. But what the Senators from California are seeking to have passed is a special piece of legislation which would deny to the Federal Government the opportunity to use the property for its greatest need in 1966, if such a need developed.

Again, I point out to the Senators from California that the gift argument is a fallacious argument, because once property is vested in the taxpayers of the United States in fee simple, without a single condition attached to it, it is dollars in the Treasury of the United States. What the Senators from California seek to do is to get a gift now to which, under the law, California would not be entitled now, unless it got this kind of special giveaway legislation passed by Congress. This is not the first time the senior Senator from Oregon has stood in a very small minority against giveaways in the Senate; but I have seen attitudes change once the Senate understood the giveaways which were involved.

Pointing out that the Department of Defense, the Department of Health, Education, and Welfare, the Bureau of the Budget, and the Department of the Navy have no objection to the passage of the bill causes me to ask: So what? What does that have to do with my responsibility as a Senator to see to it that we apply a precious principle of law in this country, and that is the principle of uniform application of the laws?

The principle being fought for by the proponents of the bill, to get an exception in order to serve the economic needs of California at the present time, does not have any merit with me. I would rather stand for the uniform application of the laws in regard to the surplus property statute. The bill seeks to create an exception in regard to the administration of laws on the books in regard to surplus property.

I close by pointing out that this land is not surplus property as of this moment. It has not been declared surplus property. This property belongs to all the taxpayers of the United States. The Senators from California, in this giveaway bill, want the Senate to give to California now the guarantee that in 1962 California will get this property, no matter what the facts are in 1966 as to the health needs, the civil defense needs, or the needs of some other Government department.

I could not accede to this proposal and then apply the Morse formula to any other Senator in connection with any bill that he might want to offer in the future. I have stated to the Senate, as I have stated to many Senators individually that I will never make an exception to the Morse formula. I defy anyone to find in the RECORD, since 1946, an exception to the Morse formula. I have applied it in my own State as well as in other States. I do not intend to make an exception to it today. That is why I have asked for a yea-and-nay vote on my amendment. I rest my case.

Mr. ENGLE. Madam President, how much time have I remaining?

The PRESIDING OFFICER. The Senator from California has 4 minutes remaining.

Mr. ENGLE. I shall address myself to one proposition; then I shall yield back the remainder of my time.

What is before the Senate is not a giveaway. In 1966 the State of California could get this property for nothing. In 1916 the Federal Government got it from the city of San Diego for nothing. The city of San Diego and the county of San Diego have joined with the State of California in asking for this legislation. The Federal Government has used the property 46 years for nothing as a rifle range. Now the Senator from Oregon says, "Wait 4 years." The State of California has acquired more than 500 acres adjacent to this property to establish a university campus. Not one single department of the Federal Government has expressed any interest in this property—neither the Navy nor any other department. They cannot use it. The fact is that if the Senator from Oregon himself had to pass upon this case now or in 1966, he would favor permitting this property to be used for the purpose of education, which under the law has priority.

All we are seeking to do is to short circuit the time. In 4 years—in 1966—the State of California could get the property for nothing. But we say, "Give it to us now." And we have included restrictions. At any time the property is not used for educational purposes, it will revert to the Federal Government.

We have included further restrictions: We say that there can be no complaints because of noise or hazards from Miramar Air Force Base. Those restrictions also were placed in the bill, and would not apply if we waited until 1966. But we cannot wait; we want to go forward now.

I repeat: The Federal Government got this property for nothing. The Federal Government has used it for 46 years. The property is now surplus to the needs of the Federal Government. In 1966, under existing law, California could get it for nothing. We are asking for it now, because it can be used now in the interest of education, the highest purpose to which public land can be put.

Mr. KUCHEL. Madam President, the equities are entirely in favor of the bill. The Government of the United States is in favor of the bill. The Senate today has an opportunity to do something constructive for public education in America by permitting a great public educational institution, whose faculty is graced by many Nobel Prize winners, whose president is an outstanding American, whose graduates perform spectacular service for the Federal Government, an opportunity to provide for some 27,000 students in southern California, on a piece of ground originally owned by the city of San Diego, which today joins in asking the U.S. Senate to approve the bill.

Mr. MORSE. Madam President, I close by saying that it is not a fact that California will get this land for nothing in 1966. California may get it for nothing in 1966, if the Department of Health, Education, and Welfare does not find health needs and civil-defense needs more paramount or if some other department of the Federal Government does not ask to use this land.

The **PRESIDING OFFICER.** The time available to both sides has expired.

Mr. KUCHEL. Madam President, on the question of agreeing to this amendment, I ask for the yeas and nays.

The **PRESIDING OFFICER.** Is there a sufficient second?

The yeas and nays were ordered.

Mr. KUCHEL. Madam President, at this time I suggest the absence of a quorum.

The **PRESIDING OFFICER.** Is there objection to having a quorum call before the yeas and nays are taken? The Chair hears none; and, without objection, the clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KUCHEL. Madam President, I ask unanimous consent that the order for the quorum call be rescinded.

The **PRESIDING OFFICER.** Without objection, it is so ordered.

Mr. KUCHEL. Madam President, am I correct in understanding that the question before the Senate is whether the Senate desires to adopt or reject the Morse amendment?

The **PRESIDING OFFICER.** The question is on agreeing to the Morse amendment.

On this question, the yeas and nays have been ordered; and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. Mr. President, I announce that the Senator from West Virginia [Mr. BYRD], the Senator from North Carolina [Mr. JORDAN], the Senator from Missouri [Mr. LONG], the Senator from Montana [Mr. METCALF], and the Senator from Alabama [Mr. SPARKMAN] are absent on official business.

I further announce that the Senator from New Mexico [Mr. ANDERSON] is necessarily absent.

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT], the Senator from Maryland [Mr. BUTLER], the Senator from Arizona [Mr. GOLDWATER], the Senators from Iowa [Mr. HICKENLOOPER and Mr. MILLER], the Senator from New Hampshire [Mr. MURPHY], and the Senator from Kansas [Mr. PEARSON] are necessarily absent.

The Senator from Kentucky [Mr. COOPER] is absent because of a death in the family.

If present and voting, the Senator from Iowa [Mr. MILLER] and the Senator from New Hampshire [Mr. MURPHY] would each vote "nay."

The result was announced—yeas 13, nays 73, as follows:

So the amendment was rejected.

Mr. KUCHEL. Madam President, I move to reconsider the vote by which the amendment was rejected.

Mr. ENGLE. Madam President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

The **PRESIDING OFFICER.** The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill (S. 1108) was ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

S. 1108

A bill authorizing the conveyance of certain property in the city of San Diego to the regents of the University of California

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Navy, or his designee, is authorized and directed when he determines that the following described land at Camp Matthews, California, is available for conveyance to the regents of the University of California for educational and related purposes, to convey said land, together with all improvements and appurtenances, to the regents of the University of California by quitclaim deed without monetary consideration therefor but upon the conditions set forth in this Act.

SEC. 2. The property to be conveyed comprising approximately 544 acres of land is more particularly described as follows: The easterly half of pueblo lot 1300; all of pueblo lot 1309; all of pueblo lot 1310; all of that portion of pueblo lot 1311 lying easterly of Pacific Highway and southerly of Miramar Road; all that portion of pueblo lot 1314 lying southerly of Miramar Road; all that portion of pueblo lot 1315 lying southerly of Miramar Road; all that portion of the westerly half of pueblo lot 1316 lying southerly of Miramar Road; said pueblo lands being according to the map thereof made by James Pascoe of 1870, a certified copy of which is filed as miscellaneous map numbered 36 in the office of the county recorder of San Diego County, California; excepting therefrom any property previously conveyed to the State of California or the city of San Diego for highway purposes.

SEC. 3. The deed of conveyance executed pursuant to this Act shall include the conditions that (a) such property shall be held by the regents of the University of California so long as the property conveyed shall be used for educational purposes; (b) if at any time the Secretary of the Navy determines, upon advice received from the Secretary of Health, Education, and Welfare, that the property so conveyed, is not held for such purposes, title thereto shall immediately revert to the United States; and (c) in the event of any such reversion, title to all improvements made thereon by the regents of the University of California during its occupancy shall vest in the United States without payment of compensation therefor. Such deed of conveyance shall be subject to such other conditions as the Secretary of the Navy may deem appropriate to protect the interests of the United States.

SEC. 4. The regents of the University of California may exchange portions of the property described in section 2 for other adjacent lands of approximately equal value in order to develop such property boundaries as may be best suited for the purposes of the University of California.

SEC. 5. Section 3 shall be applicable in all respects to any land received by the regents of the University of California under the exchange provisions authorized in section 4, and any land conveyed by the regents of the University of California pursuant to such exchange shall be received by the grantee thereof free and clear of the conditions prescribed in the first sentence of section 3.

Mr. ENGLE. Madam President, I move to reconsider the vote by which the bill was passed.

Mr. KUCHEL. Madam President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

BRINGING NUMBER OF CADETS AT U.S. MILITARY AND U.S. AIR FORCE ACADEMIES UP TO FULL STRENGTH

Mr. MANSFIELD. Madam President, I move that the Senate proceed to the consideration of Calendar No. 1494, Senate bill H.R. 7913, and that it be laid before the Senate and made the pending business.

The **PRESIDING OFFICER.** The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength.

The **PRESIDING OFFICER.** The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to, and the Senate proceeded to consider the bill, which had been reported from the Committee on Armed Services with an amendment to strike out all after the enacting clause and insert:

That section 4343 of title 10, United States Code, is amended by striking out at the beginning of such section the word "If" and inserting in lieu thereof "(a) If", and by adding a new subsection as follows:

"(b) In addition to the appointments authorized under subsection (a) of this section, the Secretary of the Army shall determine during each academic year the number by which the number of cadets at the Academy immediately prior to the termination of the succeeding academic year will be below the authorized number. Within that determination, the Secretary may select for admission to the Academy qualified candidates only from those candidates described in clauses (1), (2), and (3) below who are recommended and found qualified by the Academic Board:

"(1) Candidates who are first alternate nominees of the nominating authority specified in clauses (1) and (2) of section 4342(a) of this title; except that in any case in which the first alternate nominee of any such nominating authority is not qualified for selection, the second alternate nominee of such nominating authority shall be eligible for selection, and in any such case in which the second alternate nominee of such nominating authority is not qualified for selection, the third alternate nominee of such nominating authority shall be eligible for selection.

"(2) Candidates who are qualified nominees of the nominating authority specified in clauses (1) and (2) of section 4342(a) of this title and who were designated as congressional competitors; except that only one nominee of any such nominating authority, and only a nominee who is ranked by the Academic Board on the basis of merit next below a congressional competitor selected for admission to the Academy, shall be eligible for selection under this clause.

"(3) Candidates who are qualified nominees under the provisions of clauses (3) through (8) of section 4342(a) of this title; but not more than 5 per centum of the total number of candidates selected by the Secretary under the provisions of this subsection in any year may be selected under authority of this clause.

Selections which the Secretary may make under the authority of clauses (1) and (2) of this subsection shall be made in accordance with the order of merit established by the Academic Board for all nominees referred to in such clauses (1) and (2), and selections which the Secretary may make under the authority of clause (3) of this subsection shall be made in accordance with the order of merit established by the Academic Board for nominees referred to in such clause (3). At no time may the number of cadets at the Academy appointed under this subsection exceed two hundred and fifty. An appointment under this subsection is an additional appointment and is not in place of an appointment otherwise authorized by law."

Sec. 2. Section 9343 of title 10, United States Code, is amended by striking out at the beginning of such section the word "If" and inserting in lieu thereof "(a) If", and by adding a new subsection as follows:

"(b) In addition to the apppointments authorized under subsection (a) of this section, the Secretary of the Air Force shall determine during each academic year the number by which the number of cadets at the Academy immediately prior to the termination of the succeeding academic year will be below the authorized number. Within that determination, the Secretary may select for admission to the Academy qualified candidates only from those candidates described in clauses (1), (2), and (3) below who are recommended and found qualified by the Faculty:

"(1) Candidates who are first alternate nominees of the nominating authority specified in clauses (1) and (2) of section 9342(a) of this title, except that in any case in which the first alternate nominee of any such nominating authority is not qualified for selection, the second alternate nominee of such nominating authority shall be eligible for selection, and in any such case in which the second alternate nominee of such nominating authority is not qualified for selection, the third alternate nominee of such nominating authority shall be eligible for selection.

"(2) Candidates who are qualified nominees of the nominating authority specified in clauses (1) and (2) of section 9342(a) of this title and who were designated as congressional competitors; except that only one nominee of any such nominating authority, and only a nominee who is ranked by the Faculty on the basis of merit next below a congressional competitor selected for admission to the Academy, shall be eligible for selection under this clause.

"(3) Candidates who are qualified nominees under the provisions of clauses (3) through (8) of section 9342(a) of this title; but not more than 5 per centum of the total number of candidates selected by the Secretary under the provisions of this subsection in any year may be selected under authority of this clause.

Selections which the Secretary may make under the authority of clauses (1) and (2) of this subsection shall be made in accordance with the order of merit established by the Faculty for all nominees referred to in such clauses (1) and (2), and selections which the Secretary may make under the authority of clause (3) of this subsection shall be made in accordance with the order of merit established by the Faculty for nominees referred to in such clause (3). At no time may the number of cadets at the Academy appointed under this subsection exceed two hundred and fifty. An appointment under this subsection is an additional appointment and is not in place of an appointment otherwise authorized by law."

Sec. 3. (a) Paragraph (2) of section 4348, paragraph (2) of section 6959, and paragraph (2) of section 9348 of title 10 of the United States Code are each amended by striking out "three" and inserting in lieu thereof "five".

(b) The fourth sentence of section 182 of title 14 of the United States Code is amended by striking out "four" and inserting in lieu thereof "five".

(c) The amendments made by this section shall apply only with respect to cadets and midshipmen appointed to the service academies after the date of enactment of this Act, and shall not affect the obligated period of service of any cadet or midshipman appointed to one of the service academies on or before the date of enactment of this Act.

JURISDICTION OF THE MUNICIPAL COURT FOR THE DISTRICT OF COLUMBIA IN CIVIL ACTIONS—RECONSIDERATION

Mr. ROBERTSON. Madam President, yesterday, under a unanimous-consent call of the calendar, we passed a bill to enlarge the jurisdiction of the municipal court of the District of Columbia, a minor court, increasing jurisdiction over civil cases up to $10,000, and also giving to it the most unusual privilege of summoning witnesses in civil as well as criminal cases from a distance of 100 miles. That authority would extend into the States of Maryland, Virginia, West Virginia, and Pennsylvania.

Under these circumstances, I believe Senators from the States affected by this provision are entitled to time to consider carefully this new authority.

Therefore, I enter a motion to reconsider the vote taken yesterday by which H.R. 12708 was passed in the Senate.

INTERAGENCY COORDINATION IN DRUG RESEARCH — COMMITTEE MEETING DURING SENATE SESSION

Mr. HUMPHREY. Madam President, this afternoon, at 3 p.m., the Subcommittee on Reorganization and International Organizations of the Committee on Government Operations will hold a hearing on interagency coordination in drug research.

The hearing will be held in room 3302, New Senate Office Building.

I ask unanimous consent that this subcommittee hearing may be held during the session of the Senate.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Minnesota? The Chair hears none, and it is so ordered.

Mr. HUMPHREY. Madam President, I ask unanimous consent that a statement which I released yesterday describing the purposes of today's hearing may be printed in the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Hearing on Interagency Coordination in Drug Research

(By Senator Hubert H. Humphrey, Democrat, of Minnesota)

Tomorrow afternoon, the Senate Government Operations Subcommittee on Reorganization and International Organizations will resume its hearings on interagency coordination in drug research.

Among the specific topics which we will review will be cooperation among Federal agencies with respect to tranquilizer drugs, antihypertension drugs, antifertility drugs, and certain other categories.

I would be less than frank if I did not say that in several of these categories, it would appear that interagency cooperation has been less than perfect. It has, in some phases, according to preliminary evidence, been just about nonexistent.

WITNESSES TOMORROW

Our hearing tomorrow will be somewhat of a roundtable discussion.

Time will permit us to touch upon but a few highlights of the great many phases which bear study.

I will mention now the names of a few of the principal witnesses who will be available for questioning:

(a) Federal officials:

1. From the Food and Drug Administration: George Larrick, Commissioner; Ralph Smith, M.D., Director, Division of New Drugs; and W. R. Stephens, Director, Bureau of Enforcement.

2. From the Public Health Service: David Price, M.D., Deputy Surgeon General; and Stuart Sessoms, M.D., Deputy Director, National Institutes of Health.

(b) Private experts: Gregory Pinkus, Sc. D., director of research, Worcester Foundation for Experimental Biology (one of the world's leading experts in research on the physiology of reproduction).

In addition, individuals associated with or formally representing other private groups will be available, e.g., from the Pharmaceutical Manufacturers Association; etc.

SUBCOMMITTEE'S JURISDICTION

I would like to reiterate two points which I made at, prior to, and after last Wednesday's subcommittee hearing:

1. Our own subcommittee is not authorized to examine proposed amendments to drug laws, per se. The Senate Judiciary Committee is so authorized under the Senate Rules and is now expertly studying President Kennedy's proposals for this purpose.

There is, of course, no reason to delay strengthening present laws, pending completion of our subcommittee's study.

We are examining interagency administrative practices. Problems of administration may persist, no matter how well laws are perfected.

2. Secondly, our subcommittee does not intend to review the scientific merits or flaws of any drug or class of drugs; that is a task for scientists and technicians.

ONE BILLION TWO HUNDRED MILLION DOLLARS IN FEDERAL MEDICAL RESEARCH

For 4 years, since August 1958, the reorganization subcommittee has been studying interagency cooperation or lack of cooperation in biomedical research.

In the 1963 fiscal year, medical and health-related research will represent an expenditure in excess of $1.2 billion.

Of this sum, literally scores of millions of dollars will involve drug research.

"How much teamwork exists in drug research" is, therefore, a crucial question to the Reorganization Subcommittee.

ILLUSTRATIONS OF INTERAGENCY INTEREST IN DRUG RESEARCH

We cannot overestimate the importance of full Federal teamwork in areas relating to the Food and Drug Administration's specific responsibility. For example, late in 1960, one scientist estimated that one out of every seven Americans was taking tranquilizers as an escape from anxiety. Thorough interagency cooperation on a problem of such vast dimensions is indispensable.

As a second illustration, I cite interagency interest in drugs affecting pregnant mothers. No one need be reminded that 4.2 million babies are born each year in the United States or of our escape from a mass tragedy which might have resulted from greater use of thalidomide.

Perhaps, however, we do need to be reminded of this fact: there are infinitely more subtle problems of drug effects on women of childbearing age than the dramatic nature of thalidomide's effects might ordinarily lead us to explore.

I intend, therefore, to ask questions at tomorrow's hearing as regards interagency cooperation in drug and other research involved in obstetrics and gynecology.

There are 58 million American women between the ages of 20 and 44, and 6.7 million more between the ages of 15 and 19.

They consume considerable amounts of drugs, as do other Americans.

There is every reason, therefore, for careful review of interagency teamwork in this area of medicine.

NEED FOR PERSPECTIVE

I conclude by pointing out that our subcommittee has sought and will continue to seek an objective, sound approach to drug problems.

We all need to keep a sense of perspective. Unreasonable fear or anxiety about drugs could be just as undesirable as unreasonable or blind faith which might ignore possible adverse side effects from drugs.

The medical profession, the pharmaceutical industry, and the pharmaceutical profession have given us, I am glad to state, excellent cooperation in our study.

Mankind has much to be grateful for in the profound beneficial effects of drugs. Our intent is to help maximize those benefits and minimize hazards.

COMMUNICATIONS SATELLITE ACT OF 1962—SENATOR NEUBERGER EXPLODES MYTHS ABOUT THE SPACE COMMUNICATIONS GIVEAWAY

Mr. YARBOROUGH. Madam President, three times within the past 2 weeks the junior Senator from Oregon [Mrs. Neuberger] has rendered an outstanding service to the cause of good government by the perception, diligence, and courage with which she has used her mind and energy on behalf of the people of the United States.

She has brought effectively before the public, issues in the debate over whether the people of the United States, who have paid for the development of our capabilities in space to date, will give away that portion of the development of the uses of space connected with communications—the major portion of the uses of space within the immediately foreseeable future—or whether the people of the United States, having developed this capability, will retain it for themselves.

On Saturday, July 28, the junior Senator from Oregon [Mrs. Neuberger] managed affairs on the floor of the Senate with a wisdom and an aplomb worthy of any veteran of whatever length of service. Again, on Monday, July 30, the junior Senator from Oregon, with a 4½-hour speech, the longest speech ever made by a woman Member of the U.S. Senate, brilliantly discussed the weaknesses, the vices, and the unfairness to the people of the United States of the monopoly giveaway space communications bill. Now, in a third occasion, in a brilliant letter in the Washington Post and Times Herald of Wednesday, August 8, 1962, under the caption "Exploiting Telstar," the Senator has exploded a number of myths about the private monopoly bill. She has capably torn aside this film of fiction concerning the prevention of monopoly control by the directorship system provided in the bill; she has shown the fallacies of hoping that FCC can regulate A.T. & T. in outer space; she has pointed out again, as many of us have over and over, that this private monopoly space giveaway satellite communication bill, if passed, would be the first time in history that the United States would be the creator and sponsor of a private international monopoly and cartel.

Madam President, I tip my hat to the junior Senator from Oregon [Mrs. Neuberger] who is rendering a public service in keeping with the finest traditions of the Senate.

I ask unanimous consent to place in the Congressional Record at this point, the Senator's fine letter entitled "Exploiting Telstar" to the Washington Post and Times Herald, published Wednesday, August 8, 1962.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Exploiting Telstar

Your recent editorials have endorsed the communications satellite bill upon the ground that the bill contains ample safeguards for the public interest. These safeguards are transparent. They fail to account for the reality of A.T. & T.

The massive economic concentration represented by the Bell System—owned and controlled by A.T. & T.—is staggering. This $27 billion corporation owns and controls 98 percent of long-distance telephone service in the United States and all domestic facilities for oversea commercial telephone service.

A.T. & T.'s monopoly grasp of communications is now threatened by the advent of communications satellites. The Synoom system, rapidly being perfected by Hughes Aircraft as an alternative to the Telstar system, would enable American companies such as Western Union, Hughes, RCA, and International Telephone & Telegraph to compete with A.T. & T. for the business of long-distance communications users. If the commercial development of the Syncom system is permitted, A.T. & T.'s enormous investment in its long lines and cables will be threatened. To thwart competition, every sinew of the A.T. & T. organization is at this moment straining to insure that A.T. & T. will control the destiny of communications satellites.

No flimsy formula for the allocation of directorships such as that contained in the proposed satellite bill could possibly blunt the naked economic power wielded by A.T. & T. The bill would permit A.T. & T. to purchase as much as 50 percent of the capital stock of the proposed satellite corporation. A.T. & T.'s stockholders and officers would be free to purchase additional blocks of corporation stock. Furthermore, A.T. & T.'s position as the greatest commercial user of satellite facilities will amplify its power to dictate the rates and policies of any private satellite corporation.

Nor can I take comfort in the bill's provision for FCC regulation of the proposed satellite corporation. Since the founding of the FCC in 1934, it has never completed a full formal hearing on telephone rates. Current independent reports by the Budget Bureau, the Hoover Commission, and the Rand Corp. are unanimous in concluding that the FCC has been totally ineffective in regulating A.T. & T.

As Chairman Celler of the House Judiciary Committee has said, "A.T. & T. has successfully avoided regulation on earth. Divine guidance will be necessary to regulate A.T. & T. if it is permitted to expand its domain into space."

The proposed satellite bill would establish a revolutionary new pattern for commercial exploitation of our natural and scientific resources. For the first time in history, the U.S. Government would be the creator and sponsor of a private, international cartel. A flood of letters and telegrams to me has shown that our citizens understand the significance of the basic issue—why should the Federal Government license the unchecked expansion of monopoly and economic concentration?

Maurine B. Neuberger,
Senator from Oregon.

Washington.

Mr. MORSE. Madam President, will the Senator yield?

Mr. YARBOROUGH. I yield to the distinguished senior Senator from Oregon.

Mr. MORSE. I am very happy to associate myself with every remark made by the Senator from Texas. I add that in my judgment the letter of my colleague from Oregon [Mrs. Neuberger] published in the Washington Post and Times Herald is a most succinct and most effective presentation of irrefutable logic in support of the point of view of those of us who oppose the satellite communications bill.

I congratulate my colleague in the Senate. I express the hope that every Senator—and, I hope, millions of Americans—will have an opportunity to read the letter which my colleague wrote to the Washington Post, published in yesterday's edition.

I believe the junior Senator from Oregon should take great consolation, as should others of us, in the fact that the incomparable ex-President of the United States, Harry Truman, so the ticker says, on arriving in Washington today, supported the position of those of us who are opposed to the administration's communications satellite bill.

I wish to say that this great Democrat need not yield to any other Democrat living in America today on his record of fighting to protect the public interest; and his opposition to the bill is only another example of making a record for the people and against the shocking giveaway of the public interest that this administration is guilty of in proposing passage of the satellite communications bill.

I not only congratulate my colleague, but I also wish to say that I congratulate the ex-President of the United States, Harry Truman, for his fearlessness and his courage, manifested again as he speaks out in support of the public interest.

Madam President, I shall take only a moment to read what the ticker says about President Truman's statement on the bill. I think it is apropos to have it appear in the RECORD along with the discussion of the brilliant letter by the junior Senator from Oregon published in the Washington Post yesterday. The ticker report is as follows:

> Former President Truman came out in opposition today to the Kennedy administration's communications satellite bill.
>
> He told a trainside news conference facilities for developing a system of Telstar-like satellites were "public property" and ought to stay that way.
>
> Truman said developments in this field came at a public cost of $25 or $30 million and agreed with critics of the bill that it would be a "gigantic giveaway" to set up a private corporation to run the system.

Mr. GRUENING. Madam President, will the Senator yield?

Mr. YARBOROUGH. I yield to the distinguished Senator from Alaska.

Mr. GRUENING. Madam President, I am very happy to associate myself wholeheartedly with the very sound remarks made by the senior Senator from Texas, joined in by the senior Senator from Oregon. I fully share their sentiments. Their expressions of admiration for the junior Senator from Oregon are fully merited.

I particularly applaud the courageous stand the junior Senator from Oregon has taken not merely in regard to the issue before the Senate in respect to the space communications satellite bill but also on all issues affecting the public interest, on the side of which she is invariably found.

Mr. YARBOROUGH. I thank the distinguished Senator from Alaska, and the distinguished senior Senator from Oregon. In praising the junior Senator from Oregon they have spoken words of wisdom.

Mr. LONG of Louisiana. Madam President, will the Senator yield?

Mr. YARBOROUGH. I yield to the distinguished Senator from Louisiana.

Mr. LONG of Louisiana. Madam President, the first time that two females ever served in the U.S. Senate the mother of the junior Senator from Louisiana was one of them. There was a great pride in the family of this Senator that there were two females in the Senate at that time.

I am proud today that we have two very able female Senators as Members of this body. I wish to say that none has ever demonstrated more diligence or more arduous devotion to the cause in which she believes than the junior Senator from Oregon.

I commend the Senator from Texas for making this a matter of public record.

Mr. YARBOROUGH. Madam President, I desire to thank the distinguished junior Senator from Louisiana. I come from a State neighboring Louisiana, and I know what great services his distinguished father and mother both rendered to the State of Louisiana and to the Nation.

The distinguished junior Senator from Louisiana is now the oldest member, though he is young, of the Long family from Louisiana holding office. There is a nominee for the House of Congress who bears that family name, who will undoubtedly be elected in Louisiana in November. The junior Senator from Louisiana is now the chieftain of this great clan of fighters for the people of Louisiana. It is a happy privilege to be fighting shoulder to shoulder with him on the floor of the Senate.

We have always found the Long family on the side of the people; whether it was his father, his mother, his uncle, or other members of the family.

The dramatic methods of campaigning they used—and they were novel, for the Long family originated new methods of political campaigning for the American people—caught the public attention, but one thing stands out above all others, as I know, since I come from a neighboring State; that is, they were always on the side of the people. I take my hat off to him.

The school teachers get more pay in the State of Louisiana than they get in my State. They are better paid because of the efforts of the Long family.

Old age pensioners draw better checks, higher per capita and higher per month and per year, in Louisiana, than in my State. The Long family leadership provided that.

Over and over in the field of public welfare it will be found that Louisiana has a higher standing than any other State touching its borders. That is a tribute to the public service and leadership of the Long family.

I am not surprised now to see the chieftain of all the Long clan, as one of the leaders—one of the most able leaders—in the fight to preserve the rights, the privileges, the hopes and the dreams of the people of the United States for generations to come in regard to space. I honor him for standing up and fighting against this unwise and retrogressive thing which would destroy for all time in regard to the uses of space, the hopes of the people, the hopes of generations of people yet to come, despite expenditures of $25 billion of the people's money on all of these things, and despite the snide remarks which have been made in some of the newspapers about a filibuster and using delays and so forth. Since when has it been unpatriotic to defend the rights of 180 million people?

Thank God, the number of distinguished Senators who are following the Long experience in this body cannot merely be counted on the fingers of one hand or two hands; they are legion, and are growing in number day by day. With that support to inspire us, we will not fail. The distinguished junior Senator from Oregon is fast building a record of leadership in this body. It is not surprising to see the Long family efforts and another Neuberger fighting side by side for the common good of the people.

Mr. GRUENING. Madam President, will the Senator yield?

Mr. YARBOROUGH. I yield to the distinguished Senator from Alaska.

Mr. GRUENING. I should like again to associate myself with the remarks of the senior Senator from Texas concerning the junior Senator from Louisiana. I share his views in every respect. His is a record in behalf of public service, in behalf of the public interest, and in behalf of the plain people which is unexcelled. We hope it will go on for many years until some of the gallant and courageous fights which the Senator from Louisiana [Mr. LONG] has been waging will be won, as I am confident they will be, because they are right.

Mr. YARBOROUGH. I thank the distinguished Senator from Alaska.

Madam President, again I wish to say we are proud of the privilege of working with the present occupant of the chair, the junior Senator from Oregon [Mrs. NEUBERGER], who has already, in the brief 5 days of debate the last time the bill was discussed, made a notable contribution to the advancement of the rights of the American people. She has given irrefutable proof of the ability of her sex to render distinguished public service in this strenuously competitive body, the Senate of the United States. And she has put forth her efforts on the side of idealism and public rights and justice. In my opinion, the example she is giving will lead to the election of more women to the Senate proportionally in the future, than have ever served here in the past.

Mr. DIRKSEN subsequently said:

Madam President, in a colloquy that took place a short while ago with respect to the communications satellite bill, I heard it said that "the incomparable Harry Truman" had denounced the satellite bill.

There is a little more to the Associated Press dispatch. I think in the interest of the whole story, the remainder of the dispatch should be read into the RECORD.

The Associated Press dispatch, with a Washington date line, reads as follows:

> WASHINGTON.—Harry S. Truman today denounced the communications satellite bill backed by the Kennedy administration as a "gigantic giveaway."
>
> However, the former President emphasized that he is finding no fault with President Kennedy, in fact is supporting him heartily.
>
> "I don't think the President understands the bill," he told a reporter.

That is one of those interesting and ironic footnotes to history that ought to be properly embalmed in the compendium of wisdom and information that we call the CONGRESSIONAL RECORD. I continue reading the dispatch:

> But he added "The damned Republicans and some Democrats are trying to give away public property.

Madam President, that sounds just like Harry. Continuing to read,

> The public spent $25 or $30 billion developing satellites and the communications system ought to be publicly owned.

His careless use of $25 billion or $30 billion indicates that the incomparable Harry does not know any more about budget figures than he did when he was gracing the great residence at 1600 Pennsylvania Avenue.

The dispatch further stated,

> The Republicans will give away everything if you don't watch them.

That is cute, is it not?

Continuing to read,

> He emphasized several times that he is a backer of the Kennedy administration.

Notwithstanding that fact, he is a great backer.

I submit this only because it throws a proper light on the grand, dramatic illusions with respect to the bill.

BRINGING NUMBER OF CADETS AT U.S. MILITARY AND U.S. AIR FORCE ACADEMIES UP TO FULL STRENGTH

The Senate resumed the consideration of the bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength.

Mr. CANNON. Madam President, my remarks will be directed toward the pending business and not toward the discussion which has just taken place.

OBJECTIVE OF THE BILL

Mr. President, the aim of this bill is to permit the Military and Air Force Academies to be at their full authorized strength of 2,512 cadets at the end of the academic year immediately prior to graduation. As I shall describe in detail later, the bill would accomplish this purpose by permitting the appointment of additional cadets as a supplement to the present qualified alternate system.

Under existing law, the cadet strengths of the academies at the beginning of the academic year is used as a basis for determining the number of additional appointments which may be filled under the qualified alternate system. There is an annual attrition of about 220 cadets at the Military Academy. As a result, the academies are never at their authorized strength, except at the beginning of each academic year. The bill will permit the two academies to make appointments on the basis of anticipated vacancies which would be expected as a result of attrition during the academic year.

The bill is sometimes referred to as the overstrength bill, since the academies will be in excess of their authorized strength at the beginning of the academic year.

It would be anticipated that about 50 additional cadets would be appointed each year to the Army and Air Force Academies. The bill provides that not more than 250 cadets may be in each Academy under the authority of this bill at any one time. The appointments will result in the academies being able to graduate approximately 40 to 45 more officers each year.

It should be emphasized that the additional cadets to be appointed under this bill will require no increase in physical facilities or in the size of the faculties at either of the academies.

METHOD OF APPOINTMENT UNDER BILL

I would now like to discuss the method under which additional cadets would be appointed to the Military and Air Force Academies.

First. It should be noted that the additional appointments would be made as a supplement to the existing qualified alternate appointment system.

Second. In determining the exact number that could be entered under this system, the Secretaries of the Army and Air Force would be authorized to determine, or forecast, the number by which the cadet corps at their respective Academies would be under their authorized strength at the end of the next academic year as a result of normal attrition. As an example of the manner in which the bill would operate, the Secretary of the Army in January of 1963 would make a determination as to the extent of attrition which would occur at the Military Academy between July 1963 and June 1964. Based on this forecast he would then be in a position to determine the number of cadets who could be entered at the Military Academy in July of 1963 under the provisions of this bill.

Third. With respect to those who may compete for these additional appointments, the bill provides that 95 percent must come from congressional sources. Furthermore, this 95 percent must be first alternate congressional nominees or their equivalent. It might be pointed out that under the existing qualified alternate system, only two-thirds of those appointed are required to come from congressional sources. Under the bill only the first alternate may be appointed if he is qualified for selection. However, in the event the first alternate of the Member of Congress is otherwise admitted or is not qualified—that is, does not meet the minimum requirements for admission—the second alternate of the Member of Congress would be eligible for selection. In extremely rare cases this could also apply to the third alternate where neither the first nor the second alternate is eligible for admission. The bill makes this exception to the first alternate requirements in order to insure that the Member of Congress will be able to have one of his other alternates compete for the nomination in the event his first alternate is not eligible for some reason.

A substantial number of the Members of Congress do not use the principal alternate system for cadet nominations, but use what is termed "the congressional competitor system," under which the Member names the cadets who compete for his nomination and the military departments arrange the cadets in order of merit for admission purposes. The bill provides in such cases that the highest ranking congressional competitor following one who may have been selected for admission will be eligible for selection under the bill. These provisions insure that each Member of Congress will have one cadet competing for the appointments authorized under the bill. At the same time, there will not be more than one cadet for each Member of Congress competing for these vacancies, except in those cases where the Member may be filling more than one vacancy.

With respect to the remaining 5 percent of those who may be appointed under this bill, the Secretary could select the best qualified as determined by the academic board from all candidates other than congressional nominees. The 5-percent provision even here is permissive language and is left to the discretion of the Secretary.

The system which I have described and which this bill would provide, would result in approximately 600 first alternates or their equivalent competing for the 50 appointments each year at each of the Academies. There would be more than one candidate for each Member of Congress, due to the fact that normal attrition at the Academies causes the congressional vacancies annually to exceed the number of Members of Congress.

The Secretaries of the Army and Air Force would make the actual selections from among the competitors in accordance with the order of merit established by the academic board for all nominees in the case of the Military Academy and in the order of merit as established by the faculty of the Air Force Academy.

EXTENSION OF MINIMUM OBLIGATED SERVICE

The bill contains an additional feature not relating to appointments. It contains language which increases from 3 to 5 years the minimum period of active service which regular officers must complete following graduation from the Academies. It should be emphasized that the effect of this provision is to increase the service by only 1 year, since as a matter of regulation 4 years are presently required. The provision is applicable to the three service academies plus the Coast Guard and would not affect the period of obligated service for any cadet or midshipman appointed prior to the enactment of this bill.

Mr. LONG of Louisiana. Madam President, I offer an amendment to the committee amendment, which I send to the desk, and ask to have stated.

The PRESIDING OFFICER. The amendment of the Senator from Louisiana to the committee amendment will be stated.

The LEGISLATIVE CLERK. At the appropriate places in the committee amendment, it is proposed to insert the following:

> On page 4, between lines 3 and 4, to insert the following: That (a) section 4342 of title 10, United States Code, is amended by adding

at the end thereof a new subsection as follows:

"(i) The Secretary of the Army shall, not later than November 30 of each year, compile a list of all nominees appointed to the Academy in such year, and shall provide the information contained therein to any Member of Congress upon request. Such list shall, in the case of each appointee, indicate (1) the domicile of such appointee at the time of his nomination, (2) the name and location of the high school (or equivalent) from which such appointee was graduated, (3) the date on which such appointee was graduated from high school (or equivalent), and (4) the name of the nominating authority responsible for the nomination of such appointee."

On page 4, line 4, to strike out "That section" and insert in lieu thereof "(b) Section",

On page 6, line 7, to strike out "Sec. 2." and insert in lieu thereof "(b)".

On page 8, line 9, to strike out "Sec. 3." and insert in lieu thereof "Sec. 4.".

On page 6, between lines 6 and 7, to insert the following:

"SEC. 2. Section 6954 of title 10, United States Code, is amended by adding at the end thereof a new subsection as follows:

" '(d) The Secretary of the Navy shall, not later than November 30 of each year, compile a list of all nominees appointed to the Naval Academy in such year, and shall provide the information contained therein to any Member of Congress upon request. Such list shall, in the case of each appointee, indicate (1) the domicile of such appointee at the time of his nomination, (2) the name and location of the high school (or equivalent) from which such appointee was graduated, (3) the date on which such appointee was graduated from high school (or equivalent), and (4) the name of the nominating authority responsible for the nomination of such appointee.'

"SEC. 3. (a) Section 9342 of title 10, United States Code, is amended by adding at the end thereof a new subsection as follows:

" '(i) The Secretary of the Air Force shall, not later than November 30 of each year, compile a list of all nominees appointed to the Academy in such year, and shall provide the information contained therein to any Member of Congress upon request. Such list shall, in the case of each appointee, indicate (1) the domicile of such appointee at the time of his nomination, (2) the name and location of the high school (or equivalent) from which such appointee was graduated, (3) the date on which such appointee was graduated from high school (or equivalent), and (4) the name of the nominating authority responsible for the nomination of such appointee.' "

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana.

Mr. LONG of Louisiana. Madam President, I regret that there is such sparce attendance on the floor at the present time. I shall not suggest the absence of a quorum at this moment, inasmuch as I have discussed the amendment with the members of the committee, and I believe the committee is willing to accept this particular amendment.

Inasmuch as I do not believe there is any real objection to the amendment, which provides that Members of Congress would have the right to know who is being appointed by the academic board and who nominated applicants for appointment, I would not insist on a quorum at this time because I believe that the distinguished Senator in charge of the bill, the Senator from Nevada [Mr. CANNON], is willing to accept the amendment. On that basis I ask the distinguished Senator in charge of the bill if he is willing to accept the amendment.

Mr. CANNON. Madam President, I think the amendment is a good one. Members of Congress are entitled to have the information available on request. The request seems to be reasonable. It would require information as to the domicile of the appointee at the time of his nomination, the name and location of his high school, or equivalent, from which he graduated, the date he was graduated, and the name of the nominating authority. The request seems to be reasonable. Certainly it is within the right of Members of Congress to have the information, upon inquiry, and I am willing to accept the amendment.

The PRESIDING OFFICER. The question is on agreeing to the amendment of the Senator from Louisiana to the committee amendment.

The amendment to the amendment was agreed to.

The PRESIDING OFFICER. The question is on agreeing to the committee amendment as amended.

Mr. LONG of Louisiana. Mr. President, I call up my next amendment.

The PRESIDING OFFICER (Mr. BURDICK in the chair). The amendment will be stated.

The LEGISLATIVE CLERK. On page 4, line 13, beginning with the new sentence, strike out all down through the period in line 2 on page 6, and insert in lieu thereof the following: "Within that determination, the Secretary of the Army may select, as hereinafter provided, for admission to the Academy candidates who are recommended and found qualified by the Academic Board. In selecting the first candidate for appointment under this subsection in any year, the Secretary shall select for appointment a candidate nominated by the Member of Congress who nominated the cadet that ranks highest in the senior class for such year. In selecting the second candidate for appointment under this subsection in any year, the Secretary shall select for appointment a candidate nominated by the Member of Congress who nominated the cadet that ranks the second highest in the senior class for such year. The third and subsequent selections for appointment made by the Secretary under this subsection shall follow the same order as prescribed above. For the purposes of this subsection, only those cadets in the senior class for any year who were nominated for appointment to the Academy by current Members of Congress shall be considered, and the ranking of such cadets shall be determined by the Academic Board solely on the basis of merit.

On page 6, line 16, beginning with the new sentence, strike out all down through the period in line 4 on page 8, and insert in lieu thereof the following: "Within that determination, the Secretary of the Air Force may select, as hereinafter provided, for admission to the Academy candidates who are recommended and found qualified by the Faculty. In selecting the first candidate for appointment under this subsection in any year, the Secretary shall select for appointment a candidate nominated by the Member of Congress who nominated the cadet that ranks highest in the senior class for such year. In selecting the second candidate for appointment under this subsection in any year, the Secretary shall select for appointment a candidate nominated by the Member of Congress who nominated the cadet that ranks the second highest in the senior class for such year. The third and subsequent selections for appointment made by the Secretary under this subsection shall follow the same order as prescribed above. For the purposes of this subsection, only those cadets in the senior class for any year who were nominated for appointment to the Academy by current Members of Congress shall be considered, and the ranking of such cadets shall be determined by the Faculty solely on the basis of merit.

Mr. LONG of Louisiana. Mr. President, I have prepared a speech that I should like to deliver in support of my amendment, which is an amendment in the nature of a substitute for the committee bill. The committee has improved the bill with its own committee amendments. I believe my amendment would be an improvement on what the committee has given us.

I know how difficult it is to amend with a substitute a bill reported by the Armed Services Committee. There is no committee of the Senate which is respected more than is the Committee on Armed Services, nor is any committee more admired; and no chairman of a committee is more completely beloved by the Senate than the distinguished Senator from Georgia, the chairman of that committee. The entire Senate has complete devotion and affection for the distinguished junior Senator from Nevada [Mr. CANNON], who is in charge of the bill on the floor of the Senate.

I know I have no chance of getting my amendment adopted unless Senators listen to the debate and judge what I have to say here and consider the amendment on the merits of my presentation. Therefore, I feel I shall be compelled to insist on a live quorum; otherwise, I believe there is no possibility of my amendment being agreed to. Therefore, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the order for the quorum call be dispensed with.

The PRESIDING OFFICER. Without objection, it is so ordered.

A POSITIVE PROGRAM FOR FISH PROTEIN CONCENTRATE RESEARCH AND DEVELOPMENT

Mr. GRUENING. Mr. President, the Alaskan congressional delegation today was informed that President Kennedy is requesting $500,000 for research and development of processes to produce a concentrated protein from fish. The request is included in the President's supplemental budget request for the Department of the Interior.

This is wonderful, welcome news.

I am informed that the work planned in this important area will be conducted at the Bureau of Commercial Fisheries Technological Laboratory in College Park, Md. The pilot project planned will include experimentation with different processes, and the Interior Department hopes to develop and perfect commercial techniques for the production of fish protein concentrate.

The President has pointed to the growing need for a low-cost dietary supplement of animal protein in many nations. Research has demonstrated the high value of fish protein to diets.

Earlier this year, on March 13, I appeared before the Subcommittee on Interior and Related Agencies of the Senate Committee on Appropriations.

In the course of my testimony I urged that the money requested for fish protein concentrate be increased. I am, therefore, pleased to have this opportunity again to support the requests for these funds and I hope we will approve the request of the administration so that the United States may move more rapidly ahead in this important area.

On March 13, I said:

> In a time of history when much of the world's population suffers from a lack of protein in its diet, this country should be moving ahead in the vital area of research. This work is in the Nation's interest and merits support. We have to date failed to use properly the available harvest of the sea. In the words of our President, "Let us begin."

Many have worked for expanded research in this area and for proper utilization of the barely tapped resources of the seas. The efforts of the Senator from Illinois [Mr. Douglas], the Senator from Massachusetts [Mr. Smith], my friend and colleague from Alaska [Mr. Bartlett], the Senator from Washington [Mr. Magnuson], the Senator from Delaware [Mr. Boggs], the Senator from Maryland [Mr. Butler], the Senator from Ohio [Mr. Young], the Senator from Florida [Mr. Holland], the distinguished Senator from Minnesota [Mr. Humphrey], the Senator from California [Mr. Engle], and others deserve the highest commendation.

THE ALLIANCE FOR PROGRESS: WORDS AND DEEDS, OR ONLY WORDS?

Mr. GRUENING. Mr. President, on July 19, 1962, on the floor of the Senate I commended President Kennedy for stopping foreign aid to Peru in the light of the military takeover of that and the uncertainty that that nation could give the firm assurance required that it would carry out the self-help measures which should be required under the provisions of the Alliance for Progress.

At that time, I pointed out that logic and reason would dictate that similar action be taken with respect to Argentina and Brazil, where the instability of the Governments similarly made uncertain their ability to carry out the reciprocal agreements needed if the Alliance for Progress is to work.

Dispatches from Buenos Aires, appearing in this morning's papers, indicate that even the military junta which took over command of that Government and seized and imprisoned President Frondizi is not as stable as it appeared several weeks ago when I made my comments.

Mr. President, I ask unanimous consent that the article on the Argentine political picture, published in today's New York Times, be printed at the conclusion of my remarks.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibit 1.)

Mr. GRUENING. Mr. President, last week, on the floor of the Senate, I urged that military aid to Latin America cease. A few days later I repeated that suggestion on the "Today" show. Public response to my suggestion has been most gratifying.

Almost without exception my mail on this subject, which has come from most parts of the country, has been favorable—many letters enthusiastically so.

My original suggestion with respect to the Alliance for Progress was made in the light of the military takeover in Peru.

In the Washington Post for August 7, 1962, Marquis Childs, one of the able commentators on the Washington and national scene, reexamined in depth the situation with respect to Peru. He puts his finger on the crux of the situation when he writes:

> Officials studying what happened in Peru see this dilemma in its most acute form. When a military junta seized power, policymakers were faced with a condition and not a theory. Simply to acquiesce and continue the sizable aid program was to announce to Latin America that all the fine words about reform and democracy were meaningless.

That is precisely the point.

Is the Alliance for Progress to be only words not coupled with deeds? That is not the idea originally expressed so farsightedly by President Kennedy.

Unfortunately, from all I have heard and read, most of our Latin American friends seem to act as though the Alliance for Progress consists merely of high-sounding words. I do not blame them. Our actions have not been in keeping with our words.

No wonder the Latin Americans are confused.

In his excellent article, Marquis Childs quotes the following words uttered by an unnamed Latin American ambassador:

> But you make a mistake in trying to put land and tax reform as a prerequisite to your aid. Unless you quickly make evident what aid can do, you will have no support whatsoever in Latin America.

This is a very revealing statement. It shows an utter lack of awareness on the part of this Latin American ambassador that the Alliance for Progress has more to it than a blank check on the Treasury of the United States. Because of our widespread undertakings of "bail out" operations it is no wonder that this ambassador is laboring under the belief that the Alliance consists of no more than underwriting the governmental budgets of Latin America without undertaking much needed land reforms.

Mr. President, I ask unanimous consent that Mr. Childs' article be printed at the conclusion of my remarks, as well as an article on the Peruvian situation, written by Dan Kurzman, and published in the Washington Post of the same date.

The PRESIDING OFFICER. Without objection, it is so ordered.

(See exhibits 2 and 3.)

EXHIBIT 1

[From the New York Times, Aug. 9, 1962]

ARGENTINE WAR SECRETARY QUITS AFTER REVOLT BY ARMY LEADERS—GUIDO'S REGIME IS THREATENED—GENERAL SETS UP REBEL COMMAND IN NORTH

BUENOS AIRES, August 8.—Argentina's Secretary of War resigned tonight after a rebellion of army leaders threatened new difficulties for the shaky government of President José Maria Guido.

Gen. Juan Bautista Loza, Secretary of War and Commander in Chief of the Army, told a group of high army officers that his resignation from both posts was the only way to resolve the situation.

General Bautista Loza's decision followed a day of military upheaval that began when his own top army leader, Maj. Gen. Federico Toranzo Montero, set up a rebel command post in northern Argentina. He demanded that General Bautista Loza resign.

The Secretary of War denounced General Toranzo Montero as an outlaw, but within a few hours four generals had rallied to the rebel's side.

The rebel leaders accused General Bautista Loza, a career soldier, of having wielded an ironfisted, one-man rule over the army.

The crisis in the military hierarchy caused consternation in the Guido government, which was put into power by the army last March after a bloodless coup that ousted Dr. Arturo Frondizi as President. Dr. Frondizi is still in custody on an island in the Plate River.

The coup followed victories at the polls by supporters of the ousted former dictator, Juan D. Peron. Military leaders feared that a Peronist resurgence was at hand.

During today's confused military maneuvers, a score of army officers were arrested.

Commanders of garrisons supporting General Toranzo Montero arrested officers suspected of siding with General Bautista Loza. Meanwhile, General Bautista Loza ousted key commanders he believed to be opposing him.

One general sent by General Bautista Loza to take command of the First Motorized Infantry Division in a Buenos Aires suburb was arrested by a colonel opposed to General Bautista Loza.

President Guido was in constant conference with his ministers and military chiefs, among them the Minister of Economy, Alvaro Carlos Alsogaray. Senor Alsogaray has just returned from an aid-seeking mission to the United States.

The value of the wobbly Argentine peso tumbled again. Senor Alsogaray expressed deep concern over the effect the army conflict might have on his drive to get the economy moving again.

SUPPORT FOR REBEL RISES

General Toranzo Montero drove from his Salta headquarters to the remote city of Jujuy, 800 miles northwest of Buenos Aires, and proclaimed himself the army commander in chief.

The bold maneuver appeared at first to have scant support. But as the day wore on various key garrisons proclaimed tacit support for the rebels by demanding General Bautista Loza's resignation.

Col. Carlos Silva Valdez, commander of the Second Mountain Infantry Detachment, declared the support of his men for the rebellion. He said that garrisons in six provinces had pledged their backing.

COLONEL BACKS REVOLT

"I have 1,500 men fully armed under my orders and ready to move at any moment," Colonel Silva Valdez said over in a telephone interview. "We are in support of Toranzo Montero."

General Toranzo Montero is a brother of Gen. Carlos Severo Toranzo Montero, a former commander in chief of the army who forced a reshuffle of the top military echelons in an uprising against Dr. Frondizi in 1960.

Gen. Federico Toranzo Montero is 50 years old. He is a wiry cavalry officer who was imprisoned 3 years by the Peron regime on a charge of having plotted against General Peron.

From his rebel headquarters in Jujuy, Gen. Toranzo Montero broadcast defiance of the Secretary of War over the provincial radio. He said that "many active generals" were sympathetic with has cause and he claimed the post of Commander in Chief as "senior major general on active duty."

The fact that he established headquarters in Jujuy raised speculation that he wanted to be near the Bolivian border to seek asylum if the uprising failed.

PERONISTS STIR POLITICAL CRISES

Argentina has been plagued by political crises since Juan D. Perón was ousted as dictator in September of 1955.

Senor Perón's followers—the "descamisados" or "shirtless ones"—and the determination of the military leaders to keep them out of the Government have been at the core of the trouble.

The military leaders have been the power behind the presidential chair from the time the armed forces seized control in Argentina last March 29. On that day they ousted Dr. Arturo Frondizi as President and arrested him. In his place they installed José Maria Guido.

Senor Guido had been President of the Senate and as such was next in legal line of succession to the presidency.

The army had previously ruled through a junta after it overthrew Senor Perón. Its leaders distrusted Dr. Frondizi, who became President May 1, 1958, after he made a deal with Peronist envoys to gain the presidency. Peronist voters, barred from a political ticket of their own, gave Dr. Frondizi his winning margin.

PERONIST UNIONS RESTORED

The apprehensions of the military leaders were not lessened when President Frondizi subsequently restored Perónist unions to a controlling position in the General Confederation of Labor. In 1961 Dr. Frondizi further antagonized the military by refusing to vote with the United States to exclude Cuba from activities of the Organization of American States.

Dr. Frondizi was ousted after he lifted the ban on the Perónist political party and permitted it to run a slate of candidates in Argentina's election last March 18. The followers of the exiled former dictator won 47 of 85 seats at stake in the Chamber of Deputies and 10 of the 17 provincial governorships that were being contested.

Fearing that a return of the Perónists would undermine their power, the military deposed President Frondizi, whom they considered a tool of the Communists.

After a seesaw struggle that lasted about 2 weeks, President Guido capitulated to military demands that he circumvent Congress and settle the Perónist issue.

He announced a series of decrees that canceled the results of the March 18 elections barred Perónists from their seats in Congress and put military intervenors in control of the provincial governments.

Senor Perón is in exile in Spain. Dr. Frondizi is still being held in Argentina.

LEARNING A LESSON FROM PERU'S COUP

(By Marquis Childs)

Almost anywhere you turn in this capital in this sticky end of the summer season, you will be told that not only the Alliance for Progress but the whole foreign aid program is foundering.

Partly it can be put down to the professional enemies of the aid program such as Louisiana's Representative OTTO PASSMAN. But it is more than that. In one underdeveloped country after another, the structure of society—the cleavage between the haves and the vast mass of the have-nots—thwarts the effort to raise living standards and win friends to the democratic way of life.

Officials studying what happened in Peru see this dilemma in its most acute form. When a military junta seized power, policymakers were faced with a condition and not a theory. Simply to acquiesce and continue the sizable aid program was to announce to Latin America that all the fine words about reform and democracy were meaningless.

The aid program was suspended. Ambassador James Loeb returned to Washington and the question of the future relationship between Washington and Lima was put on the shelf. Now that the Peruvian military have freed President Manuel Prado, promised elections in 1963 and are tolerating the presence of the leaders of the APRA Party, the process of resuming at least the diplomatic relationship has begun. The United States is wisely letting Mexico and other Latin American nations take the lead in this matter.

We have heard a great deal in recent years in best sellers such as "The Ugly American" about Ambassadors who spend their time at cocktail and dinner parties with the elite. Knowing little or nothing about the country, the American Ambassador is soothed by the wealthy and wellborn who speak English and who have important financial connections with the United States. While this tends to be a caricature, it conveys an uncomfortable ring of truth about many Ambassadors we have sent abroad.

Loeb and his wife worked hard to break through this easy pattern. With their fluent Spanish, they did their best to come in contact with students, intellectuals, labor leaders and others who fall outside the elite category.

That may have been one reason when the crunch came—the junta taking over in tanks provided by the American military aid program—the American business community in Peru joined with the Lima elite to denounce Washington's policy of suspending relations and holding up the aid program. The APRA Party, led by Victor Paul Haya de la Torre who was subjected to McCarthyist-type smears during the campaign, seems to have won more votes than the Communist-dominated left- or right-wing party.

But basic interests were jeopardized—$800 million in investments by U.S. corporations. Loeb was accused by the military and the business group of being too closely identified with APRA's reformist objectives.

Whether under the military the outward forms of a free society are observed and whether next year elections are held with some degree of free choice are immediate questions for Peru. But for the Alliance for Progress, with its policy of making aid conditional on reforms presumably essential to win popular support, this is a classic case deserving the most thorough study.

You come up against a cart-before-the-horse question: Must reform come before aid can be given? This reporter talked recently with one of the Latin American ambassadors in Washington most knowledgeable about both North and South America and their complex coexistence. What he said in brief was this:

"Of course reforms are essential. We have all known this for a very long time. But you make a mistake in trying to put land and tax reform as a prerequisite to your aid.

"Unless you quickly make evident what your aid can do, you will have no support whatsoever in Latin America.

"Your Members of Congress talk a great deal about how much money they are spending for Latin America. But do they not understand that the prices for the commodities we sell, the only means we have to earn our way, have gone down and down. And the money you put into aid is only small compensation for those losses."

The Peruvian experience offers an opportunity to recast the whole program. The fantastic military aid program—jets superimposed on a peasant economy—needs drastic reexamination. And the time for learning is all too brief.

[From the Washington Post, Aug. 8, 1962]

PERUVIAN PEASANT FINDS PROMISE IN COMMUNISM

(By Dan Kurzman)

CUZCO, PERU, August 7.—Ciprian Llavilla Ccama, a peasant in the Indian village of Chocco, has never heard of Karl Marx. He harbors no ill feeling toward the United States, not being sure what or where it is. He describes himself as a very religious Catholic.

Yet, Ciprian, dressed in a red vest, tight black pants, a red knitted cap, and sandals fashioned from tire rubber, said with frightening casualness:

"If I had to choose between communism and God, I would choose communism. The Communists will give us land, but God won't."

Ciprian spoke for most of the Indian peasants in Chocco, a village about 15 miles from the ancient Inca capital of Cuzco deep in the south Peruvian Andes. He probably spoke also for the majority of inhabitants in scores of other Indian villages throughout Peru who are wallowing in medieval poverty.

OWNS HALF AN ACRE

Ciprian owns half an acre of communal land, land set aside by the government for Indian peasants only. But as the potatoes, wheat, corn, and beans yielded by this land are insufficient to meet his family's food requirements—he has a wife and two young children—Ciprian must also work another half acre of land as a tenant farmer on the nearby hacienda of a powerful absentee landlord.

For the right to use this landlord's property, Ciprian works 2 or 3 days a week for his feudal master, earning less than $1 a month. He must also work 30 days a year for his landlord without receiving any pay at all. The rest of the time he divides between his own field and the one he rents. Last year, when a drought struck, he had to do odd jobs in Cuzco to make enough money to buy food.

Ciprian lives in a dark, damp thatch-and-adobe hut, a dungeonlike enclosure without windows or furniture. A fire burning in a small mud oven that has no chimney constantly fouls the air. Aluminum pots and pans offer the only suggestion of the 20th century.

RELIES ON WITCH DOCTOR

His landlord provides no medical care in case of illness, as even the most callous colonialists do in Africa. He must rely on the herbs of the village witch doctor when any member of his family gets sick. The infant mortality rate of his village, like most others in the region, is almost 60 percent; life expectancy averages under 30 years.

But for all their misery, Ciprian and his fellow villagers are proud people with hope for their children's future. That is why they have built a small adobe schoolhouse. The government pays the salary of the teacher who comes daily from Cuzco to teach the first and second grade, enough to make the children literate in Spanish. Most of their parents are illiterate.

Ciprian, a more ambitious man than most, learned recently to speak and read Spanish at a Catholic school in Cuzco. Not surprisingly, his reading is confined almost entirely to the local Communist newspaper. "It is easier to understand than other newspapers," he explained.

It is easy indeed for him to understand the promise of land when the Communists take over the country, especially in view of the bitter fact that the landlord's property once belonged to the grandfathers of the Indian villagers. About 50 years ago, they had sold the land for about 50 cents an acre and the pledge that they would be treated well as tenant farmers.

With the Communist influence spreading, the landlords, too, are seeking help. One of the most powerful of them in southern Peru, Alfredo Romainville, owner of about 200,000 acres, sought me out when he heard I was in Cuzco. Could I not try to influence the United States to exert pressure on Peruvian authorities to get back land taken from him by armed Communist-led peasants?

To the suggestion that communism might best be continued through a voluntary redistribution of land, Romainville, replied that the only reform needed was a more equitable system of allocating rented land. He noted that some tenants with 150 acres or more rent out tiny patches of land to subtenants who have to work "30 days out of the month" for both the landlord and the original tenant, leaving only a few hours a month for work on their own leased land.

HERBERT HOOVER

Mr. CURTIS. Mr. President, tomorrow one of the greatest of all Americans will celebrate his 88th birthday. I refer to Mr. Herbert Hoover. I know that millions and millions of Americans and millions of people abroad appreciate and honor this distinguished man. It is also my opinion that as the years go by, many more millions will come to the realization of his greatness and his goodness.

There are many things about Mr. Hoover that are deserving of mention, that mark him as a great citizen and statesman. Today I shall confine my remarks to the humanitarian work of former President Hoover.

Through the centuries the question "Am I my brother's keeper?" has echoed in the conscience of mankind. Tens of millions of Americans have answered the question affirmatively by direct and indirect participation in the relief programs established to prevent mass starvation or mass loss of life by pestilence and famine during and following the total wars of this century.

One whose name is summoned to mind immediately in connection with these huge lifesaving and humanitarian endeavors is Herbert Clark Hoover.

The outbreak of World War I in 1914 found Herbert Hoover in London on a mission for the Pan-American Exposition. It also found thousands of Americans stranded in London without funds to return to the United States because of the impossibility of obtaining cash on checks and letters of credit. Hoover immediately was pressed into managing the repatriation of some 120,000 Americans in their flight from Europe. Mobilizing the resources of himself and a group of mining engineer friends, he organized the American Relief Committee in London, of which he was chairman. In this capacity he advanced cash on personal checks, arranged for hotel accomodations and steamship reservations, thus aiding his fellow countrymen, most of whom were personally unknown to him, to return to the United States.

But before he completed this task he was called to what was even a greater relief mission.

When the German armies smashed into Belgium and northern France and the British and French blockaded Germany and her allies, including occupied Belgium and northern France, 7,500,000 Belgians and 2,500,000 French men, women and children were caught in a vise. Their plight was made worse by the invaders' pillage of the grain harvest and hosts of animals. Imminent starvation faced the 10 million isolated people unless some arrangements could be made to provide food and to get it successfully through the blockade.

The Belgian national relief committee urged Hoover to take charge of a food and relief project, and so, with the approval of the American Ambassador, he organized the Commission for Belgian Relief and served as its chairman during the 5 years of its existence. He arranged with the warring nations to permit passage through the blockade of clothing and food for distribution. The first appeal for world charity was issued at the initial meeting of the Commission. During the life of the Commission the great outpouring of charity amounted to the largest fund ever known at that time. The total charitable contributions in money and cargoes of food and clothing were:

From the United States	$34,521,026.99
From the British Empire	16,641,034.85
From Latin America and others	1,128,773.67
Total	52,290,835.51

In the early days of the Commission it was apparent that it could not fully hold the lifeline for these 10 million people solely with the gifts it could obtain from generous people. Hoover thereupon succeeded in securing subsidies from the U.S. Treasury and from the Governments of Britain and France.

During these difficult years Hoover was responsible, as the controlling head of the Commission, for sending into occupied France and Belgium about 5 million tons of food and clothing, having a market value of approximately $1 billion.

The entrance of the United States into the war in April 1917, saw the return to the United States of Hoover, and his appointment by President Wilson as U.S. Food Administrator. It was in this capacity that Hoover established the U.S. Grain Corporation, the Sugar Equalization Board, and the Food Purchase Board, all for the purpose of providing a more centralized handling of food supplies during the war emergency. He also served as Chairman of the Interallied Food Council.

As Food Administrator, he developed an organization for stimulating production, checking hoarding and speculation, and conserving food supplies. His program called for meatless, wheatless, and sugarless days. By these activities he was able to meet the large food demands of the Allies, who were experiencing difficulty in maintaining the morale of the citizenry, owing to food shortages caused by reduced production and loss of cargoes by U-boat destruction. As a result of the programs he administered, it was possible to provide the necessary margins of food, medicine, and clothing for the 170 million people in the allied and neutral nations in Europe during the period of American participation in the First World War.

With the signing of the armistice on November 11, 1918, the dark curtain of war lifted, revealing a terrible scene of the devastation war leaves in its wake. It revealed a disorganized and hungry Eastern Europe. The United States took the first large-scale relief action by setting up the American Relief Administration, with Herbert Hoover as its Chairman. A congressional appropriation of $100 million was made available for use in getting food and supplies to the famine-stricken and panic-stricken countries. Large loans were later made by the United States to these countries. In 8 months, nearly 5 million tons of foodstuffs, of a value of $1 billion, were sent into 23 countries.

The total amount of oversea food and other supplies handled by the organizations which Hoover directed during the First World War was 33,841,307 tons, of a value of $5,243 million.

The signing of the peace treaty brought with it the liquidation of the American Relief Administration, as an agency acting for the U.S. Government. But suffering from lack of food still persisted in parts of Europe; so Hoover and several of his associates formed a private charitable organization to carry on the humanitarian work of feeding the hungry and orphaned children of Central and Eastern Europe. Since the name ARA had become so well known, it was decided to carry on the work of the private organization under the same title. During the life of this organization—until June 1922—it provided free meals to more than 8 million children. In addition, warm clothing of an estimated value of $8 million was distributed to 2 million children.

During the life of the American Relief Administration, it provided public and private aid to 14 million adults. Adding children, the total number of individuals who at one time or other were furnished the necessary margins to preserve life was estimated at more than 20 million, in 45 nations.

In July 1921, only a few months after Hoover had become Secretary of Commerce, and as he was preparing to wind up the activities of the American Relief Administration, Maxim Gorky, the Russian revolutionary author, addressed an appeal to him and the other American people for aid in the stupendous famine among Russian people in the Ukraine and the valley of the Volga—for bread and medicines for starving, disease-racked children. This had been due partly to freaks of the weather, but mostly to a halt in agricultural production while the Soviets were communizing the Russian peasants. At that time there were a few million dollars left over in the American Relief Administration. Hoover, in reply to Gorky, outlined certain minimum conditions upon which the task could be undertaken, particularly for children. These conditions included freedom of all American prisoners in Russia; full liberty to Americans to administer the relief and to travel without interference; distribution on a nonpolitical basis; and free storage, transportation, and offices.

The Soviet Government had been subsidizing revolution over the world with czarist gold. Hoover demanded that the Soviets place a substantial amount of the remainder in the ARA, for expenditure upon food. They raised many difficulties; and it was only when Hoover threatened to abandon the entire project that they complied. Hoover finally got together $90 million, of which about $18 million came from this Russian gold. Part of the resources came also from an appropriation by the Congress of $20 million profits left in the U.S. Grain Corporation and $8 million in medical supplies from military surplus. The remainder was raised by public charity.

Final records show that during this period of plague and pestilence, over 19 million starving Russian people, of whom 6 million were children, were fed 753,400 tons of American food.

When the back of the famine was broken and the Russian mission was ended, Hoover received a scroll of thanks from the Soviet Government. One might suppose that this humanitarian endeavor would have assured Hoover an honored place in Soviet history. This was not to be true. In 1927, when Hoover became a candidate for President, and down through the ensuing years his reward has been that the Communists have consistently attempted to defame him and his lifesaving endeavors on their behalf.

After World War II, at the request of President Truman, Hoover was coordinator of food supply for 38 nations. In his capacity he girdled the globe, making arrangements to provide rice for starving millions in the Far East and bread for millions more on other continents. And when his work was taken up by the relevant Government agencies, he expressed a readiness to assume any other tasks the President thought he could perform for the Government of the United States. Those too he has accomplished nobly.

Since the elder statesman began his career of public service in 1913, he has organized famine and disaster relief programs for more than a billion persons in 50 nations. He stands ready to serve today all humanity which he loves.

I am sure I speak not only for the vast majority of this body—yea, all of them—but the vast majority of the people whom I have the honor to represent in part, in wishing Herbert Hoover a happy birthday tomorrow, when he becomes 88 years of age.

I ask unanimous consent to have printed in the Record following my remarks an article written by Mr. David Brown, publisher, in the Globe-Democrat of August 6, 1961, concerning Mr. Hoover when he was 87 years old.

There being no objection, the article was ordered to be printed in the Record, as follows:

Herbert Hoover Reaches 87

(By David Brown)

Back in the era before electric lights or telephones or paved roads the Fourth of July was an important day in the little town of West Branch, Iowa. It was a patriotic day. The high moment came each year when the villagers and countryfolk gathered at the crossroads to hear the Declaration of Independence read aloud to them.

There was one boy of the town who always perched himself where he could hear well. In time he went away from West Branch. He grew to manhood, and a lot of years passed. And a lot of things happened in the world.

A few weeks ago, a man full of years and wisdom stood in Philadelphia's historic Independence Hall and addressed a group of school boys and girls. His words went out to the entire youth of the Nation by radio. He told the youngsters of America to be alert to protect that precious freedom they had inherited from the founders of their country.

The man who spoke that admonition with the wavering voice of age was once the boy who had listened so intently to the Fourth of July reading of the Declaration of Independence in West Branch, Iowa.

He had inherited that precious freedom himself long ago, and it had enabled him to become one of the great men of America and of the entire world.

He was Herbert Hoover.

Next Thursday—August 10—he will be 87.

The world, as it does each year, will casually note the milestone as it flicks by, but many people still alive will pause long enough to remember that this man once fed them when they were starving.

In this long life of amazing breadth Herbert Hoover has won superlative distinction in several fields. He has been a great engineer, humanitarian, administrator, elder statesman, patriot, and President of the United States.

He has gathered recognitions of all kinds. Colleges and universities of the world have given him more than 90 honorary degrees alone. Dozens of schools have been named for him, and this he considers the greatest distinction of all. For, though he is now old in years, his increasing interest has been in youth—its morality, its education, its democratic ideals. A supreme devotion in recent years has been his beloved Boys' Clubs of America of which he is chairman. Despite his age, he indefatigably goes about the country dedicating new clubhouses. Nothing has made him prouder than the fact that the new boys' headquarters in New York opposite the U.N. building, has been named the Herbert Hoover building.

His most cherished project is the Hoover Institution on War, Revolution, and Peace housed in a striking tower on Stanford University campus at Palo Alto, Calif. It is a vast collection of material on this century's "great social upheavals," and its purpose is to promote peace.

The pattern of Herbert Hoover's adult life has fallen into three segments. During the first 20 years he was a distinguished mining engineer who built a personal fortune. During the next 18 years his life was given fully, without a cent of pay, to the public service—first humanitarian and then governmental. The most extensive has been his post-Presidential period—the 28 years since he left the White House. His varied and assiduous activities have been largely in behalf of his country and its people. And they have diminished little with his mounting birthdays.

Since his wife died in 1944, widower Hoover has lived mostly in a suite high up in New York's Waldorf Towers, where he has General Douglas MacArthur for a neighbor. (He has sons, Allan and Herbert Hoover Jr., and grandchildren.) His offices are in the suite and his tireless daily activities are such that he is now keeping eight secretaries busy.

He is constantly writing books—in longhand—has one coming out in September and another "in the oven." He makes a number of major speeches, which he also writes himself in longhand. This year he has sent out more than 36,000 letters, has met innumerable people, and engaged in all sorts of activities.

In Manhattan's Waldorf Towers, where Herbert Hoover now lives at the age of 87, he is far removed in time and space from the little Corn Belt town of West Branch, Iowa, where he was born on August 10, 1874. It was just a crossroads village then, where his father sold farm implements and was the blacksmith, and his mother had taught school. But from this country village America and its future stood imaged clearly—the land of freedom, the land of opportunity, the land of rugged individualism.

The ancestors of his parents were Quakers who had come to this country in 1740 and young Herbert Hoover attended the Quaker Sunday school and built an abiding religious faith.

At the age of 10 he was an orphan, his father had died of typhoid when he was 6 and his mother was taken by pneumonia a few years later. The three children—Herbert, his brother and his sister—were distributed among relatives. He ended up with an uncle in Newberg, Oreg., attended a Quaker academy there. When he was 15 his uncle moved to Salem, Oreg., opened a real estate business and Herbert worked in the office and went to night school.

A prospecting trip with a mining engineer about this time settled his mind about a career. He heard of a brandnew school that was opening its doors at Palo Alto, Calif., and in 1891 became one of the first to enroll in Leland Stanford University. He worked his way through school, in time became Stanford's most famous graduate.

With his diploma, the young mining engineer faced the world in 1895. He began his career ingloriously with a $2-a-day pick and shovel job, but from there on it was a storybook success. He went to Australia where a gold mining boom was in progress and did so well that the Chinese Government employed his services. But first he hurried home, in 1899, and married his Stanford University sweetheart, Miss Lou Henry of Monterey, Calif. who was to become in time the Nation's First Lady. But then she was just a young wife sharing the travels and perils of her engineer husband.

They traveled all over the world together, and there were perils as well as engineering triumphs. Right near the start of their marriage they were among the 200 foreigners who were besieged 4 weeks in Tientsin during the Chinese Boxer Rebellion of 1900. Herbert Hoover was an outstanding engineer, was partner in a British firm from 1902 to 1908 and then formed his own company with branch offices flung around the world.

In less than 20 years, and by the time he was 40 years old, he was wealthy. He directed mining, metallurgical and other companies which employed 160,000 men in various countries.

The year was 1914. Hoover was in London to persuade European nations to participate in an international exposition San Francisco was holding the next year. Suddenly World War I broke and the Kaiser's army plunged through Belgium to attack France.

The quiet, reserved engineer who was known little outside his profession, was caught up in the holocaust and whirled into public life.

First he was put to work expatriating the 200,000 Americans caught in Europe by the war and he did such a good job that he was next given one of the most gigantic humanitarian tasks of all time. He headed a commission which fed 10 million distitute Belgians between October 1914 and April 17, 1917, when the United States entered the war on the side of the Allies.

He had done a tremendous job and was famous and beloved for his humanitarianism and administrative ability. President Woodrow Wilson promptly appointed him Food Administrator in the United States. He continued his work of international rehabilitation and relief after the war.

With war over, the American voters turned to the Republicans, elected Warren G. Harding President. He named the popular Hoover as his Secretary of Commerce, a Cabinet post in which he continued for 8 years when he was reappointed by Calvin Coolidge, Harding's successor after his death in 1923.

The Republicans happily turned to Herbert Hoover in 1928 when Coolidge did not "choose" to run again.

The roaring 1920's were roaring to a close. The Nation was at the crest of its greatest prosperity. Candidate Hoover had the confidence of people at home and abroad. He would bring business methods to Government and keep Government out of business. In his campaign he was so optimistic he spoke of the future possibility of abolishing poverty in America.

The Democrats nominated Alfred E. Smith, four-time Governor of New York and a man of the people. He was a Catholic; he favored ending prohibition. Hoover believed prohibition a "noble" experiment that needed better enforcement. He had personal popularity and unprecedented prosperity on his side.

In a crushing victory at the polls he won 40 of the 48 States.

Herbert Hoover was on March 4, 1929, inaugurated as the 31st President of the United States. Before 7 months had passed the greatest prosperity ever seen came tumbling down about the ears of a stunned people.

The first manifestation that a fool's paradise had come to an end was the stock market crash October 29, 1929. Then, gradually, the fires of industry died out, the wheels of commerce slowed, men lost their jobs, businesses failed, purchasing power shrank, mortgages were foreclosed on homes and farms, souplines formed, banks closed. The Nation's worst depression of all time deepened, reached bottom with 12 million unemployed in 1933 and really lasted for 10 years—until World War II set off another boom.

It was not a depression President Hoover created, it was not one he could have avoided, it is doubtful that he could have controlled it very much during his single term, though some reasonable critics argue that he was too long in recognizing its seriousness. He himself has always attributed it in the main to delayed consequences of World War I, has insisted that he could have cured it had he continued in office or that it would have been quickly dissipated if the Democrats had followed his policies. The Democrats, of course, have never shared this view.

The great depression overshadowed everything else during President Hoover's administration. Always a hard worker, he spent as much as 20 hours a day at his desk trying to rally the country toward recovery. But despite many measures to get the wheels moving again the decline continued.

A storm of condemnation descended on the Republican administration as the 1932 election year came around. The Republicans, with sagging hopes, again nominated Herbert Hoover. The Democrats picked Franklin D. Roosevelt, another New York Governor with personal charm and a vote-catching family name. He was talking about a "New Deal" and the "forgotten man."

The sad economic plight of the Nation was a perfect Democratic club with which to flay the Republicans in the campaign. The Republican President was vilified. He was made the scapegoat. It was "the Hoover depression."

Herbert Hoover's defeat at the polls that November was even more overwhelming than his victory had been 4 years earlier. He won only 6 States, lost 42.

He and his wife packed up, went home to their private residence on the campus of Stanford University at Palo Alto.

The ordeal was over. They had endured much. There was no bitterness.

Herbert Hoover, who had never accepted a cent of salary or other compensation for his years of public service—even during the 4 years he was President—did not return to his lucrative profession of engineering. Despite his political disappointment, he decided to devote the remaining years of his life to his Nation and its people, to the freedoms and ideals he had cherished since the days he listened to the Declaration of Independence at the West Branch crossroads.

He could devote plenty of time to directing, inspiring, and raising funds for his beloved Boys' Clubs of America, a national youth-building organization.

After discreet silence for a few years he became a voice of the New Deal "opposition" in speeches, books and magazine articles. He was ready when the Second World War came, and afterward, to give his services in famine relief. (When Mrs. Hoover died in 1944 he turned their residence over to Stanford and moved into Manhattan's Waldorf Towers.)

President Roosevelt always ignored the Republican ex-President, never had him inside the White House. But succeeding Democratic President Truman wisely called upon his rare and valuable talents. He employed him first in a world famine relief survey, and then used his great abilities to head a commission to seek ways of improving the executive branch of the Government and eliminating wasteful methods of operation. Familiarly called the Hoover Commission, it made sweeping recommendations in 1949 that saved an estimated $4 billion a year. The former President headed a similar commission during the administration of Republican President Eisenhower.

As the years gathered about Herbert Hoover so did the love and esteem of his countrymen. He was cheered upon appearance. He was the elder stateman. He was the inspiration of youth. He was the man who came back from the dark depths of the depression and defeat.

And always since his boyhood at West Branch, he has had that abiding faith in his country's future. A few years ago he said:

"I have lived a long life. I have witnessed and taken part in many great and threatening crises. Each time they have been surmounted the American dream becomes more real.

"My faith arises from the genius of our people, their devotion to personal liberty and their sustaining religious beliefs. If the American people are guided aright, there will be no decline and fall in American civilization."

OUTDOOR RECREATION

Mr. JACKSON. Mr. President, I ask unanimous consent to temporarily lay aside H.R. 7913 and to proceed to the consideration of Calendar No. 1782, Senate bill 3117.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (S. 3117) to promote the coordination and development of effective Federal and State programs relating to outdoor recreation, and to provide financial assistance to the States for outdoor recreation planning, and for other purposes.

The PRESIDING OFFICER. Is there objection to the unanimous-consent request of the Senator from Washington?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 2, line 4, after the word "on", to insert "and by private interests"; in line 11, after the word "The", to strike out "terms 'State' and" and insert "term"; in the same line, after the word "States", to strike out "include" and insert "includes"; on page 3, line 12, after the word "subdivisions", to insert "and private interests"; in line 19, after the word "agreements", to strike out "without regard to the provisions of section 3648 of the Revised Statutes (31 U.S.C. 529) when in his judgment such payments are necessary to facilitate such research"; on page 6, line 4, after "June 30,", to strike out "1964" and insert "1966"; on page 7, line 11, after the word "for", to strike out "coordination" and insert "cooperation"; on page 8, after line 7, to insert a new section, as follows:

SEC. 204. The Secretary is authorized to accept donations of money or other personal property which he may use in furtherance of the purposes of this Act.

At the beginning of line 11, to change the section number from "204" to "205"; and after line 15, to insert a new section, as follows:

SEC. 206. The District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa shall each be treated in the same manner as provided for States in this Act: *Provided*, That they shall not be given equal shares in the planning grant funds designated for such apportionment under section 202, but shall be given in lieu thereof, from said funds such sums as, in the Secretary's discretion, provides them with total grants which are equitable and appropriate to their needs, and the Secretary shall report the amount of such grants to Congress annually.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Congress finds and declares that the general welfare of the Nation requires that all American people of present and future generations shall be assured the availability and accessibility of such quantity and quality of outdoor recreation resources as are necessary and desirable for the physical, spiritual, cultural, recreational, and scientific benefits which such outdoor recreation resources provide; and that timely and coordinated action is required by all levels of government on and by private interests a nationwide basis to conserve, develop, and utilize such resources for the benefit of the American people.

SEC. 2. As used in this Act except as the context otherwise may require—

(a) The term "Secretary" means the Secretary of the Interior.

(b) The term "United States" includes the District of Columbia, the Commonwealth of Puerto Rico, the Virgin Islands, Guam, and American Samoa.

(c) The term "outdoor recreation resources" means land, waters, and associated resources in the United States and interests therein, improvements thereon, and access thereto, including areas of historic significance and such forests, rangelands, wetlands, fish and wildlife, and other natural resources as may serve other beneficial purposes, which provide, or may in the future provide, opportunities for outdoor recreation. The term "outdoor recreation" means the use and enjoyment of outdoor recreation resources.

TITLE I—RESEARCH, COORDINATION, AND PLANNING

SEC. 101. In order to carry out the purposes of this Act, the Secretary is authorized, after consultation with the heads of other Federal departments and agencies concerned, to—

(a) prepare and maintain a continuing inventory and evaluation of the outdoor recreation needs and resources of the United States;

(b) prepare a system for classification of outdoor recreation resources;

(c) provide technical assistance to States and their political subdivisions and private interests with respect to programs relating to outdoor recreation;

(d) encourage interstate and regional cooperation in the acquisition and development of outdoor recreation resources;

(e) sponsor and engage in research relating to outdoor recreation, directly, or by contract, grant, or cooperative agreements;

(f) formulate and keep current an integrated nationwide outdoor recreation plan which shall take into consideration the plans of Federal agencies, States, and their political subdivisions, shall set forth the current and foreseeable availability of outdoor recreation resources and the needs and demands of the public for the use and enjoyment thereof, and shall identify critical outdoor recreation problems and propose steps for their solution, identifying desirable actions to be taken at each level of government and by private interests. The Secretary shall report at intervals of not more than five years on such plan to the President for transmittal to the Congress. When the plan is transmitted to the Congress, the Secretary shall transmit copies of the report to the Governors of the several States;

(g) undertake such studies and assemble and publish such information concerning outdoor recreation, either directly or by contract, as he deems appropriate, and disseminate such information without regard to the provisions of section 321n of title 39, United States Code;

(h) establish education and interpretation programs in cooperation with educational institutions in order to assist and encourage public use of outdoor recreation resources; and

(i) request any Federal department or agency for (1) such information, data, and reports, and (2) such advice and assistance, as may be necessary in carrying out the provisions of this title; and any department or agency which furnishes such advice or assistance may expend its own funds for such purposes, with or without reimbursement from the Secretary as may be agreed upon between the Secretary and the head of the department or agency.

SEC. 102. The complete files and records of the Outdoor Recreation Resources Review Commission shall be transferred to the Secretary on or before September 1, 1962.

TITLE II—PLANNING GRANTS TO STATES

SEC. 201. To assist the States in meeting their primary responsibilities to provide outdoor recreation opportunities to the populations they serve and to encourage comprehensive planning by the States, in cooperation with their political subdivisions, for effective outdoor recreation resource programs, there is authorized to be appropriated not to exceed $50,000,000 for grants to States to assist them in the preparation of comprehensive statewide outdoor recreation plans, including the cost of training personnel for recreation planning and administrative responsibilities. Money appropriated hereunder shall be available until expended for payment to the States to assist each State for a period of not more than five years in a planning program approved by the Secretary, in accordance with section 203, commencing not later than June 30, 1966.

SEC. 202. The sum authorized to be appropriated under section 201 shall be apportioned among the several States as follows: (1) one-fifth shall be divided equally among the several States; and (2) three-fifths shall be apportioned in the proportion which the population of each State bears to the total population of the United States. The remaining one-fifth of such sum shall be available for grants to States, without apportionment as hereinabove provided, in such amounts as in the opinion of the Secretary may be required to meet the needs for outdoor recreation planning.

SEC. 203. (a) In determining the adequacy of any planning program submitted by a State for approval under this title, the Secretary shall consider whether such program—

(1) designates a State agency (hereinafter referred to as the "State agency" to administer the planning program;

(2) provides for preparing and keeping up to date a comprehensive statewide outdoor recreation plan for assuring the availability and accessibility of outdoor recreation resources to its inhabitants in accordance with the purposes of this Act. The plan shall take into account relevant Federal resources and programs and shall be coordinated with any local, metropolitan, State, or regional comprehensive plans, including those prepared with the aid of planning grants under section 701 of the Housing Act of 1954, as amended (40 U.S.C. 461); and it may consist entirely or in part of components of an interstate plan developed in cooperation with agencies of another State or States;

(3) sets forth the procedures to be followed in carrying out such planning program, with adequate provision for cooperation with all Federal, State, and local agencies having responsibilities in such fields;

(4) provides that the State agency will make such reports in such form and containing such information as the Secretary from time to time may require to carry out his functions under this title;

(5) provides such accounting, budgeting, and other fiscal methods and procedures as are necessary for the proper and efficient administration of the program, and provides that, upon request of properly authorized representatives of the Secretary, accounting and other fiscal records pertaining to such administration will be made available for inspection by such representatives.

(b) Upon approval of the State planning program, the Secretary shall pay to such State from appropriations available therefor up to 75 per centum of the first year's cost of such State program; not more than 50 per centum of the second year's cost of such program; and not more than 35 per centum of the annual costs of such program during each of the subsequent three years: *Provided,* That in no case shall the total of such grants exceed the amount available to such State under section 202.

SEC. 204. The Secretary is authorized to accept donations of money or other personal property which he may use in furtherance of the purposes of this Act.

SEC. 205. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act. Nothing contained in this Act shall limit any authority of the Secretary under any other provision of law.

SEC. 206. The District of Columbia, Puerto Rico, the Virgin Islands, Guam, and American Samoa shall each be treated in the same manner as provided for States in this Act: *Provided,* That they shall not be given equal shares in the planning grant funds designated for such apportionment under section 202, but shall be given in lieu thereof, from said funds, such sums as, in the Secretary's discretion, provides them with total grants which are equitable and appropriate to their needs, and the Secretary shall report the amount of such grants to Congress annually.

Mr. JACKSON. Mr. President, I ask unanimous consent that the committee amendments be considered en bloc.

The PRESIDING OFFICER. Is there objection?

There being no objection, the amendments were considered and agreed to en bloc.

The PRESIDING OFFICER. The bill is open to further amendment.

Mr. JACKSON. Mr. President, I send to the desk a technical amendment.

The PRESIDING OFFICER. The amendment offered by the Senator from Washington will be stated.

The LEGISLATIVE CLERK. It is proposed on page 2, line 4, to strike the word "on" which appears after the word "government" and insert the word "on" after the word "interests".

The PRESIDING OFFICER. The question is on agreeing to the amendment offered by the Senator from Washington [Mr. JACKSON].

The amendment was agreed to.

Mr. JACKSON. Mr. President, this bill was reported unanimously from the Senate Interior and Insular Affairs Committee. It stems also from the unanimous findings of the Outdoor Recreation Resources Review Commission, headed by Mr. Laurance Rockefeller, who was appointed to head this Commission in 1958.

The measure was proposed to Congress by the Secretary of the Interior and introduced by Senator CLINTON P. ANDERSON and 20 cosponsors.

The purpose of the bill is to provide for recreation planning grants to States and to give the Secretary of the Interior authorities he needs to develop a national recreation program through the Bureau of Outdoor Recreation.

The committee held extensive hearings on the bill. It was submitted to the Governors of the 50 States. Their attitude was one of wide and general receptivity to the proposal.

The PRESIDING OFFICER. The bill is open to further amendment.

If there be no further amendment to be proposed, the question is on the engrossment and third reading of the bill.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

BRINGING NUMBER OF CADETS AT U.S. MILITARY AND U.S. AIR FORCE ACADEMIES UP TO FULL STRENGTH

Mr. JACKSON. Mr. President, I ask that the Senate return to the consideration of H.R. 7913.

The PRESIDING OFFICER. Without objection, the Chair lays before the Senate the unfinished business.

The Senate resumed the consideration of the bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength.

Mr. JACKSON. Mr. President, I yield to the distinguished Senator from Delaware [Mr. WILLIAMS]—or does the Senator wish the floor in his own right?

Mr. WILLIAMS of Delaware. Yes.

The PRESIDING OFFICER. The Senator from Delaware.

CONTRADICTORY POLICIES OF THE KENNEDY-FREEMAN FARM PROGRAM

Mr. WILLIAMS of Delaware. Mr. President, I know of no better way to demonstrate the contradictory policies of the Kennedy-Freeman farm program than to call attention to some of last year's operations as the program is presently being administered.

Last year the Department of Agriculture paid out $1,118,233,897 as inducements to the American farmers to retire 53,604,795 acres from agricultural production. This was a national average of over $20 per acre. These payments, which were made for the announced purpose of reducing the production of agriculture crops are broken down as follows:

Feed grains program, 1961:	
19,114,600 acres corn diverted for payment	$645,380,700
6,100,500 acres sorghum diverted for payment	136,483,800
Soil bank conservation reserve program: 28,389,695 acres diverted for payment	336,369,397
Total	1,118,233,897

After paying out over one billion dollars to the American farmers for reducing their acreage during 1961, the Department of Agriculture then paid the American farmers another $208,182,000 to subsidize the purchase of additional lime, fertilizer, and so forth, and for certain soil conservation practices. This subsidized lime and fertilizer was made available for the announced purpose of increasing the productivity on the remaining acreage.

Now, the U.S. Government itself is the largest owner of agriculture crop and grazing land in America, but instead of just keeping its own agriculture land out of production it leased it to the American farmers for the purpose of producing more crops and more livestock.

During 1961 the record shows that the Government leased 4,881,395 acres of farmland to the American farmers for agriculture production at an average of less than $3 per acre, or a total annual rental of $13,327,953.

Thus, we find that on the New Frontier Secretary Freeman was paying an average of over $20 per acre to retire 53 million acres of cropland from production while at the same time the Government was leasing 4,881,000 acres of its own cropland back to the farmers at an average of less than $3 per acre.

A breakdown of this Government-owned farmland, the Agency under which it was leased, and the amount collected follows:

		Acres	Annual rentals
Cropland:			
Farmers Home Administration.	Leased	3,491	?
Forest Service	do	24,059	$102,545
Interior	do	169,512	595,763
Bureau of Indian Affairs.	do	3,728,621	10,612,706
Defense:			
Military	do	385,416	976,370
Civil works	do	570,296	1,040,509
Total		4,881,395	13,327,953
Grazing:			
Forest Service (Agriculture).	do	640,508	64,050
Do	do	59,789,452	3,898,497
Interior	do	193,631,545	3,425,409
Bureau of Indian Affairs.	do	18,464,332	3,208,907
Defense:			
Military	do	1,824,563	831,081
Civil Works	do	369,193	300,584
Total		264,719,593	11,728,528

Summarizing the above operations, in 1961 the U.S. Government paid $1,118,233,897, or an average of over $20 per acre, to retire 53,604,795 acres of farmland from production.

The Government paid another $208,182,000 to subsidize the purchase of lime and fertilizer to increase the production on the remaining acreage. The Government then leased 4,881,395 acres of its own farmland for agriculture production at an average of less than $3 per acre and then leased another 264,719,593 acres of grazing land at an average annual rental of less than 5 cents per acre.

But this does not represent all of the confusion on the Potomac. During 1961 the Government spent millions under the Bureau of Reclamation to irrigate and bring into production an additional 113,700 acres of cropland. Under these reclamation projects, full or supplemental irrigation service was furnished to this acreage at a cost to the taxpayers ranging from a low of $159 per acre up to a high of $1,227 per acre.

Under numerous other reclamation projects, some of which have already been authorized and some of which are still being approved, millions will be spent to irrigate and bring into full production thousands more acres of farmland.

At this point I ask unanimous consent to have incorporated in the RECORD five letters from the various Departments confirming the statistics which I have used in my report today. First, I submit a letter and attachment from the Department of Defense dated March 14, 1962, signed by Assistant Secretary Charles J. Hitch. Second, I submit a letter from the Department of Interior dated April 19, 1962, signed by Mr. N. O. Wood, Jr., Director of Division of Property Management. Third, I submit two letters from the Department of Agriculture dated April 2 and April 30, 1962, and signed by Secretary Freeman and Assistant Secretary John P. Duncan, Jr., respectively. Last, I submit a letter and attachment from the Department of Interior dated March 19, 1962, signed by Mr. Floyd E. Dominy, Commissioner of the Bureau of Reclamation.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

ASSISTANT SECRETARY OF DEFENSE,
Washington, D.C., March 14, 1962.

DEAR SENATOR WILLIAMS: In accordance with the request in your letter of March 7, 1962, addressed to Secretary McNamara, there is attached a table showing acreage leased by the Department of Defense in the United States for agricultural and grazing purposes during the fiscal year 1961.

Sincerely yours,

CHARLES J. HITCH,
Assistant Secretary of Defense.

Acreage leased by the Department of Defense for agricultural and grazing purposes in the United States during fiscal year 1961

	Number of acres	Annual rentals
Agricultural:		
Military	385,416	$976,370
Civil works	570,296	1,040,569

Civil works	369,193	300,584

U.S. DEPARTMENT OF THE INTERIOR,
OFFICE OF THE SECRETARY,
Washington, D.C., April 19, 1962.

Hon. JOHN J. WILLIAMS,
U.S. Senate, Washington, D.C.

DEAR SENATOR WILLIAMS: In accordance with your request of March 7, 1962, and our acknowledgement of March 15, 1962, enclosed is a tabulation showing (1) the total acres of land leased by bureaus of this Department during calendar year 1961 for grazing and crop production, and (2) the total rentals received from such leases. Separate totals are included for lands controlled by the Bureau of Indian Affairs.

Sincerely yours,

N. O. WOOD, Jr.,
Director, Division of Property Management.

Total acreage and rental received for land leased by the Department of the Interior for certain purposes

Bureau of Indian Affairs, calendar year 1961	18, 464, 332	3, 208, 907	3, 728, 621	10, 612, 706

DEPARTMENT OF AGRICULTURE,
Washington, D.C., April 2, 1962.
Hon. JOHN J. WILLIAMS,
U.S. Senate.

DEAR SENATOR WILLIAMS: This is in reply to your letter of March 7 requesting the same information for the year ended June 30, 1961, concerning land leased for agricultural and grazing purposes that was provided last August for certain previous years.

Land is leased for agricultural purposes by two agencies of the Department—the Farmers Home Administration and the Forest Service. The acreage so leased by the FHA as of June 30, 1961, was 3,491 acres. As of the same date, 24,059 acres of land under Forest Service jurisdiction were leased for the production of crops, including the cutting of wild hay. Forest Service receipts attributable to these uses are estimated to have totaled $102,545 during fiscal year 1961. Permits authorizing individual use of small areas for pasture purposes were issued for 640,508 acres by the Forest Service during fiscal year 1961. Receipts from these permits are estimated at $64,050, exclusive of separately determined forage fees in most areas. Data are not available in Washington showing total Government receipts from leasing and renting of land under FHA jurisdiction.

Figures on Forest Service lands "open for grazing" and grazing receipts have been received from the field but are not yet summarized. They will be furnished to you in the near future.

Sincerely yours,
ORVILLE L. FREEMAN,
Secretary.

DEPARTMENT OF AGRICULTURE,
Washington, D.C., April 30, 1962.
Hon. JOHN J. WILLIAMS,
U.S. Senate.

DEAR SENATOR WILLIAMS: This supplements our letter of April 2 which partially met your request for information comparable to that provided in August 1961, on land leased for agricultural and grazing purposes.

Forest Service lands "open for grazing" during calendar 1961 totaled 59,789,452 acres. Grazing receipts for fiscal year 1961 amounted to $3,898,497. As pointed out in our letter of last August, these lands are open for grazing under a permit system and several permittees may have stock in the same area. The fee being charged per month for 1962 averages 46 cents per cow and 7.75 cents per head for sheep.

Information on lands leased for agricultural purposes, and pasturelands for which individual use permits were issued, was supplied in our letter of April 2, 1962.

Sincerely yours,
JOHN P. DUNCAN, Jr.,
Assistant Secretary.

U.S. DEPARTMENT OF THE INTERIOR,
BUREAU OF RECLAMATION,
Washington, D.C., March 19, 1962.
Hon. JOHN J. WILLIAMS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR WILLIAMS: We are pleased to respond to your letter addressed to Secretary Udall, dated March 7, 1962, requesting information by projects of the acreage available to receive initial irrigation service from facilities completed in fiscal year 1961 under the Federal reclamation program, together with estimated irrigation investment per acre. A table providing this information is enclosed.

The data presented reflect the completion of facilities for (1) full irrigation service to lands not previously irrigated; (2) supplemental irrigation service to lands previously irrigated but having insufficient water; and (3) rehabilitation of irrigation projects constructed originally by non-Federal interests. These are designated "F," "S," and "R," respectively.

Full irrigation service provides water to lands formerly dry-farmed or grazed. The supplemental service projects and the rehabilitation of privately built projects are rescue-type operations. The acreage shown on the enclosed table represents the lands for which the final delivery facility was completed. However, the total acreage will seldom be irrigated immediately by reason of the need for the farm operator to construct farm ditches, level the land, and fully subjugate the lands for irrigation.

The estimated investment per acre for assignment to irrigation is based on total estimated dollars and total acres rather than dollars or acres programed for a particular year. This value related to the direct benefits which accrue to the farmer, plus the indirect and public benefits which accrue to the local communities or which are generated by the irrigation enterprise.

Sincerely yours,
FLOYD E. DOMINY,
Commissioner.

BRINGING NUMBER OF CADETS AT U.S. MILITARY AND U.S. AIR FORCE ACADEMIES UP TO FULL STRENGTH

The Senate resumed the consideration of the bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength.

Mr. JACKSON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The LEGISLATIVE CLERK proceeded to call the roll.

Mr. KEFAUVER. Mr. President, I ask unanimous consent that the order for a quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

DRUG LEGISLATION

Mr. KEFAUVER. Mr. President, I wish to call the attention of the Senate to a very excellent editorial which appears in this morning's Washington Post. It is entitled "Action on Drugs." I wish to read a part of it. The editorial states:

> Whatever the disappointments with this session of Congress, there is one fight that can—and should—be won. There may be apathy and public confusion about the complexities of tax policy and farm legislation. There is no apathy about the drug controversy. The tragic results of the sale of thalidomide in other countries have made abundantly clear the need for measures that will assure that no such misfortune will ever happen here.
>
> The country can thank the stubborn competence of Dr. Frances Kelsey of the Food and Drug Administration for preventing the sale of thalidomide here. Dr. Kelsey fully deserves the Distinguished Service Medal that President Kennedy bestowed on her in behalf of a grateful country. She also deserves to be heeded as an expert witness on the need for improvements in existing drug legislation.

About 10 days ago I found in the files of the Food and Drug Administration relating to thalidomide a memorandum consisting of a chronology on the various calls, letters, visits, urgings, influence, and pressure used by the William S. Merrell Co., the American company which had planned to sell thalidomide as the licensee of the German manufacturer and developer. I hope that in consideration of the award to Dr. Kelsey and also the great importance of immediately enacting drug legislation, Members of the Senate will read this record, which appears in the Congressional Record at pages 15932–15933. It not only reflects great credit on Dr. Kelsey, for refusing to knuckle under and succumb to the pressure and calls from the company, but also on a number of pharmacologists and doctors in the Food and Drug Administration. It will be seen that in these letters and calls to the Food and Drug Administration, some of the efforts were rather direct and vigorous to have this drug released for sale in the United States. I read from the memorandum:

> February 1, 1961: Dr. Murray told Dr. Kelsey by telephone that "release" was scheduled for Kevadon on March 6 and wanted to print labeling.
>
> February 16, 1961: Dr. Murray called Dr. Kelsey, referred to yesterday's call to Dr. Smith, and "wondered about Kevadon." Dr. Kelsey hoped to get to it the next week. Dr. Murray referred to a previous promise to get to it in 1 day; Dr. Kelsey disagreed that such a promise had been made, and Dr. Murray decided he probably had misunderstood.
>
> March 30, 1961: The representatives of the Merrell Co. pressed for a verbal commitment that the application would become effective with the precautionary information in the labeling.
>
> April 5, 1961: A covering letter submitted a labeling change regarding dosage, expressed hope of early review, pointed out the age of the application, expressed concern about a possible plan of Dr. Kelsey's to learn more about this or related drugs at a scientific meeting and in the literature, expressed the opinion that the data had provided adequate documentary proof of the relative safety of the drug for use as claimed, and requested to be advised of the decision by telephone as soon as possible.
>
> April 19, 1961: Dr. Murray called Dr. Smith and asked about the application. He said his firm thought some pressure should be exerted. Accordingly, their vice president intended to see Mr. Larrick if nothing were going to be done. They wanted a "Yes or No" decision so that they could prepare to go to a hearing if necessary.
>
> May 5, 1961: Concern was expressed that evidence of neurological toxicity apparently was known to the applicant without being forthrightly disclosed in the application.

And so on. It was only through the tenacious resistance of this good woman, Dr. Kelsey, and those who supported her, that a national disaster such as happened in Germany, and to a lesser extent in England and elsewhere, was avoided in the United States.

Not only that, but these disclosures show the absolute necessity for giving the Food and Drug Administration power to protect the public interest. It is imperative, as the Washington Post states. I read further from the Washington Post editorial:

> As Dr. Kelsey told the Senate Judiciary Committee, tighter restrictions are needed—especially an amendment that would eliminate the time limit now set on the sale of new drugs. As it stands, unless the Government registers disapproval within 60 days, a new drug can be automatically cleared for sale. President Kennedy is urging that the time limit be stricken from the laws; he has also suggested six other amendments to the porous measure, originally approved by the Senate Judiciary Committee.

In this connection, the bill sponsored by the Senator from Michigan [Mr. Hart] and myself, and approved by the Subcommittee on Antitrust and Monopoly, contained the substance of most of the amendments proposed last week by the President to the Senator from Mississippi [Mr. Eastland], chairman of the Committee on the Judiciary, although the details and language may be somewhat different. The Committee on the Judiciary, joined in by Senators on both sides of the aisle, has been considering the amendments. A number have been agreed to by the Committee on the Judiciary. I hope the committee will finish its work tomorrow.

But S. 1552 has been on the calendar for several weeks. The interest of the health of the Nation demands that it be passed immediately. Although the Committee on the Judiciary may finish its work on the bill tomorrow, the Senate itself must consider the proposed amendments. I am sure the Senate as a whole will join in restoring the bill to the strength it originally had so as to accomplish its original objectives which are also the objectives of the President of the United States. I compliment the President for the force he is putting behind the passage of an effective drug measure.

One important change has already been made in the Committee on the Judiciary. Drugs will no longer automatically be placed on the market after 60 days unless the FDA takes action to the contrary.

The President suggested no time limit. Originally the bill provided no time limit in which the Food and Drug Administration had to operate. The Committee on the Judiciary has now eliminated any 60- or 90-day provision. Now the Food and Drug Administration will have 180 days in which to make its initial decision. After that, it will have 30 days in which to ask for a hearing; and within a further 90 days a hearing must start before the Secretary of Health, Education, and Welfare. But at no time may a drug automatically become eligible for sale unless it has been approved affirmatively by the Secretary of Health, Education, and Welfare, or unless the courts hold that the Secretary has been capricious, arbitrary, or unreasonable in denying an application for the creation of a new drug. The provision is not as desirable, in our opinion, as the original provision of the bill introduced by the Senator from Michigan [Mr. Hart] and myself, or the recommendation of the President; but the Food and Drug Administration says it is adequate to deal with the problem of a time limit in which to pass upon new drugs.

Lest anyone think that thalidomide is the only drug that has caused serious side effects, may I call attention to the fact that in the individual views of myself, Senators Hart, Carroll, Dodd, and Long of Missouri—the latter having won renomination to the Senate yesterday—we find, at page 43, a list of drugs which, partly because of the automatic approval feature, were approved for sale, and then had to be taken off the market because of their side effects: Blood dyscrasia, aplastic anemia, cataracts, Parkinson's disease, and other serious ailments. Among them is such a widely sold product as MER–29, which caused cataracts.

The Judiciary Committee has also restored to the bill, upon the recommendation of the President, a provision making it easier for the Food and Drug Administration to withdraw a drug from the market when it finds the product is injurious to health. That is a great improvement, in that it lessens the burden of proof which must be borne by the Food and Drug Administration.

Another section which was restored to the bill substantially as it was in the subcommittee's version and substantially as recommended by the President is related to advertising. The full Committee on the Judiciary removed the advertising section, but it has been restored to the bill.

Eighty-nine percent of the drug advertisements were found, in a survey made for the subcommittee, to have either said nothing about adverse side effects or to have dismissed them with a short phrase, such as "with few side effects."

Doctors read the advertisements in the American Medical Journal and other professional journals. They read pamphlets which are brought to them by the detailmen. The cost to a drug company for a detailman, who visits doctors and urges them to prescribe the company's products, is about $5,000 a year per detailman.

There have been cases in which drugs have caused addiction, but where the company has advertised that there were no adverse side effects. The section which has been restored to the bill would simply require a truthful, factual statement of what the drug will do, together with a statement of its side effects, as approved by the Commissioner of the Food and Drug Administration. In the case of a short advertisement, a summary of the statements would be required. This is a great improvement.

Thousands of physicians all over the United States have written to the Subcommittee on Antitrust and Monopoly, urging that the committee take action with respect to the advertising problem. It may be of interest to know that the drug industry as a whole spends about 25 percent of its sales dollar on sales promotion, selling, and advertising.

We hear much about research. I am all for it. More money should be spent on research. But the drug manufacturers spend four times as much for promotion and advertising as they spend for research. The industry as a whole spends only 6.3 percent of its sales dollar for research.

There are a few other recommendations by the President to be considered by the Judiciary Committee; but even if the committee is not through, this bill should be brought up here on the floor.

I read further from the editorial:

> Mr. Kennedy is asking Congress for new power to remove unsafe or worthless drugs from the market. He wants legislation that would permit more stringent inspection of drug manufacturing. He is supporting

amendments to require simpler and more informative labeling of drugs.

Mr. President, the Judiciary Committee has now restored to the bill the provision that the generic name has to be shown half as large on the label and the advertisement as is the trade name. Usually the trade name is printed "all across the page," in an effort to impress the doctors with the trade name of a particular drug made by a particular company, and one has to look 'way down in the fine print to find the generic name. Yet if the doctors would prescribe by the generic name, the patients would often be able to buy the drugs for one-eighth or one-tenth of what they have to pay if they buy them by the trade name. So in the committee bill we have required that the generic name be printed prominently and in type half as large as the trade name.

The editorial in the Washington Post also states:

> All these suggestions seem basic protective steps and would restore the potency of reform legislation that was originally denatured by the Judiciary Committee.
>
> Most American drug manufacturers do show care and responsibility in the production of drugs, and under present legislation, Food and Drug officials have been able to prevent the worst abuses. But because one error can have disastrous effect, the public has a right to protection that is as close to airtight as legislative ingenuity can make it.

I note today that Mr. Celebrezze, the able Secretary of the Department of Health, Education, and Welfare, for whom I have a high regard, and whom I have known for a long time, has given notice that he is going to promulgate rules relating to experimental use of drugs. However, such regulations can only scratch the surface; they do not and cannot go to the basic defects of the present law. To have effective regulations, we must strengthen this part of the law with a further amendment.

The editorial also states:

> The test will be in the Senate, where the Judiciary Committee is presently considering the President's seven amendments. The committee has already made some improvements, particularly concerning time limits and Federal policing powers. But if the bill that emerges falls short of Mr. Kennedy's standards, then surely his amendments will be put up on the floor for a vote in the full light of the public record.

Mr. President, I wish to say that I think the Judiciary Committee will act on the amendments—and will act favorably, I hope. But if any of them are not acted upon favorably in the committee, I expect to present them here on the floor, in order to get the best bill we possibly can obtain.

Let me say here that action on this bill should not take a great deal of time. It is a matter of the utmost urgency, for it will protect the health of the people of the Nation. Certainly this bill should be considered by the Senate before it considers a bill to establish a private monopoly and a giveaway to a private corporation. I put human welfare ahead of monopoly welfare. Therefore, I implore the leadership to give this bill a quick green light, regardless of whatever other measures may be under consideration on the floor of the Senate. I do not think it would take more than a relatively short time to debate the drug bill sufficiently, and then pass it and get it on its way to the House of Representatives.

I wish to congratulate Representative HARRIS, of Arkansas, for the hearings he has conducted, and has now indicated will be resumed on August 20. Representative CELLER deserves the thanks of all of us, because he has been marking up the bill insofar as the antitrust and monopoly aspects are concerned. There should be no delay.

We cannot let the health of the Nation or the safety of those who take prescription drugs be jeopardized because of any delay in connection with the taking of action by the Congress on this bill. Mr. President, there is urgency about this bill, whereas there is no urgency about the satellite communications bill, and nothing would be lost by delaying the taking of action on it.

Mr. President, in line with the editorial published in the Washington Post, I hope this bill be given the first and most immediate attention.

Mr. YARBOROUGH. Mr. President, will the Senator from Tennessee yield to me?

Mr. KEFAUVER. I am very happy to yield to the distinguished Senator from Texas.

Mr. YARBOROUGH. Mr. President, as I have listened to the distinguished senior Senator from Tennessee and as I have been thinking of the many outstanding services he has rendered the American people during his five terms in the House of Representatives and his three terms in the Senate, I can think of nothing in all his services that has been of more importance to the Nation than his service in this field and his long continued efforts to protect the American people from the indiscriminate use of dangerous drugs. He has fought economic forces of great strength; and he has held long hearings, under great difficulties—difficulties which continue, with every effort being made to break up the hearings on the deleterious effects of dangerous drugs. He has had a resoluteness that would not be turned aside, despite all the obstructions which have been put in the way of the committee and despite the adverse publicity he has received, because he has been fighting for the rights and the lives of the people of this country. He has persisted and he has kept this drug bill alive.

Now we have experienced one of the most tragic and dramatic examples of the misuse of drugs in the history of the human race, particularly since the scientific age began.

As the distinguished Senator from Tennessee has pointed out, this particular drug is not the only dangerous drug which has been indiscriminately given away, as free samples, for the purpose of having experiments with it conducted on human beings. This drug is only one of many of that type.

This proposed legislation is badly needed. I share the hope of the distinguished Senator from Tennessee that this bill will be brought before the Senate before other measures are brought up here. Mr. President, there is nothing more urgent for the welfare of the American people than the enactment of laws which will safeguard them, so that young prospective mothers will not be given drugs which will result in the birth of deformed children.

When it comes to placing before us the measures that are most important, I wish to assure the leadership that, in my judgment, nothing is more important than that.

Certainly the distinguished senior Senator from Tennessee is to be greatly commended, not only by those of us in the Senate who know of his fine work, but also by all the American people.

I commend him for his work and for his long fight. Because my offices are on the same floor with his, I see him regularly there. I know that for a long time it looked as if he had to carry on a "Lone Ranger" fight, almost by himself, in order to secure justice in connection with this issue. But now the country is aroused and awakened; and now that that is the case, I hope the Senate will move forward with this legislation and will proceed to give the American people some protection, by requiring proper testing of all drugs, of all types, before they can be prescribed for human beings or before they can be given away, free of charge, in order to have human beings take them for testing purposes, and become accustomed to their use.

So I thank the Senator from Tennessee.

Mr. KEFAUVER. Mr. President, I am very grateful to the distinguished Senator from Texas for the comments he has made. There is no Member of the Senate from whom I would appreciate them more. He has always given those of us on the committee who have been fighting for this legislation and trying to carry out the investigation on which it has been based his fullest encouragement and his fullest support; and we are grateful.

The Senator from Texas has been more than generous with me. I wish to point out that we have had the help of many members of the Judiciary Committee's subcommittee and many members of the full Judiciary Committee, and we have had the encouragement and assistance of many other thoughtful Members of the Senate. All of these efforts, taken together, have brought us on the verge of a great step forward for the protection of the American people; and I thank the Senator from Texas very much.

Mr. YARBOROUGH. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. KUCHEL. Mr. President, I ask unanimous consent that further proceedings under the quorum call be rescinded.

The PRESIDING OFFICER (Mr. PELL in the chair). Without objection, it is so ordered.

NOMINATION OF THURGOOD MARSHALL TO BE A U.S. CIRCUIT JUDGE

Mr. KUCHEL. Mr. President, on October 23, 1961, many months ago, the President of the United States nominated Thurgood Marshall, a noted American lawyer, to be a U.S. circuit judge for the Second Circuit, encompassing the States of Connecticut, Vermont, and New York.

Mr. Marshall is a third generation American. He is a descendant of Negro slaves.

For many years, dating from 1938, he has been chief counsel for the NAACP. He has appeared in lawsuits before the U.S. Supreme Court on 32 occasions. In 29 of those cases the highest tribunal in our country accepted his point of view.

I think it fair to say that few members of the bar in all our Nation can boast of such a record of success. This fact alone testifies to his unique legal capacities and his high qualification for Federal judicial service.

The unhappy fact is, however, that as of August 1962, the Judiciary Committee of the U.S. Senate had taken no action with respect to this appointee, although I have no doubt that the Senate would overwhelmingly confirm his appointment were it given the opportunity.

Mr. President, in connection with this highly regrettable delay, I observe for the RECORD that on June 20, 1961, Judge William H. Cox, of Mississippi, was nominated for Federal judicial service. The U.S. Senate confirmed his nomination within a week, on June 27, 1961.

I observe also that Judge Robert Elliott, of Georgia, was nominated for Federal judicial service on January 23, 1962, and his nomination was confirmed by the Senate on February 7, 1962.

I wish to pay tribute to a member of the Senate Committee on the Judiciary who sits on my side of the aisle, a very able lawyer who has the honor to represent in part the State of Nebraska, our colleague [Mr. HRUSKA], a member of the Subcommittee of the Judiciary Committee scheduled to hold the hearings on Judge Marshall's nomination.

Of course, Mr. President, the Senator from Nebraska [Mr. HRUSKA] is a Republican. He represents the minority on that subcommittee. He was compelled to hold the subcommittee hearings originally by himself. No other member of the subcommittee appeared to participate.

A few days ago, on the television program "Youth Wants To Know" a question was asked the Senator from Nebraska [Mr. HRUSKA].

> Senator, when is the Judiciary Committee going to schedule hearings for the confirmation of Judge Thurgood Marshall?

The answer by the Senator from Nebraska was as follows:

> I wish I knew. We had one earlier this week, or last week. I might tell you the first confirmation hearing on Thurgood Marshall would not have been held at all had it not been for the Senator that's speaking to you now. I'm a member of that subcommittee and nobody else showed up on it. I showed up, and when they didn't show up, I just took the chairman's chair and we started the hearing. And we had another hearing, just day before yesterday as I remember it—one day last week—and we will, I presume, some time soon, resume hearings. I hope so. The testimony on Judge Thurgood Marshall, with his splendid record in the Supreme Court—32 cases he carries to the Supreme Court. He won 29 of them—terrific record, brilliant legal scholar. And he's been doing such a good job on the circuit court now. So I join you in the hope we'll have hearings soon and that they will be successfully concluded.

Among the decisions won by Judge Marshall, as a lawyer, was one of the most notable civil rights decisions of this century, Brown against Board of Education of Topeka, 1954, in which the Supreme Court held that segregation in the public schools denies to Negro children the equal protection of the laws guaranteed by the 14th amendment.

Another case which was argued by Judge Marshall in the Supreme Court, as a lawyer, was Cooper versus Aaron, involving desegregation of the Little Rock, Ark., schools.

Because of his reputation as an outstanding spokesman for the advancement of civil rights and equal treatment under the law, it is, I suppose, not surprising that Mr. Marshall's nomination by the President has met with some vigorous, if on occasion quiet, opposition.

At any rate, Mr. President, the delay in bringing the nomination before the U.S. Senate is more than regrettable. I salute my friends on this side of the aisle who have done what they can to advance this nomination.

My two colleagues from the State of New York [Mr. JAVITS and Mr. KEATING] testified in favor of this nominee, having known him as a constituent in the State of New York.

My only purpose in rising is to say that the U.S. Senate ought to remove every murky implication that its processes are being slowed down without justification and against the public interest. I very much hope that within the next few days the Senate may have an opportunity to confirm the nomination of a distinguished American lawyer as a member of the Federal judiciary, and to demonstrate by that fact that equal treatment under the law is not an empty shibboleth or a hollow mockery, but that men who are qualified for judicial service and who are nominated by the Chief Executive of our country deserve the same treatment in the U.S. Senate, whether their skins be white or black.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. KUCHEL. I yield to my friend.

Mr. KEATING. I wish to express the gratitude which I feel as a Senator from New York for the comments made by my friend from California. He is absolutely correct in everything he has said. There has been an unpardonable delay in respect to action on this nomination.

At the hearing held the other day, the last hearing, I drew a comparison between action on this nomination and on the nomination of Judge Elliot, who is now sitting in judgment on the cases in Albany, Ga., whose nomination was confirmed in less than 3 weeks, and on the nomination of Judge Cox, of Mississippi, whose nomination came to the Senate on June 20, 1961, and was confirmed June 27, 1961.

Unless we can get prompt action it may be necessary for us to move, in the Committee on the Judiciary, to discharge the subcommittee from further consideration of the nomination. I have indicated that I will make such a motion if the subcommittee does not conclude its hearings without further delay. Many members of the committee on both sides of the aisle have expressed their support of such a move. If we should fail in that regard for any reason—either because of a lack of recognition for that purpose or because of unusually extended debate on such a motion in the committee—we shall file a petition in the Senate to discharge the committee from further consideration of the nomination. As the Senator well knows, there is precedent for such a procedure and, although it would be used with great reluctance, particularly by members of the committee itself—it may be the only way to bring this matter to a head. I know there is a determination on the part of several of us to invoke that procedure, if necessary.

I have been informed that a hearing has now been scheduled for next Thursday morning. This should be the final hearing. Even the chairman of the committee has indicated that the hearings should be concluded at that time.

The questioning has been conducted by counsel for the committee. Committee members have asked only perfunctory questions, but the counsel for the committee has been going into a long line of questioning with regard to the NAACP, the NAACP legal and defense fund, and other activities in the States of Texas, Virginia, and others. Those questions have not brought out anything reflecting adversely on the nominee and have been almost wholly irrelevant to any issues with regard to the qualifications of the nominee, his integrity, his trustworthiness, his legal ability, his judicial temperament, or his demeanor.

Judge Marshall has been sitting on the bench for almost 10 months. We have received a letter from the chief judge of the Court of Appeals for the Second Circuit, Chief Judge Lumbard, indicating that Judge Marshall has been performing his duties, as all of us knew he would, in a superlative fashion. It is a reflection upon the Senate that the committee has not acted sooner on the nomination. The Senator from California is a champion of fairplay and equal rights, and a bitter and militant foe of discrimination in any form. I know he will join in doing everything possible to make certain that the Senate does its duty in this case.

I am grateful that the Senator from California has indicated that if it becomes necessary he will stand shoulder to shoulder with us in the battle to bring the nomination to the floor of the Senate and have it confirmed. Of course, when the Senate has the opportunity to pass upon the question, the nomination will be confirmed overwhelmingly.

Mr. KUCHEL. Mr. President, I thank the distinguished Senator from New York for his comments. I assure him that many Senators would be very glad to follow his leadership if the appointment, as a result of the regrettable delay which the confirmation has most unfortunately entailed, requires such exertions under the rules of the Senate as he has suggested. Meanwhile the Senator and his colleagues who wish to see the nomination brought forward now have the best wishes, respect, and support of most Senators.

Mr. KEATING. I thank the Senator from California.

Mr. KUCHEL. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

The PRESIDING OFFICER. A quorum is present.

BRINGING NUMBER OF CADETS AT U.S. MILITARY AND U.S. AIR FORCE ACADEMIES UP TO FULL STRENGTH

The Senate resumed the consideration of the bill (H.R. 7913) to amend title 10, United States Code, to bring the number of cadets at the U.S. Military Academy and the U.S. Air Force Academy up to full strength.

THE TRUTH-IN-RECRUITING AMENDMENT

Mr. LONG of Louisiana. Mr. President, I have offered my amendment which is at the desk. In some respects the amendment is in the nature of a substitute for the pending bill. The bill before the Senate would cause officers of the academic board to make congressional appointments for Members of Congress. What I am proposing is that we make our own appointments; that we start now to encourage Senators and Representatives to appoint the best qualified men, because there is really no incentive for the academic board to appoint the best men.

I am prepared to prove that the academic board has been playing the most horrendous kind of service politics with Academy appointments. Heretofore the board has not appointed the best qualified men to the Academy.

If 75 men are wanted in a freshman class, those selected by the Academic Board may be the sons of Senators or Representatives, whose appointments may not be based on their merits as scholars, but upon their brawn. The chances are that they will be appointed, not because of their high scholarship, but because they are the sons of persons who were heavy contributors to political campaigns, or because they are the sons of servicemen who have wanted to see their sons enter the military service.

So the sooner Congress provides a better incentive for every Senator and Representative to appoint the best men, the sooner a higher caliber of student will be appointed to the Academies.

The best way to secure men of high quality is to appoint the best qualified students. Many of the Nation's greatest officers were at the top of their class in the Academy. Gen. Douglas MacArthur made a brilliant record during the 4 years he attended the Military Academy. Other well-known officers were at the head of their class. It is persons of that type from whom selections should be made.

I regret that I did not have the opportunity to offer this proposal to the committee. The chairman invited me to do so, but I had not yet conceived the idea at that time. However, I am satisfied now that this would be the best way to improve the measure before us.

Mr. President, during the time this measure was under consideration by the Committee on Armed Services of the Senate, I made no secret of my opposition to it. My objection at that time was that the provisions of the bill were subject to a great deal of abuse by the service academies; that the bill could be used to fill the academies with football players rather than with good potential officers.

The committee made some changes in the measure which constituted improvements. The fact remains, however, that the measure is subject to abuse. The additional appointees are given to the academic boards to designate; thus the possibility is opened up of use of the measure for football recruiting. I am still opposed to this sort of practice. By leaving it within the discretion of the academic board—subject to some minimal restraints—to select the men to fill the estimated understrength, the bill permits of a good deal of maneuvering with the betterment of the football team in view.

Of course, if things were as they should be, none of us would have to be worried about the possibility of abuse. If the persons responsible for the athletic programs at the academies were living up to the mottoes they profess, then we could trust them with a measure of the kind here under consideration. Unfortunately, however, it appears that to place this kind of trust in those who would be administering this provision would be naive. I am able to say that it would be naive with some confidence, because a number of matters have recently come to light which leave the intentions of the academies highly suspect.

While I do not wish to confer any cloak of immunity upon the Air Force or the Navy, it does appear that the Military Academy is the chief culprit at this time. At least, the great bulk of these matters which have come to my attention concern the Army rather than the other branches.

The facts about the situation at the Military Academy are rather apparent. A number of articles have appeared in newspapers and magazines recently which make crystal clear that a nationwide football recruiting drive is under way at West Point; they will not be content until every high-quality football prospect in the Nation has been approached by the Army recruiters.

For example, the May 28, 1962, issue of Sports Illustrated magazine contained a revealing article entitled "Pepsodent Paul at the Point." The title, of course, refers to Army's new head coach, Paul Dietzel. It should be made clear at the outset that this kind of article is not written without the approval, at least tacit, of the authorities at the Academy. They are not ashamed of their intentions. They are proud of them. Here are some pertinent excerpts from this article:

> Dietzel says it will take 4 years to produce at Army. Hall was out after 3, but West Point will wait for Dietzel. "I intend to build a football program," he says. "The best one I know how. Build the program you want, and the winning will take care of itself."
>
> Dietzel already has made grandiose plans for recruiting. A huge map covers one office wall; in a multiplicity of colors, it shows areas to be attacked. No State has been overlooked. "This is a national Academy, not an eastern school," he says. "Hall's 1961 roster was stocked with 28 Pennsylvanians."
>
> Former Army Coach "Red" Blaik once called Pepsodent Paul the world's greatest recruiter—"If he so much as gets his feet under the supper table with a boy, the boy is his."

Mr. President, there it is in black and white. The intentions are that there will be a recruiting drive the like of which this Nation has never seen. I, for one, am not interested in enacting a piece of legislation which will make this easier. There is little doubt in my mind that the pending bill was originally designed as just that—part of the new football effort at West Point. New Orleans Sportswriter Buddy DiLiberto, in the February 3, 1962, issue of the Times-Picayune, tells of some pertinent information he obtained from Johnny Rauch, who spent the past 3 years on Dale Hall's Army coaching staff. This article stated:

> Beating Navy is the point at West Point.
>
> Navy's enrollment is about 1,000 more than West Point's, Rauch explained, and naturally many more appointees are earmarked for football.
>
> "Navy brings in about 140 football players a year and we were getting about 35 or 40," Rauch said. "Last year over 200 midshipmen reported for Navy's freshman squad."

> Another advantage Annapolis has over West Point, according to Rauch, is a "redshirt system."
>
> "Bullis Prep at Silver Spring, Md., Columbian Prep in Washington, D.C., and New Mexico Military Institute are Navy prep schools.
>
> "Each one of these schools gives Navy about 16 scholarships a year, and in reality these boys have already put in a 'redshirt year' before entering Annapolis," Rauch said. He is a former West Point coach.
>
> The only thing comparable at West Point is Manlius School in Syracuse, N.Y., which gives six scholarships a year to Army-marked football players.
>
> "The biggest recruiting problem was not knowing until late May or early June exactly how many appointments would be earmarked for football," Rauch said. "It's difficult to keep kids on the line that long."
>
> "That's why Dietzel is trying to get the bill passed which would assure him of 55 appointments a year."

That is the bill we have here—a bill which a former West Point football coach described as a football bill.

Mr. President, former Army Assistant Coach Rauch was talking about the bill which we are debating. There does not seem to be much doubt outside the Halls of Congress that this is a football bill.

Let me emphasize, Mr. President, that I do not begrudge the Army a good football team. But if no legislation whatever of this sort is enacted, they will still have an excellent team. Even if we should enact no bill at all, the Point would not suffer very much for lack of football players. Another portion of the DiLiberto article bears this out:

> Dietzel, in the opinion of Rauch, is stepping into a "changing situation at the Academy." "But a change for the better, footballwise," Rauch quickly added.
>
> "We left one of the finest Plebe teams the Academy has had in a long time," Rauch said. "When Dale Hall succeeded Colonel Blaik 3 years ago, there were only about 18 of what we call grade A football players at the Academy. There are at least 50 grade A players there now."
>
> "Hall wasn't named coach until late February 1959, and that gave us only about 2 weeks to line up our players for the Academy entrance exam in March," Rauch explained.
>
> "Consequently, we had a weak recruiting year and brought in only 28 men. We brought in about 35 in 1960 and 47 last year. Of the 35 recruited in 1960, a dozen of them lettered as sophomores last season."

Thus, Mr. President, Army will have a good football team for several years, just on the basis of the talent there now. And I have no doubt that, with Mr. Dietzel's recruiting talents, West Point will continue to fare as well in getting new players. Thus, they will have a good team, without our helping them by enacting legislation for more football appointments.

As a matter of fact, Mr. President, even if this bill is not enacted, I am certain that there will be a high rate of abuses. They have been occurring in the past, and I have no reason to believe that they will stop. The chief abuse which has come to my attention centers upon the provision of the law which forbids a Congressman's appointing a man who is not a resident of his district, and which forbids a Senator's appointing a man not from his State. The clear-cut provision of the law may well be the most frequently violated on any provision of law anywhere.

Lately, there have been several rather well-publicized incidents of violation. For example, let us consider the case of Robert DeLuca. This matter was brought to light recently by a Member of the House of Representatives from the State of New York, Representative SAMUEL S. STRATTON, who was a member of the House committee which approved the pending bill. Of course, the gentleman from New York has had occasion to repent his concurrence in the proposed legislation.

Robert DeLuca is an excellent basketball player. During his senior year in high school he was approached by West Point Basketball Coach George Hunter. In an affidavit he gave to Representative STRATTON, Robert DeLuca described the matter:

> The basketball coach from West Point witnessed one of our basketball games during March. The following day he spoke with me at our school. He explained to me that he would like to have me play for him, and he felt assured that I would be accepted at West Point. He stated that I would have to raise my college boards a little and I would be assured a spot at the Academy.
>
> I journed to the Academy the following week and passed the medical exam. The coach then went ahead and obtained my appointment. He explained to me that it would probably be from another State and a second or third alternate. I was told not to worry about this, it was standard procedure.

Let me repeat the last two sentences, Mr. President—

> He explained to me that it would probably be from another State and a second or third alternate. I was told not to worry about this, it was standard procedure.

Mr. President, what more proof is needed? The Army coach told the young man that it is "standard procedure" to obtain appointments for athletes from Members of Congress from other States. Let us bear in mind that the provisions of the United States Code clearly prohibit this.

Mr. DOUGLAS. Mr. President, will the Senator from Louisiana yield?

The **PRESIDING OFFICER** (Mr. HICKEY in the chair). Does the Senator from Louisiana yield to the Senator from Illinois?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Does the code prohibit naming alternates from another State?

Mr. LONG of Louisiana. Yes. Let me read it; it is United States Code Annotated, title 10, section 4342, subsection (c):

> No person may be nominated under clause 1(5) of subsection (a) unless he is domiciled in the State or territory or in the congressional district from which he is nominated, or in the District of Columbia or Puerto Rico, if nominated from one of those places.

That is a clear prohibition. As a matter of fact, when Members of the House of Representatives nominate for appointment to the service academies, they have to certify that the nominees come from their districts.

Mr. DOUGLAS. Is that true of alternates, as well as principals?

Mr. LONG of Louisiana. Yes, that provision of the code applies to both alternates and principals.

Mr. President, the case of Robert DeLuca came to an interesting conclusion. I read from an affidavit given by his father, Mr. Valentine J. DeLuca:

> We were told that if he received an appointment from some other State not to worry about it. This came through just as we were told it would. At this time Mr. Hunter told my son to turn down all other colleges, and tell them that he was going to the Academy.
>
> Robert went to West Point in June and took his physical aptitude and college boards, which he passed very nicely. The physical aptitude he passed very easily, and he received a sufficient enough mark to assure his acceptance at the Academy. On the morning of June 28 we received a letter from the Department of the Army stating that Robert had qualified in all the exams, but there were no openings. Even this we were told to expect, so we still went ahead with our going-away plans.
>
> That evening, at 8 o'clock, we received a call from Mr. Hunter, and he told us that my son didn't make it. This, he said, was due to pressure from the Southern States on the Academy pertaining to athletes.

Mr. President, the junior Senator from South Carolina has had something to say about these abuses. I believe I may speak for the two of us when I say that we are gratified that the Academy has heeded our admonitions. However, I am not convinced that its response was in the proper spirit. Mr. DeLuca put the question very nicely; he said:

> I would like to know if this is the honor code which is stressed so highly at West Point.

The case of Robert DeLuca is an example of attempted disregard of the law on the part of the West Point authorities, which was abandoned in the face of a growing storm of opposition.

Now let us examine some cases in which the Army has persisted in its attempts to violate the law. Permit me to read from a letter which Mr. John H. Vaught, head football coach at the University of Mississippi, wrote to me on June 18 of this year:

> Dear Senator LONG: We are cognizant of your efforts to cause the service schools to maintain normal appointments through proper channels. We wish to call to your attention the case of Stanley Hindman, of Newton, Miss., who committed himself to the University of Mississippi on a football grant-in-aid in December 1961. At the time the award was granted young Hindman mentioned that he had been contacted relative to an appointment to West Point, but had learned that no Congressman from Mississippi had an appointment available until 1963. In the meantime, he took the necessary physical and mental examinations and qualified for admission to the Academy.
>
> About a month or 6 weeks ago he flew to West Point, and, upon his return, announced his intention to enroll in the Academy in September. It has been discerned that a Senator or Representative from Pennsylvania made the appointment.
>
> Whereas we do not censure the aforementioned appointee if he really wants to attend the Military Academy, we do question the validity of the appointment, as well as the methods used by Coach Dietzel in enticing young gentlemen to abrogate their previous agreements.

Mr. DOUGLAS. Had that young man received the promise of a scholarship at the University of Mississippi, on the condition that he play football there?

Mr. LONG of Louisiana. He had signed a contract with the University of Mississippi that he would accept a scholarship, which I believe is worth about $1,200, to help pay his expenses at that university, with the understanding that he would play football there.

Of course, as we know, a contract with a minor is not binding. Nevertheless, there was an agreement between the university and that young man.

Mr. President, here is a flagrant example of disregard of the law. Stanley Hindman, of Newton, Miss., has been nominated to West Point by a Congressman from Pennsylvania. The law has been ignored. And note another dimension to this case—not only has the law been violated, but the young athlete here involved has been encouraged and persuaded to break a contract—something which his new coach seems to be able to do with impunity. What an example for the future military leaders of America.

Example No. 2: Reading from a letter written on May 17, 1962, by Coach Frank Howard, of Clemson College, S.C.:

> DEAR SENATOR LONG: I am soliciting your help in regard to Wayne Page, an outstanding football prospect and student from Lake View, S.C. Wayne's address is Route 1, Nichols, S.C. To make a long story short, I would like to advise you that Page and his family signed a grant-in-aid agreement to attend Clemson on December 13. Everything went along fine until about 3 weeks ago when West Point moved in. It now looks like the boy might change his mind and attend West Point. They are sending a representative down to Lake View quite often to talk to this boy.

Mr. President, could this representative perhaps be Paul Dietzel, himself, who, according to Red Blaik, has only to "get his feet under the supper table with a boy and the boy is his"? Coach Howard continues:

> I would appreciate it very much if you would write to Page and encourage him to live up to his original commitment and attend Clemson. Please understand that I think we need outstanding Army officers. but I also feel that if Page was not an outstanding football player that West Point would not be too interested in him. We need boys like Page to play on our Clemson teams, so that we may well represent the State of South Carolina as we have done in the past.
>
> It seems that since Paul Dietzel went to West Point he is now after practically every good football player that other teams in the United States have already signed.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Am I to understand that Clemson College is buying football players?

Mr. LONG of Louisiana. No. Let me attempt to tell the Senator what the situation is, so far as I know, in the Atlantic Coast Conference. The Atlantic Coast Conference and the Southeastern Conference have undertaken to agree to fair rules of competition. Both sides knew methods were being used to subsidize football players. They said, "Let us do it out in the open."

So here is the way it works out. It amounts to $100 a month——

Mr. DOUGLAS. Am I to understand that in the Southeastern Conference they can buy football players for $100 a month?

Mr. LONG of Louisiana. In effect; and the bids are to be competitive.

Mr. DOUGLAS. There is to be no competition; $100 a month is to be paid; but it is open to bidding for individuals.

Mr. LONG of Louisiana. That was to give everybody the same right to compete.

Mr. DOUGLAS. It also means that they get their football players for $1,200 a year. Is that correct?

Mr. LONG of Louisiana. Yes. I am proposing to show that West Point is going to get them for $11,000 a year.

Mr. DOUGLAS. In other words, West Point is breaking the so-called football market by paying more?

Mr. LONG of Louisiana. Four to one.

Mr. DOUGLAS. Does the Senator object to West Point's getting the players or to their paying more?

Mr. LONG of Louisiana. I will get to that point in just a moment.

Mr. McCARTHY. Mr. President, if the Senator will yield, I think we need a kind of quality control bill for football players.

Mr. LONG of Louisiana. Mr. President, we have been unable to determine where this young South Carolinian, Wayne Page, obtained his appointment to West Point. But we have been told by each Member of the South Carolina congressional delegation that he did not appoint the boy. Thus, it appears that another violation of the law is taking place in this instance. In addition, note that Page, like Hindman, has been induced to dishonor a grant-in-aid contract.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. In other words, after he was once bought, he did not stay bought. Is that it?

Mr. McCARTHY. Mr. President, if the Senator will yield, I suggest this is like the experience in the early days of the Civil War, where one could sign up with one regiment, jump that regiment, and get paid for joining another one.

Mr. LONG of Louisiana. I understand that the Big Ten rates are much higher.

Mr. DOUGLAS. May I say, my good friend, that my university quit the Big Ten partly because it felt the sport had been unduly commercialized.

Mr. LONG of Louisiana. I thank the Senator.

Very similar to the Page case is the case of Curtis Lindler. This young man signed a grant-in-aid contract with the University of South Carolina. He was subsequently approached by West Point, and broke his contract in order to go to the Academy. Here again, each Member of the South Carolina delegation has stated that he did not give the boy his appointment, although he is a South Carolina resident. Thus, the Lindler case appears to be example No. 4 of a violation, or attempted violation of the law, and example No. 3 of the Military Academy's involvement in broken contracts—example No. 4, Mr. President, if you count Coach Dietzel's own broken contract.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Then, the University of South Carolina, like Clemson and Mississippi, is paying to get football players. Is that correct?

Mr. LONG of Louisiana. So far as I know, the Atlantic Coast Conference gives the same kind of scholarship—I do not know their conference rules—as is given in the Southeastern Conference, which I do know something about, which is worth to a boy about $1,600 a year.

Mr. DOUGLAS. Does the Senator think that is a good arrangement?

Mr. LONG of Louisiana. As a practical matter, these rules were worked out by the conference in order to try to stop the behind-the-scenes cheating, where one college would pay a person a certain amount and somebody else would get nothing.

Mr. DOUGLAS. In other words, it is to substitute open buying for surreptitious bidding. Is that correct?

Mr. LONG of Louisiana. That is about the size of it.

Mr. DOUGLAS. Does not the Senator think these people could be prosecuted for monopolistic price fixing and restraint of trade?

Mr. LONG of Louisiana. If the Senator wants to take it to court, he can; but I am trying to show that what the Academy is getting ready to do is even worse. If the Senator wants to criticize the conference rules whereby members of the conference agree that if a boy is placed on their squad it is worth a $1,600 scholarship to that boy to play football, he can do so. I have seen very little criticism of the arrangement, although the Senator may find it obnoxious. But that is nothing compared to the situation I am about to describe, which involves direct violations of the law.

At the time the Lindler and Page matters came to light, the junior Senator from South Carolina expressed some indignation and concern about it.

At that time, I had already had a great deal to say about these violations. Partly as a result of our expressions of disapproval, I believe, the three services signed a declaration that they would honor grants-in-aid.

This gave me some gratification at the time; however, certain loopholes in their declaration have since come to light which leaves me wondering exactly what had been promised. Baton Rouge sportswriter Dan Hardesty put his finger on the problem in his column of June 22 in the Baton Rouge State Times:

> The academies stated that they would not "initiate contact" with any boy known to have signed with any other school, and that any boy being contacted by service recruiters, and applying for admission to one of the academies would be required to sign the following statement: "I have not signed a letter of intent or grant-in-aid with any institution. In the event I do, I will notify the authorities of the institution concerned that my commitment with them is

> contingent upon acceptance or rejection of my appointment as a cadet or midshipman".
>
> The time element is the catch to it. To explain this, let's use an example of a boy in the South being sought by a Southeastern Conference school. The SEC cannot legally sign a boy until after the regular football season has ended early in December. But they can contact him and have him all lined up and ready to sign, which is what everybody does.
>
> And while the SEC school's representative is talking to the boy during the season, the service academy representative also can and does talk to him. The boy has not signed with any school because he can't do so until after the season ends, and other conferences have even later signing dates than the SEC.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Is this a case of indentured servitude that is being practiced?

Mr. LONG of Louisiana. No, it is not—not yet, I will say to my friend.

I continue to read:

> Thus, the service academy is not "initiating contact" with a boy who has signed with another school. It has contacted him before he has signed with anybody, and rare indeed is the high school senior who is a good football prospect and who hasn't been contacted by every school that is interested in him long before his season ends and he can sign with anybody.
>
> And in midseason, if the boy is even willing to consider attending a service academy, he can sign the statement mentioned above. It does not bind him to go to the service academy—but it does put both the Academy and the boy morally as well as legally in the clear later on when other schools can legally sign the boy. He is obligated under that statement, to tell any college recruiter trying to sign him that, in effect, he'll sign but it will be a conditional agreement depending on whether he goes to the service academy.
>
> Neat little package, isn't it? Anybody want to help me guess who thought it up?

I think I can guess who thought up the package, and I would also guess that the Hardesty article was not written prior to discussing the subject with one of the most respected athletic directors in America.

Mr. President, the State of Louisiana has not been exempt from the tactics being used by the service academies in the ruthless competition for football players. Young James J. Bovenzi is a resident of the Fourth District of Louisiana. Originally, he was designated as a 10th alternate by the Member of Congress from that district. Later, however, he obtained a fourth alternate designation from another Member of Congress. These designations were to the Air Force Academy. However, Bovenzi was also competing for a Military Academy appointment.

Bovenzi was an excellent football prospect. According to a letter from the Army, Bovenzi underwent a physical examination at Keesler Air Force Base for the Military Academy. This examination stated that he had a heart murmur, which is not disqualifying. Later, he underwent an Air Force physical at Barksdale Air Force Base, where his father is stationed as a major. Bear in mind that the original examination, at Keesler, was for the Army, not the Air Force. At Barksdale, the Air Force examination revealed that Bovenzi has a disqualifying rheumatic heart condition. Subsequently, at the insistence of another Member of Congress the Army gave Bovenzi another physical, which he failed because of the rheumatic heart condition.

Thus, it appears that Bovenzi was taken from his home in Barksdale, where his father is stationed, to an Air Force Base at Biloxi, Miss., in order to find a doctor who would state that his heart condition was not disqualifying.

Mr. DOUGLAS. May I ask the Senator if he was kidnaped?

Mr. LONG of Louisiana. If the Senator will permit me to go a little further, I believe he will see what I think about this.

He was also nominated in violation of the law.

As a matter of fact, I suspect that the Bovenzi situation may be even more flagrant than it was described to me. Taking the word of a general officer of the Army about the matter, the examination was given first at Kessler, later at Barksdale. My guess as a former member of the Armed Services Committee is that in a matter of this sort, if one pursues it diligently enough, it will be found that the examination was given first at Barksdale. Why else would young Bovenzi have been taken to Biloxi, over 300 miles from his home when his father was in service at Barksdale, he lived at Barksdale, and he was being designated by a Member of Congress from Louisiana, from that parish.

Mr. DOUGLAS. May I ask if he was taken against his will?

Mr. LONG of Louisiana. I do not know how he was taken, I say to the Senator. I do say that this is the case of a man who has a bad heart condition, who has a rheumatic heart condition. Yet the service wanted to recruit him in spite of the advice that the man had a rheumatic heart condition. Again, the recruiting was in violation of the law.

Another Louisiana football prospect was Rogers Reinowski. The parents of this young athlete also lived in Louisiana's Fourth District; his father, too, was stationed at Barksdale Air Force Base in Shreveport. The parents of Reinowski approached the Congressman from that district for an appointment, and received one, as an alternate. Later, however, it was requested that this Congressman withdraw his appointment; the reason for this request was that Rogers Reinowski had been able to obtain a more favorable appointment from another Member of Congress, whom I would prefer not to identify because I do not wish to offend Members of Congress; at least not yet.

I am told that Reinowski's parents come from another State, and that they continue to vote there. This being the case, such an appointment might be justified. The point is, however, that both appointments could not have been correct. Either the Congressman from Louisiana was wrong in making the appointment, or the other Member was wrong. In all probability both of them, whom I respect, acted in good faith.

The real problem, Mr. President, is that the representatives of the service academies are going to Members of Congress and requesting them to make these appointments. In many cases, it is my belief that the Member approached may know very little about the boy; the chances are that he proceeds on the information given him by the Academy representative. However, it was certainly never contemplated that there should be this kind of wheeling and dealing, this trading in congressional appointments.

Now, Mr. President, these have been six cases where service academies are involved in apparent violations of the law. In three of the cases, broken contracts were also invloved. This is definitely an abuse of the worst order and should be stopped.

But are the service academies interested in putting a stop to it? Quite the contrary. They are keeping as much of it secret as they possibly can.

I wrote to the Department of the Army requesting a list of the Academic Board's selections for the past several years; I requested that this list show the name of the appointing Member of Congress, whether the boy was a first, second, or third alternate, and so forth, the hometown of the boy, and whether he played football at the Academy. I also requested to be informed as to the number of young men who came to the Academy without having taken a competitive examination in order to secure their appointments.

Here is the answer, Mr. President:

> Certain of the information you desire cannot be provided because of a longstanding policy which precludes revealing to one Member of Congress the name and address of another Member's appointee to the Military Academy.

Imagine that, Mr. President. They are saying that they will not tell us whether the law is being observed or not.

It was further stated, in response to my question about the number of Board appointees who played football:

> It will interest you to know that all cadets are encouraged to turn out for football. * * * There is no record to show which cadets turned out for football or any other sport at West Point.

Does anyone believe this to be the case? Does anyone believe that there is no record to show who the athletes are at the Military Academy?

Mr. President, earlier the commandant had provided me with some information along that line. Here it is. It is not up to date, but it presents information up to 3 years ago. Here is the record. The information is available and has been provided. When those concerned see that one is beginning to dig down to where the skeleton is really lying, they present him with the three monkeys—see no evil, hear no evil, and speak no evil.

In response to my question about the number of entrants who do not take competitive examinations, it was stated:

> The Department is unable to provide you with information regarding competitive examinations.

This is indeed a serious situation. Members of Congress, either knowingly or unwittingly, are being urged to violate the law. At the same time the Department of the Army is informing a Member of the Senate that he is not entitled to any information about this practice.

There is no doubt in my mind that, if these records were opened up to scrutiny, as they should have been at my request, a great number of the kind of violations of the law which I have described would come to light. The reason for the Army's withholding this information is clear, in view of the complicity of Army officers representing the Military Academy in the business they do with Congressmen who presumably expect favors in return.

Mr. President, in my judgment, the situation is so serious that criminal penalties ought to lie upon any Member of Congress who violates the law by giving an appointment to a nonresident of his district or State, and upon officers who coerce politicians to break the law. It seems to me that the violations are flagrant and serious enough to call for such penalties. However, in the interest of harmony, I am not going to insist upon that. But I am happy that today the Senate has agreed to an amendment which would bring that information to the light of day.

My "truth in recruiting" amendment provides that the service Secretaries have to provide a list showing the information I was refused by the Department of the Army. If this is done, it seems to me that an outraged public opinion will put a stop to this travesty on the law. At least, the constituents of errant Members are entitled to know what is going on.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Would the Senator move that the bill be referred to the Committee on the Judiciary, with particular reference to the Subcommittee on Antitrust and Monopoly Legislation?

Mr. LONG of Louisiana. I would not like to make such a motion prior to action on my amendment.

Mr. DOUGLAS. Would the Senator like to have the entire bill so referred?

Mr. LONG of Louisiana. I would have no particular objection to such a motion. However, I believe it would be best to dispose of the amendment first, and then decide what the fate of the bill should be.

Mr. DOUGLAS. The Senator from Louisiana mentioned a coach—Mr. Paul Dietzel.

Mr. LONG of Louisiana. Yes.

Mr. DOUGLAS. When did he come to West Point?

Mr. LONG of Louisiana. During the past year.

Mr. DOUGLAS. Where had he coached before?

Mr. LONG of Louisiana. Louisiana State.

Mr. CANNON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. CANNON. Is it not a fact that the bill was passed by the House in 1960 and again in 1961, long before Paul Dietzel left Louisiana State and went to West Point? The bill had passed the House twice. Is that not the fact?

Mr. LONG of Louisiana. Yes. But the bill has always been a football recruiting bill. The question arose when Dale Hall was the coach at West Point. My best information about this subject is, as the article by the assistant Army coach explained, that the purpose of the bill, so far as the Army is concerned, has always been to strengthen their football team.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. On page 6 of the Senator's speech he said—

> Mr. President, could this representative perhaps be Paul Dietzel himself who, according to Red Blaik, has only to "get his feet under the supper table with a boy and the boy is his"?

For whom was Paul Dietzel working when he would kidnap football players?

Mr. LONG of Louisiana. Kentucky, Army, and LSU.

Mr. DOUGLAS. Louisiana State?

Mr. LONG of Louisiana. Louisiana State as well. But he did not break any law to get football players to come to LSU. He did not do anything that other schools were not doing.

Furthermore, I have no objection to the coach's leaving LSU. He has the right to do the same thing other coaches have done. I have no particular objection to that. But I say that when West Point begins offering scholarships, worth $11,000 a year, and undertaking to recruit on a nationwide basis to the point at which every top football prospect in America would be recruited into West Point, the other academies will be forced to do the same thing. It is not good for the Academy; it is not good for the country; it is not good for athletics. My judgment is that the bill should not be used for that purpose. That is what I am complaining about at this moment.

Mr. DOUGLAS. I quite agree with the Senator from Louisiana. The whole practice is contrary to the real purposes of education and debases education. Colleges are purchasing gladiators and not educating students.

Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield to my friend from Illinois.

Mr. DOUGLAS. Does the Senator think that possibly the Military Academy obtained the services of Mr. Dietzel because he was a good recruiter as well as a good football coach?

Mr. LONG of Louisiana. I should be glad to have printed in the RECORD the article from Sports Illustrated, which I believe more or less met with the approval of the powers that be at the Academy. I believe the article makes pretty clear that that was the over-all purpose, the general idea. It was both.

Mr. DOUGLAS. Will the Senator permit the Senator from Illinois to make an observation?

Mr. LONG of Louisiana. Yes, I yield to my friend from Illinois.

Mr. DOUGLAS. When the Senator from Illinois was in the South Pacific, he heard about Australians who would go into New Guinea, the Solomon Islands, and other islands of the Pacific, and come back with Melanesians. They were called "black birders." Would the Senator from Louisiana say that a good deal of the same type of thing is going on in American colleges at the present time and that there are football "black birders" who ply their trade in human bodies?

Mr. LONG of Louisiana. So far as collegiate recruiting is concerned, in the section of the country from which I come, I believe it is just about as clean as it has ever been.

Mr. DOUGLAS. How clean was it?

Mr. LONG of Louisiana. All schools are on the same basis, I might add.

Mr. DOUGLAS. They are all guilty, in other words?

Mr. LONG of Louisiana. All schools are permitted to approach these young men. They talk to them, and then after these boys have played their last high school game, they can sign with one of the schools. However, someone from outside the conference can come in and try to break the agreement. On the whole, the matter has been cleaned up to a considerable degree. The Senator knows that there was a time when the situation was rather corrupt.

Mr. DOUGLAS. The Senator from Illinois believes that this is a very bad practice, and that it debases the whole purpose of higher education, and emphasizes a wrong set of values. If the Senator is correct the colleges of this country and their alumni have been corrupting the moral standards of youth and must bear a heavy responsibility for having moral and educational standards. Is it true that what the Senator from Louisiana is proposing is very similar to the proposal that the Senator from Washington proposed yesterday with respect to surplus power being used inside the Pacific Northwest area? Is the Senator from Louisiana saying that all surplus football ability and all surplus brawn and muscle shall be used inside the South?

Mr. LONG of Louisiana. No; I am not saying that. I will get to this point later in my speech.

I would ask the three service academies to get together and set rules for athletic recruiting which would be exactly the same for all three academies. This would put them on the same basis, with rules that would be fair to themselves, fair to everyone competing against them, and fair to the colleges that are producing taxpayers rather than military officers. They could then proceed to decide what type of competition they would conduct. This unregulated competition is not in the public interest, and we ought to stop it in its incipiency.

Mr. DOUGLAS. Do I understand the Senator's constructive proposition is that the Academy should state where its nominees are coming from, who has nominated them, and where they live, and we should put the spotlight on the situation?

Mr. LONG of Louisiana. The committee has already agreed to the spotlight-of-public-opinion amendment, so-called.

The amendment that I am now offering would not take from the Academic Board at the Academy the scholarships they are presently using for football recruiting.

Mr. DOUGLAS. How many of those are there?

Mr. LONG of Louisiana. Between 50 and 75.

Mr. DOUGLAS. Fifty to seventy-five appointments are given primarily for athletic ability?

Mr. LONG of Louisiana. No; the Academic Board gets around 50 to 75 appointments a year. They get them because some Representative or Senator fails to make his appointment in time for the boy to make the class. Of those they get in that fashion about half are athletes. I will establish that later in my speech. I believe they have stepped up the percentage of this football effort, however.

Mr. DOUGLAS. Should the Academic Board be called the athletic board ?

Mr. LONG of Louisiana. I would say that my study of the situation indicates that about 50 percent of the appointees of the Academic Board are based upon academic qualifications, and the other 50 percent will be based on brawn and athletic prowess. I believe I can establish that later in my speech. With regard to those, I would not change the situation, except that it would have to be revealed who appointed them.

Mr. DOUGLAS. That amendment has been accepted?

Mr. LONG of Louisiana. Yes; I am happy to say it has been accepted.

Mr. DOUGLAS. That is the so-called truth-in-recruiting amendment?

Mr. LONG of Louisiana. Yes.

Mr. DOUGLAS. The Senator from Illinois is a great believer in truth. He has a truth-in-lending bill, which he has sponsored, and he has also sponsored a disclosure bill so far as welfare and pension funds are concerned.

Mr. LONG of Louisiana. The "truth in recruiting" amendment would require the Secretaries of the Army, Air Force, and Navy to compile a list of the names of nominees, the nominating authority, and the nominee's domicile. This list is to be made available to Members of Congress for inspection. In this way, many of these abuses will be brought to light and thus stopped.

It is essential that these abusive recruiting tactics be stopped. If the Military Academy is to be permitted to engage in them, the Navy and the Air Force are going to be compelled to adopt similar methods in order to meet a challenge which threatens to run them from the gridiron in ignominious defeat. After all, the Dietzel program pursued against Tulane University so humiliated that great institution that its teams were twice defeated by margins of 62 to 0, and neither its varsity nor its freshman team contained more than one or two players in whom Coach Dietzel had demonstrated the least interest. These humiliating defeats were in some measure responsible for the replacement of the president of Tulane University with a man who had more interest in football.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Did the University of the State of Louisiana show any mercy to Tulane?

Mr. LONG of Louisiana. As a graduate of LSU I suggested that they stop recruiting for a few years to give Tulane a chance to get back in business. It had gone that far. I might say that that suggestion went over with the athletic director like a lead balloon.

Neither the Navy nor the Air Force are operated by fools. If this were so, we should undertake to make drastic changes. When they find themselves confronted with an all-out nationwide recruiting drive on the part of their principal competitor, they will be forced to engage in similar tactics. Contractors, retired officers, large concerns hoping to do business with the services on a cost-plus-fixed-fee basis, Members of Congress who hope to obtain or preserve important military installations in their States—all will become a part of this overzealous competition between three great football powers. Professional football will be denied much of its best prospective talent as the services commission for 5-year terms men who are better qualified to play professional football than to be service officers.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Do I understand the Senator objects because the present practice of the military academies may diminish the supply of professional football players?

Mr. LONG of Louisiana. That is one of the lesser reasons.

Every State university seeking to sign up a hometown high school prospect will be hard put to keep the young man away from the Army, Navy, and Air Force recruiters.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Does the Senator believe that that is any part of the business of higher education, to turn out professional football players or gladiators?

Mr. LONG of Louisiana. Well, some universities have a college of physical education; the alleged purpose of the college of physical education is to teach young men how to coach. The Senator knows as well as I do that a good professional football player can sign a contract for as much as $100,000 as a bonus to start playing. My guess is, for example, that Billy Cannon of Louisiana State University has made a quarter of a million dollars in 2 years as a professional football player. Playing in the game can mean more by way of income than can coaching.

Mr. DOUGLAS. Does not the Senator think that if he believes in truth in recruiting, every college and university in the country ought to publish its payrolls and state how much each football player is receiving? I think that if that were done, this practice would be stopped. The Senator from Louisiana is performing a very valuable service in washing this dirty linen on the floor of the Senate.

Mr. LONG of Louisiana. By washing it we might get it clean.

Mr. DOUGLAS. It is dirty linen not only of the military academies but also of a great many institutions of so-called higher education.

Mr. LONG of Louisiana. I can tell the Senator that football players in the Southeastern Conference are receiving about $1,600. That is the scholarship they receive when they sign up to go to a particular school.

I suppose it is about the same in the Atlantic Coast Conference. The Senator from Illinois probably knows more about the Big Ten than I do, because his State has Big Ten schools, or I believe one such school.

Mr. DOUGLAS. Two.

Mr. LONG of Louisiana. I do not know about the institutions. They generally have pretty good football teams, but I expect they have to do something similar in order to meet the competition.

Mr. DOUGLAS. Would not the Senator from Louisiana favor my proposal that, beginning with the service academies, we require the publication of the payrolls and how much is paid to the football players

Mr. LONG of Louisiana. So far as Louisiana State University is concerned, that information is already a matter of record. At Louisiana State, from which I was graduated, that information is already a matter of public record. There is no right to withhold such information; any taxpayer may examine the records. I am happy to say that we have made some headway toward similar results at the service academies.

Meanwhile, those fine, physically fit young men who would like to compete in the sport in the amateur tradition will learn that there is no use in trying out at the service academies, because their chances would be hopeless, and the possibility of injury great.

Mr. President, the argument has sometimes been made that to give the Academic Board additional appointments would be a good thing, because these men turn out to be extremely well qualified. I frankly do not know whether this is the case, because of the difficulties of getting any information out of the Army.

However, I do know that this is where most of the football players come from, and where they all will come from, unless we stop what is underway. Let us just examine the Army-Navy football game lineup for the past several years. This information is taken from the lineups themselves; it may not tell the full story because several times it appears that the annual yearbooks show football players not mentioned in the lineups. But just to get an idea:

First. The 1954 lineup shows 36 players for Army. Of these, 19 were admitted to the Academy by the Academic Board. This comes to 52.7 percent of the team. Of the 11 starting players, 8 were Academic Board appointees.

Second. For the 1955 game, 21 of 38 players were appointees of the Academic Board. This is 55.2 percent of the team. Nine of eleven starters were Board appointees.

Third. In 1956 the lineup showed 38 players; 16, or 42.1 percent of the team, and 6 starters, were Academic Board appointees.

Fourth. In 1957 the number of players was 42; 20—47.6 percent—were Academic Board appointees, including 6 starting players.

Fifth. In 1958 the figures were 23 of 39 players, 58.9 percent, and 6 of 11 starters.

Sixth. In 1959, 34 of 46 players were board appointees; this represents 73.9 percent of the team; and 8 starters.

Seventh. In 1960, 34 of 43 players had been admitted by the Academic Board; this was 79 percent. The starting players were not listed.

Eighth. In 1961, 42 of 58 players—72.4 percent—were Board appointees. Again, no information was given as to starting players.

Thus, for the past 3 years, 75 percent of the team were Academic Board appointees. If this percentage does not shock anyone, then consider the fact that the Academic Board appoints only 8 to 10 percent of the total number of cadets at the Academy, then you get some idea of what is going on.

Mr. President, I have stated that nobody is begrudging the Army or anyone else a good football team. At least, I am not. But with the resources already at their disposal there is little doubt that recruiting can be extensive and successful, without any further legislation to assist it. Just consider what the Military Academy has to offer. According to my figures, the yearly per-student expenditure for West Point is something over $11,000. This means that an appointment to the Academy for a young athlete is worth around $45,000.

Comparable figures for an average State university are extremely revealing. At Louisiana State University, for example, a football scholarship is worth $1,600 a year. The average per-student expenditure by the university comes to $800. This works out to $2,400 for an Louisiana State University player, as against a figure of $11,000 for West Point.

Mr. DOUGLAS. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Do I correctly understand that football players at Louisiana State University get $800 in the form of tuition and other costs which are paid for by the university, and $1,600 in cash?

Mr. LONG of Louisiana. Louisiana State University is State supported. The fees are very low. I should say that the average student pays probably $60 in fees, and the State makes up the difference, which would be about $720. About 90 percent of the cost is paid by the State.

Mr. DOUGLAS. Does the Louisiana State University football player get cash?

Mr. LONG of Louisiana. No; his laundry, room, board, ROTC uniform, and books are paid for. That is figured to be worth $1,600.

Mr. DOUGLAS. Does he get spending money?

Mr. LONG of Louisiana. I do not know about that, but perhaps he gets a little. Anyway, it comes to about $1,600; and that is what the other colleges do, too.

Mr. DOUGLAS. In other words, it is wage fixing? But wages paid for playing football.

Mr. LONG of Louisiana. That is my best understanding. That is the rule as it has been worked out by the conference of all schools in the Southeastern Conference—Tulane, Georgia Tech, University of Florida, University of Georgia, and others. As the Senator from Illinois knows, the arrangement is subject to careful inspection by the National Collegiate Athletic Association.

Mr. DOUGLAS. Does the Senator from Louisiana mean to say that the National Collegiate Athletic Association approves of this situation?

Mr. LONG of Louisiana. Yes; of course.

Mr. DOUGLAS. That is a very grave charge. The corruption has gone further than I thought.

Mr. LONG of Louisiana. Every football conference provides some method for subsidizing football players, with the exception of the Ivy League; and I am not sure that they might not have some such arrangement. If the Senator from Illinois, as a former college professor, does not know about this situation, it is time he found out about it.

Mr. DOUGLAS. I have suspected it, but I have never heard the material brought forth in public in quite the way it has been set forth by you today. If this is true, there is wholesale corruption in our colleges and universities. They are certainly not raising the moral level of our youth.

Mr. LONG of Louisiana. I do not think so. This is the way corruption has been cleaned up. The corruption existed before there was an agreement. Collegiate football is semipro football. That is what it amounts to. Every college agrees that it will compete under certain rules. If a boy attends such a college, the college will furnish his board, room, laundry, ROTC uniform—if he is a member of the ROTC—his books, and perhaps a little pocket money. But all the colleges agree on the amount. I cannot say as to the Big Ten; but I know something about LSU, because it is the college from which I was graduated and is a member of the Southeastern Conference.

Mr. DOUGLAS. Does the Senator from Louisiana say he suspects the Ivy League of following the same practice?

Mr. LONG of Louisiana. I do not know about the Ivy League. If they will tell me what their practice is, I will be glad to take their word; but I know how the arrangement works in the Southeastern Conference. It is a matter of public record; nobody argues about it.

Mr. DOUGLAS. Is it not a grave reflection upon the arrangement if no one argues about it?

Mr. LONG of Louisiana. Does the Senator cash his paycheck on the first of the month? I do not regard the Senator from Illinois as being corrupt, but I assume he cashes his paycheck.

Mr. DOUGLAS. Does the Senator mean, then, that these persons are paid to play football?

Mr. LONG of Louisiana. Of course. They sign a scholarship agreement in which it is agreed that this is what the university will do. That has been the case for a long time.

Mr. DOUGLAS. Then the universities lend themselves to the corruption of youth.

Mr. LONG of Louisiana. It is not corrupt. It is no more corrupt than if I paid the Senator from Illinois to hoe a garden for me. These boys play football, and that takes much of their time.

Mr. DOUGLAS. I had always thought that college athletics were for sport, not for business; and that when they were made into a business, the whole purpose of athletics was subverted. I played football in college. I was not a very good player, but I enjoyed the game immensely and never received a cent for it.

Mr. LONG of Louisiana. I thank the Senator from Illinois. I am trying to keep the situation from becoming worse than it is. But I believe it has been made better.

My best information is that a scholarship to a land-grant college is worth about $2,500, while a scholarship to West Point is worth about $11,000, a difference of $8,600.

This will furnish an idea of the tremendous incentives which the Army can offer a young football prospect.

The point is, Mr. President, that legislation is not needed to further the cause of football at the Point. It may well be needed to augment the strength of the corps of cadets; no one is unwilling to see legislation of the latter kind go through. But I am not willing to see the Congress enact, without protest, a bill which seems flagrantly and openly designed to permit further abuses involving congressional appointments, with the improvement of Army football being the end in view.

Mr. McCARTHY. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield to the Senator from Minnesota.

Mr. McCARTHY. Did I understand the Senator to say that about 75 percent of the students picked by the Academic Board are on the football teams?

Mr. LONG of Louisiana. No. My latest information is that Academic Board appointees comprise about 9 percent of the corps, and that this 9 percent comprise 75 percent of the football teams, and a higher percentage than that of the starting players in the Army-Navy games.

Mr. McCARTHY. Does the Senator from Louisiana know what percentage of the cadets at West Point picked by the Academic Board wind up in the upper 10 percent of their class?

Mr. LONG of Louisiana. I do not have that information, but I can give the Senator from Minnesota some idea. We should keep in mind that the Academy will not give us this information. But those at the Academy say that the academic average of those picked by the Academic Board is better than the academic average of those who are appointed by Members of Congress. That would indicate that the nonathletic 50 percent of the Academic Board selectees are very good students.

Mr. McCARTHY. Perhaps the football players are good students.

Mr. LONG of Louisiana. No; the Senator from Minnesota knows that the ones who are football players have to pass only the bare minimal academic requirements, in order to be admitted; and once they are admitted, they devote so much of their time to playing football that—with few exceptions, such as Pete Dawkins, and some few others of his caliber—they do not do particularly well at the Academy, except in playing football.

Mr. McCARTHY. But I am sure the academies can give us that information if they wish to do so.

Mr. LONG of Louisiana. I have asked for much information which they do not provide, although they have it and can produce it if they wish to do so.

Mr. CANNON. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. CANNON. The Senator from Louisiana does not suggest, does he, that certain cadets receive preferential treatment, insofar as meeting the requirements to enter the Academy are concerned, does he?

Mr. LONG of Louisiana. No. In my prepared speech I state that I do not doubt the word of the service academies that these young men are required to pass the Academic Board examination before they are admitted. I have no doubt that they do. I have no information to the contrary; and I take their word for it, without question. But I am sure that if they will open up the records for our inspection, they will reveal that the academic records of those who are recruited as football players are far below the academic records of those who are admitted on the basis of competitive examinations. I think the records will show that the academic records of those who are football players are generally rather poor.

I am sure the Senator recalls the cheating scandal of a few years ago. A number of the football players there could not keep up their academic grades. So they cheated, because they felt that they were entitled to remain there.

But, of course, the root of that difficulty is that those who are appointed because they are football players have to play so much football that they have difficulty finding time to study enough to be able to keep their grades up.

Mr. CANNON. Is the Senator from Louisiana familiar with the 1959 report of the Middle States Association of Colleges and Secondary Schools, which states:

> A sample of the admission records of athletes showed no differential treatment.

The report goes on to state:

> There are so many hurdles between appointment and qualification for admission, and the demands of the 4-year program are so rigorous, that there is little appeal to the professional type of college athlete.

Does the Senator from Louisiana agree with that report?

Mr. LONG of Louisiana. Then how are the academies recruiting so many football players?

Mr. CANNON. I ask the Senator from Louisiana whether he agrees with that report of the Middle States Association of Colleges and Secondary Schools.

Mr. LONG of Louisiana. I agree with the report set forth in the article in Sports Illustrated. The article states that on the wall in the office at the Academy there is a map which shows where every good football prospect in America is living; and the article states that West Point is working on each one of them. Furthermore, I believe it will be found that the article was published in Sports Illustrated with the tacit approval of the West Point authorities .

Mr. DOUGLAS. Was the article published in Sports Illustrated?

Mr. LONG of Louisiana. Yes. I now show it to the Senator from Illinois.

Mr. DOUGLAS. Is the Senator from Louisiana referring to the article entitled "Pepsodent Paul at the Point"?

Mr. LONG of Louisiana. Yes.

And listen to this affidavit from Robert DeLuca:

> The basketball coach from West Point witnessed one of our basketball games during March. The following day he spoke with me at our school. He explained to me that he would like to have me play for him, and he felt assured that I would be accepted at West Point. He stated that I would have to raise my college boards a little and I would be assured a spot at the Academy.

It sounds as though his grades were poor.

He went on to say that the appointment would have to come from outside the State. And that is against the law. And he said that he was told this was "standard procedure." That is what that basketball player swore to, under oath. I have also cited the cases of football players—one from Clemson, and one from the University of Mississippi. This is going on all over the country; and it is in violation of the law.

Mr. DOUGLAS. Let me refer to the article entitled "Pepsodent Paul at the Point." In the article there is the following statement:

> A huge map covers one office wall; in a multiplicity of colors, it shows areas to be attacked. No State has been overlooked. "This is a national academy, not an eastern school," he says. Hall's 1961 roster was stocked with 28 Pennsylvanians.

It sounds as if he were operating a livestock farm.

Mr. LONG of Louisiana. And the chart on the office wall also shows the name of every Senator and every Member of the House of Representatives who has not filled out his alternate appointments—so they can be made available.

Mr. President, the tenor of this speech has thus far been directed toward improper football recruiting methods. The purpose of the measure under consideration is contended to be to provide additional officer strength to the Army. All of us favor this. If we are concerned with the true purpose of the service academies, we should undertake to see to it that they are getting the best qualified and most highly motivated officer material possible, rather than depriving the Green Bay Packers of the heft and physical prowess they will need in order to win another national professional football championship.

The record shows that the Academic Board at the Military Academy has been choosing over 50 percent of its appointees on the basis of athletic prowess, rather than scholastic ability and leadership, although I concede that these young men are required to maintain passing grades in order to remain in the Academy. I suspect that a great deal of coaching by some of the better students is occurring. But the authorities say the football players maintain passing grades, and I dc not quarrel with that statement.

It has been contended that the selectees of the Academic Board on the average have better records than do congressional appointees. If this is true, it is an indictment of the entire system of congressional appointments. And the system should be indicted. Although a considerable number of Senators and Representatives base their appointments upon competitive examinations, the Academy has not even been willing to inform us what percentage of Senators and Representatives do so. If it were learned that the congressional appointees as a group could not average better than a group chosen more than 50 percent for athletic prowess, this would indicate that more than half of the congressional appointees are being designated without regard to merit.

Let me hasten to say that thus far every principal appointment I have made has been made strictly on the basis of merit, after a competitive examination.

The same is true of the appointments made by other Senators. Yet, a high percentage of Academic Board appointments have gone to sons of politicians, of service officers, of substantial campaign contributors, of relatives—which appointees in many instances have not been required to prove their worth in a competitive examination.

A long time ago efforts were made to take the Army out of conventional politics; and the success of those endeavors has been responsible in large measure for the high caliber of officers that this Nation enjoys.

Unfortunately, the services have yielded to the temptation to create their own brand of politics within the services. Furthermore, there seems to be developing a fraternity of politicians and officers who feel that there is a brand of politics in which the two can mutually engage—the politicians, to gain advantage for their States and favorite contractors; and the officers, to establish military control over what ordinarily should be civilian decisions, particularly in the field of lawmaking.

In my judgment, the entire program to enthrone service football at the expense of privately financed and State institutions—the institutions which are producing the taxpayers who pay for this service business—should be brought to a halt.

Mr. DOUGLAS. It is at the expense of the standards of these young men, too, is it not?

Mr. LONG of Louisiana. Yes; I agree with the Senator from Illinois, as I have said earlier.

My recommendation is as follows: The service academies should be compelled to agree upon rules of competition which will not be unfair to other colleges and universities, nor unfair to any of the three great service academies.

Mr. CLARK. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. I agree with the Senator from Louisiana that appointments to the service academies should be made on the basis of merit and on the basis of appointing those who will make the best officers. I have always held competitive examinations for appointments from my State, and I also choose on the basis of personal interviews, in order to select the ones who I believe are best qualified to be officers. To do anything else would be outrageous, in my opinion. The appointments should not be made on the basis of athletic skill or political connections.

My question is: How would the amendment of the Senator from Louisiana help in this situation?

Mr. LONG of Louisiana. This bill would permit the Academic Board to appoint about 75 more young men a year.

Those men have been named as alternates. Those are our nominees. Rather than have the Board appoint them, my proposal is to let the Members of Congress who have been appointing the top men have a second appointment. How are we going to tell? Wait until graduation. Let us say that one of us appointed Douglas MacArthur. That Member would be entitled to a second appointment. The chances are that he had been appointed on the basis of competitive examinations, and that he had been appointed on the basis of merit rather than on the basis of athletics or politics.

Mr. CLARK. If Senators would conduct their procedures for appointments on the basis of selecting them on merit rather than on either athletics or politics, the pending bill would be satisfactory?

Mr. LONG of Louisiana. Not necessarily.

Mr. CLARK. Why not?

Mr. LONG of Louisiana. It would still leave to the Academic Board the privilege of playing all kinds of politics with our alternates.

Mr. CLARK. What percentage of the young men who go into the service academies are picked by the Academic Board?

Mr. LONG of Louisiana. Eight to ten percent are Academic Board selecteees. They prove to be 75 percent of the football guards. They contain most of the wrestlers, hockey players, basketball players, and so forth.

Mr. CLARK. Would the Senator's amendment do away with the Academic Board appointees?

Mr. LONG of Louisiana. No. I would leave to them what they have now. Let them do all the football recruiting they wish, but let them tell us whom they are appointing in violation of the law. This is what my truth-in-recruiting amendment will accomplish.

I have another amendment that would impose criminal sanctions on Senators and Members of the House for violating the law. I am not going to insist on it, because it might be too harsh a remedy. The committee is willing to go along with the truth-in-recruiting proposal. The academies can get all the football players they want and do all the recruiting they want, but with respect to the new appointees, let us take them and make the new appointments on the basis of merit, by rewarding Members of the House and Senators who appoint the best men with additional appointments. That would be an honor. It would encourage the Senator or Member of the House to attend the graduation ceremony, if his appointee were in the top 75.

Mr. DOUGLAS. So the Senator proposes a limitation of athletic armaments?

Mr. LONG of Louisiana. Instead of leaving the bill so that it can be used for football purposes, I am trying to make the bill an incentive and reward to Members of the House and Senators to select appointees based on merit, by giving them the recognition they deserve for appointing the best and finest young men.

Mr. CLARK. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. METCALF in the chair). Does the Senator from Louisiana yield to the Senator from Pennsylvania?

Mr. LONG of Louisiana. I yield.

Mr. CLARK. If the amendment is adopted, will it delay for a period of 3 or 4 years the desired objective of increasing the size of the academies to full strength?

Mr. LONG of Louisiana. It would start now. For example, if the Senator had made an appointment of a young man who finished 1st, or 10th, or 15th in this year's senior class, he would be entitled to another appointment next year.

Mr. CLARK. So the Senator's amendment would not delay the time when the size of the academies would be brought to full strength to take care of dropouts for one reason or another?

Mr. LONG of Louisiana. That is correct.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield

Mr. KEFAUVER. The Senator's plan and program sounds like a very good one to me. How many additional appointments would there be for each academy under the plan?

Mr. LONG of Louisiana. About 75 for West Point. I do not know how many for the Air Force. I presume about the same number.

Mr. KEFAUVER. Should it not be the same number for each academy?

Mr. LONG of Louisiana. The number would be determined in this way: At the beginning of each year the Academy would estimate how many young men would drop out before the year was over. On the basis of this estimate, additional appointments would be made, so that there would be an overstrength in the number of cadets at the beginning of the year. The theory is that, taking into consideration the dropouts that would occur, the number left would be the number for which the institution has facilities. The number of additional appointees is estimated at about 70 or 75 under the bill.

Mr. KEFAUVER. A good many of us use the civil service system or the academic system of allowing selection of the best young men from a group submitted. This proposal would be an incentive to do the same kind of thing with respect to all Members of Congress. Is that correct?

Mr. LONG of Louisiana. It would. I want to give the committee credit for improving the bill. In the form in which the bill came to the Senate, the Academic Board could have chosen any one of three alternates, first, second, or third. The bill now limits them to the first alternate. The old Board appointments are left, and the old chicaneries we have known in the past can be followed, but the new appointments would be limited to the first alternates. This would be some incentive for a Senator or a Member of the House to name the best qualified man for the principal and the second best qualified as the alternate, so those boys would be selected. But I feel that my approach is a further improvement.

Mr. KEFAUVER. I think the academies themselves might be in favor of that proposal.

Mr. LONG of Louisiana. It had not occurred to me at the time the committee was considering the question that this might be the best way to achieve the objective. I would like to have offered it in time for the committee to consider it, because, I am frank to say, the committee has been most fair. The distinguished chairman and the Senator in charge of the bill have been most courteous, and I thank them.

Mr. CANNON. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. CANNON. I think it should be pointed out that the system proposed by the Senator from Louisiana eliminates competition in respect to the additional vacancies. They would have to be taken from candidates designated by the Member of Congress, but not from first alternates. So there is not going to be competition among 600 people who would compete for the 50 vacancies under the bill. So the overall selection of the additional appointments is going to be substantially lower in quality because of the lack of competition, and we are not going to be able to get the top 50 men out of 600.

Mr. LONG of Louisiana. I thank the Senator for that observation. I think the Senator misunderstands my amendment. My amendment provides that the principal appointment will be made as now. The Academic Board would have approximately 50 appointments, as it has now.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. DOUGLAS. Where do the 50 appointments come from? How do they originate?

Mr. LONG of Louisiana. If the Senator from Illinois had neglected to submit an appointment, or if it had been made by a Member of the House who had passed away, or if a Member of the House had not made an appointment, there would be a vacancy. The present Academic Board appointees result from the failure of Senators and Representatives to take advantage of their full quota. The additional ones are going to be made to replace those who are going to flunk out or, for one reason or another, drop out, and it is proposed to appoint in overstrength, so that the number will be at full strength at the end of the year.

I shall not touch the provision relating to the principal appointment or the Board appointment. It is bad, but right now I am concerned with not making a bad situation worse. What I want to do is improve the quality of the whole arrangement by encouraging every Senator and Representative to appoint his best man; by doing so he will receive recognition and be encouraged to appoint the top man to the military school. In addition, he will have a second appointment. I really think we will find that those who appointed the best man previously are likely to appoint the best man in the future.

Mr. ALLOTT. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield.

Mr. ALLOTT. Am I to understand that the amendment will work in this way: Those who had the top 75 would each have an appointment, but, under the law, they would be limited to the appointment of their top alternate.

Mr. LONG of Louisiana. No. Under the amendment I am proposing, let us say 75 additional appointments would be the desired overstrength. Let us say the Senator had appointed 1 in the top 75 of the graduating class. The Senator would be permitted to appoint the principal he was going to appoint, plus one more man. He could appoint football players if he wished to do so in the case of the two appointments. He can now do it with respect to one.

The point is that if the Senator is one who has appointed, let us say, the valedictorian of the class, he should be entitled to make another appointment. My guess is that the Senator from Colorado might even go to the graduation ceremonies to receive some recognition, to which he would be entitled, if he appointed the valedictorian of that class.

Mr. ALLOTT. I think that is quite probable.

The argument which the Senator has made is a logical one. The interpolitical system which has developed in regard to this whole question is not a healthy one. Since I was in the Chamber, I could not let the statement by the Senator pass without also saying that I am one of those who have always made every appointment to every service academy solely upon the basis of a competitive examination.

Mr. LONG of Louisiana. I have, also; and I say to the Senator that I have not received my first campaign contribution from a father of one of those sons. It has been suggested to me that thousands of dollars could be offered to support my campaign if I would use another system. But I have felt that this is how it should be done. This is the best way to be fair to all the boys. Let them all take the examination, and then let the best qualified one be selected.

Mr. ALLOTT. The Senator is correct. Every American boy ought to have an equal opportunity.

Mr. LONG of Louisiana. Senators and Representatives in Congress have a right to choose a different means, if they so wish. I am not arguing that point. Senators and Members of Congress can make their appointments as they wish to make them. All I say is that we should not pass a bill to permit a group of military officers to make our appointments for us. These are our appointments. They are congressional appointments. The bill would permit military officers to make the appointments. They already have 50 of our appointments with which to play. They want 70 or 75 more. The military officers want to make the appointments for Members of Congress.

Why should we do that? Why not fill these spots by using an incentive to appoint the most qualified men?

Mr. JAVITS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to the Senator from New York.

Mr. JAVITS. The Senator has made a fine speech, which has an excellent point, and the country should be indebted to the Senator for revealing this situation. I admire the Senator's speech especially because he has documented it with cases. Quite often people make fine forensic speeches but never quite get to the evidence.

Mr. LONG of Louisiana. Some of the information came from a Representative in Congress from New York.

Mr. JAVITS. The Senator is very kind.

Really, what the Senator is saying is that there is something very deeply wrong with the system which is used. Perhaps it would be impossible to try to reform what he has latched on to on today's date in August, with respect to the whole system. It needs very much more opportunity and very much more study. At least, the opportunity is presented for a token effort and improvement, in the judgment of the Senator.

I deeply believe, however, that the amendment does not necessarily—and I think my colleague from Pennsylvania was reaching for the same idea—carry out the excellent thesis which the Senator has laid before us. Even if the Senator's amendment were not agreed to, I would dislike to feel that the lesson thereby is to be lost upon the Senate and that the Senator's thesis is to be considered rejected. That will not be so. I do not think that the Senator's thesis hangs upon this amendment.

I say that for the reason that I was at West Point, as a member of the Board of Visitors. That is the reason why I have been bold enough to interrupt the Senator. I talked about the bill with commandant of West Point, General Westmoreland, in great detail. He was deeply concerned. It would be unfair to say he was deeply concerned about having the bill passed, but he was very concerned about dealing with the problem, for he feels it is depriving our country of the full capacity of the Academy.

The Academy has the instructors, the equipment, and the housing available; yet, every once in a while, the Academy finds itself deficient as to the number of cadets.

Of course, we all understand that the Navy has very much more flexibility than West Point in terms of the cadet corps. The Navy cadet corps is substantially greater than the West Point cadet corps. It is interesting that the Navy is not included in the provisions of the bill, apparently because it has a much better system in regard to dealing with this problem.

Mr. LONG of Louisiana. I am not at all sure it is a better system. I seriously suspect that we ought to take a look at the Navy situation, as well.

Mr. JAVITS. That would be good. I am coming to something which is very important, if the Senator will yield further, because I agree with the Senator.

In view of the fact that I feel very deeply that the Senator's thesis is so much more important than the particular amendment we are considering, I feel the problem should have full consideration.

In all fairness, it is not a fact, that the Academic Board would choose the 50. The Academic Board would recommend the 50 from some 600.

Like so many other Senators, I not only give an examination with respect to appointment to the academies, but also I go through what is a rather heavy burden of interviewing the first 20 in each one of the categories. I interview about 100 young men every year. I make a personal choice.

Often in the past I have picked the young man who scored fifth, sixth, or seventh on the examination, because I have felt—since I have served myself, as has the Senator and as have so many others—"This man may lead my boy and be responsible for his life." Therefore, I wish to be very careful about whom I nominate. So my conscience is clear in this regard.

Mr. LONG of Louisiana. I am not trying to say that the conscience of any Senator in this body is not clear.

Mr. JAVITS. I understand.

Mr. LONG of Louisiana. The Senator does not have to appoint the boy who is the best qualified. The Senator can appoint anyone he chooses to appoint.

Mr. JAVITS. That is correct.

Mr. LONG of Louisiana. That is what the law provides.

Mr. JAVITS. The Senator's proposed system would be different, and would change one of the basic principles, because it would then confine the preferred appointment, as it were, to Senators who appointed boys who happened to score well at the end of the course.

I should like to make a suggestion to the Senator, and I would appreciate it if the Senator who is in charge of consideration of the bill would listen carefully.

My colleague from New York [Mr. Keating] submitted a resolution some time ago which urged that there be a complete study and review of the whole question of appointments to the service academies. It seems to me that, regardless of what may happen with respect to the Senator's amendment, since that is a relatively narrow question, the entire problem should be studied.

Certainly I would join with the Senator in expressing the wish and the desire that the Armed Services Committee, very early in the next session, before it is overloaded with work, perhaps through an ad hoc subcommittee or perhaps through the full committee, consider the speech made by the Senator from Louisiana, which is very well documented and makes a strong and effective point. I feel it should be taken deeply to heart.

I feel there should be a complete study of the question as to how best to make the appointments, and the results of appointments. Information should be obtained as to whether there is proselytizing, which would be a very unhappy situation. We have seen examples from time to time—indeed, some have been notorious—which have hurt the standing of the academies.

The whole problem should be gone through with a fine-tooth comb, so that there will be an effect far beyond the proposed amendment. I think it deserves such an effect. The Senator's amendment presents a relatively limited question, with which we are asked to deal today.

The Senator himself admits that the proposal would not prevent a Member of Congress, if he chose to do so, from appointing a football star or a prospective football player to an academy.

Mr. LONG of Louisiana. I do not think we ought to try to prevent a Member of Congress from doing so. It seems to me that if a Member of Congress wants to appoint an outstanding football player of his State to the Academy, he ought to have that right. That ought to be his privilege, if that is how he thinks he should make the appointment. I do not think we ought to change that system.

My argument is that we should provide an incentive, so that we will get boys who will be leaders of our country—so that we will get another Douglas MacArthur or another Robert E. Lee. I regret to say that I do not think Ulysses S. Grant did very well in the Academy. Although he was a good soldier.

Mr. DOUGLAS. He was a very good general.

Mr. LONG of Louisiana. He was, still, a credit to the Academy.

Mr. DOUGLAS. He was a very good general.

Mr. JAVITS. He was from Illinois.

Mr. LONG of Louisiana. I do not think he did too well at the Academy, but I think southern officers would concede that he was a very competent military officer.

Mr. DOUGLAS. That is very handsome of the Senator. The results clearly showed it.

Mr. LONG of Louisiana. I yield further to the Senator from New York.

Mr. JAVITS. If I may, I should like to finish my thought.

Of course the argument can be made that it will be a sad day if we have to give Members of Congress an inducement to appoint the best men to the academies. If they are not so minded, so geared, and that patriotic, I doubt whether this proposal would make them any different from what they are.

Mr. LONG of Louisiana. I hope my friend from New York does not think that we will get to heaven in a single leap. My old government professor once told me: "Democracy is like a raft—it won't sink, but you will always have your feet wet."

There will always be something which needs to be corrected. By the time we see the ends of these problems, we shall be dead.

Mr. JAVITS. I merely wish to finish my thought by pointing out that the amendment is not necessarily fitted to the much bigger problem which the Senator has posed, quite eloquently and effectively. I join with the Senator in urging that the committee take whatever may happen in regard to the amendment and the problem itself as a total problem which should be dealt with in a much more comprehensive way than we have any opportunity for dealing with it at this time.

Mr. LONG of Louisiana. Mr. President, I yield the floor.

Mr. CANNON. Mr. President, I should like to answer a few of the remarks made by the Senator from Louisiana.

First, most of the Senator's debate went to the alleged abuses of the system that is now in effect. I believe we have corrected the abuses, if they existed, by agreeing to the first amendment of the Senator from Louisiana. I think his amendment, which was accepted on the floor of the Senate, was a good amendment. I think that bringing out information before the public for public scrutiny will, as he has correctly stated, assure that appointing authorities will not abuse the authority they have, if they have been abusing that authority up to the present time. So in conclusion on that point, I should say that the Senator's amendment would correct most of the items complained of in the subject of his speech today.

Again, I point out that the Senator quoted Johnny Rauch as saying that Paul Dietzel tried to get the bill passed so that he would assure him of 55 appointments a year for football. I think it has already been pointed out that the bill was passed in 1960 by the House and was passed again in 1961 by the House.

The approach is not a new one. It is not a new approach to the problem, and certainly it was not Paul Dietzel's idea, I am sure, because he was in Louisiana at the time the bill was first passed, and for some time thereafter, and certainly was at West Point long after the bill had been considered very thoroughly in the House.

Mr. President, there has been a great deal of criticism with respect to the appointment of football players to the Academy. Personally I see nothing wrong with the appointment of football players to the Academy. The Academy has the best of the future leaders of our country. They are supposed to be bright young boys, healthy boys. They must pass rigid physical examinations. We want healthy boys in our academies. We would have it no other way. Otherwise we would reduce the physical requirements for entrance.

If a boy wishing to enter the Academy meets all the requirements, as he must, and still plays football outstandingly, as many boys have, he has my wholehearted admiration. I am proud to have such boys represent me at the academies, and represent me as some of our prospective military leaders. I think they are to be commended in that respect.

Again I point out for the benefit of Senators that the report of the Middle States Association of College and Secondary Schools in 1959 has very clearly pointed out that the boys do not get any preference for entrance into the Academy. They must meet the requirements that are set up by the board for entrance.

Furthermore, no preferential treatment is accorded them while they are at the Academy. A cadet who plays football at the Academy receives no preferential treatment while he is a member of the cadet corps. He receives no special schedule, courses of instruction, privileges, or emoluments as a result of his athletic activity.

I am sure that could probably not be said about some of the football players at some of the universities throughout the country.

His performance as an athlete is in addition to meeting all the other requirements of his contemporaries. Again quoting from the 1959 report:

> An athlete is first of all a cadet, and the intercollegiate athletic program is in line not only with the objectives of the program itself, but also with those of the Military Academy. As far as one can discover, the program is one which is producing wholesome outcomes.

The report goes on to state:

> Eligibility is determined weekly and cadets on athletic teams are immediately removed from their athletic squads when their academic records show impairment.

In conclusion, I repeat that there is certainly nothing wrong with the appointment of athletes to our outstanding military academies. If the appointees can carry the load they are required to carry, I, for one, will be satisfied.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CANNON. I yield to the distinguished Senator from Pennsylvania.

Mr. CLARK. Before a vote is taken on the bill, I should like the record to show that in my opinion the whole system of Congressional appointments to the academies is wrong. Neither Representatives nor Senators are really adequately qualified to select individuals to go to our service academies. In too many instances we are under very severe political temptation to select individuals who are not the best qualified. As a result of the discussion today, I hope that the Committee on Armed Services will give serious thought to the question whether this particular privilege which we have taken unto ourselves by congressional legislation is not an obsolete and outmoded way of selecting young men to whom we are going to look to lead our Nation's defense. I have always held competitive examinations. But I am confident that there are many, including the authorities at the Academy, who are far better qualified to select the young men than I am. I hope that the Committee on Armed Services will give some thought to that rather iconoclastic suggestion.

Mr. CANNON. The subject has been given some consideration. In fact, over the years a number of boards of visitors, and certainly the military authorities themselves, have recommended a change in the appointing system. However, in all seriousness and candor, I point out to my good friend, that I doubt very seriously that Congress would look very favorably upon giving up its prerogatives in the appointment of boys to the academies, particularly when the boys must meet very strict entrance requirements, irrespective of how badly the appointing authority may want particular boys in the Academy. They must pass entrance requirements that are established by those in authority and who know what they should be. I think the results of the graduates of the Academy are the best evidence. The fact that our Academy graduates rate so high as compared to the graduates of other colleges throughout the country lends a great deal of credence to the system used in the appointments at the present time.

Mr. CLARK. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. CLARK. I do not disagree with anything my friend from Nevada has said. I suspect that it would be even harder to change the method of appointing candidates to the military academies than to secure a change in the rules of the Senate, which I think is even more important.

Mr. KEATING. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. KEATING. Supplementing what the distinguished Senator from Pennsylvania has said, I share to some degree his feelings. I do not imagine it is the most popular view in this body or would be in the other. But I have serious doubts whether the congressional appointments of cadets has served its purpose. What we want—and I know we are all sincere in trying to arrive at a conclusion—is the best qualified men to lead our forces in the three service academies.

Mr. President, I have been concerned about this problem for some time, and feel that in a period of severe national stress the Congress should be fully informed about this important phase of our defense effort.

The practice of congressional nominations for West Point, and later the other academies, goes back well over a century. Although the President originally made all the appointments himself, it was common procedure by the time of President Jackson for the Secretary of War to accept the recommendations of Members of Congress. This procedure was finally legalized in a statute of 1843, partly as the result of a legislative maneuver to halt congressional criticism of West Point as an "undemocratic" institution.

The point of this brief excursion into history, Mr. President, is that the method of selecting our future officers is mostly the result of tradition and some sharp political dealing, and has never been justified on the grounds that Congressmen are the most eminently qualified for the job. I do not doubt that my colleagues conscientiously attempt to nominate the best possible men to the academies. But might this job not be done as well, or better, by another group with fewer responsibilities and a less hectic workload? It is frequently suggested that some other system might work better—selection by local boards, a nationwide competitive examination, or something similar to the NROTC procedure are often mentioned. There are good cases for all these arguments.

The problem of Academy nominations, Mr. President, is particularly relevant at this time, when a number of new proposals are suddenly presented. During this debate, my colleague from Louisiana has raised several important questions about the criteria for selection, questions which have not been completely answered, questions which his amendments do not answer, either. Given the nature of the charges, and the essentially anomalous position of the Congress in the nomination procedure, it seems sensible to me that an investigation of the entire problem should be undertaken. It may be that after careful consideration, we shall find the present method to be the best. But we must, as we have not in the past, give the matter this careful consideration. We must not turn to untried new proposals without looking into the whole problem.

Mr. President, in these critical days of our Nation's history, we are called upon to meet a great challenge. We have appropriated huge sums of money, and have devoted a good deal of time, to the creation of a strong defense effort. But this effort will be largely in vain if we do not select the best possible men to carry out the mission. Our survival cannot hinge upon material things alone—in the long run, we must depend upon the quality and courage of our people, reflected in the officer corps, for victory. We cannot afford to remain complacent about any phase of our defense, particularly with regard to the service academies, which are a crucial first step in the human effort. And we cannot experiment with unique new methods for drawing our Nation's officers from a hat.

This is not the way to legislate now, by acting on new ideas or gimmicks without study. We need a full investigation. In the meantime, however, it is ridiculous to prevent the Air and Military Academies from maintaining their full strength of cadets. Let us first pass this bill and then properly, and carefully in committee study the whole question of Military, Naval, and Air Academy appointments.

My colleague from New York referred to the resolution which I have had for some time. I think the resolution was first offered in 1957 when I was a Member of the House of Representatives. The resolution would call for a study by the Committees on Armed Services of the two bodies with legislative recommendations as to what changes, if any, should be made in the public interest in the selection and nomination of candidates for the three service academies.

I have prepared an amendment to the bill which would provide for such a study. I would be reluctant to offer that amendment, or at least to press it, if the members of the Armed Services Committee were opposed to such a study, since, after all, primarily it is their problem on our behalf. It seems to me that what we are talking about goes beyond the specific problem of filling a small gap in the Academies and that it really is a part of a bigger problem as to how we should go about the entire matter of selecting candidates for the Academies.

I have no illusions about Members of Congress giving up their powers. That is not the normal practice here, except to give them up to the executive branch of the Government; that is the only way we surrender powers in this body. To surrender power in any other way is probably not very practical.

I personally would feel better as a Member of Congress if I felt that the Armed Services Committee had thoroughly canvassed this entire question and had arrived at a conclusion as to what they would recommend to us as to the manner of selecting nominees.

The Senator from Louisiana has presented a strong, documented case, and I urge that either an amendment be accepted to call for such a study, or, if that does not seem feasible, that the committee take up at some point this whole question, and study it thoroughly. Does the Senator agree?

Mr. CANNON. I could not accept the amendment if it were offered as an amendment. I presume it is not at the moment being offered, because there is another amendment pending.

Mr. KEATING. It has not been offered.

Mr. CANNON. If such a resolution were submitted and referred to the Armed Services Committee for study, I am satisfied that the chairman and the members of the committee would give consideration to it. My personal feeling is that this problem has been considered time and time again over recent years.

Mr. KEATING. A real study has been made?

Mr. CANNON. A thorough study has been made by the various advisory committees and members of the Boards of Visitors to the respective academies, and reports have come back periodically. They come to Congress for the benefit of all of us. I believe there has been consideration enough to disclose at least at this moment that there is little likelihood of any prospective change in the situation.

Mr. SALTONSTALL. Mr. President, will the Senator yield?

Mr. CANNON. I yield.

Mr. SALTONSTALL. Even though I have not heard all of the discussion this afternoon, I know that when the Air Force Academy was established the Armed Services Committee went into the subject of appointments very carefully with relation to the Air Force Academy. The system we started in the Air Force Academy was a little different from the system that has been used over the years at West Point and Annapolis. We studied the subject at that time, and we devised a system that we believe is an improvement, but still requires congressional appointment. It is a better system than the one at West Point and Annapolis, but it is along the same principle of allowing Members of Congress to select the candidates.

Mr. KEATING. Has a recent survey been made of this question?

Mr. SALTONSTALL. I do not know.

Mr. LONG of Louisiana. Mr. President, I ask for the yeas and nays on my amendment.

The yeas and nays were ordered.

Mr. KEATING. I should like to inquire whether a recent study has been made of this subject.

Mr. SALTONSTALL. The Air Force Academy study was quite recent.

Mr. CANNON. That study was made within the past 4 or 5 years. It has been under constant consideration. The Air Force Academy was not up to full strength, and this problem was under continuing study and recommendations by the respective Boards of Visitors. It has been given constant consideration. There was no formal hearing devoted directly to that specific point, but the problem was under discussion and study.

Mr. KEATING. Has the Armed Services Committee—possibly the distinguished Senator from Massachusetts could also join in answering this question—focused attention on the question raised by the Senator from Pennsylvania [Mr. CLARK] and myself as to whether it is right to have Members of Congress name these young men? I rather agree with my friend from Nevada that it is not likely that the system will be changed. I wonder whether this question has been considered by the Armed Services Committee.

Mr. CANNON. This subject has been considered by some members of the Armed Services Committee. It has not been considered formally in full committee, to my knowledge, since I became a member of the committee. However, I, as one member, have considered it, along with other members of the committee, in serving as a member of the respective Boards of Visitors, and as Chairman of some of the Boards of Visitors. The subject has been very thoroughly aired. It has been very thoroughly considered. It has been very thoroughly discussed. Some very definite decisions have been made.

Mr. SALTONSTALL. I wish to confirm what the Senator from Nevada has said. I do not believe there has been any formal discussion of the subject in committee as a whole since the Air Force Academy was established. There has been constant discussion in the Board of Visitors and by members of the committee.

Mr. KEATING. As I said before, and possibly before the Senator from Massachusetts came into the Chamber, I would feel considerable reticence about offering an amendment to direct that the Committee on Armed Services conduct an inquiry into this subject if it is not disposed to do so. I am not a member of the committee. It is up to the committee to determine whether it would like to go into the subject. However, I think it would be a very useful accompaniment to this bill.

Mr. CANNON. Mr. President, in opposing the amendment of the Senator from Louisiana I would say that to accept his amendment would degrade our selection system, because it would permit the appointment of 50 cadets by congressional authority from the alternate list and would completely eliminate the element of competition among the 50 candidates; whereas by the system to be followed if the bill is enacted without the amendment we would have competition for the 50 vacancies among the alternates, 95 percent of whom must be selected from congressional sources. Furthermore, the bill would increase competition for the vacancies. I think it is highly important to maintain the highest possible level.

Mr. JAVITS. As a member of the Board of Visitors, I consider the pending bill of great importance to West Point and to our Nation's security. The bill would give us some more officers. I repeat that I admire what the Senator from Louisiana has done. He has rendered a fine service to all of us. Even though I shall have to vote against his amendment, because I believe the selection system for this limited number contained in the bill is a sound one, it in no whit diminishes my determination to stand shoulder to shoulder with him whenever the opportunity presents itself—and I assure the Senator that I will ask embarrassing questions on this point—in seeing to it that the utilization of athletic personnel at West Point is kept within decent and proper and ethical bounds. I respect his diligence, and I am grateful to him for the service he has rendered in his well-documented speech today.

Mr. LONG of Louisiana. I hope the Senator from New York will remain long enough to hear what I am about to say, because I should like to respond to what he said.

The Senators from New York have talked about a study being made. Studies have been going on for years. I refer to page 21 of the hearings, as follows:

> Senator SMITH. You mentioned the study that the Defense Department is making. How long have they been on this study, do you know?
>
> General WESTMORELAND. To my knowledge, about 2 years.
>
> Senator SMITH. It seems as though I have been hearing about this study, Mr. Chairman, and making this uniform, the academies uniform, in their procedure for a long time.
>
> Do you have any indication that they expect to come out with a report?
>
> General WESTMORELAND. I cannot forecast when it will be, Senator Smith, that great progress is being made.

And so it goes on; but there is no indication as to when the study will be completed.

West Point is now getting about 70 of the Board's selections. The Board was giving about 35 of the appointments to football players. Now the number has been stepped up so that 47 appointments will be given to football players. According to the former football coach, if the bill passes, 55 of the appointments will be given to football players. That means that of those whom the Board presently appoints, practically all will be football players.

The bill can be used to average out the first alternates against football players in an effort to reach an average that would make it appear that these appointments are as good, on the average, as the appointments made by Senators. But the bill does not give us any reason to encourage the appointment of candidates having merit.

My amendment would allow the Academy the existing academic board appointments with which to play politics. Those appointments would not be touched.

This incident happened in connection with one of the other Academies. I was told I had to submit my appointees by a date in April, and I did so. Much later, a young man came to me who wanted to be appointed as an alternate. I told him I had no vacant alternates, and that, in any event, it was far too late to get into the Academy. The young man said to me, "Do not worry. Have me appointed as an alternate by anyone, and I will get in. All I need is an appointment."

I spoke to a Member of the House, who obtained a list which shows vacant appointments. The young man was designated an alternate 2 months after the list was closed for Senators and Representatives. But the boy was appointed to the Academy, and he is there now. I do not care to mention his name. But that is the kind of politics which is played.

With respect to the 50 new appointments, why not, for once, encourage Senators and Representatives to make appointments based on merit? Assuming that 50 more appointments were to be made to the Academy, the amendment provides that those who are appointed would be appointed by the sponsors of the 50 top men in this year's graduating class. This arrangement would encourage Senators and Representatives to make appointments based on merit. That is how the President makes appointments. If we cannot do this, then let the President make our appointments, because his appointments, generally speaking, are better; even though I would challenge him to make better appointments from Louisiana than I make, because I make appointments based on examinations.

If we want to provide a real incentive, let us adopt my amendment and improve the bill. Let us encourage Senators and Representatives to appoint men strictly on their merits. Beyond that point, let the board play all the politics it wants with the appointments being made at present.

I thank the committee for its consideration. I regret that I have delayed the Senate so long on this subject; but it seemed to me that someone should take the time and trouble to study the situation to see what might be done to correct it.

A statement was made that the bill was passed previously by the House. It was passed by the House previously. But this took quite some time.

In 1959, when an attempt was made to pass a similar bill, Representative Overton Brooks, of Louisiana, a ranking member of the committee in the House, placed in the Record a list of those who were board appointees. The board was so upset that the bill was not acted upon but was put back on the calendar. The House never sent it to the Senate.

That was a football bill. When the Representative from my State raised a question, those who had brought up the bill voted to put it back on the calendar.

Mr. RANDOLPH. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. RANDOLPH. The Senator from Louisiana is always convincing—even in defeat. Comment on gridiron greats and just average players has been spirited this afternoon. I should like the record to disclose that in 1928 at least one of the Academies, with all its so-called football talent, possessed less than was necessary to defeat the Davis and Elkins College football team. I recall that in the opening game at Annapolis, on an afternoon in October when the temperature was approximately 93° the Middies bowed in defeat. That 11 from my hometown in West Virginia won over the Navy by a score of 2 to 0. That in itself is significant because our enrollment was approximately 200 students; but what is of real significance is the fact that 11 stalwarts played for 60 minutes. There were no substitutions on that West Virginia team from the hills which turned back the favored forces of the Navy in that classic contest.

Perhaps in one year or another our service teams may be much improved—in fact they are top foes; but from the mountains, with just 11 players, not performing in platoon, but playing 60 minutes of tough football, we achieved the satisfying result on that epochal afternoon. The Senator now speaking was truly pleased because he was on the sidelines that day as director of athletics of this splendid institution of learning.

Mr. LONG of Louisiana. I thank the Senator from West Virginia.

Mr. President, I am ready to vote.

Mr. BARTLETT subsequently said: Mr. President, since 1945, every class which has graduated from the Military Academy has included additional appointees. In considering the merits of H.R. 7913, it was of interest to me to learn who these young men were, what they did as cadets and how many of them became officers. It is important to know this, since the criteria proposed for selection of cadets by H.R. 7913 is the same as the criteria for those of the past years. Over 95 percent of them have been congressional nominees. In addition to the record of excellence cited by the Senator from Nevada, I should like to comment on the scholarship and military records of additional appointees who have been admitted to the Military Academy in recent years. Of these cadets, 50 percent more of them graduated in the top one-fifth of their class than was the case for other cadets. In terms of successfully graduating from the Academy we again find the additional appointees with an exceptional record—the attrition rate of other cadets exceeds that of the additional appointees by 50 percent.

To me this record of superlative achievement is evidence of what has been said by others—the record of the Members of Congress in nominating young men and of the services in admitting and training them is one of which we can be proud. Let us not let any petty disaffections over the employment of a football coach, or any parochial interest in this or that football player be the cause of denying our young men an opportunity to attend one of these outstanding institutions and serving the Armed Forces upon which so much of our Nation's future depends. We need the best men available for the future of this Nation, and if a man who fills this description also plays football, then more power to him.

Mr. CANNON. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk proceeded to call the roll.

Mr. CANNON. Mr. President, I ask unanimous consent that the order for the quorum call be rescinded.

The PRESIDING OFFICER. Without objection, it is so ordered.

The question is on agreeing to the amendment of the Senator from Louisiana [Mr. Long].

The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr. Burdick], the Senator from Virginia [Mr. Byrd], the Senator from New Mexico [Mr. Chavez], the Senator from Michigan [Mr. Hart], the Senator from North Carolina [Mr. Jordan], the Senator from Oklahoma [Mr. Kerr], the Senator from Ohio [Mr. Lausche], the Senator from Missouri [Mr. Long], the Senator from Virginia [Mr. Robertson], the Senator from Florida [Mr. Smathers], and the Senator from Alabama [Mr. Sparkman] are absent on official business.

I further announce that the Senator from New Mexico [Mr. Anderson] is necessarily absent.

On this vote, the Senator from North Dakota [Mr. Burdick] is paired with the Senator from Michigan [Mr. Hart]. If present and voting, the Senator from North Dakota would vote "nay," and the Senator from Michigan would vote "yea."

On this vote, the Senator from Florida [Mr. Smathers] is paired with the Senator from Oklahoma [Mr. Kerr]. If present and voting, the Senator from Florida would vote "yea," and the Senator from Oklahoma would vote "nay."

On this vote, the Senator from Virginia [Mr. Robertson] is paired with the Senator from North Carolina [Mr. Jordan]. If present and voting, the Senator from Virginia would vote "yea," and the Senator from North Carolina would vote "nay."

Mr. DIRKSEN. I announce that the Senator from Utah [Mr. Bennett], the Senator from Maryland [Mr. Butler], the Senator from Arizona [Mr. Goldwater], the Senators from Iowa [Mr. Hickenlooper and Mr. Miller], the Senator from New Hampshire [Mr. Murphy], and the Senator from Kansas [Mr. Pearson] are necessarily absent.

The Senator from Kentucky [Mr. Cooper] is absent because of a death in the family.

The Senator from California [Mr. Kuchel] and the Senator from North Dakota [Mr. Young] are detained on official business.

If present and voting, the Senator from California [Mr. Kuchel] and the Senator from New Hampshire [Mr. Murphy] would each vote "nay."

The result was announced—yeas 32, nays 46, as follows:

So Mr. Long's amendment was rejected.

Mr. DIRKSEN. Mr. President, I move to reconsider the vote by which the amendment was rejected.

Mr. CANNON. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. CANNON. Mr. President, I ask for the third reading.

The PRESIDING OFFICER. Is there further amendment?

If there be no further amendment, the question is on the engrossment of the amendment and the third reading of the bill.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill (H.R. 7913) was read the third time and passed.

The title was amended, so as to read: "An act to amend title 10, United States Code, authorizing the appointment of additional qualified alternate and competitive nominees to the United States Military Academy and the United States Air Force Academy".

Mr. CANNON. Mr. President, I move to reconsider the vote by which the bill was passed.

Mr. MANSFIELD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

ANNOUNCEMENT OF HEARINGS BY PREPAREDNESS INVESTIGATING SUBCOMMITTEE, ON NUCLEAR TEST DEVELOPMENTS, ARMS CONTROL, AND DISARMAMENT MATTERS

During the speech of Mr. LONG of Louisiana,

Mr. STENNIS. Mr. President, as chairman of the Preparedness Investigating Subcommittee of the Senate Committee on Armed Services, I am releasing to the press the announcement that hearings are planned by the subcommittee on nuclear test developments, arms control, and disarmament matters.

In the past, research and development, confirmed through adequate testing, have been vital to the development of future weapon systems. Therefore, the hearings, which will commence as soon as possible, will focus on the basic importance of nuclear test activity as well as on developments in the current nuclear test-ban negotiations.

The Armed Services Committee has legislative responsibility for the common defense generally, and for the size and composition of the Armed Forces. Our committee is therefore concerned with the development of our weapons, their relationship to arms control and disarmament matters, including activities connected with any test-ban negotiations. Decisions on these matters cannot help but be reflected in the size and quality of our defense shield.

The hearings will explore all new technical data available and will feature testimony by top officials of the Arms Control and Disarmament Agency, the Department of Defense, the Joint Chiefs of Staff, and members of the scientific fraternity.

Mr. President, we have received inquiries from Members of Congress, as well as others, with reference to this general subject matter. It has been considered by the members of the subcommittee for many weeks. It has been unanimously agreed that hearings should be held as soon as we reasonably can do so.

We expect to hold as many of the hearings in open session as the security of our country will permit.

The experts disagree about fallout, and about the continuing effects of fallout. They disagree as to the necessity for much of the testing. They disagree as to what concessions, if any, are involved with reference to the test ban.

I am authorized by the Senator from Massachusetts [Mr. SALTONSTALL] expressly to say that he joins in the sentiment of this announcement of the hearings, as do all members of our subcommittee.

Mr. SYMINGTON. Mr. President, will the Senator yield?

Mr. STENNIS. The Senator from Missouri is in the Chamber. I am delighted, if I may do so, to yield to him at this time.

Mr. SYMINGTON. Mr. President, I am very glad to have heard the statement made by the distinguished chairman of the Preparedness Subcommittee of the Senate Armed Services Committee.

The Soviets have just fired the world's second largest nuclear explosion. No one can say for sure that the United States is ahead in this nuclear race. We may be—we may not be. Some experts believe we are; some believe we may not have that advantage. We see the smoke of their cooking but that does not tell us of the quality of their food.

Mr. Khrushchev says he now has a defense against missiles. Perhaps he does; perhaps he does not. But we know now that he has been testing extensively in this field, and he may be ahead in this category, and some experts say he may be ahead in other important categories.

Much of the public opinion in this country has been formed as the result of the constant reiteration, in public as well as in private, of the grave dangers current tests cause because of contamination of the atmosphere.

Some authorities in this field, however, deny that the danger of contamination is nearly as serious as others assert. The first group may be right. They may be wrong. In any case, they should be heard, along with those who disagree, because what the American people have the right to know is all truth that will not help a possible enemy.

I thank the able Senator from Mississippi for yielding to me. I also thank my friend the able Senator from Louisiana.

Mr. STENNIS. Mr. President, I am most grateful for the counsel and advice of all members of the subcommittee, and of all members of the Committee on Armed Services as well as for the long weeks of consideration and deliberation which have taken place with reference to this question.

I emphasize that there is a need on the part of Members of Congress, particularly, to know more about what are the pros and cons with reference to this highly important—and increasingly important—matter. Therefore, we shall proceed as quickly as we reasonably can.

Mr. JAVITS. Mr. President, will the Senator yield to me?

Mr. STENNIS. I yield to the Senator from New York.

Mr. JAVITS. What my colleague is doing is most important. I hope that after the information is obtained it will be made available to all Members of the Senate, not only to members of the Committee on Armed Services.

I say this for the reason that the country and the world should know how seriously we take our responsibilities with respect to the ratification of treaties. No matter what is done at Geneva, the world should know that finally the question will have to be resolved in the Senate, with deep conscience, by 100 of us who are Senators of the United States.

The sooner we begin to get the education in depth, of which the Senator from Mississippi and our colleague from Missouri speak so properly, the better it will be for us, the better it will be for the world, and the better it will be for the security of our country.

Mr. STENNIS. I thank the Senator from New York for his kind remarks.

I emphasize that the Senator from Mississippi has already said the information will not be obtained merely for members of the Committee on Armed Services. Its publication will be for all Senators, and for the public so far as security will permit.

Mr. JAVITS. I thank the Senator from Mississippi, and I also thank the Senator from Louisiana.

Mr. SALTONSTALL subsequently said: Mr. President, I should like to support the Senator from Mississippi [Mr. STENNIS] in the statement that he made to the Senate this afternoon that the Preparedness Investigating Subcommittee of the Committee on Armed Services will go into a study of the subject of the development of our weapons and their relationship to arms control and disarmament matters, including activities connected with any test-ban negotiations. That is certainly a part of our responsibility, and I commend the Senator and Chairman of the Preparedness Subcommittee on his statement.

Mr. ENGLE. Mr. President, will the Senator yield to me?

Mr. LONG of Louisiana. I yield to the Senator from California for 1 minute.

EXECUTIVE SESSION

Mr. ENGLE. Mr. President, I ask unanimous consent that the Senate go into executive session for the purpose of considering two nominations to be district judges which are at the desk. This has been cleared with both sides of the aisle.

The PRESIDING OFFICER. Is there objection to the request of the Senator from California?

There being no objection, the Senate proceeded to the consideration of executive business.

DISTRICT JUDGES

The PRESIDING OFFICER. The clerk will state the first nomination.

The legislative clerk read the nomination of Charles H. Carr, of California, to be U.S. district judge for the southern district of California.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of Stanley A. Weigel, of California, to be U.S. district judge for the northern district of California.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

Without objection, the President will be immediately notified of the confirmation of the nominations.

LEGISLATIVE SESSION

Mr. ENGLE. Mr. President, I ask unanimous consent that the Senate resume the consideration of legislative business.

The PRESIDING OFFICER. Is there objection to the request of the Senator from California?

There being no objection, the Senate resumed the consideration of legislative business.

MESSAGE FROM THE HOUSE

A message from the House of Representatives, by Mr. Bartlett, one of its reading clerks, announced that the House had passed, without amendment, the bill (S. 2135) to authorize the Securities and Exchange Commission to delegate certain functions.

The message also announced that the House had passed a bill (H.R. 3460) to amend section 9(a) of the Trading With the Enemy Act, as amended, in which it requested the concurrence of the Senate.

AUTHORIZATION FOR COMMITTEE ON FOREIGN RELATIONS TO FILE A REPORT ON H.R. 11040 AFTER ADJOURNMENT TODAY

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Committee on Foreign Relations be permitted to file a report on H.R. 11040, the communications satellite bill, during the adjournment after today's session.

The PRESIDING OFFICER. Without objection, it is so ordered.

EIGHTY-THIRD BIRTHDAY ANNIVERSARY OF CHARLES L. WATKINS, PARLIAMENTARIAN

Mr. SALTONSTALL. The gentleman sitting in front of the Presiding Officer, the Parliamentarian, Mr. Charles L. Watkins, will celebrate his 83d birthday anniversary tomorrow. As one who has enjoyed his services over the years that I have been in the Senate, and been helped and advised in the discussions we have had, including a few disagreements, I wish him a happy birthday.

LEGISLATIVE PROGRAM

Mr. DIRKSEN. Mr. President, I wish to query the majority leader about the program for the remainder of the day and also the program for tomorrow.

Mr. MANSFIELD. Mr. President, in response to the question raised by the distinguished minority leader, it is anticipated that the Senate will take up bills on the calendar to which there is no objection; and that it will adjourn until 12 o'clock tomorrow, at which time, under the agreement reached on August 1, H.R. 11040, the communications satellite bill, will be laid down and made the pending business. I anticipate that consideration of that bill will take some time.

Mr. DIRKSEN. In that connection, I see the very distinguished Senator from Oregon [Mr. MORSE] in the Chamber. I thought perhaps, for the information and guidance of Senators, since he is the grand captain for whatever procedure may be taken on the bill, he could supply us with some information.

Mr. MORSE. Mr. President, I yield to my boss, director, and teacher, the distinguished Senator from Tennessee [Mr. KEFAUVER].

Mr. DIRKSEN. I yield to the very distinguished Senator from Tennessee, the master strategist on the bill.

Mr. KEFAUVER. I appreciate the adjective the Senator has applied to me. As I said the other day——

Mr. DIRKSEN. I did not apply it. I borrowed it from the distinguished Senator from Oregon 10 days ago.

Mr. KEFAUVER. I include the distinguished Senator from Oregon in my thanks, also.

Of course, we hope that bills involving human welfare, such as the drug bill, or the agriculture bill, might come up first, before the controversial communications satellite bill. There is not too much controversy left with respect to the drug bill. Most of the major issues have been pretty well agreed to. It is of great importance to the people of the Nation that the bill be passed immediately.

I understand that there is controversy on the farm bill, but certain referendums are coming up; so many persons feel that it is necessary to act on the bill one way or the other.

Mr. DIRKSEN. I inform the Senator that I still have the floor.

I wish to inform the Senator from Tennessee that, so far as the drug bill is concerned, the pharmaceutical lawyers who have been sitting with the Judiciary Committee all the time we have been meeting during this past week have been taking up the time, and the bill and the President's suggestions are still in the Judiciary Committee. I do not know whether they will get out this week.

I will say for members of my own party that they have been cooperative and have attended the meetings. I desire to make it plain to the Senator from Tennessee that the fault is not on our side that the bill is in the Judiciary Committee.

Mr. KEFAUVER. It is on the calendar. It is not in the Judiciary Committee.

Most of the President's recommendations have been acted upon. The Senate does not have to wait for the Committee on the Judiciary to act on the two or three which remain. There is no reason why the bill, which has been on the calendar for several weeks, could not be considered. We have received the recommendations of the Committee on the Judiciary with respect to most of the President's recommendations for amendment.

Mr. DIRKSEN. Mr. President, my very good friend from Tennessee stood on the floor the other day and talked about introducing an independent bill with respect to prescription drugs and other things, and said, in the Committee on the Judiciary, "Perhaps that proposal should go over until next year, or we shall have to hold independent hearings, because the prescription drug interests have not been heard on this bill."

The Senator will have to admit that to the Members of the Senate.

Mr. KEFAUVER. The Senator is talking about what drugs?

Mr. DIRKSEN. Prescription drugs.

Mr. KEFAUVER. Not prescription drugs.

Mr. DIRKSEN. They were taken out of the bill by our friend, when the hearings were started.

Mr. HUMPHREY. Proprietary drugs.

Mr. KEFAUVER. The Senator is talking about proprietary drugs.

Mr. DIRKSEN. Yes, proprietary drugs. I thank my pharmacist friend from Minnesota.

Mr. KEFAUVER. Those were the proprietary drugs. We said, in certain sections of the bill, that it was not the intention to include them. They are not included. That question has been satisfactorily adjusted.

As to the prescription drugs, the ethical drugs, the bill is on the calendar. Most of the President's good amendments and recommendations have been acted upon favorably by the Committee on the Judiciary. There is no reason to hold up action on the bill.

I think the Senator would agree that there has been such a unanimity of effort and ideas about the bill in recent days that there is not too much area of controversy left.

Mr. DIRKSEN. Mr. President, let me say to my friend from Tennessee that I know the score. The amendments which would be offered would be committee amendments, as distinguished from amendments to be offered by the distinguished Senator from Tennessee, if the Senate should consider the bill which is now on the calendar without the work being completed in the Committee on the Judiciary.

I want to pay my respects to the distinguished Senator from New York [Mr. KEATING], to the distinguished Senator from Nebraska [Mr. HRUSKA], and to other Senators for the faithful way in which they have attended the hearings every day in order to perfect the bill. I think it would be an affront to the Senate to have the bill considered now, before the work which is still pending at the request of the President of the United States is completed.

Mr. KEFAUVER. I am glad that Senators have been attending the meetings.

Mr. DIRKSEN. They have been.

Mr. KEFAUVER. They have been very diligent. I agree.

Mr. DIRKSEN. Our Members have been in their places.

Mr. KEFAUVER. The fact remains, nevertheless, that all but a few of the recommendations of the President have been acted upon, mostly favorably.

The Committee on the Judiciary will meet in the morning for any further consideration which is necessary. The bill did not go back to the Committee on the Judiciary. It is on the calendar, ready for action. I think there is substantial area of agreement about the bill.

So far as I am concerned, any amendments which are not proposed by the Committee on the Judiciary certainly would not require any extended discussion. Those would include one or two other amendments.

Mr. DIRKSEN. I say to my friend from Tennessee that no Senator on this side asked for further hearings on the bill. The requests came from the President of the United States. We were most willing to consider them. Now it has been suggested that the Senate consider the bill before the seven amendments which came from the White House—not from our side—are first appropriately considered.

We are more than willing to cooperate with the President and with the Food and Drug Administration in regard to this question.

Mr. KEFAUVER. Most of the amendments which have come from the White House would restore the Hart-Kefauver bill to the shape it was in when it came from the Antitrust and Monopoly Subcommittee, as will be seen from the individual views of the Senator from Colorado [Mr. CARROLL], the Senator from Missouri [Mr. LONG], the Senator from Connecticut [Mr. DODD], the Senator from Michigan [Mr. HART], and myself.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. DIRKSEN. I have the floor, Mr. President.

Mr. MANSFIELD. Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Illinois has the floor.

Mr. KEFAUVER. If the Senator from Illinois and other Senators had not watered down and emasculated certain provisions at the beginning, there would be no necessity for taking up the Presidential recommendations at this time.

Mr. DIRKSEN. Mr. President, I suppose it is felt that we ought to accept the harassing restrictions and provisions which were brought in in a bill which had no patrimony. We knew nothing about its parentage. I have not learned to this day who authored it. But it was about as restrictive as it could have been.

I am always ready to see the bill amended, but I am not willing to undertake the harassment and devastation of a great industry in the United States without some reasonable justification for it.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield to my distinguished friend from Colorado with the understanding that I shall not lose my right to the floor.

Mr. CARROLL. I should like to ask a question of the Senator from Tennessee.

Not long ago there was an open debate in the Senate. I leveled some very serious charges concerning what was going on in the Senate Committee on the Judiciary. At that particular time I took issue with my own chairman.

Mr. DIRKSEN. Does the Senator refer to the chairman of the committee, or the chairman of the subcommittee?

Mr. CARROLL. I refer to the chairman of the Senate Committee on the Judiciary.

I asked a question before this body then. I wanted to know what the program of the President was, and who was asserting the President's program. The able Senator from Tennessee at that time was fighting, in the Senate Committee on the Judiciary, for a proper drug bill.

What has happened today? As a result of the publicity from the actions on thalidomide by Dr. Kelsey, there has been a great change in sentiment in this body. There has been a change in the attitude of the administration. Now the administration has proposed seven amendments, which sustain the position of the able Senator from Tennessee.

This is why I support the Senator. These are simple amendments. We have now agreed to most of them. May I ask the Senator from Tennessee how many we have agreed to?

Mr. KEFAUVER. Four of them, I think.

Mr. CARROLL. There are about three amendments remaining, which affect the health and safety of the family life of America. We are now being asked to bypass this drug bill to take up another measure, and I ask Senators to believe me when I say that it is a measure which is so technical that few understand it.

We can quickly pass the drug bill. The amendments can come from the committee tomorrow. We can pass the bill in the Senate, in my opinion, in a debate lasting——

Mr. KEFAUVER. I should say 2 hours.

Mr. CARROLL. I was about to say 3 hours. Let us get on with our business.

Mr. DIRKSEN. Mr. President, I do not yield any further.

Mr. CARROLL. I have not finished. The Senator yielded to me.

Mr. DIRKSEN. I have the floor, Mr. President, I do not yield further.

Mr. CARROLL. I am entitled to complete my statement.

Mr. DIRKSEN. Mr. President, a parliamentary inquiry. Who has the floor?

The PRESIDING OFFICER. The Senator from Illinois has the floor.

Mr. CARROLL. The Senator has yielded to me. If the Senator is going to shut off debate——

Mr. DIRKSEN. Yes; I am going to shut off the distinguished Senator from Colorado, and I ask him to take his seat. The Senator from Illinois has the floor, and he knows the rules of the Senate.

Mr. MANSFIELD. Mr. President, will the Senator yield to me?

Mr. DIRKSEN. I yield with pleasure to my distinguished friend.

Mr. MANSFIELD. It seems to me that about a half hour ago I yielded to the Senator from Illinois.

Mr. DIRKSEN. I took the floor.

Mr. MANSFIELD. Since that time I have been unable to get the floor back.

Mr. DIRKSEN. Mr. President, I am distressed.

Mr. MANSFIELD. I should like to transact some business.

Mr. DIRKSEN. I shall wind up, and see to it that the majority leader gets the floor back.

In all fairness, we sat in the hearings for an hour and a half, with all the pharmaceutical lawyers in the Food and Drug Administration, and in the Department of Health, Education, and Welfare. All the Republicans were in their places. I could not see quite as many who were with the New Frontier. But we went on and did the business, with nine Senators in the Committee on the Judiciary. A quorum was present.

How much did we accomplish? We argued about the touch of a word, the emphasis of a phrase, the striking out of a line, the replacing of a semicolon, and whether a comma was in the right place or whether a period ought to take its place. This went on until 12 o'clock, until the rule had to be invoked.

What was accomplished? I suppose we did refine some things.

When Senators talk about the simplicity of the bill and how easy it would be to pass it, I say that there were lawyers sitting around the table who have worked with it, and they had the greatest of difficulty, notwithstanding the presence of George Larrick, the Commissioner of the Food and Drug Administration; Mr. Ellenbogen, a talented draftsmen from the Department of Health, Education, and Welfare; Mr. Sonosky, another talented draftsman; the committee staff members and everyone else who was present.

This problem is so simple that Mrs. Franklin Roosevelt wrote a column, demeaning the Senator from Illinois and making it appear as if doing this job was like picking a plum off a tree. We ought to invite her to come to the Committee on the Judiciary and find out what is involved. A great industry, dedicated to the health of the people of the country, is involved. Bureaucrats too often are willing only to harass, restrict, penalize and use the regulatory power.

They can say what they like about the minority leader, but he will state his case, God willing, whether or no, notwithstanding all the rather captious and carping criticisms that have been made. No one knows that better than does the distinguished Senator from Tennessee. I pay tribute to him for the patience with which he has labored on the subject. I thought he was wrong. Many others thought he was wrong. So we have refining amendments. There has not been an amendment that has come from the White House which has not been refined and changed in the course of the deliberations of the committee—and all for the good, too.

Mr. President, I have finished. The distinguished majority leader wishes to get to the calendar, and I shall forsake the floor.

COMMITTEE REPORT

Mr. MANSFIELD. Mr. President, may I make a request?

The PRESIDING OFFICER. The Senator from Montana is recognized.

Mr. MANSFIELD. Has unanimous consent been granted permitting the Committee on Foreign Relations to file a report during the adjournment after today's session on H.R. 11040, the communications satellite bill?

The PRESIDING OFFICER. Permission has been granted.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the minority views may be filed on the same basis.

The PRESIDING OFFICER. Without objection, it is so ordered.

LEGISLATIVE PROGRAM

Mr. CARROLL. Mr. President, will the majority leader yield to me?

Mr. MANSFIELD. I yield.

Mr. CARROLL. Mr. President, I wish to sustain the position of the Senator from Tennessee [Mr. KEFAUVER]. For 2 years he has worked on the drug issue. I can tell what has gone on in that committee. I participated not long ago in a debate on the floor of the Senate. At that time I warned that those who asserted they were representing the President of the United States were not, in my opinion, representing the President's viewpoint. I do not wish to put words into the mouth of the Senator from Tennessee, but he said substantially the same thing.

What happened? I have seen what I call junior executives of the executive departments working on the bill. The bill was partially drawn, in my opinion, by those in the pharmaceutical industry. Within the past few weeks suddenly Dr. Kelsey, a courageous woman, has brought to focus the real problem in licensing of drugs. That situation has given impetus to new theory and new thinking.

Mr. McGEE. Mr. President, may we have order?

The PRESIDING OFFICER. The Senator from Colorado will suspend until the Senate is in order.

Mr. CARROLL. Something new has occurred.

Mr. MORSE. Mr. President, the Senate still is not in order.

The PRESIDING OFFICER. The Senator's point of order is well taken. The Senate will be in order.

Mr. CARROLL. If any Senator wishes to be heard, I shall be glad to yield. Otherwise, if I may have the attention of Senators, I have only a few words to say.

Within the past few days something new has developed. The other day President Kennedy decorated Dr. Kelsey. For what? For a courageous act in resisting the pressure of some in the pharmaceutical industry in connection with authorization of a drug that would affect the health and welfare of the family life of our Nation. That action has also brought a great change in the thinking of the people of our Nation. It ought to bring a great change. Within the Senate Committee on the Judiciary it has brought a change. I can say without equivocation that the opposition party on the other side of the aisle has fought the amendments of the able Senator from Tennessee every step of the way. Now what has happened? For the first time we have a clear conception of what the President wants.

The other day I said I was sometimes confused.

I said I did not know who spoke for the President. But at last we now have amendments. The able Senator from Tennessee has said we have passed four amendments. We still have three amendments on a bill which is vital to the family life of America.

But now we are faced with entering a debate on the communications satellite bill. I have not yet participated in that debate. I have not stated my position on that bill. But I think it is a sad commentary to note that we are going into a filibuster when we ought to be considering a subject that is of far greater benefit to our people—our children and our families—than what some have described as premature and vague proposed legislation. It is a sad commentary on the Senate.

Mr. President, I have been engaged in an investigation of the drug issue. I have nothing against the pharmaceutical industry. None of the drug manufacturing industry is located in Colorado. The people of Colorado, however, have felt the effects of high-priced drugs and are threatened, as are families in other States by unsafe drugs.

In the national interest—in the interest of the people—we should pass a drug bill. I believe we could do so within a few hours.

I am not opposed to debate on the communications satellite bill. I think the debate would be good for the country. I have not yet participated. I have not taken a stand against the position of the majority leader. I have not taken a stand against the administration on that bill. I shall read and examine the RECORD in the days ahead. In regard to the farm program, of course, that is important, but it is not of such pressing importance as is the drug bill. I want to study the farm bill to be sure that the cattlemen, the ranchers, the stockgrowers of Colorado are adequately safeguarded against unreasonable invasions of their rights.

I commend the able Senator from Tennessee for his efforts. If we could set aside the satellite bill for a few hours, notwithstanding what the minority leader has said, I think we could accomplish something.

Mr. President, I know who has been blocking the bill for many months. I know who has been playing the game of the pharmaceutical industry for months. Eventually——

Mr. DIRKSEN. Why does not the Senator say so?

Mr. CARROLL. Recently an event has taken place that was so overpowering and overwhelming in the public eye that they have begun to run for cover. That is the situation that we see today.

Mr. DIRKSEN. Mr. President, the Senator has not violated the rules yet.

Mr. CARROLL. I have not yielded the floor.

Mr. MORSE. Mr. President, I rise to a point of order. The Senator from Colorado has the floor, I believe.

The PRESIDING OFFICER. The Senator from Montana has the floor and he has yielded to the Senator from Colorado.

Mr. CARROLL. Those of whom I have spoken are intelligent Senators. I have seen them cradle this corporation, that corporation, and this industry and that industry in my 5 years as a member of the Committee on Antitrust and Monopoly Legislation. They do not fool the junior Senator from Colorado one iota.

The same procedure has been followed in respect to the drug bill. The record is clear to anyone who wishes to investigate. The record is crystal clear.

On the other hand, I wish to extend my thanks and my congratulations. They are changing their opinion. They are accepting the amendments recently proposed by the President. They are working them over. As the able Senator from Tennessee has said, we can settle the question in 3 hours, and all the crocodile tears and protestations will be meaningless unless we pass the bill quickly. It is very important. That is the testimony of Commissioner Larrick. It is the testimony of the experts and the scientists. Let us get the bill underway now. We must get it over to the House of Representatives. We must pass the bill at this session and not hold it up waiting for particular concepts of some Senators on the question of a communications satellite. Let us get the important drug bill underway soon in the Senate.

If I am permitted to do so by the majority leader, I should like to yield to the able Senator from Tennessee.

Mr. MANSFIELD. I yield for that purpose.

Mr. KEFAUVER. The minority leader said he did not know where the bill had come from. The bill arose from the need shown by hearings over a long period of time, by many physicians, some of them in the administration. After the needs were shown, the bill was drawn up. It was worked over and revised in the Antitrust and Monopoly Subcommittee. It went to the full committee, and then it was referred to the Patent Subcommittee. Some sections of the bill were eliminated. It came back to the full committee. Some of the provisions were taken out and others were changed, and I thought some were substantially watered down.

Mr. CARROLL. Over what period of time?

Mr. KEFAUVER. Over a period of 3 years now. That is the length of time that we have worked on it. On April 10 the President, in a letter to the Senator from Mississippi [Mr. EASTLAND] has substantially approved the bill as it came from the Antitrust and Monopoly Subcommittee. After the thalidomide episode, knowing that drugs would go on the market automatically unless turned down within a certain length of time, and knowing also that other drugs had gone on the market which are dangerous and have caused side effects——

Mr. CARROLL. How recently was that?

Mr. KEFAUVER. That was in the past 3 weeks. I commend the President for sending his amendments to Congress. He sent up seven amendments, which restored some of the provisions that had been taken out of the bill, and they would add other provisions.

The language was not always identical. In some cases it was identical with what the bill originally had contained. Both sides in the committee have striven sincerely to discuss and consider the President's recommendations. In the bill certain very important provisions had been restored. The automatic taking effect of a new drug application and putting it on the market has been eliminated. That has been adjusted, not exactly as I would have done it, but I believe satisfactorily. At the present time, under present law, we have no control over effectiveness. It is possible to market a drug which has no beneficial effect at all. We have added effectiveness. That is an improvement. Also added to the bill has been the power to make regulations, so that the Food and Drug Administrator can keep track and get records from doctors when medicines are put out for experimental purposes, so that they will not be marketed on a hit-and-miss basis without anyone knowing how much is being put out and to whom they are being given.

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. KEFAUVER. I would just like to add one or two other things. A few other things have been added to the bill. We have adjusted other differences. One of the evils in the drug industry has been that some companies in their advertisements and in their promotion have said that there were no side effects, when there might be very serious side effects. This morning we drafted an amendment to provide for regulations setting forth the side effects, or condensations of them. We also have drafted an amendment with respect to certifying antibiotics. At the present time only a few antibiotics are certified.

Some of the other amendments of the President have to do with factory inspection. The President has recommended a little stronger factory inspection provision, which I believe ought to be adopted without discussion.

There is also the matter of quality control procedure, dealing with the proper kind of quality control. The bill is on the calendar, and I believe there is much uniformity of opinion about these provisions, after they have been worked over for many days by the Judiciary Committee. Public opinion has been focused on the problems we face at the present time. I do not believe there would be any controversy which would require a substantial time to resolve. We have worked upon the President's amendments.

I agree with the Senator from Colorado that unless the bill is passed drugs will be going on the market automatically, which might cause a catastrophe. The law is deficient. Of all the laws that ought to be strong and fair and effective, this law is the most important, because it vitally affects the health of our people.

I am sure we can enter into agreements for a short length of time to discuss the amendments. I anticipate that the bill would not take more than 2 or, at most, 3 hours to dispose of. As the Senator from Colorado has said, it must go to the House, and undoubtedly the bill would have to go to conference. The House is holding hearings on the subject at the present time. The House wants our bill before it acts.

I think it would be almost a catastrophe to have the bill tied up behind a highly technical and controversial issue, on which many Senators have not had an opportunity to speak. I know that at least five or six Senators who are opposed to the satellite bill do not like it in its present form, or believe it greatly needs amendment, want to discuss it at considerable length. I believe it ought to be discussed at considerable length. There is a great deal of misunderstanding and wrong information about it. The public is only now finding out about it. To place the drug bill behind the satellite bill would be to put human values second. I believe they ought to come first. I therefore implore the leadership on both sides to try to see to it that in one way or another the drug bill will come before us.

Mr. CARROLL. Mr. President, will the Senator yield for a question?

Mr. MANSFIELD. I yield.

Mr. CARROLL. I wish the Senator from Tennessee would inform the Senate whether it is true that the amendments which have been approved have come up within the past few days.

Mr. KEFAUVER. Yes; within the past week.

Mr. CARROLL. Within the past week. I commend the minority leader and I commend the Republican side for considering the new amendments. Whatever mistakes were made in the past on both sides, the fact is that five amendments have been approved.

Mr. KEFAUVER. Yes; five of them have been substantially agreed upon.

Mr. CARROLL. What I have been trying to say to the majority leader and to the minority leader is that I have not taken a position on the communications satellite bill. I have not the slightest desire to delay consideration of the bill. However I say, after some of us have worked on the drug problem in committee, that this problem is vital to the public. I hope the minority leader will correct me if I am wrong. I have found to my amazement that pharmaceutical manufacturers are issuing experimental medicines and pills to doctors, with no check upon them by the Food and Drug Administration; and these medicines are being put out to doctors by salesmen. Human beings are being used as guinea pigs, and there is no check by the Federal Government. It does not even know what the doctors are putting out, or where the drugs are going. Except for the individual integrity of the doctor or the hospital, my family and the family of every Senator could be used as guinea pigs to test the safety of a drug.

Mr. KEFAUVER. Without their even knowing that they are being used.

Mr. CARROLL. The patient is never told that he is being used as a guinea pig.

I have strong feelings on this question, as does the able Senator from New York [Mr. JAVITS] who raised this issue last Sunday. I had been away from Washington for 2 weeks. When I returned to the committee Monday I raised the same question with Commissioner Larrick. His answers are recorded, and they are to the effect that the pharmaceutical manufacturers are distributing experimental drugs that we—our children and our families—do not know about, and that we are being used as guinea pigs. I do not like that, despite the amendment which came from the President. I also have drafted an amendment to cure this defect in our drug testing system and I shall offer it to the drug bill.

I say to the majority leader in all sincerity that while the communications satellite bill is the pending business before the Senate—I think the parliamentary situation is that the communications satellite bill is now the pending business—is it not?

Mr. MANSFIELD. It will be tomorrow at noon.

Mr. CARROLL. I believe the question that has been raised can be settled in a very few hours. It would not in any sense delay Senators who desire to speak on this important issue. I believe the question can be settled. The amendments which the able Senator from Tennessee is seeking to have considered are not difficult. I do not think there is a Member of the Senate on either side of the aisle who would dare to vote against the bill if it were brought before the Senate, because the bill has been carefully thought out. It is in the public interest, in the national interest, and in the family interest.

I commend the able Senator from Tennessee for the wonderful work he has done through the years, under great stress and in the face of considerable and persistent opposition. He has shown great courage and tenacity, despite what has happened in recent years, in sustaining his position on the bill.

AMENDMENT OF THE TARIFF ACT OF 1930

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1550, H.R. 3508.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 3508) to amend the Tariff Act of 1930, as amended.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed at the appropriate place, after each bill is considered, a statement with respect to the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. MORSE. Mr. President, I was in conversation and did not hear what bill was taken up.

The PRESIDING OFFICER. H.R. 3508.

Mr. MANSFIELD. The purpose of the bill is to permit the Secretary of the Treasury to designate any freight forwarder, authorized to act as such by any agency of Government, as a carrier of bonded merchandise for the final release of which from customs custody a permit has not been issued.

Mr. MORSE. I have no objection.

The PRESIDING OFFICER. Without objection, the request of the Senator from Montana is granted.

The general statement is as follows:

GENERAL STATEMENT

Section 551 of the Tariff Act of 1930, as amended (19 U.S.C. 1551), deals with carriage in bond of merchandise not finally released from customs custody. As originally enacted, section 551 authorized the Secretary of the Treasury to designate as carriers of bonded merchandise only common carriers who owned or operated railroad, steamship, or other transportation lines or routes. Public Law 285, 79th Congress (59 Stat. 667), broadened this authority to permit the Secretary to designate freight forwarders under the jurisdiction of the Interstate Commerce Commission to handle bonded merchandise in transit. No other freight forwarders were authorized to be so designated.

When Congress considered the above amendment to section 551 in 1945, other freight forwarders (for example, those handling airfreight) were much less important in that field than at present. There seems to have been no special reason why the privilege at that time was limited to freight forwarders under the jurisdiction of the Interstate Commerce Commission. In any event, under present complex international trade arrangements it would greatly facilitate the movement of goods if the Secretary of the Treasury was authorized to extend the privilege of handling bonded merchandise to any freight forwarder licensed to act as such by any agency of the Government, subject, of course, to such regulations and terms as the Secretary of the Treasury may find necessary.

Government departments favor this legislation and no opposition has been found. The committee recommends the passage of the bill.

The bill was ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I am calling up only those bills on the calendar to which there is no objection.

INTERSTATE COMMERCE ACT THROUGH ROUTES AND JOINT RATES

Mr. MANSFIELD. Mr. President, I move that the Senate proceed to the consideration of Calendar No. 1756, H.R. 11643.

The PRESIDING OFFICER. The bill will be stated by title.

The LEGISLATIVE CLERK. A bill (H.R. 11643) to amend sections 216(c) and 305(b) of the Interstate Commerce Act, relating to the establishment of through routes and joint rates.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate proceeded to consider the bill.

LEGISLATIVE PROGRAM—FARM LEGISLATION

Mr. MORSE. Mr. President, while H.R. 11643 is before the Senate, I should like to comment on another subject.

I have listened with great interest to the discussion of the past 30 minutes or so on the floor of the Senate concerning whether the drug bill should be taken up prior to its being reported by the Committee on the Judiciary. I think there will be adequate time to take it up in the very next few days, if the Committee on the Judiciary completes its work; and I think all doubts should be resolved in favor of giving the Committee on the Judiciary reasonable time to report the bill to the Senate.

But after listening to the statement of the Senator from Tennessee that only two amendments are left, I see no reason why that bill should not be before the Senate, ready for action, by Monday or Tuesday of next week at the latest.

However, there is another subject which I think is also of a great emergency nature, more of an emergency than the satellite bill, and that is the farm bill. I wish to make this statement about the farm bill tonight, because from reading the press I judge that an interesting attempt is being made politically to place the blame for any delaying action on the farm bill upon those of us who are opposed to the satellite bill.

I wish to make it very clear that I think the motion that should be made tomorrow, after the satellite bill has been made the pending business—and by a unanimous-consent agreement it will become the pending business—is a motion to lay aside the satellite bill until the Senate disposes of the proposed farm legislation, for the American farmers are entitled to immediate action on that bill.

We have already been told that certain planting dates make it very unwise to have a long delay in the consideration of the farm bill, particularly with respect to wheat.

But let the RECORD show tonight—and I speak in behalf of Senators who are opposed to the satellite bill—that the responsibility for not taking action on the farm bill is not ours, but is the responsibility of those in charge of the schedule of the Senate. The RECORD will speak for itself as to what the spokesmen on the other side of the aisle said in the Senate the other night with respect to their opposition to the farm bill, when they were bargaining in public, for all America to hear and see, and were making very clear to the leadership of the Senate that if the farm bill were brought up, they proposed to engage in a lengthy debate on it. Let Senators read the RECORD and determine for themselves what the intention is. I have no hesitancy in saying what my interpretation of the RECORD is; namely, that Republican spokesmen on the floor of the Senate threatened to filibuster the farm bill if it was brought up. Let the farmers of America understand that.

In my judgment, the farm bill should be brought up immediately. In my judgment, tomorrow, after the satellite bill has become the pending business of the Senate, the farmers of the country are entitled to a motion to lay aside consideration of the satellite bill and to have the farm bill brought up for action by the Senate. After that bill has been disposed of, the Senate can return to any other business it wishes to take up.

But the senior Senator from Oregon has no intention of letting any group in the Senate, on either side of the aisle, seek to place on the group of us who are opposing the satellite bill the responsibility for not calling up the farm bill for consideration starting tomorrow, August 10.

I say to the farmers of America: Take a look at who is responsible in the Senate of the United States for not taking immediate action on the farm bill. As soon as a reasonable time has been given the Committee on the Judiciary for action on the drug bill, I would then agree that the farm bill ought to be temporarily laid aside for the immediate consideration of the drug bill, because that bill is essential to the immediate protection of the health of the people of the country.

Much was said in debate this afternoon about what has happened as a result of certain policies of the pharmaceutical industry. I read with alarm reports concerning the serious effects of a certain birth-control pill which apparently has been released by the pharmaceutical industry and, in some instances, is having a dangerous, detrimental effect upon the health of those who have taken the pill. If the stories are accurate—and I am waiting to see what the reports show—it appears that the pharmaceutical industry has not adequately protected the American people by means of adequate tests of that pill and study of the effects it might have.

After we take care of the drug bill, I think the Senate should resume consideration of the farm bill; and then let us see where Members of the Senate stand in regard to the final position they will take at this session in connection with the interests of the farmers. In my judgment the farmers are entitled to have whatever farm legislation is finally passed at this session, passed by the Senate without further delay.

Mr. DIRKSEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. First, let me say to the Senator from Oregon that the chairman of the House Interstate and Foreign Commerce Committee has announced that hearings on the drug bill will not begin in that committee until August 20. Second, let me make clear that the only Members of the Senate who now are raising the bogymen of the drug bill and the farm bill are those who are opposing the satellite bill.

Mr. KEFAUVER. Mr. President, if the Senator will yield, that is not quite correct. The Senator from Colorado [Mr. Carroll]——

Mr. DIRKSEN. It was so reported today in the newspapers, and I have eyes with which to read. If the reports are mistaken, of course I am mistaken on that point. But until that matter is determined otherwise, I still stand on the statement made by Oren Harris that his committee will begin hearings on the drug bill on August 20.

Mr. President, the only Members of the Senate who are trying to defer action on the satellite bill and are trying to confuse us and to talk about the drug bill and the farm bill are Senators who are filibustering the satellite bill. Where are the rest of them? Who stand in their places and make this plea before the Senate? Only Senators who have been definitely identified with the Fabian action of filibustering. That fact should be known by all the world; and it will not be easy for them to put the monkey on the back of any other Senator.

Finally, Mr. President, the satellite bill will be the pending business of the Senate tomorrow; and insofar as it lies within the power of the minority leader to keep it the pending business, it will remain the pending business.

If that is the way those Senators want it—and they want it that way, because they laid it down in that fashion—we will take it. The Senator from Oregon said, "We will use everything in the rule book." I responded; I said "Good. We know something about the rules, too."

So, Mr. President, if that is the way they want it, they shall have it, and the country will know where the responsibility and the culpability will lie.

So when the satellite bill comes before us tomorrow, insofar as it lies within my jurisdiction and my feeble authority, I shall do everything I can to see to it that the satellite bill remains before the Senate until the issue is resolved one way or the other.

Mr. KEFAUVER. Mr. President, will the Senator yield for a correction?

Mr. DIRKSEN. I yield with pleasure to the Senator from Tennessee.

Mr. KEFAUVER. I thank the Senator from Illinois. He was incorrect when he said that only those who are opposing the satellite bill want the drug bill to be brought up and passed. I think every Member of the Senate wants—or should want—early action on the drug bill.

Also, the Senator from Michigan [Mr. Hart], the Senator from Colorado [Mr. Carroll], the Senator from Connecticut [Mr. Dodd], and the Senator from Missouri [Mr. Long] have joined in the report of the Judiciary Committee urging immediate consideration and passage of the drug bill; and they have also urged such action on the floor of the Senate.

I do not know the attitude of those Senators toward the satellite bill. I think some of them have not decided. Some have told me that they favor the satellite bill.

At any rate, the statement to which I have referred was not quite factual.

Also, Representative Harris has held substantial hearings on the drug bill in the House Interstate and Foreign Commerce Committee; and I understand that the announcement he made was that he would finish the hearings immediately, even if there had to be night sessions.

Mr. DIRKSEN. Mr. President, what is wrong with my statement that Representative Harris said he would begin the hearings on August 20? Was that statement right, or was it wrong?

Mr. KEFAUVER. I thought he said he would start them immediately. At any rate, very full hearings have been held on both the antitrust and monopoly and the judicial aspects of the bill, as well as the food aspects, by the House Judiciary Committee; and those hearings have been printed, and are very complete. So there are complete hearings by one committee, and partially finished hearings by another committee.

Mr. DIRKSEN. Mr. President, the Senator from Tennessee knows there are four drug bills pending in the House: The Sullivan bill, the two Harris bills, and the Celler bill—three in the Committee on Interstate and Foreign Commerce and one in the Judiciary Committee. So the Senator should not attempt to confuse us by bringing the Celler bill into this picture. All day in the Senate Judiciary Committee we have talked about the Harris bill and its various facets.

Mr. KEFAUVER. But the Celler bill——

Mr. DIRKSEN. Mr. President, let us not go into it. The majority leader wants to proceed with the legislative calendar.

Mr. KEFAUVER. I merely wish to correct the Record.

Mr. DIRKSEN. But it does not need correction. I know the score.

Mr. KEFAUVER. I know the Senator from Illinois usually does, but perhaps he is mistaken once in a while.

Mr. DIRKSEN. I yield.

Mr. KEFAUVER. The Celler bill is a companion bill, and it was introduced on the same day Senate bill 1552 was introduced. It has been amended until it is almost like the bill as it came from the Antitrust and Monopoly Subcommittee, which is the bill which was approved by the President; and it is substantially the bill the President has wanted, by virtue of the inclusion of the amendments the President has sent here.

The House bill is also very much the same, I concede.

Mr. DIRKSEN. But the House Judiciary Committee has done nothing about the Celler bill, and the Senator is depending on Representative Harris, of Arkansas, to hold hearings.

Mr. KEFAUVER. The House Judiciary Committee has held about 3 weeks of hearings.

Mr. DIRKSEN. But it has done nothing about the bill.

Mr. KEFAUVER. It has marked up the bill.

Mr. DIRKSEN. No, it is standing in its tracks.

Mr. KEFAUVER. The Senator is mistaken.

Mr. DIRKSEN. No, I am not.

Mr. KEFAUVER. Only yesterday I talked to Representative Celler, and they are ready to go.

Mr. DIRKSEN. All this week our own Judiciary Committee has been meeting and discussing the Kefauver bill, the Harris bill, and the amendments which have come from the White House. The Celler bill has not been mentioned.

Mr. KEFAUVER. But when Senators talk about the Kefauver-Hart bill, they are talking about the Celler bill, because they are the same.

Mr. DIRKSEN. Mr. President, three Senators have in the past few minutes stood in their places and made pleas about the farm bill and the drug bill. The distinguished Senator from Oregon [Mr. Morse] is one of them. If he is not one of the filibustieros on the satellite bill, I have been an unobserving person. And if the distinguished strategic leader from Tennessee is not another of the filibustieros, then I am mistaken. And if the distinguished Senator from Colorado [Mr. Carroll] is not also on that side of the fence——

Mr. CARROLL. Mr. President, will the Senator yield?

Mr. DIRKSEN. I yield.

Mr. CARROLL. I give the Senator my word that I am not in favor of public ownership of the communications satellite——

Mr. DIRKSEN. I am delighted to hear the Senator say that.

Mr. CARROLL. I wish to say that now, so that Senators may understand that when I make my remarks on the floor of the Senate, I am speaking from deep conviction that action must be taken on the drug bill.

Mr. DIRKSEN. What about the satellite bill?

Mr. CARROLL. I think it is good.

Mr. DIRKSEN. I congratulate the Senator from Colorado; and I congratulate the distinguished Senator from Minnesota; and I congratulate my friend, the majority leader; and I have nothing more to add.

But certainly it is true that those three Senators have made their appeals.

Mr. CARROLL. Mr. President, I wish to get this matter straightened out. I am not here to further any filibuster. I ask the minority leader and the majority leader to understand that. I am talking about a measure which I think is vital to the people of the Nation. That is why I think that in 3 hours the Senate could achieve passage of a drug bill. I commend the minority leader and Senators on his side of the aisle. Amendments have been considered in committee this week and their previous position has been changed. They have seen the light. They are intelligent men. We are going to come forth with a pretty good bill, I believe. I merely say let us do first things first.

Several weeks ago I said—and I say it to the Senator from Oregon and to the Senator from Tennessee—that I do not like the concept of complete public ownership in connection with the satellite bill; and I say that now on the floor of the Senate.

I have not spoken on this issue. I will speak on it later. I may have an amendment that I hope can bridge the differences between the two divergent positions. I am also working on a substitute bill that may be a compromise which all Senators can accept without yielding too much on principle.

I am thinking of a bill providing for the creation of a Space Communications Commission. This Commission would be patterned after the Atomic Energy Commission in organization and operation.

The Commission would be given the responsibility for planning, constructing, owning, managing, and maintaining the satellite communications system. It would be the expressed policy of the bill, however, that the operation of the facilities—satellites, ground stations, and associated equipment—would be by authorized communications carriers. Furthermore, the Commission could contract with private companies for the construction of any and all facilities as desired in the public interest. This means, in effect, that the Government would control the satellite system but would not be in the position of providing communications services directly to customers. Communications services to customers would be provided in the traditional way through private enterprise under the supervision and regulation of the FCC.

Under my proposed bill, the President of the United States would be given the responsibility of supervising the planning and development of a national program and for coordinating work of the Space Commission with other agencies of the Government.

Launch facilities for communication satellites would be provided for by NASA and the bill will provide for full cooperation between NASA, the Space Commission, and the authorized carriers who would furnish consumer service.

The President, through the Secretary of State, would be given the responsibility for the conduct of such negotiations with foreign governments or international bodies as may be necessary for full development of a worldwide satellite system.

The Commission itself would be composed of five members appointed by the President. Their terms would be for 5 years and their compensation would be $22,000 per annum. No individual who is affiliated with a communications common carrier could serve as a member of the Commission.

This bill would provide for the use of appropriated funds for the establishment of the system. However, this could be changed to provide for bond financing without affecting the rest of the bill.

I intend to do much more research on this matter but I should like to have your assistance on refining my proposal as we think through this complex problem.

I sincerely ask the majority leader and the majority whip to believe me when I tell them—one of the last speeches I made in Colorado was to 500 people, with many women in the audience—that the people at home do not have a deep interest in the communications satellite issue. They do not really understand the issue, yet. However, it is beginning to sink in. That is why I say the filibuster, if Senators want to call it that, has some good effect.

The people are beginning to feel that something is wrong with the bill, and they are beginning to get the concept that it is a giveaway.

But I believe there is another issue which is predominant in their minds, and that issue is this: When a pharmaceutical group can give a doctor experimental drugs that are not approved, and that doctor can use one's family and children as guinea pigs, without notifying the people, we have a serious issue. I think Senators had better pay some attention to drug legislation, instead of talking about something that some people feel is premature, for lack of scientific knowledge.

I repeat, I do not like the concept of public ownership. I think we can consider a new and different approach, in which several branches of government can participate.

I urge the Members of this body to think about the proposal I made a few moments ago. I remember many years ago when there was the discovery of what we call nuclear power——

Mr. DIRKSEN. Oh, Mr. President, I hope we do not get into nuclear power.

Mr. CARROLL. I ask the minority leader to restrain himself, if possible, for a while.

Mr. DIRKSEN. I want to yield to the majority leader.

Mr. CARROLL. I have the floor.

Mr. DIRKSEN. No. I have the floor.

Mr. CARROLL. Who has the floor, Mr. President?

Mr. DIRKSEN. I have the floor.

Mr. CARROLL. Who has the floor, Mr. President?

Mr. DIRKSEN. Mr. President, I do not yield the floor any longer.

The PRESIDING OFFICER. The Senator from Colorado has the floor.

Mr. DIRKSEN. The Senator from Colorado?

The PRESIDING OFFICER. Yes.

Mr. DIRKSEN. The Senator from Illinois had the floor.

Mr. CARROLL. The Senator did until he took his seat.

The PRESIDING OFFICER. The Senator from Illinois had the floor and yielded the floor. The Senator from Colorado was recognized.

Mr. CARROLL. I have the floor. I ask for the regular order.

Mr. DIRKSEN. Mr. President, I raise a question of privilege and ask for the record.

Mr. CARROLL. I ask for the regular order.

Mr. DIRKSEN. I raise a question of privilege and ask for the record to see who has the floor; but I am willing to yield to the majority leader.

Mr. CARROLL. I have the floor, and I insist upon it. Mr. President, I ask for a ruling.

The PRESIDING OFFICER. The Senator from Colorado was recognized and has the floor.

Mr. DIRKSEN. I withdraw the point of privilege.

Mr. CARROLL. I ask the majority leader, the minority leader, and all Senators present to consider this: Many years ago there was debate on the floor of the Senate when the Nation had discovered a new source of power. It was called nuclear power. There were forces within this Nation which sought to put it into the hands of a power corporation.

Mr. President, do you know how the Senate and House resolved the problem? They created an Atomic Energy Commission. What did that Commission do?

I ask Senators to pay particular attention to what I have to say. The Commission was created by Congress as an independent agency, its members to be selected by the President. Its orders are subject to review by the courts. That Commission was created, and it built plants all over the Nation.

What else did it do? Those plants have been let out to such companies as Dow Chemical, but the U.S. Government retained control of the nuclear energy.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. CARROLL. I am happy to yield.

Mr. MORSE. Would the Senator be interested in knowing that the senior Senator from Oregon offered an amendment in the Foreign Relations Committee this afternoon, as a substitute for the bill, that provided exactly for the system the Senator from Colorado is talking about, and that we were defeated by a vote of 14 to 3?

Mr. CARROLL. The members of the Foreign Relations Committee are noted for their great wisdom in the field of foreign relations. I did not know the Senator had offered such an amendment. I have been laboring all day with lawyers and other persons in an effort to arrive at the very same solution, because I thought I could come to the majority leader and the minority leader and, within the framework of the Constitution, offer to bridge in some way the gap that exists, not only in our own party, but on the other side.

I say, in all frankness, that I am against public ownership, but I want to think out a way to handle another great scientific discovery, in which we can exercise and assert the separation of powers under the Constitution.

Mr. MORSE. Mr. President, will the Senator yield?

Mr. CARROLL. I am happy to yield to the Senator from Oregon.

Mr. MORSE. I advise the Senator from Colorado that I offered another substitute this afternoon in the Senate Foreign Relations Committee, supported by such a brilliant international lawyer as Ben Cohen, a proposal that I have discussed for quite some time in recent days, and made it very clear that it would be perfectly satisfactory to the senior Senator from Oregon in protecting the public interest. The substitute bill would enlarge the jurisdiction of NASA, whereby NASA would continue to represent the U.S. Government in the development of the communications satellite system, with the authority, to contract out to all American businesses—not merely a selected monopolistic group, but all—which would come in on the ground floor, on an equal standing, to help the Government develop a satellite communications system, which I happen to think is vital to the perpetuation of peace in the world in the decades immediately ahead. That substitute was defeated by a vote of 13 to 3, one Senator having been necessarily called out of the room prior to the taking of the vote.

I invite the attention of the Senator from Colorado to the fact that it is not the proposal of the senior Senator from Oregon that there be Government ownership and operation, but it is his proposal, as demonstrated by the two substitute amendments, to see to it that the satellites remain American-flag satellites, with the Government of the United States in the saddle, and private industry, under contract or license or permit, working with the Government to provide a communications satellite system, which is essential if we are to whip Russia in the contest for men's minds in respect to winning them over to the side of freedom.

Mr. CARROLL. I am happy to have these remarks of the able Senator from Oregon. I have been home for 2 weeks. I have been reading about the debate through my home newspapers and in the Record. It is evident from the statements that the Senator from Oregon, the Senator from Tennessee, and other Senators waging the alleged filibuster are supposed to have the concept, as the able minority leader has talked about, the Fabian philosophy of government control——

Mr. MORSE. Mr. President, will the Senator yield?

Mr. CARROLL. I am happy to yield.

Mr. MORSE. Does the Senator know any formula which would protect us from a press blackout? Our charge on the floor of the Senate is that the American press has failed in its responsibility to the American people to accurately report the position of those of us who have opposed the administration's satellite bill.

Mr. CARROLL. Would the junior Senator from Colorado be at least partially correct in asserting that, as he understands the debate which is going on, what is sought by those who advocate some opposition to the bill is not Government ownership, basically, but Government control and regulation?

Mr. MORSE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. Pell in the chair). Does the Senator yield?

Mr. CARROLL. I am happy to yield.

Mr. MORSE. I think that is a very fair statement of the position of the senior Senator from Oregon.

Mr. CARROLL. When this issue came to my knowledge—I have said this two or three times—I thought it over. I am not for Government ownership. I want that understood. What am I for? I am for control and regulation.

I am the chairman of the Subcommittee on Administrative Practice and Procedure of the Committee on the Judiciary.

We study all the agencies regulating the monopolies in this country, or at least they are supposed to control them. Witness the FCC. Witness the Federal Power Commission.

I have not reached a conclusion on this question, because I want to examine its legal aspects.

We can do more than make an assumption. We can assert a fact.

When the Atomic Energy Commission was established there was a hue and cry for a while to the effect that it represented Government ownership. It did not. It represented Government control of a basic, strategic commodity which was needed. The Government built the plants, in the sense that the Government appropriated the money for the plants. The construction was let out under contract.

There is some work going on now in the Boulder Flats of Colorado. Dow Chemical is situated there, and doing a good job, too.

Mr. GRUENING. Mr. President, will the Senator yield?

Mr. CARROLL. I yield to the distinguished Senator from Alaska.

Mr. GRUENING. Would the Senator be interested in knowing that the position he has expressed is precisely the position taken by the Senator from Alaska?

We do not want Government ownership, but we do want Government control and regulation, which the present bill does not provide in any sense. We want to protect the public interest. We want to protect the public against exorbitant rates. We want to protect the public against poor programs. We want to protect the public in every sense.

As the Senator from Oregon has stated, that is precisely what most of us want to achieve. We do not want Government ownership, but we want Government regulation and control in behalf of the public interest.

I am glad to welcome the Senator from Colorado to our group.

Mr. CARROLL. I wish to say, before the Senator welcomes me into his arms, that I do not accept the embrace as yet.

Mr. GRUENING. The Senator will.

Mr. CARROLL. The purpose of this presentation tonight is to make clear that I do not stand in opposition to my majority leader or to the administration bill. I did not get into the discussion this evening, I say to my friend the majority leader—and he is my friend—except to emphasize my deep concern and conviction about the drug bill, which would require only 3 or 4 hours to consider.

I see the able Senator from New York [Mr. Keating] in the Chamber. He has been a great help on the bill. He has been a great help on the Committee on the Judiciary.

I am interested in passing some good legislation, and sending it to the other body. Then we can fight out the communications satellite bill.

I am not looking for delay. I want the Congress to achieve something which will be good for the people. I am not saying that Congress has not done so, but to me it would be a remarkable achievement, under great adversity, to pass the drug bill. If we could have only a few hours, we could end the debate on it. Then we could debate these issues back and forth.

I say to the majority leader that I shall continue to work along this line on the communications satellite bill. I think we have clarified the position. I hope that some of my friends on this side of the aisle, who have very strong convictions, will now begin to think in those terms. Perhaps they have begun. The able Senator from Alaska has been thinking in those terms.

I think the position the Senators have taken has been distorted. I think the position is not known throughout the country. Some look upon this group of Senators, as though they were in favor of public ownership. They are not for that at all.

There is a bridge. There is a way by which Senators on both sides of the aisle can get together in the national interest.

I am not against A.T. & T. It is a big monopoly. We all know that. It operates throughout the Nation. It operates in the West. I am not against the telephone company. It is the only monopoly there is which operates in my State. I do not fear exorbitant rates.

I will tell Senators what I do fear. I fear we may set a pattern by legislation which may inhibit future scientific developments.

Who knows what the future holds?

Mr. President, frankly, I am thinking in terms of a space communications commission comparable to the Atomic Energy Commission. What would be the powers of such a commission? The commission would be an agent of this body. It would be an agent of the legislative body. It would be our independent agent. It would have the expertise to pass upon questions which, frankly, are beyond my comprehension in the scientific field.

What else could the Commission do? We could delegate to it the authority to pass rules and regulations.

Would we cut down the jurisdiction of the FCC? No. The FCC still would have ratemaking authority. The FCC could control through the ratemaking power.

What else could be done? The situation would be like that which existed during the early days of the AEC, when the Government built plants throughout the country. Why could not the Space Communications Commission build the ground stations. It would not do it itself. It would let contracts to the telephone company, to RCA, Western Union or to other firms.

This is something we should consider. These installations could be built under contract.

But where would the ownership be? As in the case of the AEC, it would be in the Government. There would be no socialism involved. Why is that? It is because commissions are independent. They are subject to court review for arbitrary and capricious action. The members are subject to Presidential appointment.

This is a bridge over which I think we can pass. As I say, I have spent all day working on this problem, and I reserve the right to change my mind, but I assure the majority leader that my talk this evening was not in the slightest premeditated. I had no previous conference. When I heard the drug bill discussed, I thought the Senate should consider it and get it out of the way in 3 or 4 hours.

I assure the majority leader of my sincerity in this regard. I reserve the right to change my mind, even about a Space Communications Commission, but I say these are the lines along which I have been thinking and working all day. I believe we can resolve this question among those in our own party, and, I hope, on the other side of the aisle.

FARM LEGISLATION

Mr. MORSE. Mr. President, I wish briefly to restate my position in regard to the responsibility for no action being taken on a farm bill immediately. I express my opinion that if the farm bill should be brought before the Senate, judging from what the Congressional Record shows in regard to statements made by Republican spokesmen the other night, it would be subjected to a very prolonged debate, for reasons generally known; that those who are on the Republican side of the aisle are against the administration proposals for farm legislation, and, also, the Republicans on the House side share that view, as evidenced by the fact that only one Republican in the House voted for the administration's farm program.

I say to the farmers that there is nothing which stops the Senate from proceeding to consider a farm bill, except a failure to make a motion, and agree to it, to lay aside the satellite communications bill until the farm bill has been acted upon.

Then the Senate should pass the drug bill. It can then go back to the satellite bill if it wishes to do so. To use the descriptive term of the minority leader with respect to placing the monkey on someone's back, I wish to say that the monkey is on the back of the Republican side of the aisle so far as proposed farm legislation is concerned. If Republicans wish to proceed to consider farm legislation, let them join in a request to lay the satellite bill aside long enough to pass farm legislation, and then go back to the satellite bill.

INTERSTATE COMMERCE ACT THROUGH ROUTES AND JOINT RATES

The Senate resumed the consideration of the bill (H.R. 11643) to amend sections 216(c) and 305(b) of the Interstate Commerce Act, relating to the establishment of through routes and joint rates.

Mr. MANSFIELD. Mr. President, has Calendar No. 1756, H.R. 11643, been disposed of?

The **PRESIDING OFFICER.** It has not.

Mr. LONG of Louisiana. Mr. President, may we have a report on the bill?

The **PRESIDING OFFICER.** The bill will be stated by title.

The Legislative Clerk. A bill (H.R. 11643) to amend sections 216(c) and 305(b) of the Interstate Commerce Act, relating to the establishment of through routes and joint rates.

Mr. MORSE. Mr. President, I could not understand.

Mr. MANSFIELD. That was the title of the bill. I will explain it.

Mr. MORSE. What is the calendar number of the bill?

Mr. BARTLETT. Does the Senator from Oregon desire an explanation of the bill?

Mr. MORSE. I should like to see what the calendar states.

I am familiar with the bill. I did not understand what bill was being considered. I have no objection.

The **PRESIDING OFFICER.** The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading of the bill.

The bill was ordered to a third reading, was read the third time, and passed.

GENERAL SUPPLY FUND

The bill (H.R. 8100) to amend section 109 of the Federal Property and Administrative Services Act of 1949, as amended, relative to the general supply fund was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1827), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE

The purpose of H.R. 8100 is to provide the General Services Administration with the authority to use the general supply fund to pay transportation costs of supplies for Government agencies and to obtain reimbursement for those costs from customer agencies on a "delivered price basis" for the supplies distributed through the fund. Under the present wording of section 109 of the Federal Property and Administrative Services Act of 1949, as amended, the transportation costs which are chargeable to the general supply fund and thus recoverable from the customer agencies are limited to those transportation expenses to the first storage point of the merchandise. H.R. 8100, as amended, would expand GSA's authority so as to allow the full recovery of transportation costs for supplies which are furnished to customer agencies.

BILL PASSED OVER

The bill (S. 2369) to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve was announced as next in order.

The **PRESIDING OFFICER.** Without objection, the Senate will proceed to the consideration——

Mr. MORSE. Mr. President, I have no objection to proceeding to the consideration of the bill. However, I have not had an opportunity to check into the bill. May I ask the calendar clerk if the bill in any way involves the Morse formula? Will the majority leader permit me to study the bill for a moment while the Senate considers another bill?

Mr. MORSE subsequently said: Mr. President, may I have the attention of the majority leader for a moment? I have talked to the able assistant calendar clerk with regard to Calendar No. 1786. It is not clear from a reading of the committee report whether the Federal Government has in fact any monetary interest in the property concerned. I should like to consult the Senator from Idaho [Mr. Church] about the measure. I am in the position that I have always been careful to protect my record so that no one could say that I knowingly permitted a bill to go through that in fact violated the Morse formula. I am on the floor of the Senate. I cannot be sure from what I consider to be a rather ambiguous report on the bill. Our very able assistant on the calendar committee tells me that he cannot answer my question, either. He does not think the bill involves a Federal monetary interest. I do not think it does, either, but I wish to be doubly sure. I would like to see it get before the Senate before the other bill is taken up tomorrow, but it is the pending business. I do not wish to postpone consideration of the bill for a long time.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MORSE. I yield.

Mr. MANSFIELD. Action on the measure was specifically requested by the Senator from Idaho [Mr. Church].

It was cleared by both sides. I think the Senator's request is reasonable. I ask that the bill go over.

The **PRESIDING OFFICER.** The bill will be passed over.

WITHDRAWAL OF CERTAIN PUBLIC LANDS AT LUKE-WILLIAMS AIR FORCE RANGE, YUMA, ARIZ.

The bill (H.R. 3507) to provide for the withdrawal and reservation for the Departments of the Air Force and the Navy of certain public lands of the United States at Luke-Williams Air Force Range, Yuma, Ariz., for defense purposes was considered, ordered to a third reading, was read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1830), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE

The purpose of H.R. 3507 is to withdraw from the public domain 379,600 acres of land in Pima, Maricopa, and Yuma Counties, Ariz., and reserve them for the use of the Departments of the Navy and Air Force in connection with training at Luke-Williams Air Force Range, Yuma, Ariz.

NEED

The Luke-Williams Air Force Range complex has within it a total of 2,669,300 acres of land of which 2,190,200 acres have previously been withdrawn from the public domain by administrative action. H.R. 3507 describes the remaining 479,100 acres of which the 379,600 acres of public lands involved were withdrawn in 1943, restored at the end of World War II, and utilized again since shortly after the beginning of the Korean war.

Enactment of this bill is required because the act of February 28, 1958 (72 Stat. 27) provides, among other things, that no withdrawal of more than 5,000 acres for any one defense project or facility may be effected except by act of Congress.

The proposed withdrawal and reservation will be for a period of 10 years with option to renew for an additional 5 years. This assures a review by the administrative agencies involved 10 years from now and a further review at the end of 15 years. If the military departments desire to extend their use beyond this term they will have to request further legislative action, thereby assuring congressional scrutiny of the necessity for such continued use.

KARL HEINZ AGAR

The Senate proceeded to consider the bill (S. 689) for the relief of Karl Heinz Agar which had been reported from the Committee on the Judiciary, with an amendment to strike out all after the enacting clause and insert:

That, in the administration of the Immigration and Nationality Act, Karl Heinz Agar shall be deemed to be within the purview of section 323 of that Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

HIDAYET DANISH NAKASHIDZE

The bill (S. 3071) for the relief of Hidayet Danish Nakashidze was considered, ordered to be engrossed for a third reading, was read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, notwithstanding the provisions of the Immigration and Nationality Act, the periods of time Hidayet Danish Nakashidze has resided and was physically present in the United States or any State since June 17, 1957, shall be held and considered as compliance with the residence and physical presence requirements of section 316 of said Act.

ANTONIO DA COSTA

The Senate proceeded to consider the bill (S. 3090) for the relief of Antonio da Costa which had been reported from the Committee on the Judiciary, with an amendment to strike out all after the enacting clause and insert:

That, notwithstanding the provisions of section 212(a)(17) of the Immigration and Nationality Act, Antonio da Costa may be issued an immigrant visa and admitted to the United States for permanent residence if he is found to be otherwise admissible under the provisions of such Act: *Provided,* That this Act shall apply only to grounds for exclusion of which the Department of State or the Department of Justice has knowledge prior to the enactment of this Act.

The amendment was agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

SURAJ DIN

The bill (H.R. 2139) for the relief of Suraj Din was considered, ordered to a third reading, read the third time, and passed.

SALVATORE MORTELLITI

The bill (H.R. 2176) for the relief of Salvatore Mortelliti was considered, ordered to a third reading, read the third time, and passed.

AMRIK S. WARICH

The bill (H.R. 3127) for the relief of Amrik S. Warich was considered, ordered to a third reading, was read the third time, and passed.

LEWIS INVISIBLE STITCH MACHINE CO., INC.

The bill (H.R. 7549) for the relief of Lewis Invisible Stitch Machine Co., Inc., now known as Lewis Sewing Machine Co., was considered, ordered to a third reading, read the third time, and passed.

ELIZABETH A. JOHNSON

The bill (H.R. 10308) for the relief of Elizabeth A. Johnson was considered, ordered to a third reading, read the third time, and passed.

DAY FOR OBSERVANCE OF COURAGE DISPLAYED BY THE UPRISING IN THE WARSAW GHETTO AGAINST THE NAZIS

The Senate proceeded to consider joint resolution (S.J. Res. 179) authorizing and requesting the President to designate May 1, 1962, as a day for observance of the courage displayed by the uprising in the Warsaw ghetto against the Nazis, which had been reported from the Committee on the Judiciary, with amendments, on page 1, line 3, after the word "the", to strike out "first day of May 1962" and insert "twenty-first day of April 1963"; so as to make the joint resolution read:

Resolved by the Senate and House of Representatives of the United States of America in Congress assembled, That the twenty-first day of April 1963 is hereby marked in recognition of the astounding courage displayed by the uprising in the Warsaw ghetto against the Nazis. Through such uprising, the men, women, and children who met death on that tragic day and those who perished in concentration camps and in the gas chambers, symbolize the indestructible spirit of liberty which throughout history has ultimately triumphed against the forces of tyranny.

The President is authorized and requested to issue a proclamation inviting people of the United States to observe such day with appropriate ceremonies and activities.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed, as follows:

The title was amended, so as to read: "Joint resolution authorizing and requesting the President to designate April 21, 1963, as a day for observance of the courage displayed by the uprising in the Warsaw ghetto against the Nazis."

Mr. KEATING. Mr. President, I ask unanimous consent to have printed at this point in the Record a statement I have prepared.

There being no objection, the statement was ordered to be printed in the Record, as follows:

STATEMENT BY SENATOR KEATING

In April 1943 the world observed the rebellion of the Jewish inhabitants of the Warsaw ghetto—an epic struggle of incredible valor. Although the members of the ghetto were hopelessly outnumbered from the start, they did not hesitate to rebel against the might of the Nazi armies. The revolt of the Warsaw ghetto embodied the valor of these brave people. Faith and spiritual affirmation filled them; and with the bravery of desperation, they inflicted substantial setbacks on the German Army.

I am pleased that the Senate has approved this resolution to mark the 1st day of May 1962, in recognition of that heroic struggle.

The date which one chooses to celebrate this tragic occasion differs depending on whether one uses the Gregorian calendar or the Hebraic Judaic calendar but whatever the day—the spirit, the dedication, and the honor which we do to these brave men and women who gave their lives to the cause of freedom is unchanged. Their sacrifice will live forever in the hearts and memories of all free people.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1839), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

The purpose of the joint resolution, as amended, is to call attention to the 20th anniversary of the uprising against the Nazis in the Warsaw ghetto. This heroic effort, doomed from the outset, remains a symbol of man's struggle for freedom. Twenty-eight thousand men, women, and children were killed in this fighting, and 10,000 were deported to later death in concentration camps and gas chambers. Temporarily nazism triumphed. But in the long run the forces of human freedom and dignity were successful.

Out of the ashes of the Warsaw ghetto has come the vigorous, free, courageous State of Israel.

The committee believes it appropriate to mark this anniversary by authorizing the President to designate a day for observance of the courage displayed by these people. Accordingly, the committee recommends favorable consideration of Senate Joint Resolution 179, as amended.

NATIONAL TEACHERS' DAY

The bill (S. 3380) to designate the second Monday in October as "National Teachers' Day", was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the President is authorized and requested to issue a proclamation designating the second Monday in October as National Teachers' Day in honor of the teachers of America and inviting the people of the United States to display their esteem and respect on such day in schools and other suitable places with appropriate ceremonies.

Mr. KEATING. Mr. President, I ask unanimous consent to have printed in the RECORD at this point a statement I have prepared.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR KEATING

The bill authorizes the President to issue a proclamation designating the second Monday in October as "National Teachers' Day." The bill invites the American people to display their esteem and respect for the significant contributions made to our national life by teachers throughout the country.

Teachers through their efforts have served not only in providing knowledge for the youth of our Nation, but have also helped to cultivate codes of conduct and principles which strengthen and create a healthy community atmosphere.

We have all too often neglected the many contributions teachers have made in the growth and progress of our Nation. The scientists, businessmen, and Government officials of the future are today being trained in the classrooms of America. The accomplishments and achievements of our Nation 50 years from now will depend to a large extent on the teachers of today. Their responsibility is great and often their recognition limited. The purpose of the bill which I have offered is to set aside 1 day out of the year for national recognition of the teachers of our land.

Education is becoming increasingly more important to the development of our Nation. Increased technology and the demands of a sophisticated society require a more highly trained people. The teachers of America provide the answer to these demands and for their unswerving dedication deserve the thanks of our Nation.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1840), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The purpose of the proposed legislation is to authorize the President to issue a proclamation designating the second Monday in October as National Teachers' Day in honor of the teachers of America and inviting the people of the United States to display their esteem and respect on such day in schools and under suitable places with appropriate ceremonies.

STATEMENT

The growth of our Nation has demonstrated that education is becoming more and more a matter of critical importance, not only to our Nation but to each individual citizen of our land, and it is becoming increasingly important that if our Nation is to compete with other nations in science and technology, and if this country is to compete in economic and technical assistance to the world's underdeveloped lands, these goals depend almost entirely on higher quality education of our children. The quality of our education as we know it today depends to a large extent upon the expertise of our teachers who man the frontlines in providing higher standards of education for the American people.

INCORPORATION OF THE AMERICAN SYMPHONY ORCHESTRA LEAGUE

The Senate proceeded to consider the bill (S. 3338) to incorporate the American Symphony Orchestra League, which had been reported from the Committee on the Judiciary, with amendments, on page 11, line 5, after "(a)", to strike out "The financial transactions shall be audited annually by an independent certified public accountant in accordance with the principles and procedures applicable to commercial corporate transactions.", and insert "The accounts of the American Symphony Orchestra League shall be audited annually in accordance with generally accepted auditing standards by independent certified public accountants or independent licensed public accountants, certified or licensed by a regulatory authority of a State or other political subdivision of the United States."; on page 12, after line 15, to insert a new section, as follows:

EXCLUSIVE RIGHT TO NAME, EMBLEM, SEALS, AND BADGES

SEC. 16. The corporation shall have the sole and exclusive right to the name 'American Symphony Orchestra League' and to have and to use in carrying out its purposes distinctive insignia, emblems and badges, descriptive or designating marks, and words or phrases as may be required in the furtherance of its functions. No powers or privileges hereby granted shall, however, interfere or conflict with established or vested rights.

On page 13, at the beginning of line 2, to change the section number from "16" to "17", and at the beginning of line 10, to change the section number from "17" to "18"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the following persons—

Harold Gregory, Salt Lake City, Utah;
Samuel R. Rosenbaum, Philadelphia, Pennsylvania;
Mrs. Harry Fagg, Beaumont, Texas;
Frank E. Joseph, Shaker Heights, Ohio;
John D. Wright, Phoenix, Maryland;
Doctor George Szell, Cleveland, Ohio;
Henry Denecke, Cedar Rapids, Iowa;
Harry Levenson, Worcester, Massachusetts;
Theodore C. Russell, Jackson, Mississippi;
Stanley Williams, Milwaukee, Wisconsin;
Oliver M. Clegg, Magnolia, Arkansas;
R. Philip Hanes, Junior, Winston-Salem, North Carolina;
Mrs. Ben Hale Golden, Lookout Mountain, Tennessee;
Miles F. Portlock, Junior, Orkney Springs, Virginia;
Mrs. B. H. Littlefield, Bradenton, Florida;
Cecil W. Slocum, Omaha, Nebraska;
Max Rudolph, Cincinnati, Ohio;
Mrs. Ward T. Langstroth, Billings, Montana;
Elden Bayley, Springfield, Ohio;
George Barati, Honolulu, Hawaii;
Mrs. Albert C. Olsen, Buffalo, New York;
John Edwards, Pittsburgh, Pennsylvania;
Mrs. Mignonne P. Ladin, New York, New York;
Leslie C. White, Doraville, Georgia;
Mrs. Fitzgerald Parker, Nashville, Tennessee;
Doctor Peter Paul Fuchs, Baton Rouge, Louisiana;
R. Wilton Billstein, Woodbury, New Jersey;
Mrs. Elizabeth S. Greene, West Hartford, Connecticut;
Gibson Morrissey, Roanoke, Virginia;
Alfred C. Connable, Kalamazoo, Michigan;
Mrs. Holmes Frederick, Greenville, South Carolina;
William Steinberg, Pittsburgh, Pennsylvania;
Virginia Wartman, Allentown, Pennsylvania;
Robert L. Conn, Springfield, Illinois;
Paul O. Grammer, Essex Fells, New Jersey;
Henry Janiec, Spartanburg, South Carolina;
Charles B. Stacy, Charleston, West Virginia;
Doctor James Christian Pfohl, Charlotte, North Carolina;
Frederick I. Moyer, Castle Rock, Colorado;
Thomas D. Perry, Junior, Hingham, Massachusetts;
Carlos Moseley, New York, New York;
Mrs. G. Robert Herberger, Scottsdale, Arizona;
James P. Robertson, Wichita, Kansas;
Myron Levite, Brooklyn, New York;
Mrs. Leo R. Pflaum, Wayzata, Minnesota;

and their successors, are hereby created and declared to be a body corporate by the name of "American Symphony Orchestra League" (hereinafter referred to as the corporation) and by such name shall be known and have perpetual succession and the powers, limitations, and restrictions herein contained.

COMPLETION OF ORGANIZATION

SEC. 2. A majority of the persons named in the first section of this Act are authorized to complete the organization of the corporation by the selection of officers and employees, the adoption of a constitution and bylaws not inconsistent with this Act, and the doing of such other acts as may be necessary for such purpose.

PURPOSES OF THE CORPORATION

SEC. 3. The purposes of the corporation shall be to—

(1) serve as a coordinating, research and educational agency and clearing house for symphony orchestras in order to help strengthen the work in their local communities;

(2) assist in the formation of new symphony orchestras;

(3) through suitable means, encourage and recognize the work of America's musicians, conductors, and composers; and

(4) aid the expansion of the musical and cultural life of the United States through suitable educational and service activities.

CORPORATE POWERS

SEC. 4. The corporation shall have power—

(1) to have succession by its corporate name;

(2) to sue and be sued, complain and defend in any court of competent jurisdiction;

(3) to adopt, use, and alter a corporate seal;

(4) to choose such officers, managers, agents, and employees as the business of the corporation may require;

(5) to adopt, amend, and alter a constitution and bylaws, not inconsistent with the laws of the United States or any State in which the corporation is to operate, for the management of its property and the regulation of its affairs;

(6) to contract and be contracted with;

(7) to take by lease, gift, purchase, grant, devise, or bequest from any private corporation, association, partnership, firm, or individual and to hold any property, real, personal, or mixed, necessary or convenient for attaining the objects and carrying into effect the purposes of the corporation, subject, however, to applicable provisions of law of any State (A) governing the amount or kind of property which may be held by, or (B) otherwise limiting or controlling the ownership of property by, a corporation operating in such State;

(8) to transfer, convey, lease, sublease, encumber, and otherwise alienate real, personal, or mixed property; and

(9) to borrow money for the purposes of the corporation, issue bonds therefor, and

secure the same by mortgage, deed of trust, pledge, or otherwise, subject in every case to all applicable provisions of Federal and State laws.

PRINCIPAL OFFICE; SCOPE OF ACTIVITIES; DISTRICT OF COLUMBIA AGENT

SEC. 5. (a) The principal office of the corporation shall be located in Charleston, West Virginia, or in such other place as may be later determined by the board of directors, but the activities of the corporation shall not be confined to that place, but may be conducted throughout the various States and possessions of the United States.

(b) The corporation shall have in the District of Columbia at all times a designated agent authorized to accept service of process for the corporation; and notice to or service upon such agent, or mailed to the business address of such agent, shall be deemed notice to or service upon the corporation.

MEMBERSHIP; VOTING RIGHTS

SEC. 6. (a) Eligibility for membership in the corporation and the rights, privileges, and designation of classes of members shall, except as provided in this Act, be determined as the constitution and bylaws of the corporation may provide.

(b) Each member of the corporation, other than honorary, sustaining, or associate members, shall have the right to one vote on each matter submitted to a vote at all meetings of the members of the corporation.

BOARD OF DIRECTORS; COMPOSITION, RESPONSIBILITIES

SEC. 7. (a) Upon the enactment of this Act the membership of the initial board of directors of the corporation shall consist of the following persons:

R. Wilton Billstein, Woodbury, New Jersey;
Igor Buketoff, Fort Wayne, Indiana;
Mrs. Ronald A. Dougan, Beloit, Wisconsin;
Mrs. J. W. Graham, Sioux City, Iowa;
Howard Harrington, Detroit, Michigan;
William Herring, Winston-Salem, North Carolina;
Harold Kendrick, New Haven, Connecticut;
Robert MacIntyre, Birmingham, Alabama;
Thomas Perry, Junior, Boston, Massachusetts;
Mrs. H. W. Roberts, Dallas, Texas;
Mrs. Jouett Shouse, Washington, District of Columbia;
Alan Watrous, Dallas, Texas;
John S. Edwards, Pittsburgh, Pennsylvania;
Mrs. Fred Lazarus III, Cincinnati, Ohio;
Charles W. Bonner, Fresno, California;
Alfred Connable, Kalamazoo, Michigan;
Victor Feldbrill, Winnipeg, Manitoba, Canada;
Mrs. Gerald S. Greene, West Hartford, Connecticut;
Mrs. G. Robert Herberger, Scottsdale, Arizona;
Thomas Iannaccone, Rochester, New York;
Doctor Richard Lert, Hollywood, California;
Mrs. Fitzgerald Parker, Nashville, Tennessee;
Mrs. Leo R. Pflaum, Wayzata, Minnesota;
Miss Helen Ryan, Orlando, Florida;
George Szell, Cleveland, Ohio;
Jackson Wiley, Springfield, Ohio;
George Irwin, Quincy, Illinois;
R. H. Wangerin, Louisville, Kentucky.

(b) Thereafter, the board of directors of the corporation shall consist of such number, shall be selected in such manner (including the filling of vacancies), and shall serve for such term as may be prescribed in the constitution and bylaws of the corporation.

(c) The board of directors shall be the governing board of the corporation and, during the intervals between the meetings of members, shall be responsible for the general policies and program of the corporation and for the control of all contributed funds as may be raised by the corporation.

OFFICERS; ELECTION AND DUTIES OF OFFICERS

SEC. 8. (a) The officers of the corporation shall be a president, one or more vice presidents (as may be prescribed in the constitution and bylaws of the corporation), a secretary, and a treasurer, and one or more assistant secretaries and assistant treasurers as may be provided in the constitution and bylaws.

(b) The officers of the corporation shall be elected in such manner and for such terms and with such duties as may be prescribed in the constitution and bylaws of the corporation.

USE OF INCOME; LOANS TO OFFICERS, DIRECTORS, OR EMPLOYEES

SEC. 9. (a) No part of the income or assets of the corporation shall inure to any of its members, directors, or officers as such, or be distributable to any of them during the life of the corporation or upon its dissolution or final liquidation. Nothing in this subsection, however, shall be construed to prevent the payment of compensation to officers of the corporation in amounts approved by the board of directors of the corporation.

(b) The corporation shall not make loans to its officers, directors, or employees. Any director who votes for or assents to the making of a loan or advance to an officer, director, or employee of the corporation, and any officer who participates in the making of such a loan or advance shall be jointly and severally liable to the corporation for the amount of such loan until the repayment thereof.

NONPOLITICAL NATURE OF CORPORATION

SEC. 10. The corporation, and its officers and directors as such, shall not contribute to or otherwise support or assist any political party or candidate for public office.

LIABILITY FOR ACTS OF OFFICERS AND AGENTS

SEC. 11. The corporation shall be liable for the acts of its officers and agents when acting within the scope of their authority.

PROHIBITION AGAINST ISSUANCE OF STOCK OR PAYMENT OF DIVIDENDS

SEC. 12. The corporation shall have no power to issue any shares of stock or to declare or pay any dividends.

BOOKS AND RECORDS; INSPECTION

SEC. 13. The corporation shall keep correct and complete books and records of account and shall keep minutes of the proceedings of its members, board of directors, and committees having any authority under the board of directors; and it shall also keep at its principal office a record of the names and addresses of its members entitled to vote. All books and records of the corporation may be inspected by any member entitled to vote, or his agent or attorney, for any proper purpose, at any reasonable time.

AUDIT OF FINANCIAL TRANSACTIONS

SEC. 14. (a) The accounts of the American Symphony Orchestra League shall be audited annually in accordance with generally accepted auditing standards by independent certified public accountants or independent licensed public accountants, certified or licensed by a regulatory authority of a State or other political subdivision of the United States. The audit shall be conducted at the place or places where the accounts of the corporation are normally kept. All books, accounts, financial records, reports, files, and all other papers, things, or property belonging to or in use by the corporation and necessary to facilitate the audit shall be made available to the person or persons conducting the audit; and full facilities for verifying transactions with the balances or securities held by depositories, fiscal agents, and custodians shall be afforded to such person or persons.

(b) A report of such audit shall be made by the corporation to the Congress not later than March 1 of each year. The report shall set forth the scope of the audit and shall include a verification by the person or persons conducting the audit of statements of (1) assets and liabilities, (2) capital and surplus or deficit, (3) surplus or deficit analysis, (4) income and expense, and (5) sources and application of funds. Such report shall not be printed as a public document.

USE OF ASSETS ON DISSOLUTION OR LIQUIDATION

SEC. 15. Upon dissolution or final liquidation of the corporation, after discharge or satisfaction of all outstanding obligations and liabilities, the remaining assets, if any, of the corporation shall be distributed in accordance with the determination of the board of directors of the corporation and in compliance with the constitution and bylaws of the corporation and all Federal and State laws applicable thereto.

EXCLUSIVE RIGHT TO NAME, EMBLEM, SEALS, AND BADGES

SEC. 16. The corporation shall have the sole and exclusive right to the name "American Symphony Orchestra League" and to have and to use in carrying out its purposes distinctive insignia, emblems and badges, descriptive or designating marks, and words or phrases as may be required in the furtherance of its functions. No powers or privileges hereby granted shall, however, interfere or conflict with established or vested rights.

TRANSFER OF ASSETS

SEC. 17. The corporation may acquire the assets of the American Symphony Orchestra League, Inc., a corporation organized under the laws of the States of Virginia and Michigan, upon discharging or satisfactorily providing for the payment and discharge of all of the liability of such corporation and upon complying with all laws of the States of Virginia and Michigan applicable thereto.

RESERVATION OF RIGHT TO AMEND OR REPEAL CHARTER

SEC. 18. The right to alter, amend, or repeal this Act is expressly reserved.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1841) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The purpose of the proposed legislation, as amended, is to confer a Federal charter upon the American Symphony Orchestra League, Inc.

STATEMENT

The American Symphony Orchestra League is the only organization in existence devoted exclusively to the needs of symphony orchestras, their related organizations and arts councils. It is a nonprofit, research, service, and educational association. Its membership consists of symphony orchestras and arts councils, business firms, educational institutions, libraries, individuals representing women's associations and symphony boards, as well as composers, conductors, concert artists, artists' agents, orchestra managers, and musicians—all representing 1,200 symphony orchestras. These range from the smallest college and community orchestra to the largest of the major orchestras. It is maintained solely for the purpose of assisting orchestras and arts councils to strengthen their work, stabilize their financial base, expand their cultural services within their own communities, and upgrade their artistic standards.

The league's activities and services are many and varied. Its official publication, the Newsletter, reports on the work, problems, research, and activities of orchestras, women's associations, arts councils, and other related arts activities. It issues special publications including authoritative studies of legal documents of symphony orchestras, governing boards of orchestras, survey of arts councils, summary of music critics workshops, conductor study, and training opportunities, and report on recording projects. Other special memorandums are issued periodically, devoted to various aspects of orchestra work and research.

Each year, comparative financial and statistical reports are compiled and issued to participating orchestras within three budget categories—the metropolitan orchestras, the large budget community orchestras, and the small budget community orchestras. Over 100 orchestras participate in the league's monthly exchange of information on concert attendance in relation to the type of concert and specific artist presented. Nearly 200 orchestras participated in a survey on support of orchestras by municipal, county, and State funds. The publication of the 1960 to 1962 concert calendar includes concerts of 203 league member orchestras listing dates, orchestras, conductors, assisting artists, and world premieres.

The league talent pool serves orchestras, musicians, managers, and conductors, and is designed to assist organizations in finding needed personnel. Its individual service program enables members to request and receive advisory service on employment and on special problems.

The league's study and training activities have provided opportunities to enter into cooperative projects with other organizations. For example:

The Rockefeller Foundation has assisted in many of its research and training projects with approximately one-half million dollars in grants over the last 6 years;

The U.S. Government selected the league to develop the work and organization of the music committee of the people-to-people program;

Broadcast Music, Inc., has assisted extensively in presenting musicians' study projects at its national conventions. The American Society of Composers, Artists & Publishers and other business firms have assisted in other projects;

The Avalon Foundation has made a grant to the league for the purpose of developing an in-service training program in orchestra management;

The Music Critics Association & Community Arts Councils, Inc., have selected the league to serve as their administrative agency. The World Music Bank is administered by the league;

The league serves as the coordinating agency for the Alice M. Ditson Fund whose orchestra awards this year were presented to conductors of only four orchestras; and

The league each year conducts an orchestra management course which is the only such training program offered on a professional level anywhere.

Its conductor study programs continue to be in such demand that it cannot accommodate the scores of conductors wishing to attend.

Its advanced conductors' study has proved of enormous interest and help in making available the funds, background education, and training opportunities necessary to the advancement of talented young conductors.

Mainly as a result of the league alerting members and nonmembers of the possible discontinuation of the 1960–61 CBS radio broadcasts of the New York Philharmonic, CBS received 11,000 letters, and the programs were presented for the 31st consecutive year.

The league is represented on the advisory committee for the National Cultural Center for the Arts in Washington, D.C., by its President, Mr. John Edwards. Its executive secretary, Mrs. Helen Thompson, represents the league on the Council of Arts in Government, on the editorial board of Musical America, on the executive committee of the National Music Council, and contributes to the forum lecture programs broadcast throughout the world by the Voice of America, and will be a judge for the Liverpool competitions.

The league has introduced to the orchestra world, a retirement income plan for conductors, orchestra, and arts council managers, and administrative employees. The plan was under study by the league board for 3 years, and is covered under a group annuity contract issued by the Equitable Life Assurance Society of the United States.

A short time ago, a gift was made to the league by Mrs. Jouett Shouse, of Washington, D.C., of 40 acres of beautiful, rolling woodland just 20 minutes from the Nation's Capitol. Edward Durell Stone, world-renowned architect, is preparing the plans for its national headquarters to be known as Symphony Hill.

The league's activities are nationwide and constitute a contribution to the cultural life of our country which is so great as to be immeasurable. Presently incorporated under the laws of Michigan and West Virginia, the league's members feel strongly that their important national activities would be more appropriately carried on under a Federal charter.

RESTORATION OF CERTAIN WIDOWS AND CHILDREN TO ROLLS

The Senate proceeded to consider the bill (H.R. 5234) to amend title 38, United States Code, to provide for the restoration of certain widows and children to the rolls upon annulment of their marriages or remarriages, and for other purposes, which had been reported from the Committee on Finance, with an amendment, on page 1, line 8, after the word "veteran", to insert "and after enactment of the 1962 amendment to this paragraph,".

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1842) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

> Under existing law, payments of benefits to the widow of a veteran are terminated upon her remarriage unless the remarriage is "void."
>
> In some States, annulment of some marriages are considered to relate back to the date the relationship was entered into; however, in such cases no benefits become payable under Veterans' Administration laws unless the marriage was void, Because of the diversity of State laws on the question of which marriages are "void" and which marriages are "voidable" (i.e., require judicial action to declare their nonexistence), identical factual situations can lead in some cases to restoration of widow's benefits and in other cases to continued denial thereof.
>
> The bill provides a uniform rule under which widow's benefits may be restored in such cases if (1) the remarriage is "void," or (2) the remarriage is annulled, unless the annulment is procured by fraud or collusion.
>
> Additionally, the bill provides an identical rule for recognition of a veteran's child as "unmarried" for Veterans' Administration benefit purposes (pursuant to definition in existing 38 U.S.C. 101(4)) as are specified for widows. The desirability of uniformity respecting the two classes of beneficiaries is obvious.
>
> Aside from resolution of the problem respecting treatment of cases involving causes for annulment which are generally recognized as void, the bill permits restoration of benefits following annulment of a merely voidable remarriage or marriage.
>
> Recognition of annulment decrees in the manner proposed would be consistent with the maintenance and promotion of good Federal-State relationships. It would also remove the possible occasion for doubt in the minds of the parties regarding their marital status which might result from a denial of benefits by the Veterans' Administration under the present law. Incidentally, it has been reported to the committee that the restoration provision would permit more simplified administrative procedures, and would accordingly involve less administrative expense than current practices.
>
> The bill also deals with an area in which there have been some abuses. In some cases, in order to avoid the "remarriage" bar to payment of widow's benefits, women have entered into illicit relationships with men, holding themselves out to the public to be their wives, while drawing benefits as the widow of a veteran. The Veterans' Administration has adopted a rule under which it is presumed where certain facts exist that a remarriage has occurred; however, the validity of this practice has been questioned recently in the case *Sinlao v. United States* (271 F. 2d 846). The bill establishes a statutory test to be applied by the Administrator in such cases, providing for the termination of benefits where the widow of a veteran lives with another man and holds herself out to the public to be the wife of the other man. Enactment of this provision would amount to statutory confirmation of the Veterans' Administration rule, with the addition of two more restrictive factors. Under the administrative standard, a reputation of marriage is necessary to warrant termination of benefits; and the standard does not apply where it is established that there is a legal impediment to a valid marriage between the widow and her male cohabitant. The matters of reputation and impediment are not material under the bill's provision.
>
> The committee does not believe that the U.S. Government should continue payment of gratuities to a claimant who after her veteran husband's death lives with a man and holds herself out openly to the public as the wife of such man. Accordingly, the more restrictive statutory provision appears proper. The Veterans' Administration has reported that this provision would also permit more simplified administrative procedures, with a consequent lessening of administrative expense.
>
> In order to avoid harsh results which might result from application of the new standard to relationships terminated prior to enactment, the committee has adopted the recommendation of the Veterans' Administration that the bill be amended so that the statutory provision will apply only to the actions of a veteran's widow after enactment. It is understood that the Veterans' Administration will continue to apply the present administrative rule to prior relationships.

The Veterans' Administration has advised that the annulment feature of the bill would increase benefit costs, whereas the "lived with another man" provision would result in savings. It is also stated that there are no adequate data available upon which to base an estimate of the fiscal effect of the bill, but that it is believed that the number of cases affected and the resulting net additional benefit cost would be relatively small.

BOARD OF VETERANS' APPEALS CASES

The Senate proceeded to consider the bill (H.R. 857) to amend section 4005 of title 38, United States Code, to provide that cases appealed to the Board of Veterans' Appeals shall contain a brief statement of the facts of the case appealed, with a citation and application of the law, together with the recommendations of the office appealed from, and for other purposes which had been reported from the Committee on Finance, with an amendment, to strike out all after the enacting clause and insert:

That chapter 71 of title 38, United States, Code, is amended by deleting sections 4005 and 4007 thereof, redesignating section 4006 as 4007, and inserting after section 4004 the following new sections:

"§ 4005. Filing of notice of disagreement and appeal

"(a) Appellate review will be initiated by a notice of disagreement and completed by a substantive appeal after a statement of the case is furnished as prescribed in this section. Each appellant will be accorded hearing and representation rights pursuant to the provisions of this chapter and regulations of the Administrator.

"(b) (1) Except in the case of simultaneously contested claims, notice of disagreement shall be filed within one year from the date of mailing of notice of the result of initial review or determination. Such notice, and appeals, must be in writing and be filed with the activity which entered the determintaion with which disagreement is expressed (hereafter referred to as the "agency of original jurisdiction"). A notice of disagreement postmarked before the expiration of the one-year period will be accepted as timely filed.

"(2) Notices of disagreement, and appeals, must be in writing and may be filed by the claimant, his legal guardian, or such accredited representative, attorney, or authorized agent as may be selected by him. Not more than one recognized organization, attorney, or agent will be recognized at any one time in the prosecution of a claim.

"(c) If no notice of disagreement is filed in accordance with this chapter within the prescribed period, the action or determination shall become final and the claim will not thereafter be reopened or allowed, except as may otherwise be provided by regulations not inconsistent with this title.

"(d) (1) Where the claimant, or his representative, within the time specified in this chapter, files a notice of disagreement with the decision of the agency of original jurisdiction, such agency will take such development or review action as it deems proper under the provisions of regulations not inconsistent with this title. If such action does not resolve the disagreement either by granting the benefit sought or through withdrawal of the notice of disagreement, such agency will prepare a statement of the case consisting of—

"(A) A summary of the evidence in the case pertinent to the issue or issues with which disagreement has been expressed;

"(B) A citation or discussion of the pertinent law, regulations, and, where applicable, the provisions of the Schedule for Rating Disabilities;

"(C) The decision on such issue or issues and a summary of the reasons therefor.

"(2) A statement of the case, as required by this subsection, will not disclose matters that would be contrary to section 3301 of this title or otherwise contrary to the public interest. Such matters may be disclosed to a designated representative unless the relationship between the claimant and the representative is such that disclosure to the representative would be as harmful as if made to the claimant.

"(3) Copies of the 'statement of the case' prescribed in paragraph (1) of this subsection will be submitted to the claimant and to his representative, if there is one. The claimant will be afforded a period of sixty days from the date the statement of the case is mailed to file the formal appeal. This may be extended for a reasonable period on request for good cause shown. The appeal should set out specific allegations of error of fact or law, such allegations related to specific items in the statement of the case. The benefits sought on appeal must be clearly identified. The agency of original jurisdiction may close the case for failure to respond after receipt of the statement of the case, but questions as to timeliness or adequacy of response shall be determined by the Board of Veterans' Appeals.

"(4) The appellant will be presumed to be in agreement with any statement of fact contained in the statement of the case to which no exception is taken.

"(5) The Board of Veterans' Appeals will base its decision on the entire record and may dismiss any appeal which fails to allege specific error of fact or law in the determination being appealed.

"§ 4005A. Simultaneously contested claims

"(a) In simultaneously contested claims where one is allowed and one rejected, the time allowed for the filing of a notice of disagreement shall be sixty days from the date notice of the adverse action is mailed. In such cases the agency of original jurisdiction shall promptly notify all parties in interest at the last known address of the action taken, expressly inviting attention to the fact that notice of disagreement will not be entertained unless filed within the sixty-day period prescribed by this subsection.

"(b) Upon the filing of a notice of disagreement, all parties in interest will be furnished with a statement of the case in the same manner as is prescribed in section 4005. The party in interest who filed a notice of disagreement will be allowed thirty days from the date of mailing of such statement of the case in which to file a formal appeal. Extension of time may be granted for good cause shown but with consideration to the interests of the other parties involved. The substance of the appeal will be communicated to the other party or parties in interest and a period of thirty days will be allowed for filing a brief or argument in answer thereto. Such notice shall be forwarded to the last known address of record of the parties concerned, and such action shall constitute sufficient evidence of notice.

"§ 4006. Administrative appeals

"Application for review on appeal may be made within the one-year period prescribed in section 4005 of this title by such officials of the Veterans' Administration as may be designated by the Administrator. An application entered under this paragraph shall not operate to deprive the claimant of the right of review on appeal as provided in this chapter."

Sec. 2. The table of headings at the beginning of chapter 71 is amended by striking:

"4005. Applications for review on appeal.
"4006. Docketing of appeals.
"4007. Simultaneously contested claims."

and inserting in lieu thereof:

"4005. Filing of notice of disagreement and appeal.
"4005A. Simultaneously contested claims.
"4006. Administrative appeals.
"4007. Docketing of appeals."

Sec. 3. The amendments made by this Act shall be effective January 1, 1963.

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended, so as to read: "An act to improve due process in the consideration and final adjudication of disputed claims for veterans' benefits by providing that the claimant shall be furnished a brief statement of the facts and law applicable to the case appealed and afforded an opportunity to reply thereto."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1843) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE OF BILL

The bill would require that the Administrator of Veterans' Affairs furnish claimants who are appealing to the Board of Veterans Appeals with a summary of the evidence in the file applicable to their case, together with an explanation of the law and the regulations.

PURPOSE OF AMENDMENT

The committee amendment, as recommended by the Veterans' Administration, merely clarifies the language applicable to the new procedure but does not change its basic intent.

GENERAL EXPLANATION

The bill will afford an added measure of due process in the consideration and final adjudication of disputed claims for veterans' benefits. It will require that in all cases which a claimant files a timely notice of disagreement with a decision by the Veterans' Administration agency of original jurisdiction on any issue, the Veterans' Administration will furnish the claimant or his representative with a statement which would provide a summary of the evidence in the case pertinent to the issue, the citation of the pertinent law and regulation, and the decision on such issues with a summary of the reasons therefor.

The committee has approved an amendment recommended by the Veterans' Administration which clarifies the language applicable to the new procedure without changing its basic content.

As explained by the Veterans' Administration, the essential elements of the veterans' appellate procedures as they will exist after the enactment of this bill are:

(1) A timely filing of a notice of disagreement. (The appeal period would not be changed.)

(2) Review and development of the case by the agency which denied the original claim to the extent proper, and the modification of the original decision to allow the claim, in whole or in part, if such action is found to be in order;

(3) Preparation of the "statement of the case" as proposal by H.R. 857, if the disagreement is not resolved to the satisfaction of the claimant by the agency of original jurisdiction;

(4) The furnishing of such statement to the claimant with notice of his right to perfect his appeal to the Board of Veterans Appeals; and

(5) Consideration of the case by the Board of Veterans Appeals on the basis of the entire record, including the "statement of the case" and the claimant's response thereto as contained in his formal appeal.

This bill will place the veteran or his survivor in a better position to develop new evidence available and to fully prepare and present his appeal. Moreover, the issue should be more clearly delineated which should facilitate appellate procedures in many cases. And as a practical matter some appeals which will go to the Board will be eliminated once the committee fully understands the basis for the decision.

In its report to this committee on the bill, the Veterans' Administration concluded:

"In weighing all considerations, we recommend favorable consideration of H.R. 857, if amended as we have suggested in this report. We estimate that the bill, as worded, would require the preparation of approximately 60,000 'statements of the case' per year at an administrative expense of approximately $1.5 million. The number of statements to be prepared and, consequently, the added expense would be reduced as the result of the changes we have proposed."

MEDICAL ADVISORY PANELS

The Senate proceeded to consider the bill (H.R. 852) to amend chapter 3 of title 38, United States Code, to authorize the Administrator of Veterans' Affairs to establish medical advisory panels to resolve conflicts of evidence in questions involving service connection of disabilities or deaths which had been reported from the Committee on Finance, with an amendment, to strike out all after the enacting clause and insert:

"That chapter 71 of title 38, United States Code, is amended by adding at the end thereof:

"'§ 4009. Independent medical opinions

"'(a) When, in the judgment of the Board, expert medical opinion, in addition to that available within the Veterans' Administration, is warranted by the medical complexity or controversy involved in an appeal case, the Board is authorized to secure an advisory medical opinion from one or more independent medical experts who are not employees of the Veterans' Administration.

"'(b) The Administrator shall make necessary arrangements with recognized medical schools, universities, or clinics to furnish such advisory medical opinions at the request of the Chairman of the Board. Such arrangement will provide that the actual selection of the expert or experts to give the advisory opinion in any individual case will be made an appropriate official of such institution.'

"Sec. 2. Section 3301 of title 38, United States Code, is amended by adding at the end of paragraph (1) thereof the following new sentence: 'And to an independent medical expert or experts for an advisory opinion pursuant to section 4009 of this title.'

"Sec. 3. The table of sections at the end of chapter 71 of title 38, United States Code, is amended by adding at the end thereof: "'4009. Independent medical opinions.'"

"Sec. 4. The amendments made by this Act shall be effective January 1, 1963."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended so as to read: "An act to establish a procedure for the use of independent medical experts by the Board of Veterans' Appeals."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1844) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

PURPOSE OF BILL

The purpose of the bill is to improve the appellate procedures applicable to veterans' claims by authorizing the referral of such claims to independent medical experts.

PURPOSE OF AMENDMENT

The committee amendment, which was recommended by the Veterans' Administration, simplifies the proposed procedure by making the use permissive with the Veterans' Administration.

GENERAL EXPLANATION

The bill authorizes the use of independent medical experts when, in the judgment of the Board of Veterans' Appeals, their use is warranted by the medical complexity or controversy involved in an appeal case. To assure the independence of the medical experts used in such circumstances, their services would be secured through arrangements with recognized medical schools, universities, or clinics, by which the individual expert, or experts, who would render the opinion in specific cases would be selected by an appropriate institution official.

The committee adopted an amendment recommended by the Veterans' Administration and endorsed by the Bureau of the Budget which made the use of independent medical experts permissive with the Board rather than mandatory as would have been required by the bill as passed by the House of Representatives. The bill, as approved by the committee, makes no reference to the Board of Veterans' Appeals securing an advisory opinion from the Chief Medical Director of the Veterans' Administration since this is a matter within Agency discretion and ample authority for this practice now exists. In fact, the committee was informed that between 200 and 300 cases per year are currently submitted to the Chief Medical Director by the Board of Veterans' Appeals for expert advisory opinions.

The following excerpts are from the Veterans' Administration report on the bill:

"We cannot precisely estimate the cost of the legislation amended according to our recommendation. At the present time, between 200 and 300 cases per year are submitted to the Chief Medical Director by the Board of Veterans' Appeals for expert advisory opinions. It might logically be expected that enactment of the bill, even as amended, would result in an increase in the number of cases in which medical advisory opinions from either the Chief Medical Director or independent experts would be requested. But we are unable to predict the number in advance, although it is our best judgment that the number would not be excessive from the standpoint of cost—unlike the situation which would exist if the original version of the bill were enacted. Opinions through universities can probably be secured for about $50 for each opinion by a single specialist. Payments would be made under the authority of section 213 of title 38, United States Code, which authorizes the Administrator to secure the necessary services by contract or agreement as he deems practicable.

"In summary, while I must strongly oppose H.R. 852 in its present form I believe the underlying purpose has merit. Accordingly, if it is amended as suggested in this report, I would recommend its enactment.

"We are advised by the Bureau of the Budget that there is no objection from the standpoint of this administration's program to the presentation of this report to your committee."

TOTAL RATING FOR COMPENSATION FOR BLINDED VETERANS

The Senate proceeded to consider the bill (H.R. 3728) to amend title 38, United States Code, so as to authorize the Administrator to assign a total rating for compensation to a veteran granted service connection for blindness of one eye who subsequent to separation from active duty incurs blindness in the remaining eye which had been reported from the Committee on Finance with an amendment, to strike out all after the enacting clause and insert:

That subchapter VI of chapter 11 of title 38, United States Code, is amended by adding at the end thereof the following new section:

"§ 360. Special consideration for certain cases of blindness or bilateral kidney involvement

"Where any veteran has suffered (1) blindness in one eye as a result of service-connected disability and has suffered blindness in the other eye as a result of non-service-connected disability not the result of his own willful misconduct, or (2) has suffered the loss or loss of use of one kidney as a result of service-connected disability, and has suffered severe involvement of the other kidney such as to cause total disability, as a result of non-service-connected disability not the result of his own willful misconduct, the Administrator shall assign and pay to the veteran concerned the applicable rate of compensation under this chapter as if his blindness in both eyes or such bilateral kidney involvement were the result of service-connected disability."

Sec. 2. The analysis of chapter 11 of title 38, United States Code, is amended by adding at the end thereof the following:

"360. Special consideration for certain cases of blindness or bilateral kidney involvement."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

The title was amended, so as to read: "An act to amend chapter 11 of title 38, United States Code, to authorize special consideration for certain disabled veterans suffering blindness or bilateral kidney involvement."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the Record an excerpt from the report (No. 1845) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the Record, as follows:

EXPLANATION OF THE BILL

Under existing law, if a veteran enters military service with blindness of one eye and incurs blindness in the other eye as the result of that service he is considered to have service-connected blindness of both eyes and certain statutory rates of compensation are payable. On the other hand, if another veteran incurs blindness of one eye in service and then subsequent to service he suffers blindness of the other eye as the result of non-service-connected cause he is entitled to compensation only for unilateral blindness. This is the present situation even though the ultimate resulting total blindness is the same in both of these cases. In each case the loss of a veteran's sight of one eye in service was a direct causative factor in such total blindness. The equitable purpose of this bill is to equate both types of cases.

EXPLANATION OF AMENDMENT

The committee amendment would extend the same principle to cases involving the loss or loss of use of one kidney in the service where the veteran, following service, suffers a severe involvement of the other kidney from a non-service-connected cause. Under the present law the disability rating in this type of case cannot be more than 30 percent—the rate for unilateral loss only—even though the veteran is in fact totally disabled. The committee amendment would authorize a rating of total service-connected disability in this type of case.

BILL PASSED OVER

The bill (S. 3614) to authorize the temporary suspension of the Jones Act (46 U.S.C. 833) upon certain findings by the Secretary of Commerce, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. Over.

The PRESIDING OFFICER. The bill will be passed over.

CONVEYANCE OF CERTAIN LAND IN VICINITY OF GEORGETOWN, COLO.

The bill (S. 3100) to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Georgetown, Colo., to Frank W. Whitenack, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MORSE. Mr. President, may we have an explanation of the bill?

Mr. MANSFIELD. Mr. President, section 2 of the bill states:

SEC. 2. The patent in fee authorized by the first section of this Act shall be issued subject to the payment by the said Frank W. Whitenack to the Secretary of the Interior of an amount equal to the fair market value of the property conveyed as determined by the Secretary after appraisal, exclusive of improvements placed thereon by Frank W. Whitenack and his grantees.

Mr. MORSE. I have no objection.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 1, line 6, after the word "fee", to strike out "including" and insert "exclusive", and on page 2, line 8, after the word "numbered", to strike out "18727" and insert "18737"; so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is authorized and directed to issue, subject to the provisions of section 2, to Frank W. Whitenack of Georgetown, Colorado, a patent in fee (exclusive of oil, gas, and other mineral rights) to the following described tract of land, situated in the vicinity of Georgetown, Colorado:

Beginning at a stake at corner numbered 1, whence the northeast corner section 5, township 4 south, range 74 west, sixth principal meridian bears north 29 degrees 57 minutes west 761.7 feet, thence east 279.7 feet to corner numbered 2, thence south 176.0 feet to corner numbered 3, thence south 82 degrees 16 minutes west 200.5 feet to corner numbered 4 which is also corner numbered 1, survey numbered 18737, Dora Lode, thence south 7 degrees 44 minutes east 150 feet to corner numbered 5, which is also corner numbered 4, survey numbered 18737 Dora Lode, thence north 82 degrees 16 minutes east 180.1 feet to corner numbered 6, thence south 992.6 feet to corner numbered 7, thence west 660 feet to corner numbered 8, thence north 502 feet to corner numbered 9, thence south 60 degrees 20 minutes east 119.4 feet to corner numbered 10, which is also corner numbered 3 survey numbered 408 Mills Placer, thence north 17 degrees 30 minutes east 919.7 feet to the place of beginning.

SEC. 2. The patent in fee authorized by the first section of this Act shall be issued subject to the payment by the said Frank W. Whitenack to the Secretary of the Interior of an amount equal to the fair market value of the property conveyed as determined by the Secretary after appraisal, exclusive of improvements placed thereon by Frank W. Whitenack and his grantees.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

CONVEYANCE OF CERTAIN LANDS TO THE PRINCE GEORGES COUNTY HOSPITAL

The bill (H.R. 7782) to authorize the Secretary of the Interior to convey certain lands in the State of Maryland to the Prince Georges County Hospital, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MORSE. Mr. President, may we have an explanation of the bill?

Mr. MANSFIELD. The purpose of the bill is to transfer to the Prince Georges Hospital 3¼ acres of land upon payment of 50 percent of the fair market value as determined by the Secretary, plus the cost of making the conveyance.

Mr. MORSE. I am delighted that the Morse formula is contained in the bill. I have no objection.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill, which had been reported from the Committee on Interior and Insular Affairs, with an amendment, on page 1, at the beginning of line 5, to strike out "one dollar" and insert "50 per centum of the fair market value as determined by the Secretary."

The amendment was agreed to.

The amendment was ordered to be engrossed and the bill to be read a third time.

The bill was read the third time and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1848) explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of H.R. 7782 is to transfer to the Prince Georges County Hospital, Maryland, a parcel of land (about 3¼ acres) adjacent to its present grounds.

NEED

The Prince Georges County Hospital has recently expanded from a 100-bed to a 400-bed institution. Its present 23 acres of land are inadequate for an institution of this size. Additional land, the committee was advised by the hospital's administrator, is needed for residents' quarters, nursing home facilities, and further additions to the hospital.

The 3¼ acres to be transferred were part of a tract acquired by the Government in connection with its construction of the Baltimore-Washington Parkway but are no longer needed for that purpose. The cost of the tract to the Government was $3,500 plus $135 interest or $3,635 for 12.2 acres or about $300 per acre. At the same time that this land was acquired, the hospital donated an adjacent 5.31 acres to the Government for the same purpose. The donated lands had an estimated value of about $2,000 or about $400 per acre.

The committee recognizes the worthy public purpose to which these lands will be put if transferred to the Prince Georges County Hospital. The location of the lands in relation to the parkway is such that they do not add to the scenic beauty of the parkway. The lands lie over the crest of a hill on a slope away from the parkway and cannot be seen from the parkway. Other land being acquired by the hospital will surround this property which is triangular on two sides.

AMENDMENT

The amendment adopted will require the hospital to pay 50 percent of the fair market value of the property plus the cost of conveyance. Prince Georges County has obtained substantial benefits from the Baltimore Washington Parkway, which was constructed with 100 percent Federal financing. The grant by the county of the 5 acres needed for the parkway was without reservation or a request that the granted lands be replaced. It was only recently that the need for additional land developed for the hospital.

The action by the committee is along lines which have been quite consistently and generally followed in similar land transfers in the past.

The lands sought now by the hospital were acquired by the Federal Government as a part of the parkway program in 1947, at a cost of $300 per acre.

While there may have been some advance in the value of this land, the committee notes that the provision it has included will provide the hospital with the land at a price midway between the cost envisioned in the bill as introduced and the cost contemplated in the House bill.

CONVEYANCE OF CERTAIN LAND IN ALASKA TO MRS. WILLIAM E. BELTZ

The bill (S. 1065) to authorize the Secretary of the Interior to convey certain land situated in the vicinity of Unalakleet, Alaska, to Mr. William E. Beltz was announced as next in order.

Mr. MORSE. Mr. President, may we have an explanation of the bill?

Mr. MANSFIELD. I understand that this has to do with a patent which was not completed by the husband of the named beneficiary in the bill, who was a former president of the Alaskan State Senate. Section 2 of the bill states:

> The patent shall be subject to outstanding gravel permits and rights-of-way, the patent may be issued only after payment of the fees that the deceased entryman would have been required to pay, and the patent shall be based upon a survey made without cost to Mrs. Beltz.

Mr. MORSE. I have no objection.

The **PRESIDING OFFICER.** Is there objection to the present consideration of the bill?

There being no objection, the Senate proceeded to consider the bill which had been reported from the Committee on Interior and Insular Affairs, with amendments, on page 1, line 4, after the word "issue", to strike out "without consideration," and insert "subject to the provisions of section 2,"; in line 5, after the word "fee", to strike out "including all" and insert "exclusive of oil, gas, and other"; and on page 2, after line 11, to insert a new section, as follows:

> SEC. 2. The patent shall be subject to outstanding gravel permits and rights-of-way, the patent may be issued only after payment of the fees that the deceased entryman would have been required to pay, and the patent shall be based upon a survey made without cost to Mrs. Beltz.

So as to make the bill read:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That the Secretary of the Interior is authorized and directed to issue, subject to the provisions of section 2, to Mrs. William E. Beltz a patent in fee (exclusive of oil, gas, and other mineral rights) to the following described tract of land, together with all buildings and other improvements thereon, situated in the vicinity of Unalakleet, Alaska: Post numbered 1 located on left limit of North River on sandbar approximately 400 feet east of the North River Bridge; thence 2,640 feet in an easterly direction following the river upstream to a narrow slough and following the slough to post numbered 2; thence 2,640 feet in a southerly direction (through timber) to post numbered 3; thence 2,640 feet in a westerly direction to post numbered 4 located on the bank of the North River; thence upstream in a northerly direction back to post numbered 1 approximately 2,640 feet from post numbered 4; such land being the same land described in the homestead settlement claim (No. F-023595) of the late William E. Beltz.
>
> SEC. 2. The patent shall be subject to outstanding gravel permits and rights-of-way, the patent may be issued only after payment of the fees that the deceased entryman would have been required to pay, and the patent shall be based upon a survey made without cost to Mrs. Beltz.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1849), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE

The purpose of the bill is to authorize and direct the Secretary of the Interior to issue a patent to Mrs. William E. Beltz to the lands upon which her late husband filed a homestead entry. Mr. Beltz had not brought the entry to the point of completion where existing law would confer upon Mrs. Beltz the rights of a person succeeding to the entry of a deceased entryman. In consideration of the bill Senator GRUENING advanced a rule of reason and equity, which the committee adopted, for deciding the course to follow for this type of case.

NEED

William E. Beltz, Alaska born of Eskimo stock, was the first president of the senate in the new State of Alaska, a post to which he was unanimously elected and occupied when an incurable brain tumor swiftly overcame him. The father of four children, the oldest only 6 at the time of his untimely passing, with his wife, he was engaged in perfecting his homestead entry, as well as serving in the Alaska Senate and in numerous public activities. It was this disabling illness and this alone which nullified his efforts.

In view of the circumstances the committee concluded that reason and equity in this case demonstrated the need for this act.

COSTS

There are no costs to the Government.

AMENDMENTS

The first and third amendments prescribe that the Secretary shall issue the patent to the land to Mrs. Beltz. Inasmuch as Mrs. Beltz has carried forward the agricultural development of the land these amendments propose that the patent be issued under the Homestead Act.

The second amendment, relating to the reservation of the mineral rights, applies the principle used in similar conveyances.

The bill (S. 3615) to authorize the Housing and Home Finance Administrator to provide additional assistance for the development of comprehensive and coordinated mass transportation systems, both public and private, in metropolitan and other urban areas, and for other purposes, was announced as next in order.

The **PRESIDING OFFICER.** Is there objection to the present consideration of the bill?

Mr. MANSFIELD. I ask that the bill go over.

The **PRESIDING OFFICER.** The bill will go over.

BILL PASSED OVER

The bill (S. 3389) to promote the foreign commerce of the United States through the use of mobile trade fairs, was announced as next in order.

The **PRESIDING OFFICER.** Is there objection to consideration of the bill?

Mr. MANSFIELD. I ask that the bill go over.

The **PRESIDING OFFICER.** The bill will be passed over.

APPOINTMENT OF JUDGES FOR COURTS IN THE DISTRICT OF COLUMBIA

The bill (S. 3428) relating to the appointment of judges to the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia and the juvenile court of the District of Columbia was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

> *Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled,* That (a) the second sentence of the first section of the Act entitled "An Act to consolidate the Police Court of the District of Columbia and the Municipal Court of the District of Columbia, to be known as 'The Municipal Court for the District of Columbia', to create 'The Municipal Court of Appeals for the District of Columbia', and for other purposes", approved April 1, 1942 (56 Stat. 190; D.C. Code, sec. 11-752), as amended, is amended to read as follows: "The court shall consist of a chief judge and fifteen associate judges appointed by the President with the advice and consent of the Senate."
>
> (b) The third sentence of section 6 of such Act, as amended (D.C. Code, sec. 11-771), is amended to read as follows: "The said court shall consist of a chief judge and two associate judges appointed by the President with the advice and consent of the Senate, two of whom shall constitute a quorum."
>
> SEC. 2. (a) Subsection (a) of section 19 of the Juvenile Court Act of the District of Columbia, approved June 1, 1938 (52 Stat. 601; D.C. Code, sec. 11-920), as amended, is amended by striking out "three judges" and inserting in lieu thereof the following: "a chief judge and two associate judges".
>
> (b) Subsection (c) of section 19 of such Act is amended by striking out the first sentence thereof.
>
> SEC. 3. Nothing contained in any amendment made by this Act shall be construed as affecting any appointment or designation as a judge or chief judge of the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia, or the juvenile court of the District of Columbia made prior to the date of enactment of this Act.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1851), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The purpose of this bill is to amend existing law relating to the appointment of judges to the municipal court, the municipal court of appeals, and the juvenile court of the District of Columbia, so as to remove the ambiguity that now exists in the law and to make it perfectly clear that the designation of the chief judges of the aforementioned courts shall be made by the President with the advice and consent of the Senate.

Since the enactment of the present law on the composition of the municipal court and the municipal court of appeals in 1942 (Public Law 512, 77th Cong.), the procedure of long standing has been for the President to forward the designation of the chief judge to the Senate for approval. Although this was the practice for almost two decades, the Justice Department in a letter dated October 1, 1961, advised the chairman of the Senate Committee on the District of Columbia of the Attorney General's intention to deviate from such procedure and recommend that the President merely designate a chief judge without submitting the designation to the Senate for approval. In accordance with this announced intention, the President, without soliciting Senate confirmation, designated the Honorable Andrew Hood to be the chief judge of the municipal court of appeals for the District of Columbia.

In support of its legal interpretation in this matter, the Justice Department concluded that Public Law 512 (77th Cong.) does not require the Senate's approval for the designation by the President of a chief judge to the municipal court and the municipal court of appeals for the District of Columbia, but rather the plain language of the statute authorizes the appointment of a given number of judges with Senate approval, and thereafter authorizes the President to choose one of them to act as chief judge without the necessity of Senate approval.

Contrary to the Justice Department's legal interpretation of the statute, the American Law Division of the Library of Congress, in a memorandum opinion to the committee dated February 13, 1962, came to a completely opposite legal decision in the matter, concluding that the designation of a chief judge by the President under the purview of Public Law 512 requires the approval of the Senate. In formulating its decision in this regard, the American Law Division relied on the legislative history of the existing statute and in connection therewith stated the following in the aforementioned memorandum:

"The above review of the legislative history of Public Law 512 strongly indicates that as regards the municipal court of appeals the offices of chief judge and of associate judges are to be considered as distinct and that the President's designation of a nominee as chief judge is to be made at the time of nomination and hence that an appointment to that office must receive the consent of the Senate. The original bill clearly provided that the chief judge and the associate judges were to be appointed as such by the President with the consent of the Senate. The bill as adopted is ambiguous, but was not intended to effect any change from the original bill in this regard. In addition, the bill as adopted clearly distinguishes between the chief judge and the associate judges as regards their initial appointments. The chief judge is to be appointed for 10 years while the associate judges are to be appointed for 8 and 6 years each. The act gives the President no authority to remove a chief judge during his term and to designate another judge as chief judge in his stead."

In addition to relying heavily on the legislative history of the public law, the American Law Division in formulating its decision also gave weighty consideration to the possibility of diminished compensation of the chief judge that could occur where the designation is not approved by the Senate for a definite time period. In this connection the memorandum opinion stated:

"It should be noted that Public Law 512 both as originally adopted and as amended provides that the chief judges of both courts shall receive a compensation $500 higher than that provided for the associate judges of their courts. It would therefore be extraordinary for the act also to be interpreted as meaning that the persons designated as chief judge shall serve as such at the pleasure of the President. Article III, section 1, of the Constitution provides, for example, that the compensation of Federal judges shall not be diminished during their continuance in office. That article of course applies only to "constitutional courts" whose judges serve during good behaviors, but it evidences a tradition that no one shall be in a position to influence judges through possession of power to reduce their compensation. Interpreting Public Law 512 to mean that the President may designate an individual as chief judge without consent of the Senate leaves open the question of the term for which the designation may be made and may give rise to a situation where the President is asserted to have the power to terminate the designation at his pleasure, thereby giving the President a power as regards District of Columbia courts that he may not constitutionally possess as regards article III courts. If it had been the intention of Congress in enacting Public Law 512, it surely would have been spelled out clearly in the act."

It is the belief of this committee that from the divided legal opinions rendered by the Department of Justice and the American Law Division of the Library of Congress an ambiguity exists in the language of Public Law 512 relating to the appointment of the chief judges of the municipal courts for the District of Columbia. Accordingly, the committee is of the view that the procedures to be followed in appointing the chief judges to the various courts of the District of Columbia should be made clear. This bill, if enacted, would remove the ambiguity that now exists in the statutes and make it perfectly clear that the designation of the chief justices of the municipal court, the municipal court of appeals, and the juvenile court must be with the advice and consent of the Senate.

The bill also provides that any appointment or designation as a judge or chief judge of the municipal court for the District of Columbia, the municipal court of appeals for the District of Columbia, or the juvenile court of the District of Columbia made prior to the date of enactment of the measure, shall not be affected.

The committee is informed that the Justice Department does not oppose the enactment of this legislation.

RAILROAD UNEMPLOYMENT INSURANCE ACCOUNT

The bill (S. 3529) to amend the Manpower Development and Training Act of 1962 with regard to reimbursement of the railroad unemployment insurance account was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That subsection (h) of section 203 of the Manpower Development and Training Act of 1962 is amended, effective March 15, 1962, by inserting "(1)" after the subsection designation, and by adding at the end of such subsection the following new paragraph:

"(2) If unemployment benefits under the Railroad Unemployment Insurance Act are paid to a person taking training under this Act and eligible for a training allowance, the railroad unemployment insurance account in the unemployment trust fund shall be reimbursed, from funds herein appropriated, for all of such benefits paid prior to July 1, 1964, and for 50 per centum of the amount of such benefits paid on or after that date. The amount of such reimbursement shall be determined by the Secretary of Labor on the basis of reports furnished to him by the Railroad Retirement Board and such amount shall then be placed in the railroad unemployment insurance account."

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1853), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

The purpose of the bill is to direct that the Railroad Retirement Board shall be reimbured for all unemployment compensation payments made by it to persons taking training under the Manpower Development and Training Act of 1962 (Public Law 87–415; 76 Stat. 23) and eligible for training allowances thereunder. The act provides for reimbursement in compensation cases to any State making such payments, and it is the object of this bill to make identical provision for reimbursement in the case of railroad unemployment benefits paid out of the railroad unemployment insurance account. Reimbursement would be authorized for all payments made prior to July 1, 1964, and for 50 percent of payments paid on or after that date.

BILLS PASSED OVER

The bill (S. 2937) to amend the Civil Service Retirement Act so as to provide for increases in annuities, eliminate the option with respect to certain survivor annuities, and provide for interchange of credits between civil service retirement system and the insurance system established by title II of the Social Security Act, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. I ask that the bill go over. It is not calendar material.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3164) to amend the Civil Service Retirement Act so as to increase, in the case of children attending school, from 18 to 21, the maximum age for receiving benefits under such act was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

ALTERNATE REPRESENTATION OF SECRETARIAL OFFICERS, MIGRATORY BIRD CONSERVATION COMMISSION

The bill (S. 3504) to provide for alternate representation of secretarial officers on the Migratory Bird Conservation Commission, and for other purposes, was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That section 2 of the Migratory Bird Conservation Act (16 U.S.C. 715a) is amended by inserting, immediately after the first sentence, the following new sentence: "Each of the aforesaid Secretaries may designate the Under Secretary or an Assistant Secretary of his department as his alternate with authority to represent him and to consider and pass upon matters before the said Commission."

SEC. 2. Section 18 of the aforesaid Act (16 U.S.C. 715q) is hereby amended by striking out "commission" and inserting in lieu thereof "commission" and by striking out "$5,000" and inserting in lieu thereof "$10,000".

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1856), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

The Migratory Bird Conservation Commission was created by section 2 of the Migratory Bird Conservation Act (act of Feb. 18, 1929, 45 Stat. 1222). This act in effect was amended in 1939 by Reorganization Plan No. II, which transferred functions of the Secretary of Agriculture relating to the conservation of wildlife, game, and migratory birds to the Secretary of the Interior, and provided that the Secretary of the Interior shall be secretary of the Migratory Bird Conservation Commission in lieu of the Secretary of Agriculture. In other respects the original composition of the Commission was retained.

In addition to the two Cabinet members (the Secretary of Agriculture and the Secretary of the Interior) mentioned, the Commission consists of the Secretary of Commerce, two Members of the Senate selected by the President of the Senate, two Members of the House of Representatives selected by the Speaker. The statute also provides for representation on the Commission by a State official during consideration and voting on all questions relating to the acquisition of any areas of land and water in his State.

The Commission is authorized to approve areas of land and water for purchase or rental by the Secretary of the Interior, and is required through its Chairman, to make a detailed annual report to Congress on its operations.

Senator HRUSKA and METCALF presently represent the U.S. Senate on the Commission. The Members from the House of Representatives are Congressmen GAVIN and KARSTEN.

PURPOSE OF THE BILL

At a Commission meeting June 27, 1962, the Secretary of the Interior informed the Senate and House of Representative Members that, after an investigation that he had made, he had determined, through studying a 1954 opinion by the Solicitor of his Department that he was authorized to designate anyone to appear and represent him on the Commission.

On the basis of that Solicitor's 1954 opinion the congressional members of the Commission feel that the Migratory Bird Conservation Act (16 U.S.C. 715a) should be amended. They believe, and your committee concurs, that the decisions to spend the money, $105 million collected through "duck stamp" sales should be made on a relatively high level. The four Members of Congress take the position that the conservationists of this country who made possible the "duck stamp" program felt that they were giving the trustee responsibilities to the Secretary of the Interior, the Secretary of Commerce, and the Secretary of Agriculture.

There has been difficulty, at times, in getting a quorum at Commission meetings due to the heavy demands upon the time of Cabinet members.

S. 3504 would provide that the Secretaries may designate the Under Secretary or an Assistant Secretary from their departments, as alternates if they are unable to attend.

Section 18 of the Migratory Bird Conservation Act would be amended to increase the $5,000 authorization in the original act to $10,000. There is going to be an accelerated wetlands program under the 1961 act. This money would cover expenses for the members of State fish and game commissions and others who come to give the Commission information and facts that they need to know about the land they are acquiring.

STUDIES OF THE GENETICS OF SPORT FISHES

The Senate proceeded to consider the bill (S. 1542) to authorize the Secretary of the Interior to conduct studies of the genetics of sport fishes and to carry out selective breeding of such fishes to develop strains with inherent attributes valuable in programs of research, fish hatchery production and management of recreational fishery resources, which had been reported from the Committee on Commerce, with amendments, on page 2, after line 7, to strike out:

SEC. 2. For the purpose of carrying out the provisions of this Act, the Secretary of the Interior is authorized (1) to acquire suitable lands and water rights, to construct or otherwise acquire laboratory or other buildings and structures, to acquire equipment and apparatus and to employ necessary personnel; (2) to cooperate with State and other institutions and agencies upon such terms and conditions as may be appropriate; (3) to make public the results of research and experiments conducted pursuant to the first section of this Act; and (4) to propagate, maintain, and distribute such genetically improved or stabilized strains of fishes as may be developed by the authorized program of selective breeding.

And, in lieu thereof, to insert:

SEC. 2. That for the purpose of carrying out the provisions of this Act, the Secretary of the Interior is authorized—

(a) to acquire in such manner as he shall consider to be in the public interest land and interests in land including but not limited to water rights; to construct or acquire otherwise laboratory or other buildings and structures; to acquire equipment and apparatus; and to employ necessary personnel;

(b) to cooperate with States and with other agencies and institutions upon such terms and conditions as he may consider to be appropriate and in the public interest;

(c) to make public the results of research and experiments conducted pursuant to this Act; and

(d) to propagate, maintain, and distribute to cooperating States and other agencies such genetically improved or stabilized strains of fishes as may be developed pursuant to this Act.

So as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Interior is hereby authorized and directed to establish a fishery research laboratory or laboratories to conduct basic studies of the genetics of sport fishes and to carry out selective breeding programs directed toward the development of strains of fishes having inherent physical characteristics or physiological reactions of specific or general value to the constructive management of the recreational fisheries and to the guiding and implementing functions of research and fish hatchery production.

SEC. 2. That for the purposes of carrying out the provisions of this Act, the Secretary of the Interior is authorized—

(a) to acquire in such manner as he shall consider to be in the public interest land and interests in land including but not limited to water rights; to construct or acquire otherwise laboratory or other buildings and structures; to acquire equipment and apparatus; and to employ necessary personnel;

(b) to cooperate with States and with other agencies and institutions upon such terms and conditions as he may consider to be appropriate and in the public interest;

(c) to make public the results of research and experiments conducted pursuant to this Act; and

(d) to propagate, maintain, and distribute to cooperating States and other agencies such genetically improved or stabilized strains of fishes as may be developed pursuant to this Act.

SEC. 3. There are hereby authorized to be appropriated such sums as may be necessary to carry out the provisions of this Act: *Provided,* That no more than $2,500,000 shall be appropriated for this purpose in any one fiscal year.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I ask unanimous consent to have printed in the RECORD an excerpt from the report (No. 1857), explaining the purposes of the bill.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

PURPOSE OF THE BILL

S. 1542, as amended, would authorize studies by the Department of the Interior, of sport fishes and direct it to carry on valuable research programs relating to selective fish breeding.

The Bureau of Sports Fisheries and Wildlife, Department of the Interior, has this to say in its testimony in support of S. 1542:

"The Department has submitted to the Committee on Interstate and Foreign Commerce a favorable report on S. 1542 (H.R. 7826), and has recommended several perfecting amendments of a clarifying nature.

"We believe the type of study proposed in this legislation will be highly beneficial. In the past, our scientists and those of other agencies have tried in many ways to better the recreational fishery resources of the United States. We have regulated the catch to save fish for more anglers, and have planted fish from hatcheries to increase the number available in the streams, lakes, ponds, and reservoirs. We have tried to improve the environments in these waters so that fish have a better chance to survive, and we have even tried to give them better feeding areas and spawning places.

"Except for a few sporadic efforts, we have not yet tried to improve the fish themselves into hardier, healthier, longer-lived strains. Until we undertake this line of work, we are not doing our utmost to meet the recreational fishing demands which are already upon us.

"Our own limited studies have indicated that by breeding and rearing fish specifically for the streams in which they are to live, and for the natural conditions they will face, we can have better fish survival and the angler will have more attractive fish to catch.

"Greater economy in fish production at hatcheries will come from developing genetically stable strains of fish suitable for artificial rearing. Much progress has been made in this direction by the feeding of low-cost foods, but more progress will come by rearing fish better able to utilize those foods. Disease resistance is another asset which must be developed and fixed in strains of hatchery fish reared under crowded conditions. Brood stock having high fecundity and good egg viability is also desired. Properly organized studies on genetics of fish will help us to develop fish breeding lines for these various purposes. It is entirely possible that with these strains, and through the use of fish hybrids, we can rear fish economically for the put-and-take angler who is becoming increasingly common."

In support of the bill, Senator J. J. HICKEY, of Wyoming, stated—

"The tourist industry in Wyoming and throughout the Rocky Mountain West has increased in magnitude over the years and it is anticipated that the recreational facilities of these States will need to be increased during the coming years to provide for the growth of this industry. The additional requirements for game fish in supplying the needs of this industry have become a problem of significant magnitude, and the passage of this bill, S. 1542, would assist in obtaining better breeds of fish and enhance the fish hatchery production for this recreational industry."

Gov. Jack Gage, of Wyoming, expressed the views of Wyoming State agencies in the following manner:

"We are of the opinion that the establishment of a research unit in the area would be of great benefit to the Rocky Mountain region, especially in research in trout. The scientific research such a unit could provide would be of inestimable value."

In the long run this bill should save the taxpayers money. It is a well-known fact that a large percentage of fish placed in the streams by fish hatcheries die before they become acclimated to their new surroundings. The result is that a greater number of fish must be planted in order to meet the healthier, hardier strains of fishes, not only will this problem be overcome to a great extent but the pleasure derived by the fisherman in having to exert greater efforts in landing his catch will be magnified.

COSTS

The Department of the Interior made the following estimate of funds required for research in genetics and selective breeding:

"Although no funds are presently available or budgeted for research in genetics and selective breeding, such work is included in our plans as a major function of our fishery research program. Initial studies will concentrate on the rainbow trout, a logical choice because of its wide distribution, great popularity, importance in production of Federal, State, and private hatcheries, and adaptability to culture. We anticipate that at a site affording a water supply of the required temperature, volume, and quality, the primary experimental facilities for rearing and testing hundreds of separate small lots of rainbow trout will be built. Costs of major facilities for rainbow trout research, estimated at approximately $1 million, will be divided between 2 or perhaps 3 fiscal years. Concurrently, a permanent staff of about 10 professional and 12 supporting personnel would be assembled. The professional team would include personnel trained in fishery biology, genetics, pathology, serology, physiology, and related disciplines. Annual costs, salaries, and expenses of this program probably will reach the $200,000 level in about 4 years.

"Subsequent expansion of the scope of the genetics and selective breeding to include important warm-water species will benefit from experience gained in the early trout studies and will be facilitated by the results of cultural-methods research now underway. This bill provides for a maximum appropriation of $2,500,000 in any one fiscal year. We believe that full development of the planned program can be accomplished within this limitation."

BILLS PASSED OVER

The bill (H.R. 1171) to assure continued fish and wildlife benefits from the national fish and wildlife conservation areas by authorizing their appropriate incidental or secondary use for public recreation to the extent that such use is compatible with the primary purposes of such areas, and for other purposes, was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. Over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 103) to authorize the Secretary of the Interior to construct, operate and maintain the Auburn-Folsom south unit, American River Division Central Valley project, California, under Federal reclamation law was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. I ask that the bill go over.

The PRESIDING OFFICER. The bill will be passed over.

The bill (S. 3517) to authorize the Secretary of Commerce to establish and carry out a program to promote the flow of domestically produced lumber in commerce was announced as next in order.

The PRESIDING OFFICER. Is there objection to the present consideration of the bill?

Mr. MANSFIELD. Over.

The PRESIDING OFFICER. The bill will be passed over.

STATUE OF EUSEBIO FRANCISCO KINO

The joint resolution (H.J. Res. 439) authorizing the State of Arizona to place in the Statuary Hall collection at the United States Capitol the statute of Eusebio Francisco Kino was considered, ordered to a third reading, read the third time, and passed.

FUNERAL EXPENSES OF THE LATE SENATOR DWORSHAK, OF IDAHO

The resolution (S. Res. 365) to pay certain funeral expenses of the late Senator Henry C. Dworshak, of Idaho was considered and agreed to, as follows:

Resolved, That the Secretary of the Senate is hereby authorized and directed to pay from the contingent fund of the Senate the actual and necessary expenses incurred by the committee appointed to arrange for and attend the funeral of the Honorable Henry C. Dworshak, late a Senator from the State of Idaho, on vouchers to be approved by the chairman of the Committee on Rules and Administration.

PRINTING AS A SENATE DOCUMENT STUDY ENTITLED "TRIAL PROGRAM OF PUBLIC LAND RANGE APPRAISAL"

The resolution (S. Res. 367) authorizing the printing as a Senate document of a study entitled "Trial Program of Public Land Range Appraisal," was considered and agreed to, as follows:

Resolved, That there be printed as a Senate document a study entitled "Trial Program of Public Land Range Appraisal", prepared at the request of the Senate Committee on Appropriations by the Department of Agriculture and the Department of the Interior.

ELECTION OF SENATE MEMBER TO THE JOINT COMMITTEE ON THE LIBRARY

The resolution (S. Res. 372) electing a member on the part of the Senate to the Joint Committee on the Library was considered and agreed to, as follows:

Resolved, That Mr. BOTTUM be, and is hereby, elected a member on the part of the Senate of the Joint Committee on the Library, vice Mr. PEARSON.

ADDITIONAL COPIES OF HEARINGS ON IMPORTS AND EXPORTS

The concurrent resolution (H. Con. Res. 500) authorizing the printing of additional copies of parts 2, 3, 6, and 7 of the hearings held before the Committee on Education and Labor on the impact of imports and exports was considered and agreed to.

PRINTING AS HOUSE DOCUMENT REPORT OF JOINT COMMITTEE ON ARRANGEMENTS TO COMMEMORATE THE 100TH ANNIVERSARY OF THE FIRST INAUGURAL OF ABRAHAM LINCOLN

The concurrent resolution (H. Con. Res. 503) to authorize the printing as a House document the report of the Joint Committee on Arrangements to Commemorate the 100th Anniversary of the First Inaugural of Abraham Lincoln was considered and agreed to.

Mr. MANSFIELD. That completes the call of the calendar.

EDUCATIONAL AND TRAINING FILMS FOR USE BY DEAF PERSONS

Mr. MUSKIE. Mr. President, I move that the Senate proceed to the consideration of S. 2511.

The PRESIDING OFFICER. The bill will be stated by title for the information of the Senate.

The LEGISLATIVE CLERK. A bill (S. 2511) to provide for the production and distribution of educational and training films for use by deaf persons, and for other purposes.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Maine.

The motion was agreed to; and the Senate proceeded to the consideration of the bill, which had been reported from the Committee on Labor and Public Welfare with amendments on page 2, at the beginning of line 1, to strike out "That" and insert ""That""; after line 17, to insert:

(b) Paragraphs (4), (5), and (6) of section 3(b) of such Act are redesignated as paragraph (5), (6), and (7), respectively, and there is inserted after paragraph (3) the following:

"(4) provide for the conduct of research in the use of educational and training films for the deaf, for the production and distribution of training films for the deaf, and for the training of persons in the use of films for the deaf."

And on page 3, line 4, to strike out "(b)" and insert "(c)", so as to make the bill read:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) the first section of the Act entitled "An Act to provide in the Department of Health, Education, and Welfare for a loan service of captioned films for the deaf", approved September 2, 1958 (72 Stat. 1742), is amended to read as follows:

"That the objectives of this Act are—

"(a) to promote the general welfare of deaf persons by (1) bringing to such persons understanding and appreciation of those films which play such an important part in the general and cultural advancement of hearing persons, (2) providing, through these films, enriched educational and cultural experiences through which deaf persons can be brought into better touch with the realities of their environment, and (3) providing a wholesome and rewarding experience which deaf persons may share together; and

"(b) to promote the educational advancement of deaf persons by (1) carrying on research in the use of educational and training films for the deaf, (2) producing and distributing educational and training films for the deaf, and (3) training persons in the use of films for the deaf."

(b) Paragraphs (4), (5), and (6) of section 3(b) of such Act are redesignated as paragraphs (5), (6), and (7), respectively, and there is inserted after paragraph (3) the following:

"(4) provide for the conduct of research in the use of educational and training films for the deaf, for the production and distribution of training films for the deaf, and for the training of persons in the use of films for the deaf."

(c) Section 4 of such Act is amended to read as follows:

"Sec. 4. There are hereby authorized to be appropriated for each fiscal year such funds as may be necessary to carry out the objectives of this Act."

The PRESIDING OFFICER. The question is on agreeing to the amendments.

The amendments were agreed to.

The bill was ordered to be engrossed for a third reading, read the third time, and passed.

Mr. MANSFIELD. Mr. President, I wish to extend my congratulations to the distinguished Senator from Maine [Mr. Muskie], and the distinguished Senator from Rhode Island [Mr. Pell] for the outstanding work they have done on this matter and the initiative and enthusiasm they have shown. They are to be commended. Certainly, I am grateful for their taking the initiative in this matter.

Mr. MUSKIE. I thank the majority leader for his generous comments. I ask unanimous consent that there may be inserted at this point in the Record an explanation of the bill.

There being no objection, the explanation was ordered to be printed in the Record, as follows:

Explanation

The bill, S. 2511, as reported by the committee, would amend Public Law 85–905, that established a loan service of captioned films for the deaf in the Department of Health, Education, and Welfare. The bill would delete the existing ceiling of $250,000 on appropriations for the captioned films for the deaf program and authorize the Secretary of Health, Education, and Welfare to provide for:

(a) the conduct of research in the use of educational and training films for the deaf;

(b) the production and distribution of training films for the deaf; and

(c) the training of persons in the use of films for the deaf.

These new authorities and the increased level of funds that could be made available would permit a significant expansion in the library of captioned films for the deaf. The films themselves would improve in quality and in usefulness through the newly authorized program of research in captioned films for the deaf. The training of personnel in the use of these films would further enhance their value in educating and training the deaf.

Regional distribution centers for the captioned films for the deaf could be established to provide for the most efficient distribution of the greatly increased library of films.

The new responsibilities that would be carried out through the captioned films program would include special programing for curricula in the education of the deaf. Research that would be pursued under the new authorities of the bill would relate to: (1) selection and utilization of electromechanical devices related to filmed materials; (2) development and validation of film programs and procedures; and (3) the application and integration of such devices and materials into existing and planned curricula.

The level of Federal funds that would be available under the expanded program of captioned films for the deaf would be determined on an annual basis by the Congress.

Although the present program of captioned films for the deaf is limited to $250,000 per year, the Federal Government appropriates sums considerably in excess of this amount in behalf of educational and recreational materials for those afflicted by blindness. In 1962, for example, a total of $1,800,000 was appropriated for the talking books program administered by the Library of Congress and an additional $670,000 was appropriated for the production and distribution of braille textbooks and other educational materials by the American Printing House for the Blind.

Hearings

Testimony in favor of the enactments of S. 2511 was presented on August 7, 1962, by representatives of such organizations and associations as the Conference of Executives of American Schools for the Deaf, the Council for Exceptional Children, the Convention of American Instructors of the Deaf, and the National Association of the Deaf.

Mr. MUSKIE. Mr. President, I ask unanimous consent that a copy of my statement before the Committee on Labor and Public Welfare on the bill be printed in the Record at this point.

There being no objection, the statement was ordered to be printed in the Record, as follows:

Mr. Chairman, I have had a long and continuing interest in the new and revolutionary techniques which are being introduced into educational programs. The more I have studied the potential of new methods, particularly audiovisual aids, the more I have become convinced of the tremendous possibilities of this method in teaching the deaf.

Last year in testimony before the Senate Appropriations Committee I indicated my belief in the favorable impact an improved captioned films program would have on the welfare of this group of handicapped persons.

I would like to state that, with an additional year of experience in the present program, I am even more convinced of the necessity for this amendment.

The need for expanded educational opportunities for the deaf increases and the time has arrived to take some positive action to assist these handicapped persons.

In considering this legislation, we should look at the Federal program for the blind. The existing inequality between that program and the captioned films for the deaf program is clearly evident.

At the present time, the captioned films for the deaf program has a limited annual budget of $250,000. This represents $1 for each deaf person in the United States.

Compared with this sum, the talking books for the blind program in 1962 served 350,000 individuals at a cost of approximately $1,800,000, or a little over $5 for each blind person. The talking books program has an unlimited budget. In addition to Federal assistance, there are many charitable organizations, such as Columbia Lighthouse for the Blind, which are concerned with the special problems of the blind.

I in no way want to imply that assistance to the blind should be curtailed. I merely wish to indicate the wide gap between the two programs.

Enactment of S. 2511 would help to narrow the present inequity in assistance given to these two groups of handicapped individuals.

Under the present captioned films program, some 650 groups of deaf persons utilize the film distribution services. This figure is less than 10 percent of the total deaf population of approximately 250,000.

Currently the program has a mere 14 educational subjects, and some of these are actually more documentary than educational. The remaining subjects are solely entertainment by nature.

Commercial firms are not interested in producing captioned films because of the limited market. They are also not interested in exploring new techniques in the use of films for this special group. The film industry is not in a position to promote teacher training in more effective use of the films.

The present act contains no provision for research or for training personnel who teach the deaf. These are critical and important areas which are forced to go neglected because of narrow budget limitations.

Unique educational problems are involved in teaching a person handicapped by deafness. This student requires better visual materials and more adequately trained teachers.

Teachers of the deaf are faced with unusual problems not always fully realized or understood by the lay public. A child who is either born deaf or rendered deaf at a very early age is inflicted with a double burden to bear throughout life. There is no normal way for such a child to learn how to communicate because sounds have no meaning for him.

By expanding the present captioned films programs, it will be possible to enrich the lives of many more thousands of deaf children and adults. In considering this amendment, we must remember that the Nation benefits as well as the handicapped individual.

In fiscal year 1961, the appropriation for this program was only $185,000. In fiscal year 1962, the Senate saw fit to increase that amount to $250,000. This is the ceiling which has been placed on Public Law 85–905.

S. 2511 would amend Public Law 35–905 and would remove the $250,000 annual appropriation limitation.

The bill would permit the Federal Government to assume responsibility for the production of captioned films for the deaf.

It would authorize research in the use of education and training film for the deaf and would provide for training of persons in the use of those films.

Mr. Chairman, I sincerely believe that the proposed expansion of the existing program is important to the welfare and intellectual development of this group of American citizens. And as we all know, when better opportunities are afforded for educational advancement, better citizenship results.

I strongly urge the committee to take immediate and favorable action in regard to S. 2511.

ORDER OF BUSINESS

Mr. KEATING. Mr. President, I have a question regarding another bill on the calendar in which I am particularly interested. It is Calendar No. 973, H.R. 10. I should like to inquire when we might expect that the bill will be called up for consideration. It passed the House on three occasions by practically a unanimous vote, and was favorably reported by the Senate Committee on Finance in the 86th Congress by a vote of 12 to 5, and in the first session of the 87th Congress by a vote of 14 to 3. It seems to be picking up some ground in the Senate.

I have long been interested in this legislation both in the other body and here. Millions of American citizens are urging action and I strongly believe that they are entitled to it. It is only natural that the 9 million self-employed of the country and their 10 million employees should be interested in H.R. 10 because it has a direct effect on the standard of living which they may expect in their later years. The self-employed cannot look forward to their retirement with the same sense of security as do the approximately 31 million Americans who are covered by private and public retirement plans. H.R. 10 is of paramount importance to these 19 million Americans, and I believe it imperative that we act on this bill whose merit is beyond question and whose passage is long overdue.

I have an interest in the bill. Millions of American citizens are urging action. I strongly believe they are entitled to it. I wish to inquire of the distinguished Senator from Montana whether we may expect that it will be programed shortly.

Mr. MANSFIELD. While it will not be programed shortly, it will be programed at an appropriate time.

Mr. KEATING. I thank the Senator, although that does not give me too great hope of action soon.

AMENDMENT OF SECTION 9(a) OF THE TRADING WITH THE ENEMY ACT

Mr. KEATING. Mr. President, may I ask that H.R. 3460, which passed the House of Representatives today, be laid before the Senate?

Mr. MANSFIELD. Mr. President, reserving the right to object, I should like to hear what the bill provides.

The PRESIDING OFFICER. The bill will be stated by title.

The **Legislative Clerk.** A bill (H.R. 3460) to amend section 9(a) of the Trading With the Enemy Act, as amended.

Mr. KEATING. Mr. President, I object to a second reading of the bill.

The PRESIDING OFFICER. Under rule XIV, the bill will go over until tomorrow.

Mr. KEATING. Mr. President, a parliamentary inquiry.

The PRESIDING OFFICER. The Senator from New York will state it.

Mr. KEATING. Will the bill be taken up in the morning hour tomorrow?

The PRESIDING OFFICER. During the morning hour, the bill will be laid before the Senate for a second reading.

Mr. KEATING. I thank the Chair.

COMMITTEE MEETING DURING SENATE SESSION

Mr. DIRKSEN. Mr. President, I ask unanimous consent that the Committee on the Judiciary be permitted to meet during the session of the Senate tomorrow.

Mr. MORSE. I object.

The PRESIDING OFFICER. Objection is heard.

INTERSTATE COMMERCE ACT THROUGH ROUTES AND JOINT RATES

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of Calendar No. **1756**, **H.R. 11643**, which was considered earlier but held up briefly. Now it has been cleared.

The PRESIDING OFFICER. The bill will be stated by title.

The **Legislative Clerk.** A bill (H.R. 11643) to amend section **216**(c) and **305** (b) of the Interstate Commerce Act, relating to the establishment of through routes and joint rates.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana.

The motion was agreed to; and the Senate resumed consideration of the bill.

The PRESIDING OFFICER. The bill is open to amendment. If there be no amendment to be proposed, the question is on the third reading and passage of the bill.

The bill (H.R. **11643**) was ordered to a third reading, was read the third time, and passed.

Mr. BARTLETT. Mr. President, I desire to express my deep appreciation to the distinguished senior Senator from Delaware [Mr. Williams], who had given consideration to offering an amendment to H.R. 11643, but who later notified the majority leader and me that he did not intend to do so. I am especially grateful because for more than 2 years we have been seeking legislation of this kind, so that certain through routes and joint rates might be established to and from Alaska and Hawaii. Twice before the Senate passed a bill to establish a joint board composed of representatives of the Federal Maritime Commission and the Civil Aeronautics Board. The House of Representatives did not agree that this was the proper procedure that should be followed, and passed the bill which has been before us and was passed only a few minutes ago, permitting the filing of through routes and joint rates with the Interstate Commerce Commission.

The Committee on Commerce thought the need for corrective action was so great that it was decided to acquiesce in the House bill, notwithstanding the fact that the committee felt that the joint board approach might be better, and the Federal Maritime Commission and the Department of Commerce was very decidedly of that opinion.

In essence, the enactment of the bill will permit lower freight rates both to Hawaii and to Alaska. Up until now, it has been possible to file through routes and joint rates via rail and water, but not by motor carrier and water. This procedure will now be permissible, if the bill be enacted.

There was some question on the part of the Hawaii trucking industry, when Hawaii became a State, and the Interstate Commerce Commission made an administrative determination, which emerged as Regulation MC–59, that the Commission would not extend its jurisdiction to the Hawaiian Islands. I am informed that the trucking industry there was fearful that H.R. 11643 might, as it were, permit the Interstate Commerce Commission to come in the back door, and for a time an amendment to the bill was urged, which was before the Commerce Committee in these words:

> The provisions of this subsection shall not be applicable to common carriers by motor vehicle in the State of Hawaii.

Conferences were held with interested individuals and groups, the most recent of them having taken place this afternoon. I had a meeting with representatives from the offices of Senator Long of Hawaii, and Senator Fong. Representative Inouye also attended in person. It was our conclusion that we should try to have the bill pass without amendment, especially in light of the letter written to me on this subject under date of July 19, last, by Rupert L. Murphy, chairman of the Interstate Commerce Commission.

Mr. President, I ask unanimous consent that the letter be printed at this point in my remarks.

There being no objection, the letter was ordered to be printed in the Record, as follows:

Interstate Commerce Commission,
Office of the Chairman,
Washington, D.C., July 19, 1962.

Hon. E. L. Bartlett,
U.S. Senate, Washington, D.C.

Dear Senator Bartlett: This is in response to your recent oral request for the Commission's position on a possible amendment to exclude motor common carriers operating in the State of Hawaii from the application of section 1 of H.R. 11643, as passed by the House of Representatives on June 22, 1962. The language of the amendment, which would be added at the end of section 1, is as follows:

"The provisions of this subsection shall not be applicable to common carriers by motor vehicle in the State of Hawaii."

Section 1 of H.R. 11643 was designed to extend to motor common carriers subject to part II of the Interstate Commerce Act the privilege of joining in through routes and joint rates with water common carriers subject to the jurisdiction of the Federal Maritime Commission on traffic moving between Alaska or Hawaii and the other States. Motor common carriers now operating in Hawaii under the exemption granted by the Commission in Ex Parte No. MC–59, Motor Carrier Operations in the State of Hawaii, 84 M.C.C. 5, are not, of course, subject to part II of the act and they would not therefore, be eligible to enter into such joint arrangements under the provisions of the bill. Thus, even without the amendment, enactment of H.R. 11643 would not affect the status of motor carriers in Hawaii operating under the Ex Parte MC–59 exemption.

Since, as it is generally recognized, conditions in the transportation industry seldom remain static, the inclusion of such an amendment in the bill could, as we see it, operate to the disadvantage of the Hawaiian motor carriers by making the statute too inflexible. If, for example, the Commission should at some future date find, after notice and oportunity for all interested parties to be heard, that it would be in the public interest to revoke the exemption as to some or all of these carriers, the carriers could not participate in through route and joint rate arrangements with water carriers serving Hawaii without further legislative action. Such action is, of course, necessarily time consuming and until actually taken would, during the interim period, deprive the shipping public of the benefits of through routes and joint rates.

All circumstances considered, the Commission would not favor the amendment in question.

Sincerely,

Rupert L. Murphy,
Chairman.

Mr. BARTLETT. Mr. President, Representative Inouye returned only this morning from a trip to Hawaii, where he held meetings with truckers and trucking groups. He told us of their concern; but it is his opinion, after our consultations today, that the trucking industry of Hawaii, in which he takes such a deep interest, will not be adversely affected by the provisions of the bill.

I feel certain that if at any later date the Interstate Commerce Commission should decide to extend its jurisdiction to Hawaii, it would give adequate preliminary notice to the Members of the congressional delegation from Hawaii, to the State government, and to the industry of the island.

I hope and believe that would be the case.

EXECUTIVE SESSION

Mr. MANSFIELD. Mr. President, several nominations are at the desk. If the Senate will concur, I move that the Senate proceed to the consideration of executive business to consider the nominations at the desk.

FEDERAL HOME LOAN BANK BOARD

The **PRESIDING OFFICER.** The first nomination at the desk will be stated.

The legislative clerk read the nomination of John deLaittre, of Minnesota, to be a member of the Federal Home Loan Bank Board for the term of 4 years expiring June 30, 1966, vice Ira A. Dixon.

The **PRESIDING OFFICER.** Without objection, the nomination is confirmed.

Mr. HUMPHREY. Mr. President, it is a real privilege to have this opportunity to express my support for the nomination of John deLaittre as a member of the Federal Home Loan Bank Board.

Mr. deLaittre is one of Minnesota's outstanding leaders in the field of finance, a man who has the respect and friendship of every person of consequence in the housing field in the upper Midwest and, indeed, throughout the country. He has a distinguished record as a civic leader, and is known not only for his high professional attainments, but also for his impressive record of good works for his fellowmen and for the welfare of his community.

I know that Mr. deLaittre is making a considerable sacrifice in agreeing to accept this position, and that he is doing so because of his strong sense of public need and responsibility. Mr. deLaittre is a man of complete probity and integrity, who will serve on the Home Loan Bank Board with honor and distinction.

It gives me great pleasure to have this opportunity to support the nomination of my good and respected friend.

I ask unanimous consent that a biographical sketch of the nominee and a number of letters regarding this nomination be printed at this point in the Record.

There being no objection, the biographical sketch and letters were ordered to be printed in the Record, as follows:

Biographical Sketch of John deLaittre

Born on Nicollet Islands, Minneapolis, Minn., on September 7, 1907, as the son of Karl deLaittre and Rosamond (Kimball Little) deLaittre.

Education: Blake School, Minneapolis, 1915–18, 1920–23; Friends School, Washington, D.C., 1918–19; Milton Academy, Massachusetts, 1923–25; Harvard College, A.B., 1925–29; travel around world, 1929–30; Harvard Law School, LL.B., 1930–33.

Professional: Associated with Minneapolis law firm, Kingman, Cross, Morley, Cant & Taylor, 1933–40; member, Hennepin County and Minnesota Bar Associations.

Banking: Farmers & Mechanics Savings Bank of Minneapolis; assistant treasurer, 1940–42; treasurer, 1942–47; vice president, 1947–57; president, 1957–62; trustee, 1952–62; National Association of Mutual Savings Banks, director, 1952–62; president, 1959–60; National Thrift Committee (Chicago) director and treasurer, 1961–62; International Thrift Institute (Amsterdam), director and vice president, 1960–62; Federal Home Loan Bank Board "Task Force," 1961–62.

Business: Western Oil & Fuel Co., director, 1951–60; Great Northern Insurance Co., director, 1955–62; Title Insurance Co. of Minnesota, director, 1960–62.

Civic and welfare: Pillsbury Settlement House, director and former president; Legal Aid Society, director and former president; War Chest of Minneapolis, director, 1941–45; Community Chest, director, 1948–62; United Fund of Minneapolis, director, 1959–62; United Hospital Fund, director and first vice president, 1957–62; American Red Cross, chairman, Hennepin County Chapter, 1950; assistant to director, Foreign Operations, Washington, D.C., 1943–44; Minnesota Historical Society, president, 1960–62; Minneapolis Foundation, trustee; Minneapolis Society of Fine Arts, trustee; Walker Art Center, trustee; Twin City Area Educational Television Corp., trustee and acting president; Lakewood Cemetery, trustee; Harvard Club of Minnesota, director and former president; Smith College, board of counselors, former member.

Family: Married to Carolyn Erminger of Macon, Ga., and Chicago, in 1934; three daughters: Mrs. Henry A. Pillsbury, San Francisco, Calif.; Mrs. Carolyn deL. Hawley, Santa Barbara, Calif., and Miss Lila deLaittre, enters the Madeira School, Greenway, Va., in September 1962.

Residence: 520 West Ferndale Road (Route 5, Box 56), Wayzata, Minn.

U.S. Savings and Loan League,
Chicago, Ill.,
August 8, 1962.

Hon. A. Willis Robertson,
Chairman, Banking and Currency Committee, Senate Office Building, Washington, D.C.

Dear Chairman Robertson: The officers of the U.S. Savings and Loan League have asked me to communicate to the committee our support of the nomination of John deLaittre as a member of the Federal Home Loan Bank Board. His many years as head of the highly respected Farmers and Mechanics Savings Bank of Minneapolis give him a firsthand knowledge of financial institutions that will be most valuable in his Board service. In numerous important national, State, and local activities he has clearly demonstrated that he has the leadership and executive abilities required for this important assignment. The league will cooperate fully with John deLaittre and the two other distinguished Board members, Joseph McMurray and Joseph Williams.

Some of the financial press have speculated that the appointment of a savings banker to the Federal Home Loan Bank Board is a step in bringing together the savings banks and savings and loan industries or combining their Federal agencies or establishing a new system of federally chartered savings banks. Therefore, we would like to point out that our wholehearted endorsement of Mr. deLaittre is not intended as any endorsement of any proposals with respect to combining the two industries, etc. These are all entirely separate and distinct matters from the appointment of an outstanding and experienced businessman to the Federal Home Loan Bank Board.

Sincerely yours,

Stephen Slipher,
Legislative Director.

National League of Insured
Savings Associations,
Washington, D.C.,
August 9, 1962.

The Honorable A. Willis Robertson,
Chairman, Senate Banking and Currency Committee, Washington, D.C.

Dear Mr. Chairman: It is a privilege to add our hearty endorsement to the nomination of Mr. John deLaittre to serve as a member of the Federal Home Loan Bank Board. Mr. deLaittre by education, experience and temperament is ideally qualified for this very important post and we are hopeful that your committee will report favorably on this nomination.

Sincerely yours,

Bryce Curry,
General Counsel.

Minneapolis, Minn.,
August 8, 1962.

Hon. A. Willis Robertson,
Chairman, Senate Banking and Currency Committee, Washington, D.C.

I am pleased to inform you that the Savings and Loan League of Minnesota at its annual convention last month unanimously and wholeheartedly endorsed the candidate John deLaittre as a member of the Federal Home Loan Bank Board. We consider Mr. deLaittre a man of high character and unusual ability. He has served his community well and would be an extremely fine asset to the bank board. We therefore trust that your committee will grant approval of his appointment.

Vernon F. Welch,
Executive Vice President,
Savings and Loan League of Minnesota.

TOPEKA, KANS.,
August 8, 1962.

A. WILLIS ROBERTSON,
Chairman, Senate Banking Committee,
Senate Office Building, Washington, D.C.

Delighted to indorse nomination for John deLaittre to Federal Home Loan Bank Board

HENRY A. BUBB,
Chairman of Legislative Committee.

U.S. ARMY

The legislative clerk read the nomination of Gen. Maxwell D. Taylor, U.S. Army, to be chairman of the Joint Chiefs of Staff for a term of 2 years.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

The legislative clerk read the nomination of Gen. Earle G. Wheeler, U.S. Army, to be Chief of Staff, U.S. Army, for a term of 2 years.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

ASSISTANT SECRETARY OF THE NAVY

The legislative clerk read the nomination of Victor M. Longstreet, of New Jersey, to be an Assistant Secretary of the Navy.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

ASSISTANT PHYSICIAN TO THE PRESIDENT

The legislative clerk read the nomination of Capt. George G. Burkley, Medical Corps, U.S. Navy, to be assistant physician to the President, for temporary promotion to the grade of rear admiral while serving at the White House.

The PRESIDING OFFICER. Without objection, the nomination is confirmed.

THE NAVY AND MARINE CORPS

The legislative clerk proceeded to read sundry nominations in the Navy and Marine Corps.

Mr. MANSFIELD. Mr. President, I ask that the nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations are confirmed.

THE ARMY

The legislative clerk proceeded to read sundry nominations in the United States Army.

Mr. MANSFIELD. Mr. President, I ask that the nominations be considered en bloc.

The PRESIDING OFFICER. Without objection, the nominations are confirmed.

NOMINATIONS ON THE DESK

The legislative clerk proceeded to read sundry nominations in the Navy and Air Force, which had been ordered to lie on the desk.

Mr. MANSFIELD. I ask that the nominations be confirmed en bloc.

The PRESIDING OFFICER. Without objection, the nominations are confirmed en bloc.

Mr. MANSFIELD. I ask that the President be notified of the nominations which have been confirmed.

The PRESIDING OFFICER. Without objection, the President will be notified.

(For nominations confirmed today, see the end of the Senate proceedings.)

LEGISLATIVE SESSION

Mr. MANSFIELD. Mr. President, I move that the Senate resume the consideration of legislative business.

The motion was agreed to; and the Senate resumed the consideration of legislative business.

ORDER FOR ADJOURNMENT UNTIL NOON TOMORROW

Mr. MANSFIELD. Mr. President, I ask unanimous consent that when the business for today has been completed, the Senate adjourn until 12 o'clock noon tomorrow.

The PRESIDING OFFICER. Without objection, it is so ordered.

ONE MILLIONTH VISITOR TO ALASKA EXHIBIT AT SEATTLE WORLD'S FAIR

Mr. BARTLETT. Mr. President, about an hour or so ago I received a telephone call from Mr. Morris Ford, of Seattle, who is head of the tourist promotion agency of the State of Alaska, and has spent a considerable amount of time in Seattle in the last few months in connection with Alaska's exhibit at the Seattle World's Fair.

Mr. Ford informed me that yesterday a Mrs. Tidwell, of Tigard, Oreg., became the one millionth person to visit the Alaska exhibit—and a very good one, indeed, it is—at the Seattle World's Fair.

She was honored on that occasion, of course. But that will not be all. Tomorrow, Mrs. Tidwell leaves on a trip—a free trip, naturally—to Point Barrow, Alaska; and she will also be an honored guest at the big fair currently being held at Fairbanks, Alaska.

RELEASE OF RIGHT, TITLE, OR INTEREST IN CERTAIN STREETS IN HEYBURN, IDAHO

Mr. MORSE. Mr. President, some minutes ago Calendar No. 1786, Senate bill 2369, to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve was reached on the Legislative Calendar. I asked that the bill go over until the report could be clarified. I pointed out that our calendar clerk was undecided about whether the Morse formula was involved; and I said I wanted to speak to the Senator from Idaho [Mr. CHURCH] about the bill.

I now have talked with the Senator from Idaho [Mr. CHURCH], who assures me that no monetary interest of the Federal Government is involved.

This is an old reclamation project; and I understand the Federal interest was disposed of at the time when the reclamation project was established.

There has been left, however, a cloud on the title to certain streets and alleys; and the title insurance companies want the cloud on the title removed, and feel that it is necessary to have this bill passed, in that connection.

The Senator from Idaho assures me that no monetary interest in behalf of the taxpayers of the United States is involved. If that is true—and I am sure it is—then there is no application of the Morse formula; and therefore I have no objection to passage of the bill.

So, Mr. President, with the consent of the minority leader, I ask unanimous consent that the Senate now proceed to the consideration of Calendar 1786.

The PRESIDING OFFICER. Is there objection?

There being no objection, the bill (S. 2369) to release the right, title, or interest, if any, of the United States in certain streets in the village of Heyburn, Idaho, and to repeal the reverter in patent for public reserve was considered, ordered to be engrossed for a third reading, read the third time, and passed, as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That any right, title, or interest of the United States in and to streets that were dedicated upon the filing of the townsite plat for Heyburn, Idaho, a reclamation townsite established pursuant to the Act of April 16, 1906 (34 Stat. 116), as amended, and that adjoin lands which have been sold, which streets have been vacated, or any street that may hereafter be vacated within the original townsite of Heyburn, Idaho, is hereby released and quitclaimed to the adjoining owners by the United States.

SEC. 2. The clause included in patent numbered 1048499, issued by the United States to the village of Heyburn on July 27, 1931, providing for reversion of title to the United States is hereby repealed, and any right, title, or interest of the United States in and to Lincoln Boulevard or any street hereafter to be vacated within said townsite adjoining the lands described in said patent is hereby released.

ADJOURNMENT

Mr. DIRKSEN. Mr. President, under the order previously entered, I move that the Senate do now adjourn.

The motion was agreed to; and (at 8 o'clock and 2 minutes p.m.) the Senate adjourned, under the order previously entered, until tomorrow, Friday, August 10, 1962, at 12 o'clock meridian.

CONFIRMATIONS

Executive nominations confirmed by the Senate, August 9, 1962:

U.S. ATTORNEY

James P. Alger, of Utah, to be U.S. attorney for the district of Guam for the term of 4 years.

U.S. MARSHAL

James R. Berry, of Pennsylvania, to be U.S. marshal for the western district of Pennsylvania.

U.S. DISTRICT JUDGES

Stanley A. Weigel, of California, to be U.S. district judge for the northern district of California.

Charles H. Carr, of California, to be U.S. district judge for the southern district of California. (A new position.)

FEDERAL HOME LOAN BANK BOARD

John deLaittre, of Minnesota, to be a member of the Federal Home Loan Bank Board for the term of 4 years expiring June 30, 1966.

ASSISTANT SECRETARY OF THE NAVY

Victor M. Longstreet, of New Jersey, to be an Assistant Secretary of the Navy.

U.S. ARMY

Gen. Maxwell D. Taylor, U.S. Army, for appointment as Chairman of the Joint Chiefs of Staff for a term of 2 years.

Gen. Earle G. Wheeler, U.S. Army, for appointment as Chief of Staff, U.S. Army, for a term of 2 years.

Gen. George Henry Decker, U.S. Army, to be placed on the retired list in the grade of general, under the provisions of title 10, United States Code, section 3962.

The following-named officers to be placed on the retired list, in the grades indicated, under the provisions of title 10, United States Code, section 3962:

To be generals

Gen. James Edward Moore, O15650, Army of the United States (major general, U.S. Army).

Gen. Herbert Butler Powell, O16684, Army of the United States (major general, U.S. Army).

To be lieutenant general

Lt. Gen. Thomas John Hall Trapnell, O16782, Army of the United States (major general, U.S. Army).

The following-named officers for appointment in the Regular Army of the United States, to the grade indicated, under the provisions of title 10, United States Code, sections 3284 and 3306:

To be brigadier generals

Brig. Gen. Walter August Jensen, O19006, Army of the United States (colonel, U.S. Army).

Brig. Gen. Joseph Warren Stilwell, O19117, Army of the United States (colonel, U.S. Army).

Brig. Gen. George Thomas Powers 3d, O19137, Army of the United States (colonel, U.S. Army).

Brig. Gen. Samuel Edward Gee, O19251, Army of the United States (colonel, U.S. Army).

Brig. Gen. William Roberts Calhoun, O19256, Army of the United States (colonel, U.S. Army).

Brig. Gen. Edward Spalding Ehlen, O19286, Army of the United States (colonel, U.S. Army).

Brig. Gen. John Andrew Seitz, O30137, Army of the United States (colonel, U.S. Army).

Brig. Gen. Charles Francis Tank, O19350, Army of the United States (colonel, U.S. Army).

Brig. Gen. Kermit LeVelle Davis, O19386, Army of the United States (colonel, U.S. Army).

Brig. Gen. John Farnsworth Smoller, O19416, Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert Hawkins Adams, O19474, Army of the United States (colonel, U.S. Army).

Brig. Gen. Lloyd Elmer Fellenz, O19485, Army of the United States (colonel, U.S. Army).

Brig. Gen. Harry Lester Hillyard, O19524, Army of the United States (colonel, U.S. Army).

Brig. Gen. Charles Edward Johnson 3d, O19534, Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert Carson Kyser, O19535, Army of the United States (colonel, U.S. Army).

Brig. Gen. Harry Jacob Lemley, Jr., O19756, Army of the United States (colonel, U.S. Army).

Brig. Gen. Hugh McClellan Exton, O19780, Army of the United States (colonel, U.S. Army).

Brig. Gen. Durward Ellsworth Breakefield, O19781, Army of the United States (colonel, U.S. Army).

Brig. Gen. Harry Herndon Critz, O19786, Army of the United States (colonel, U.S. Army).

Brig. Gen. Elmer John Gibson, O19822, Army of the United States (colonel, U.S. Army).

Brig. Gen. James Willoughby Totten, O19834, Army of the United States (colonel, U.S. Army).

Brig. Gen. Hamilton Austin Twitchell, O19843, Army of the United States (colonel, U.S. Army).

Brig. Gen. Joseph Rieber Russ, O19860, Army of the United States (colonel, U.S. Army).

Brig. Gen. John Hart Caughey, O19885, Army of the United States (colonel, U.S. Army).

Brig. Gen. Edward William Sawyer, O19918, Army of the United States (colonel, U.S. Army).

Brig. Gen. Norman Basil Edwards, O19936, Army of the United States (colonel, U.S. Army).

Brig. Gen. Frank Joseph Sackton, O30553, Army of the United States (colonel, U.S. Army).

Brig. Gen. Walter Brown Richardson, O30597, Army of the United States (colonel, U.S. Army).

Brig. Gen. Roy Lassetter, Jr., O51714, Army of the United States (colonel, U.S. Army).

Brig. Gen. Bruce Edward Kendall, O30623, Army of the United States (colonel, U.S. Army).

Brig. Gen. Eugene Albert Salet, O30790, Army of the United States (colonel, U.S. Army).

Maj. Gen. Bruce Palmer, Jr., O20117, Army of the United States (colonel, U.S. Army).

Maj. Gen. William Reeves Shuler, O20118, Army of the United States (colonel, U.S. Army).

Maj. Gen. James Benjamin Lampert, O20147, Army of the United States (colonel, U.S. Army).

Brig. Gen. John Edward Kelly, O20156, Army of the United States (colonel, U.S. Army).

Brig. Gen. David Woodrow Hiester, O20191, Army of the United States (colonel, U.S. Army).

Brig. Gen. Selwyn Dyson Smith, Jr., O20194, Army of the United States (colonel, U.S. Army).

Brig. Gen. Howard McCrum Snyder, Jr., O20213, Army of the United States (colonel, U.S. Army).

Brig. Gen. James Edward Landrum, Jr., O20216, Army of the United States (colonel, U.S. Army).

Maj. Gen. William Childs Westmoreland, O20223, Army of the United States (colonel, U.S. Army).

Brig. Gen. Beverley Evans Powell, O20237, Army of the United States (colonel, U.S. Army).

Brig. Gen. Edward Clare Dunn, O20245, Army of the United States (colonel, U.S. Army).

Brig. Gen. Robert George Fergusson, O20267, Army of the United States (colonel, U.S. Army).

Maj. Gen. John Arnold Heintges, O20281, Army of the United States (colonel, U.S. Army).

Maj. Gen. Creighton William Abrams, Jr., O20296, Army of the United States (colonel, U.S. Army).

Lt. Gen. John Hersey Michaelis, O20328, Army of the United States (colonel, U.S. Army).

Brig. Gen. William Pelham Yarborough, O20362, Army of the United States (colonel, U.S. Army).

Brig. Gen. Charles Billingslea, O20367, Army of the United States (colonel, U.S. Army).

Brig. Gen. Benjamin Franklin Evans, Jr., O20368, Army of the United States (colonel, U.S. Army).

U.S. MARINE CORPS

The following-named officers of the Marine Corps for temporary appointment to the grade of major general, subject to qualification therefor as provided by law:

William P. Battell
George H. Cloud
Frank C. Tharin
Lewis J. Fields
Raymond L. Murray
Frederick E. Leek

The following-named officers of the Marine Corps for temporary appointment to the grade of brigadier general, subject to qualification therefor as provided by law:

Joseph L. Stewart
John P. Coursey
Joseph S. Reynaud
William K. Jones
Hugh M. Elwood
Raymond G. Davis
Edward H. Hurst

U.S. NAVY

Capt. George G. Burkley, Medical Corps, U.S. Navy, assistant physician to the President, for temporary promotion to the grade of rear admiral while serving at the White House.

The following-named officers of the line of the Navy for temporary promotion to the grade of rear admiral, subject to qualification therefor as provided by law:

Levering Smith
David Lambert
Horace V. Bird
Frank L. Pinney, Jr.
Lester R. Schulz
Lester S. Chambers
Donald G. Irvine
Marshall W. White
William S. Guest
Edward C. Outlaw
Russell Kefauver
James A. Brown
Paul S. Savidge, Jr.
Francis D. Boyle
John H. McQuilkin
Mason B. Freeman
William F. Petrovic
Norvell G. Ward
Constantine A. Karaberis
Allan F. Fleming
John M. Alford
James W. O'Grady
William F. Bringle

IN THE AIR FORCE

The nominations beginning Roger R. Bate to be permanent professor of the U.S. Air Force Academy, and ending Robert K. Zimmerman to be second lieutenant, which nominations were received by the Senate and appeared in the Congressional Record on August 1, 1962.

IN THE NAVY AND MARINE CORPS

The nominations beginning William R. Walker to be permanent lieutenant commander in the Medical Corps of the Navy, and ending John G. Matlack to be second lieutenant in the Marine Corps, which nominations were received by the Senate and appeared in the CONGRESSIONAL RECORD on July 20, 1962.

EXTENSIONS OF REMARKS

Needed: Simplified Handbook of Farm Laws

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, August 9, 1962

Mr. WILEY. Mr. President, the Nation regrettably has not yet found any "magic formula" for solving the problems in agriculture.

For this year, the outlook is also problematical.

In a broadcast over Wisconsin radio stations, I was privileged to discuss highlights of pending legislation and, as well, make some suggestions which if adopted, would help make existing programs more effective in meeting the challenges of agriculture.

I ask unanimous consent to have excerpts of the address printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

NEEDED: SIMPLIFIED HANDBOOK OF FARM LAWS

Friends, this is your senior Senator, ALEX WILEY. I welcome the opportunity once again to discuss some of the problems confronting us in agriculture.

On the legislative front, the House of Representatives recently passed a bill called the Food and Agriculture Act of 1962. Currently, the measure,, after some "surgery" by the Senate Agriculture Committee, is pending before the Senate.

Generally, the provisions relate to: extending the existing law on feed grains; a modified wheat program; revising Public Law 480 for shipping food abroad; liberalized farm credit; expanding research for industrial uses of farm commodities; and revised land-use programs.

Realistically, the bill, similar to a major measure defeated earlier in the session, is highly controversial. On the positive side, there are two features which, if adopted, would be of significance to us here in Wisconsin:

1. Expansion of research for industrial uses of agricultural products, including milk and other dairy products. (Earlier this session, I recommended the establishment of a special laboratory here in Wisconsin for expanding research for commercial—industrial uses of dairy products.)

2. Secondly, the land-use recommendations could prove of value. These include: permanent agricultural conservation programs on a national basis; assistance to producers under long-term agreements (not to exceed 15 years) to conserve and develop soil, water, forest, wildlife and recreational resources; appropriations would be restricted to $10 million annually; a loan program to State and local public agencies for carrying out more effective land utilization programs; and special assistance for Federal participation in installation costs of recreation projects and in land costs for fish, wildlife and other purposes.

Tourism increasingly is an aspect of Wisconsin's economy. The creation of close-by, on-the-farm vacation spots could provide more citizens—about two-thirds of whom now live in urban areas—with greater opportunities to: get either weekend, or vacation "breaths of fresh air" in the country; acquaint children with nature and animal life; and generally provide an opportunity for improving the health of our citizens—mentally, spiritually, and physically, through the enjoyment of our out-of-door heritage.

Fundamentally, however, the bill contains seriously controversial provisions—particularly relating to the degree of Federal control over farmers. Consequently, the outlook is problematical on this or any other major legislation this session.

Over the years, the Nation has adopted, if in somewhat "patchwork" fashion, an extensive, complex system of laws relating to agriculture.

Unfortunately, these laws too often, are wrapped or entangled in legalistic redtape and obscured by bureaucratic language.

As a result, programs that might be of assistance often may not be known to farmers; or, if known, the requirement may be too complicated to encourage wide participation. Consequently, these do not adequately serve their originally intended purposes.

For this reason, I am recommending that the Secretary of Agriculture prepare for farmers in clear, not bureaucratic language, a "Handbook of Farm Laws and Programs." The handbook, I believe, could well include: a summary of existing laws and programs; a clear definition of their purposes; illustrations of how these can effectively help the farmer; and simplified ways for participating in such programs.

If this were done, I believe that: (1) many of the existing programs being carried along at the taxpayers' expense administratively could be of greater help to the farm economy; and (2) the handbook would provide a useful guide for review, revision, and, if necessary, repeal of existing or adoption of new programs to improve the economic outlook of agriculture.

The Colombian Lotteries

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 9, 1962

Mr. FINO. Mr. Speaker, I would like to apprize the Members of this House about the Colombian lotteries.

Colombia is a small and poor country, yet, it realizes the worth of lotteries. The gross receipts from said lotteries in 1961 amounted to over $12 million of which about $3 million went to the Government.

The income received is used for hospital development, homes for the poor, the blind, deaf mutes, the aged and other charitable institutions.

Mr. Speaker, is it not time that we stopped being reckless and careless with the tax and revenue advantages offered by a national lottery? If we would have the courage to wipe out hypocrisy, we could raise over $10 billion in additional revenue which would help to cut our high taxes and reduce our mounting national debt.

The 26th Anniversary of the Spanish Civil War

EXTENSION OF REMARKS
OF
HON. THOMAS E. MORGAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, August 9, 1962

Mr. MORGAN. Mr. Speaker, I am pleased to join with my colleagues in commemorating this important anniversary in the history of modern Spain.

I used the term "modern Spain" in order to contrast the relatively short time that has elapsed since the memorable defeat that international communism suffered on the Iberian Peninsula, with the much older ties of friendship that have existed between our people and the people of Spain.

All of us are conscious, I am certain, of the contribution which Spain has made over the centuries to the establishment and development of Western civilization in the Western Hemisphere. In the United States alone, many of our areas, towns and cities clearly reflect the influence of Spanish culture. Those contributions have enriched our own lives in many ways.

But what is more relevant to the anniversary which we are observing today, is the extent to which Spain of today—modern Spain—can help us in enlarging the area of freedom and in establishing the foundation for lasting peace in the world. This is the task which confronts us today. And I am happy to say that Spain has contributed—and continues to contribute in many ways—to the achievement of those goals.

Our bases in Spain serve as vital links in the chain of free world defenses.

Spain's strategic position, and historic links with millions of peoples living in the developing countries, help our common cause.

And, even more recently, Spain's decision to apply for membership in the European Economic Community, to move into the mainstream of economic life of Western Europe, can result in an important contribution by enhancing the strength, unity, and economic viability of the so-called Atlantic community.

I am very pleased that, during this time of change and challenge, Spain is so ably represented in Washington by

His Excellency, Ambassador Antonio Garrigues. Ambassador Garrigues' friendship for our country, and his extensive experience in many areas of human endeavor, will serve him in good stead in his present assignment.

In concluding my remarks I would like to echo the sentiments expressed by President Kennedy when he accepted Ambassador Garrigues' credentials.

"The continuing cooperation of our two countries in defense of the West," he said, "has been of mutual benefit in many fields and I am confident that the benefits of this collaboration will continue."

I, too, am hopeful and confident that our two countries will continue to cooperate in the interest of freedom and peace in the world.

In conclusion, I want to compliment the gentleman from New Jersey [Mr. GALLAGHER], a distinguished member of the Committee on Foreign Affairs, for his eloquent remarks. I further wish to extend my congratulations to the Spanish nation and its leaders on their important anniversary. It marks, as we all know, one of the serious reverses suffered by the Communist movement in its drive to extend its dominion over the free peoples of the world.

The 32d Division Comes Home

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, August 9, 1962

Mr. WILEY. Mr. President, the year-ago Berlin crisis resulted in a callup of National Guard and other Reserve Forces—including Wisconsin's 32d National Guard and other State Reserve units.

Now these defenders of freedom are returning home.

In a weekend broadcast over Wisconsin stations, I was privileged to discuss the significance—as well as the problems—involved in the callup of Reserve forces.

I ask unanimous consent to have excerpts of the address printed in the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY SENATOR ALEXANDER WILEY, REPUBLICAN, OF CHIPPEWA FALLS, OVER WISCONSIN RADIO STATIONS, AUGUST 4–5, 1962

In a world of crises, we—particularly here in Wisconsin—are day by day witnessing personally that the price of liberty is eternal vigilance, yes; but also eternal readiness to defend freedom.

Almost a year ago, Wisconsin's famed 32d Division—and other fighting units—were called up "to the colors" as a result of the Berlin crisis. The majority of these men are scheduled to return home in August.

A cross section of Wisconsin, these soldier-citizens include teachers, students, farmers, engineers, laborers, businessmen, industrialists, and other trades and professions.

The reintegration of these sacrificing citizens, despite the best kind of help by all of us, will, nevertheless, be difficult and require maximum effort and cooperation by all segments of our society. Fortunately, a statewide survey has indicated that, for the most part, employers will honor reemployment rights of reservists and Guard members.

Our challenge, then, is to assure that these defenders of freedom, rather than being unduly penalized for emergency service, should be accorded every assistance, in act and spirit, commensurate with the significance of their sacrifices for our national security, and the difficulties of reestablishing themselves in civilian life.

MISSION: DEFENSE

In these critical times, the mission of our military forces includes: (1) serving as a deterrent force to any would-be aggressors, capable of striking a death-dealing blow to any attacking enemy; and (2) a protective shield—holding the Reds "at bay"—while we strengthen the free and non-Communist world; and seek solution or accommodation of East-West differences on diplomatic, economic or ideological fronts.

MAJOR GOALS OF U.S. DEFENSE POLICY

As a leader of the free world, and major obstacle to the Communist effort to control the globe, the United States must continue to: Maintain powerfully manned ground, air, and naval forces capable of defense, and of striking back against an attacking enemy; create an ever-stronger economy to support the skyrocketing costs of defense, as well as meet the fast-growing needs of an ever-increasing 186-million population; and mobilize our citizens in 'spirit' as well as militarily, to meet the challenge to survival by communism.

REVIEW OF RESERVE POLICY

After the call of the 32d—and similar units around the State and Nation—patriotic citizens and their families, and others concerned with national policy, asked: "Was this necessary?" "Did a callup, resulting in serious disruption of civilian life, serve our national security?"

In the Congress, the Armed Services Committee scheduled hearings to find answers to such questions. There were tremendous amounts of testimony. As yet, unfortunately, there has still been no clarification of national policy.

In the best traditions of America, however, Wisconsin's 32d, and other units', rise to the call enabled America to more strongly "flex its muscles," at a critical time in history. Once again, a show of strength discouraged aggression by demonstrating to the Communists that we stand ready and willing to protect the rights of freedom. For this contribution to the cause of freedom—at considerable personal sacrifice—you, and your families—deserve the gratitude of all America. Now, we are happy that you are home. Along with all fellow citizens, I, as your Senator, stand ready to do everything possible to make less difficult the problems of readjustment to day-to-day life in Wisconsin.

Leading Doctor Favors Medicare

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1962

Mr. TOLL. Mr. Speaker, I read a very interesting letter on the editorial page of the Philadelphia Bulletin of August 8. It was written by one of the leading physicians of Philadelphia. His views refer to the position of one-third of the medical profession as favoring the King-Anderson bill.

I have known Dr. Leon Solis-Cohen for a great many years and have observed his outstanding contributions to the public welfare. He has been very active in civic and fraternal affairs and has frequently participated in matters affecting the welfare of the people.

His observations are contained in the remarks by the Honorable JAMES A. BYRNE of Pennsylvania, who has included the newspaper report. I wish to commend Dr. Solis-Cohen for his views and for his strong statement in favor of medical care for the aged under social security.

Radio-TV as Seen From Capitol Hill

EXTENSION OF REMARKS

OF

HON. ROBERT G. STEPHENS, JR.

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1962

Mr. STEPHENS. Mr. Speaker, under leave previously granted, I call attention of the House to the fact that on August 6, 1962, the Honorable OREN HARRIS, of Arkansas, the distinguished chairman of the Committee of the House or. Interstate and Foreign Commerce, addressed the Georgia Association of Broadcasters, Inc., at its annual convention at Jekyll Island, one of Georgia's fine State parks.

This 1962 convention, presided over by H. Randolph Holder, of Athens, Ga., president of the Georgia Association of Broadcasters, Inc., and owner of radio station WGAU, and guided by the quietly efficient executive secretary, Jack Williams, was unusual in at least three respects. First, under President Holder's leadership the Georgia Association of Broadcasters has achieved the enviable position of being the largest in the United States. Second, as stated by Frank Harden, president of the South Carolina Broadcasters Association, it was "the first occasion when our members have had the pleasure of officially meeting in joint session with our fellow broadcasters in the neighboring State of Georgia." And, third, it was the first time so outstanding a national figure as Representative OREN HARRIS had appeared before the annual convention.

It was my honor to present Mr. HARRIS to the assemblage and his speech was so well given and so vital to the radio and television industry, I requested that I be permitted to insert the following text in the RECORD:

RADIO-TV AS SEEN FROM CAPITOL HILL

(Address by Representative OREN HARRIS, Democrat of Arkansas, chairman, Committee on Interstate and Foreign Commerce, House of Representatives)

Ladies and gentlemen, it is a privilege and pleasure for me to be with you here today. The subject which you have suggested gives me an opportunity of sharing with you some thoughts about the actions taken by our committee and the Congress during the 87th Congress in the field of radio and television.

Radio and television legislation has assumed a very prominent place among the many subjects over which our committee has jurisdiction.

We have been more active during the 87th Congress with respect to radio and television legislation than perhaps any of the numerous other subjects within our committee's jurisdiction.

Let me be more specific and give you some illustrations.

As of July 4, 1962, a total of 783 bills were referred to our committee. Of this total, 91 bills fell into the category of radio and television. This constitutes a very large percentage considering the fact that our committee jurisdiction includes, among others, subjects such as railroads, aviation, motor transportation, securities and exchanges, trade regulations, public health, food and drug regulation, oil and gas, and electric power, and so forth.

The large number of radio and television bills is only one of several yardsticks by which one can measure the awareness on the part of Congress with respect to radio and television matters.

Another yardstick is the close attention which the Congress is giving to the agency to which is assigned the responsibility of regulating radio and television—the Federal Communications Commission. When, in April of 1961, President Kennedy submitted to the Congress a reorganization plan affecting the organization and procedures of that Commission, Congress disapproved the plan. It was felt that the plan would concentrate too much power in the hands of the Commission Chairman by giving him authority to assign fellow Commissioners and Commission personnel to specific tasks.

Congress realized, however, that the steadily increasing workload of the Commission required some changes in the law governing the Commission's procedures. Also, in order to promote efficiency and to speed up the handling of applications and other cases by the Commission, it was felt that Congress would have to permit the delegation of some functions to qualified and experienced Commission personnel, subject, however, to review and final decision by the Commission itself.

Our committee gave careful consideration to this legislation which passed both Houses of the Congress and was signed into law on August 31, 1961. I believe, and certainly it is my sincere hope, that provisions of the legislation will be used by the Commission to reduce the large backlog of cases pending before it.

Two other measures on which our committee acted and which have become law attest to the interest of the Congress in an expanding broadcasting industry. I have reference to the all-channel television receiver and the educational television legislation.

The purpose of these two acts of Congress is to eliminate a great waste of one of our most valuable natural resources—the radio spectrum. As all of you well know, in 1952 the Federal Communications Commission adopted a nationwide intermixed UHF-VHF allocation structure for television and set aside a number of television channels for noncommercial educational television. Out of a total of 2,225 television assignments, 681 are VHF stations and 1,544 are UHF stations. Ninety-two of the VHF and one hundred and eighty-nine of the UHF station assignments are reserved for educational television. However, only 103 commercial and 16 educational UHF stations are actually on the air.

The principal reason why UHF commercial and educational broadcasting have not been able to develop successfully thus far has been the scarcity of television receivers which are capable of receiving stations operating on UHF channels. In addition, educators interested in operating educational broadcasting facilities have been confronted with a lack of funds to pay for the installation of educational television facilities.

The all-channel television receiver legislation and the legislation providing for Federal matching grants to assist States, local communities, and private nonprofit agencies in the construction of educational television facilities are designed to overcome these difficulties. The enactment of these two measures should, in my opinion, contribute to a vast expansion of UHF television—both commercial and noncommercial. Of course, this expansion will not come overnight, but it is my hope that the growth will be steady and that it will contribute greatly to making available to the American people television service to the fullest degree.

With all the attention which is given these days to television, our committee still has found time to go into certain complex and controversial questions of radio broadcasting.

The character of radio broadcasting has changed very much over the years. Radio has become preponderantly a local service and many persons have come to depend on radio for local news and information.

Our committee held extensive hearings on two subjects which have been of intense interest to radio broadcasters: daytime operations and clear-channel operations. As a result of these hearings and extensive consideration of the problems involved, our committee decided on a course of action with regard to each of these problems.

As you well know, the daytime stations have been asking for years for authority to broadcast at least from 5 a.m. until 7 p.m., and subsequently revised their request downward so that they would be permitted to broadcast at least from 6 a.m. until 6 p.m.

The Commission turned down both of these requests. In spite of repeated urgings on the part of our committee to authorize the conducting of actual limited tests with presunrise and postsunset operations, the Commission has failed to do so.

Our committee decided that the public interest requires that daytime stations located in communities which are not served by full-time stations be authorized to operate presunrise. At present, many persons in the United States residing in areas not served by full-time community radio stations have to do without early morning local news and information programs in wintertime because many daytime stations may not begin operations until after sunrise. In northern localities, which are not as fortunate as we are here down South, sunrise occurs rather late in the morning.

In order to make available to such persons in wintertime vitally needed local news and information programs, under the bill reported by the committee and passed by the House, presunrise operations would be authorized under certain conditions. Such presunrise operations would have to be discontinued or modified if the Commission finds that such operations cause harmful interference to a substantial portion of the area or population in the primary service area of another radio station.

The committee did not find on the basis of the hearings conducted by it that it would be in the public interest to authorize postsunset operations by daytime stations. During the evening hours there is not the same urgent need for local information and news programs which exists in the early morning hours. Furthermore, postsunset operations would cause a greater amount of interference to other stations since during the late afternoon hours more stations are on the air than during the early morning hours.

In view of the fact that we are rapidly approaching the end of this session, it is not at all certain that there will be enough time for the Senate to take up this legislation. It is my judgment, however, that the Federal Communications Commission will make a real effort to work out the problems relating to daytime broadcasting stations along the guidelines laid down in this legislation.

A somewhat related problem was involved in the case of the operations of class I-A clear-channel stations. The Senate adopted in 1938 a resolution to the effect that operations with power in excess of 50 kilowatts would be against the public interest. Relying in part on the Senate resolution, the Federal Communications Commission decided to duplicate 13 of the presently existing class I-A clear channel stations.

Our committee felt after extended hearings that the Commission's decision should be stayed for 1 year and that the Commission should review its decision in the light of a policy declaration passed by the House which would leave the Commission free to authorize operations with power in excess of 50 kilowatts if operation with such higher power is found to be in the public interest. The information given to our committee indicates that better radio service can be rendered to many persons in the United States by several of the clear channel stations if they are authorized to operate with power in excess of 50 kilowatts.

Finally, our committee reported and the House passed a bill providing for the establishment of a Communications Satellite Corporation. This bill, in my opinion, is one of the most important pieces of legislation which has come before the 87th Congress and it is likely to revolutionize the international communications industry. When we considered this legislation it was not thought of as being of primary interest to broadcasters. The outstanding success of Telstar, however, as a relay station for broadcasts demonstrates the terrific impact which communications satellites may have on broadcasting.

Shortly before Telstar was launched one of the technically most experienced Commissioners of the FCC gave a talk in which he pointed out several reasons why, in his opinion, communications satellites would not be used to any considerable extent for international radio and television broadcasting. He mentioned the great cost involved in using satellites for this purpose and the fact that time differentials would make simultaneous broadcasts impractical.

The Commissioner may well be right for ordinary day-by-day television fare, and Telstar was certainly not conceived by the A.T. & T. primarily for use as an international television relay station.

It is a fact, however, that Telstar caught the imagination of the people in the United States and Europe, not because it might some day replace undersea cables in international telephone or telegraph service. Telstar won the tremendous popular acclaim which it received because it has enabled millions of television viewers to participate in their own homes in events taking place thousands of miles away on other continents.

As a matter of fact, there have been reports that Soviet Russia is planning to use four satellites to transmit television programs from Moscow throughout the Russian nation instead of using cables or microwave relays. Of course, these Russian satellites will also relay programs to other captive nations behind the Iron Curtain and thus tie these nations together even more closely.

For that reason alone we should under no circumstances jeopardize the lead which our Nation has achieved with the successful launching of Telstar. It is my fervent hope that the Congress will complete action promptly on the communications satellite legislation so that we may go forward with the organization of the corporation which is expected to be the U.S. instrument through which we will participate in a worldwide international communications satellite system.

Apart from making available increased telephone and telegraph facilities, Telstar or its successor satellites, in my opinion, may before long become the medium by which television will expand into an important international force.

Since the end of World War II, developments in the broadcasting field have certainly left a tremendous impact on our present-day lives. They have transformed the leisure habits of a majority of our citizens. They are effectuating important changes in our educational practices. Educational television plays an ever-growing role in the education of our school and college-age children in the sciences, in languages, and in the arts.

Television is affecting our political lives. The televising of the political conventions of our major parties, for example, has led to an insistent demand that convention proceedings be modified to fit them better for television. The televised debates of the two presidential candidates during the 1960 campaign perhaps created a precedent which may be followed in future presidential campaigns.

On-the-spot news coverage of important events has given millions of our citizens an opportunity to be present when these events occur. I need only mention such outstanding events as the space shots of our astronauts and the White House tour conducted by Mrs. Kennedy.

These outstanding events may not be the bread and butter of broadcasters—they may actually cost the broadcasters dearly in dollars and cents—but these are the events which make broadcasting the powerful medium which it has become in this Nation. And now our horizons may be broadened still further by the advent of Telstar which may permit the televising of such newsworthy events on an intercontinental scale.

What do all of these developments mean for you—the broadcasters? They mean that you are holding in your hands tremendous power and with that power must go a growing sense of responsibility.

As broadcasters you constitute a profession and not just a trade. Therefore, you must conduct yourself at all times as members of a profession.

As members of a profession you must deal with problems affecting your industry not only from the point of view of businessmen but also from the point of view of the public whom you serve.

As professional men and women you require a sense of unity. In the marketplace you may compete with one another. Individual television broadcasters may compete with individual radio broadcasters. Individual VHF broadcasters may compete with individual UHF broadcasters. Individual daytimers may compete with full-timers. Individual clear channel stations may compete with individual regional stations.

However, this competition among individual broadcasters in the marketplace should not let you forget that in dealing with the public and those who represent the public you are broadcasters and professionals together. If I may suggest, do not permit yourself to become divided into subgroups with one group fighting another group to the detriment of your profession and to the detriment of the public whom you serve.

I am saying these things advisedly on the basis of my legislative experience particularly during the 87th Congress. As broadcasters you will always have the sympathetic ear of the Members of Congress. As groups of broadcasters fighting for advantages over other groups of broadcasters without being mindful to the public interest, you are likely to jeopardize your professional standing and to exhaust in a very short time the tremendous reservoir of goodwill which you have created over the years.

I wish all of you a successful convention. I am happy to have been with you today. I am glad to say in conclusion that the future looks exceedingly bright for the broadcasting profession and I want to congratulate you for it.

Independence Day of Chad

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1962

Mr. POWELL. Mr. Speaker, we take this opportunity to send warm felicitations to His Excellency the President of the Council of Ministers of Chad, Francois Tombalbaye; and His Excellency, the Ambassador of Chad to the United States, Adam Malick Sow, on the occasion of the second anniversary of Chad's independence.

Formerly part of French Equatorial Africa, Chad is a landlocked country in central Africa about twice the size of France. But in spite of the fact that it has no outlet to the sea, it has long been an active crossroads of trade since it lays on the main routes between east and tropical Africa. Its location has also made it a meeting place of various ethnic groups and has been a determining factor in its interesting history.

Nomads from the north and sedentary populations from the south mingled in Chad. In pre-European times African empires flourished until Islamic conquerors penetrated in the 14th century. Accounts of European voyagers in the 19th century sound like a tale from the "Arabian Nights" in their descriptions of sultans who displayed their wealth in slaves, ostrich plumes, and ivory. Its people today are as varied as in the past: Arab nomads, Negroid herdsmen, primitive villagers and fishermen, Muslims, Christians, Animists.

Its topography matches its population in variety, for Chad is a land of desert, savannah and forest, mountains, rivers, and plains. The north is a sahara, while vegetation and rainfall increase as one travels southward to actual jungle areas in the far south near the border. One of the most rewarding aspects of the country to the current voyager is that the bird and animal life so rapidly disappearing in other parts of Africa still abound in Chad. There are still hunting areas where herds of antelope, buffalo, elephant, and giraffe are plentiful.

But Chad, like the rest of independent Africa, is engaged in a determined campaign to catch up with the 20th century in political and economic development, and its swift progress forms a striking contrast to the background just painted. To trace briefly its political development since World War II, in 1946 Chad acquired the status of oversea territory of the French Republic. A territorial assembly was created whose powers were gradually broadened. Then, in August 1960 Chad became an independent Republic. Executive power is exercised by the President of the Republic assisted by an appointed Council of Ministers. Legislative authority rests in the National Assembly whose Members are elected by direct universal suffrage for a 5-year term. Soon after independence Chad became a member of the United Nations. Thus, in a few short years Chad has successfully made the political leap to the 20th century and joined the world community of sovereign states.

In the economic field Chad has also moved forward. The year 1961 saw a record cotton crop—Chad's chief export—increased construction activity, and an increment in the national budget. Chad's second largest export is meat, and Chad is encouraging the development of tanneries, meat-processing plants, and cottonseed oil presses.

Thus, on this anniversary of independence we congratulate the Republic of Chad for its successes of the past and extend our very best wishes for its future development.

CAP Dinner for International Air Cadets

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 9, 1962

Mr. ANFUSO. Mr. Speaker, on Monday, August 6, I had the great honor and pleasure of attending a dinner at the Statler-Hilton Hotel in Washington by invitation of my good friend Col. Barnee Breeskin, special assistant to Col. Paul Ashworth, national commander of the Civil Air Patrol.

This dinner is an annual event sponsored by the Pan American World Airways for the air cadets and their escorts from 21 foreign countries. These cadets visit Washington each year, after having been guests of the United States, touring most of the States in groups of 5 and in several instances even as many as 25.

On this particular occasion, at the dinner on August 6, Colonel Ashworth presented a plaque award to Adm. Harold Miller, retired, vice president of Pan American World Airways, for meritorious service in the international air cadet exchange program.

Senator HUBERT H. HUMPHREY, of Minnesota, the Senate majority whip, made a wonderful address on the merits of the cadet exchange program. I, too, had occasion to express some views regarding this program which I consider very important to the free world.

I want to take this opportunity to congratulate Pan American World Airways on their great contribution to this worthwhile exchange program. For the past 10 years this company has consistently sponsored projects of great benefit to this program and thereby was instrumental in bringing together many fine citizens of this country in the common bond of brotherhood, thus resulting in a successful exchange of ideas and a better understanding of problems. Mr. Juan

Trippe, president of Pan American World Airways, has long been known for his efforts in the cause of international good will.

We, of New York, are very proud of the fine work being done by the Civil Air Patrol and we are particularly proud that our fair city of New York is one of the host cities, just as is Washington, for these foreign cadets visiting the United States under the exchange program.

Mr. Speaker, I am pleased to list the States that have served as hosts to the foreign cadets. They are as follows: Alabama, Indiana, Maine, Massachusetts, Michigan, Minnesota, Missouri, Montana, Nebraska, New Hampshire, New Jersey, New Mexico, North Carolina, Ohio, Oklahoma, Oregon, Rhode Island, South Carolina, Texas, Virginia, and Wisconsin.

The following is a list of the countries that participated in the program: Belgium, Brazil, Canada, Chile, Denmark, El Salvador, France, Germany, Great Britain, Greece, Guatemala, Israel, Italy, Netherlands, Norway, Peru, Portugal, Spain, Sweden, Switzerland, and Turkey.

Finally, I want to include also the names of the distinguished guests at the head table at the dinner given by the Pan American World Airways:

HEAD TABLE SEATING ARRANGEMENT, CIVIL AIR PATROL DINNER, STATLER HOTEL, WASHINGTON, D.C., AUGUST 6, 1962

1. Mr. Ira D. Mackler, Wilson Co.
2. Col. Dan Evans, wing commander, National Capitol Wing.
3. Col. Edward F. McGinnis, American Legion.
4. Col. Daniel F. Boone, deputy regional commander, Civil Air Patrol.
5. Mr. C. William Martin, Jr., president, Pepsi Cola Bottling Co. of Washington.
6. Maj. Gen. Walter Agee, former national commander.
7. Mr. John R. O'Brien, vice president, Touchdown Club.
8. Mr. Robert G. Baker, secretary to the majority, U.S. Senate.
9. Representative JAMES MORRISON, Louisiana.
10. Col. Paul Ashworth, U.S. Air Force, national commander, Civil Air Patrol.
11. Senator HUBERT HUMPHREY, majority whip, U.S. Senate.
12. Adm. Harold Miller, vice president, Pan American World Airways.
13. Commissioner John B. Duncan, District of Columbia.
14. Representative VICTOR L. ANFUSO, New York.
15. Mr. Fred Black, Blyco Corp.
16. Representative CHARLES McC. MATHIAS, Jr., Maryland.
17. Mr. Glen B. Eastburn, New York Airways.
18. Maj. Gen. Lucas V. Beau, former national commander.
19. Mayor Frank Mann, Alexandria, Va.
20. Col. Milton Kronheim, old friend of Civil Air Patrol.
21. Col. A. Paul Fonda, office, Assistant Chief of Staff of Reserved Forces.
22. Lt. Col. Wm. H. Schulie, special assistant to the national commander, New York phase.
23. Col. Barnee Breeskin, special assistant to the national commander, Washington, D.C.
24. Mr. Lincoln White, press officer, State Department.

SENATE

FRIDAY, AUGUST 10, 1962

The Senate met at 12 o'clock meridian, and was called to order by the President pro tempore.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

Almighty and everlasting God, at this white altar of peace and quietness, where all divisive cries are stilled, we bow in reverence and humility, praying for the enthronement of brotherhood in all the earth.

May the instrumentalities of justice, mutual understanding, and cooperative endeavor being devised in these anxious, yet hopeful, days, be but the channels of Thy providence, bringing to fulfillment at last the ancient prophet's dream, "Violence shall be no more heard in Thy land, wasting nor destruction within Thy borders."

Save those who minister here from false choices; and guide their hands and minds to heal and bind, to build and to bless.

In the name of the One who maketh all things new, we pray. Amen.

MESSAGE FROM THE PRESIDENT

A message in writing from the President of the United States submitting a nomination was communicated to the Senate by Mr. Miller, one of his secretaries.

EXECUTIVE MESSAGE REFERRED

As in executive session,

The PRESIDENT pro tempore laid before the Senate a message from the President of the United States submitting the nomination of Dr. Harvey Brooks, of Cambridge, Mass., to be a member of the National Science Board, National Science Foundation, which was referred to the Committee on Labor and Public Welfare.

CALL OF THE ROLL

Mr. MANSFIELD. Mr. President, I suggest the absence of a quorum.

The PRESIDENT pro tempore. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 149 Leg.]

Aiken
Allott
Bartlett
Beall
Bible
Boggs
Bottum
Bush
Butler
Byrd, Va.

Young, Ohio

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr. BURDICK], the Senator from West Virginia [Mr. BYRD], the Senator from Michigan [Mr. HART], the Senator from Arizona [Mr. HAYDEN], the Senator from Missouri [Mr. LONG], the Senator from Michigan [Mr. MCNAMARA], and the Senator from Rhode Island [Mr. PASTORE] are absent on official business.

I further announce that the Senator from New Mexico [Mr. ANDERSON] is necessarily absent.

Mr. KUCHEL. I announce that the Senator from Utah [Mr. BENNETT], the Senator from Arizona [Mr. GOLDWATER], the Senators from Iowa [Mr. HICKENLOOPER and Mr. MILLER], the Senator from New York [Mr. JAVITS], the Senator from Kentucky [Mr. MORTON], and the Senator from New Hampshire [Mr. MURPHY] are necessarily absent.

The Senator from Kentucky [Mr. COOPER] is absent because of a death in the family.

The PRESIDENT pro tempore. A quorum is present.

COMMUNICATIONS SATELLITE ACT OF 1962—REPORT OF A COMMITTEE

Mr. FULBRIGHT. Mr. President——

The PRESIDENT pro tempore. The Chair recognizes the Senator from Arkansas.

Mr. FULBRIGHT. Mr. President, in accordance with the decision of the Senate of August 1, I send to the desk H.R. 11040, an act to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

The bill which I send to the desk is not at the moment accompanied by a committee report although it will bear today's number. Although the majority of the committee was prepared to submit a written report along with the bill which I have sent to the desk, as a matter of courtesy it was agreed that the minority should have until Monday noon in order to prepare its views so that they might be published jointly with the report of the committee.

At this time, Mr. President, I ask unanimous consent that the minority views may be printed with the report of the Committee on Foreign Relations on H.R. 11040.

The PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. FULBRIGHT. I take this opportunity, Mr. President, to call to the attention of Members of the Senate that a committee print of the bill is available for each Senator and that the printed hearings of the Committee on Foreign Relations have been available on the Senate floor since 10 a.m. this morning. Members of the Senate will be interested to know that the bill was reported without amendment by a vote of 13 to 4. Prior to this final vote, the committee gave careful consideration to some 13 amendments, inclusive of 2 amendments in the nature of substitutes. A rollcall was had on each of these amendments.

I commend to Members of the Senate the hearings compiled over a period of 5 days. The junior Senator from Alabama [Mr. SPARKMAN] presided over most of the hearings in my absence, and I am sure that Senators will find these hearings helpful. I call especial attention to those portions of the hearings when the committee examined the Secretary of State on the question of whether he felt the foreign policy interests of the United States were adequately taken care of in the bill now before the Senate.

I may add that, of course, rather unusual circumstances surrounded this bill, four other committees of the Congress having already passed upon the bill, and it having been subjected to considerable discussion in the Senate. While I think it is a first step in an uncharted sea, I personally think it is a good step, and one which will undoubtedly require changes and amendments in the future, but this is a very notable effort on the part of the Senate.

The **PRESIDENT** pro tempore. The bill will be stated by title.

The **LEGISLATIVE CLERK**. A bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

Mr. MANSFIELD and **Mr. KEFAUVER** addressed the Chair.

The **PRESIDENT** pro tempore. The bill H.R. 11040, the communications satellite bill, having been reported to the Senate pursuant to the order of the 1st instant, it now, under that order, becomes the pending business.

The question is on the amendment heretofore proposed by Mr. LONG of Louisiana, for himself and other Senators, on page 33, line 12, and page 34, line 20.

The Chair recognizes the Senator from Montana.

Mr. MANSFIELD. Mr. President, under the terms of the unanimous-consent agreement entered into August 1, the Foreign Relations Committee of the Senate today reported H.R. 11040, the communications satellite bill. This achievement represents another milestone in the most remarkable history of this bill. No other bill in this session of the Congress has received the study or undergone the scrutiny of the Senate as has this bill. To date it has been thoroughly studied by five committees in the Senate alone, not including the policy committee, and by one in the House, and has been the subject of well over 3,000 pages of testimony that took 45 days to present. On the Senate floor this measure has consumed 308 pages of debate in 14 days, more than any other bill this year. I cite these figures only to show that the Senate has extended every conceivable courtesy to those who feel strongly about this bill and has patiently and willingly allowed them to express, and reexpress, their views. Much of the time and energy of this body, that of the House of Representatives, and the administration have been devoted to making this as good a bill as could be made.

The bill now comes before us for the third and, I hope, the final time this year. In the light of this generous legislative history, the Senate must now squarely face the question of whether it will legislate or vegetate.

The U.S. Senate has a decision to make. Simply stated, we must decide what instrument our Nation shall choose to find our way in space, specifically in the realm of space communications. It has been said that the democratic system of government moves too slowly to deal with the problems of a modern world. I do not believe that this is so. But I believe that the ultimate action or inaction taken by the Senate on this bill will tend to add proof or disproof to that unhappy theory. The Senate must decide what policy it chooses to follow. It may ultimately decide to adopt the space policy suggested by this bill, or it may reject that policy and adopt another, but it should at least choose a course of action.

I ask the Senate only to choose the course of action it deems best for our country. If the Senate chooses the course outlined by this bill, that may be a satisfactory solution. If the Senate chooses another course, that too will be a solution, but choose we should.

As majority leader in this body, I want to make clear that I have no special interest in or special knowledge of this measure beyond that of one Senator from the State of Montana. Indeed, now that the measure is before the Senate, the leadership anticipates that the Senator from Oklahoma [Mr. KERR], the Senator from Washington [Mr. MAGNUSON], the Senator from Rhode Island [Mr. PASTORE], and the Senator from Alabama [Mr. SPARKMAN], each of whom was a key figure in the committees which studied this bill, will be in a position to set to rest any remaining substantive doubts on the merits of the issue.

The leadership will do whatever it can to enable the Senate to reach a decision. But once again I remind the Senate that the powers of the majority leader under the rules are no greater than the powers of any individual Senator. The leadership—this leadership—functions on the basis of the self-restraint of equal Members and mutual accommodation with equal Members. It is inclined to no other mode of operation.

It has been said—in the heat of debate, perhaps—that the leadership has been less than impartial in the procedural treatment of this situation as compared with that applied on the poll tax amendment and literacy test measure. Let me point out that the Senate passed the poll tax amendment on the 12th day of debate. And on the literacy test measure, after 13 days of debate on the floor, the second of two cloture attempts was made by the leadership. It did not even muster a simple majority of the Senate.

Today we begin the 15th day of debate on this bill. That and the extensive and exhaustive hearings by five committees and subcommittees add up to an extraordinary consideration of this measure, an extraordinary tolerance of full debate on this measure.

If legislative paralysis once again besets us, a motion for cloture may be in order. To choose that course, if it comes to that, will be the responsibility of the Senate, but the leadership will not be hesitant in recommending it to the Senate. In such an event the issue will be simply, are two-thirds of the Senators present and voting determined that a decision shall be made one way or the other?

Thus, in the next few days each Senator and the Senate as a whole must examine the responsibility which rests on this body. The leadership will attempt to do no more than suggest to the Senate that it is time to reach the point of rational decision under the rules. Whether the Senate is prepared to reach that point, the coming days will answer.

Mr. President, it is my understanding that the Senator from Oregon [Mr. MORSE] intends to move that the Senate proceed to consider the farm bill. It is my further understanding that if the motion is offered during the morning hour it will be in order and will be not debatable under the rules.

The Senator from Oregon will be entirely within his rights in this parliamentary maneuver to sidetrack the space satellite communications bill in favor of the farm bill. But I may say that the Senator from Montana will also be within his rights when he moves to table the maneuver.

The majority leader and the minority leader proposed a unanimous-consent agreement last week, which the Senate accepted in good faith. I think the implications of that agreement were clear. They were that the Senate would stay with the satellite communications bill until it was finally considered and disposed of.

The question of the farm bill arose at the time, and the majority leader made clear that, as far as he was concerned, it would await consideration until after the satellite communications bill had been taken up and resolved. For that course the majority leader takes full responsibility, and in keeping good faith with that understanding I will move to table the motion of the Senator from Oregon if it is made.

Mr. MORSE and **Mr. GORE** addressed the Chair.

The **PRESIDING OFFICER** (Mr. HOLLAND in the chair). Does the Senator from Montana yield; and, if so, to whom?

Mr. MORSE. Mr. President, will the majority leader yield?

Mr. MANSFIELD. I yield to the Senator from Oregon.

Mr. MORSE. I wish to advise the majority leader that my first motion will be a motion that the Senate proceed to the consideration of Senate Resolution 24, which is the Morse antifilibuster resolution. I would be very happy to offer that motion now, if the Senator from Montana, my majority leader, wishes to follow the parliamentary course that he has described, but I intend in due time to make the motion to proceed to consider the Morse antifilibuster resolution. If I am defeated in that—and I hope I shall not be—I then shall move that the Senate proceed to consider the farm bill.

Mr. GORE. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Montana yield?

Mr. MANSFIELD. I yield to the Senator from Tennessee.

Mr. GORE. Since it was through negotiations between the distinguished majority leader and the junior Senator from Tennessee that an agreement was worked out, which ultimately was translated into a unanimous-consent action by the Senate, I should like to state some reservation to the statement which the majority leader has made with respect to good faith. The extent of the understanding which I had, and which I conveyed to the group with which I was associated, was that the unanimous-consent agreement would be for the bill to be reported to the Senate not later than 12 o'clock noon on Friday, today. I did not understand that this unanimous-consent agreement—that the bill be reported to the Senate and that, upon its having been reported, it become the pending business of the Senate, would in any way affect the morning hour, or any other motion which a Senator might have a right to make under the parliamentary rules of the Senate.

I felt, in fairness to my colleagues and to the majority leader, so that the Senate may understand the extent of my understanding, that I should make this statement to the Senate and to the majority leader.

Mr. MANSFIELD. Mr. President, the Senator from Tennessee is an honorable man, and he has stated the facts as he understands them. I think he is correct.

May I point out that during the course of the debate, following the agreement reached between the two sides, I stated at that time as one means of getting the unanimous-consent agreement that we would stay with this measure until it was disposed of in one way or another, before any other measure was taken up. I think that ought to be emphasized, too.

Mr. GORE. I recall that. I merely wished to point out the distinction. This did occur in the colloquy, but it was not involved in the agreement between the distinguished majority leader and the junior Senator from Tennessee.

Mr. MANSFIELD. I am sure the Senator is correct.

Mr. KEFAUVER. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator yield?

Mr. MANSFIELD. I yield to the senior Senator from Tennessee.

Mr. KEFAUVER. Feeling the urgency of the matter which has been discussed off and on for several days—which I feel would not take very much time or delay the further consideration of the satellite communications bill to any appreciable extent, beyond only a few hours—I felt that I should at least give the Senate an opportunity to consider the drug bill, S. 1552, which has been on the calendar for about a month. So I had in mind, when I could get recognition, at the appropriate time, to move that the Senate proceed to the consideration of S. 1552.

Mr. MANSFIELD. Mr. President, the Senator from Tennessee has reiterated once again the interest which he has shown consistently, but over the past several days to a greater degree than usual. He has stated that the drug bill has been on the calendar for over a month. I believe if Senators will look at the calendar, they will see that the bill was reported on the 19th of last month.

The first policy committee meeting held since that time was last Tuesday. At that time the drug bill was brought up for consideration and the policy committee gave the chairman of that committee the right to bring the bill to the floor of the Senate as soon as the Committee on the Judiciary had completed consideration of amendments which had been sent down by the President of the United States.

It was the understanding of the policy committee that last week the President of the United States called the distinguished chairman of that committee, the Senator from Mississippi [Mr. EASTLAND] to the White House to discuss the amendments. It was the understanding of that committee that hearings on those amendments had been begun on Monday last. It was the desire of the leadership, if the amendments were agreed to in the committee, and if the chance of passage was at least 50–50, to call up that bill, if it could be passed before the communications satellite bill was laid down at noon today.

I assure the Senator from Tennessee that he has no monopoly on interest in the bill. The Senate as a whole, and the policy committee in particular, are aware of the importance of the bill. I think the policy committee acted equitably and with dispatch. Following the proper procedure, we were waiting for the Committee on the Judiciary to report the amendments which had been sent down by the President of the United States.

Again in all frankness I say that if there had been any chance that consideration of the bill could have been completed, insofar as the amendments are concerned, in the Judiciary Committee and it could have been considered on the floor of the Senate before 12 o'clock noon today, it was the intention of the leadership to call up that bill. However, circumstances had arisen prior to that time which were beyond the control of the leadership. Pledges had been made, and pledges are made not to be disregarded but to be honored.

Mr. EASTLAND. Mr. President, will the Senator yield?

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. MANSFIELD. I yield to the Senator from Mississippi.

Mr. EASTLAND. Mr. President, we had hoped to finish consideration of the drug bill today. We lacked consideration of three amendments. That is all. This morning we lost a quorum. The Senator from Tennessee was one of those who left the meeting. He asked to be recorded in favor of the remainder of the amendments. As I understand, there was objection from the Senator from Oregon to a request that the committee be authorized to meet this afternoon. We had hoped to finish consideration of the drug bill today, and I think we would have finished it today.

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. MANSFIELD. I yield.

Mr. KEFAUVER. I am sure the majority leader will recall that I stated earlier the bill was not returned to the Committee on the Judiciary.

Mr. MANSFIELD. That is correct.

Mr. KEFAUVER. The bill has remained on the calendar. The President sent several very worthwhile amendments to Congress, some of which had originally been in the bill when the bill was before the Subcommittee on Antitrust and Monopoly Legislation. It is good to have the Committee on the Judiciary consider amendments which in the main it had considered previously when the bill was considerably changed some 2 months ago.

I urge that consideration by the Committee on the Judiciary should not hold up consideration of the bill on the floor of the Senate, because the amendments are fairly simple. Most of them were in the bill once before. The Senate as a whole is a less technical and a less judicial forum in which to try to obtain expeditious consideration of the amendments. I do not think there would have been much controversy about them on the floor of the Senate because they had been worked over several times. They are fairly clear. I think the Senate itself is capable of passing on the two or three remaining amendments.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. Mr. President, I will yield in a moment.

REQUEST FOR COMMITTEE MEETING DURING SESSION OF THE SENATE

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the Permanent Subcommittee on Investigations of the Senate Committee on Government Operations be permitted to meet during the sessions of the Senate while conducting hearings on the Billie Sol Estes case.

Mr. MORSE. Mr. President, I object.

The PRESIDING OFFICER. Objection is heard.

Mr. DIRKSEN. Mr. President, will the Senator yield?

Mr. MANSFIELD. I yield.

Mr. DIRKSEN. Before going to more pleasant things, I recall to Senators that last night we had probably more than an hour's discussion on the drug bill.

At approximately 8 o'clock last evening I asked permission for the Committee on the Judiciary to sit during the session of the Senate today in the belief, as confirmed by the distinguished chairman, that we could finish consideration of all the amendments and have them offered as committee amendments to the bill which is now on the calendar.

The distinguished Senator from Oregon [Mr. MORSE] objected, which was his right under the rule. I rushed away from the committee this morning to come over prepared to renew the request. I went to see the distinguished Senator from Oregon [Mr. MORSE]. He said he would object to all committee meetings while the matter now pending before the Senate was in process of disposition. I said I thought he was unfair. I reassert the statement for the following reason. There was nothing implicit in the understanding when the satellite bill went to the Committee on Foreign Relations that there went with it unanimous consent for the committee to meet. At no time did I ever raise any objection. Now the Committee on the Judiciary, being prepared to dispose of the question this afternoon, in our judgment, cannot meet because the Senator from Oregon has indicated to me very firmly that he intends to object. I shall not discuss the drug bill any further.

CHARLES L. WATKINS, PARLIAMENTARIAN OF THE SENATE, 83D BIRTHDAY

Mr. DIRKSEN. Mr. President, in the year 1879 a boy was born at Mount Ida, Ark. He went through school, law school, and ultimately he found himself on the Senate payroll in the strange capacity of a classified laborer. In fact, he was no laborer at all. He was a stenographer to the distinguished Senator from Arkansas, James P. Clarke.

In 1904 he came to Washington. Then in 1914 he went to the office of the Secretary of the Senate. I think he has filled every station at the front bench—bill clerk, journal clerk and, because of his familiarity with the Senate rules, he became an informal adviser to Senators and to the Chair on the interpretation of the Senate rules.

Senators may well suspect that I am talking about the distinguished Parliamentarian of the Senate, Mr. Watkins. Strangely enough, we did not create the job of Parliamentarian until 1935. Mr. Watkins has been the Parliamentarian of the Senate from that time to the present.

I allude to all that information for a reason. Today is his birth anniversary. He is 83 years of age. What a grand character he is. What a deep impress he has made upon the orderly procedure of the Senate and upon the destiny of our country.

Mr. Watkins is a godly man. For 40 years he has been the secretary of the Sunday school of his church. What a glowing record. That was continuous service. He is a gentle man. He is an impartial man. He is a fair man. Above all else, he is a modest man.

His modesty reminds me of the young man who was taking a lady friend on a sleigh ride. She had her cap set for him, and she was quite aggressive. But he was the very soul of modesty. After a long sleigh ride she finally blurted out, "Nobody loves me any more and my hands are cold."

Well, this soul of modesty bethought of the observation for a moment and finally he said very circumspectly, "I am sure the Lord loves you, and you can sit on your hands." [Laughter.]

That is the modesty of our distinguished friend from Arkansas.

So I suggest that the Senate rise, if I may make such a suggestion, in salute to a great public servant, who has served us so long and so faithfully.

[Applause, Senators rising.]

Mr. MANSFIELD. Nothing could be added to what the distinguished minority leader has said. I intend to delay what I have to say in my admiration of our distinguished Parliamentarian so that Senators wishing to make motions may do so.

Mr. MORSE. Mr. President, I wish to comment on the remarks of the Senator from Illinois in regard to committee meetings. Before I do so I wish to say to my great teacher, Charles Watkins, that I am sorry that I have been such a poor student of his so many times, because I have flunked some of his teachings from time to time. Whatever I do know about the rules of the Senate, if anything, I have learned from this great teacher. Anything I do not know should not be charged against him. I wish to join in extending to Charles Watkins my hearty congratulations for his being so faithful in presiding over the parliamentary problems of the Senate.

Mr. KEATING. Mr. President, I join my colleagues today in wishing our esteemed Parliamentarian, Charlie Watkins, a most happy 83d birthday. It is often said that life begins at 80. If this age-old maximum is accepted, as I think it is by every one of us, then we must all acknowledge that our fine and distinguished Parliamentarian is today but 3 years old—celebrating his third year of really living.

Some people wonder what makes the Senate tick; even some of us who labor here do at times. We get tied up with filibusters; legislation gets bottled up so that the backlog seems insurmountable; but I can say this: If it were not for Charlie Watkins, we never could have gotten this far.

Let us make Charlie Watkins, a sprightly 83 today, an example we all can emulate when we reach that milestone in life. May we act as young, be as exuberant, and look as age proof and time defying as he does.

I take this opportunity to wish our distinguished Parliamentarian a very happy birthday; and may his joy have no amendments.

ORDER OF BUSINESS

Mr. MORSE. Mr. President, I wish to say that the minority leader has reported correctly that I objected to the meeting of the Judiciary Committee today. There were various reasons why I objected. One is that the drug bill should come to the floor of the Senate. It can come to the floor of the Senate at any time that the Senate wants to bring it to the floor. The Senator from Tennessee is quite right. What is remaining for action in the Judiciary Committee could be handled here on the floor of the Senate. We all know this issue, and the committee could be discharged so that the bill could be brought to the floor of the Senate.

I would prefer to have it first acted on by the Judiciary Committee. I know of nothing that stops the Judiciary Committee from meeting mornings, unless the Senate is in session. The responsibility for the Senate being in session in the morning will not be mine, I assure the Senate. The leadership of the Senate can give the Judiciary Committee ample time to meet mornings.

I know of no reason why the Judiciary Committee cannot meet evenings. The Senate being in session in the evenings will not be a responsibility of mine, I can assure the Senators.

I believe there should be quick action taken on the bill.

Let us come to the crux of the matter. I am objecting to committee meetings until the communications bill is disposed of, one way or another. That is provided for in the rules. We all know we are engaged in a parliamentary contest in regard to the communications bill. It is up to the leadership to decide how long it wants to stay in session this year. Having the right under the rules to object to committee meetings—and I believe the rule was put in the rule book for a good purpose—I have always thought that committees should not meet while the Senate is in session. I have always favored a rescheduling of the Calendar of the Senate, whereby the Senate would meet at the beginning of the session for a couple of days a week, and on the other days of the week the committees could meet; then increase the sessions of the Senate as the session continues, and the committee work of the Senate has been completed. I believe that is a sound procedure. I am sorry the Senate has not adopted that type of reform in the Senate, which some of us have been proposing for years.

I do not take the responsibility for the position I take on the parliamentary problem that confronts us. While the discussion of the satellite bill is underway, the senior Senator from Oregon does not intend to give unanimous consent for committee meetings while the Senate is in session.

Mr. MANSFIELD. Mr. President, what is the pending business?

The PRESIDING OFFICER. The communications satellite bill, with an amendment proposed thereto by the distinguished junior Senator from Louisiana [Mr. LONG].

Mr. MORSE. I send to the desk a motion that the Senate proceed to the consideration of Senate Resolution 24, the so-called Morse antifilibuster resolution.

Mr. MANSFIELD. Mr. President——

The PRESIDING OFFICER. The clerk reports that the matter is not in his possession, but is still in the Committee on Rules and Administration. The motion, therefore, is not in order. The Senator from Montana is recognized.

Mr. MANSFIELD. The question I was about to put to the Chair has been answered.

Mr. MORSE. Mr. President, I move that Senate Resolution 24 be taken from the committee and be made the pending business of the Senate.

Mr. MANSFIELD. I move to table that motion.

The PRESIDING OFFICER. The question is on agreeing to the motion of the Senator from Montana to table the motion made by the Senator from Oregon.

Mr. MANSFIELD. Mr. President, I ask for the yeas and nays.

Mr. DOUGLAS. Mr. President, I ask for the yeas and nays.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr. Burdick], the Senator from West Virginia [Mr. Byrd], the Senator from Michigan [Mr. Hart], the Senator from Arizona [Mr. Hayden], the Senator from Missouri [Mr. Long], the Senator from Michigan [Mr. McNamara], and the Senator from Rhode Island [Mr. Pastore] are absent on official business.

I further announce that the Senator from New Mexico [Mr. Anderson] is necessarily absent.

I further announce that, if present and voting, the Senator from West Virginia [Mr. Byrd], the Senator from Arizona [Mr. Hayden], the Senator from Missouri [Mr. Long], the Senator from Rhode Island [Mr. Pastore], and the Senator from New Mexico [Mr. Anderson] would each vote "yea."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. Bennett], the Senator from Arizona [Mr. Goldwater], the Senators from Iowa [Mr. Hickenlooper and Mr. Miller], the Senator from New York [Mr. Javits], the Senator from Kentucky [Mr. Morton], and the Senator from New Hampshire [Mr. Murphy] are necessarily absent.

The Senator from Kentucky [Mr. Cooper] is absent because of a death in the family.

If present and voting, the Senator from Arizona [Mr. Goldwater], the Senator from Iowa [Mr. Miller], and the Senator from New Hampshire [Mr. Murphy] would each vote "yea."

On this vote, the Senator from Utah [Mr. Bennett] is paired with the Senator from New York [Mr. Javits]. If present and voting, the Senator from Utah would vote "yea," and the Senator from New York would vote "nay."

The result was announced—yeas 70, nays 14, as follows:

So Mr. Mansfield's motion to lay Mr. Morse's motion on the table was agreed to.

Mr. HUMPHREY. Mr. President, I move that the vote by which the motion to lay on the table was agreed to be reconsidered.

Mr. DIRKSEN. Mr. President, I move to lay on the table the motion to reconsider.

The motion to lay on the table was agreed to.

Mr. MORSE. Mr. President, there is another motion which I wish to make. However, before making it, I wish to say that I am very much disappointed that my previous motion was laid on the table, although I would be less than honest if I did not say that that action came as no surprise, for always before I engage in prolonged debate in the Senate, I offer the Morse antifilibuster resolution or pledge my support to the Douglas antifilibuster resolution or to the Clark antifilibuster resolution or to the antifilibuster resolution which the great Senator Herbert Lehman used to submit, or to the antifilibuster resolution which the late great Senator Dick Neuberger, of Oregon, used to submit, because I always hope that perhaps sometime the Senate will come to grips with the matter of changing rule XXII, so that the minority will be fully protected from being ridden over, roughshod, by a galloping majority at any particular time.

But now the Senate has spoken again on the Morse antifilibuster resolution.

THE FARM BILL

Mr. MORSE. Mr. President, Now I turn to another measure which I think should be given precedence over the pending bill—returning to the pending bill as soon as these two or three very emergency pieces of legislation are taken care of.

As the Senate knows, Mr. President, I do not think we should postpone any further the consideration of the farm bill. Therefore, Mr. President, I move that the Senate proceed to the consideration of House bill 12391, the farm bill; and as I make my motion, I raise a parliamentary inquiry. I believe the bill should be read by the clerk; and I ask, as a parliamentary inquiry, whether I am entitled to have the bill read as I make my motion.

The PRESIDING OFFICER. Under the rules, the Senator is entitled to have the title of the bill read, but not the body of the bill.

Mr. MORSE. Mr. President, I send to the desk my motion; I move that the Senate proceed to the consideration of House bill 12391, the farm bill.

The PRESIDING OFFICER. The motion of the Senator from Oregon is not debatable.

Mr. MANSFIELD. Mr. President, I move that the motion of the Senator from Oregon be laid on the table.

The PRESIDING OFFICER. The Senator from Montana has moved that the motion of the Senator from Oregon be laid on the table.

Mr. MORSE. Mr. President, on this question, I ask for the yeas and nays.

The PRESIDING OFFICER. The yeas and nays have been requested. Obviously there is a sufficient second, and the yeas and nays are ordered.

The question is on agreeing to the motion of the Senator from Montana [Mr. Mansfield] to lay on the table the motion of the Senator from Oregon [Mr. Morse] that the Senate proceed to the consideration of House bill 12391, the farm bill. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr. Burdick], the Senator from West Virginia [Mr. Byrd], the Senator from Michigan [Mr. Hart], the Senator from Arizona [Mr. Hayden], the Senator from Missouri [Mr. Long], the Senator from Michigan [Mr. McNamara], and the Senator from Rhode Island [Mr. Pastore] are absent on official business.

I further announce that the Senator from New Mexico [Mr. Anderson] is necessarily absent.

I further announce that, if present and voting, the Senator from West Virginia [Mr. Byrd], the Senator from Arizona [Mr. Hayden], and the Senator from Missouri [Mr. Long], would each vote "yea."

On this vote, the Senator from North Dakota [Mr. Burdick] is paired with the Senator from Rhode Island [Mr. Pastore]. If present and voting, the Senator from North Dakota would vote "nay," and the Senator from Rhode Island would vote "yea."

Mr. KUCHEL. I announce that the Senator from Utah [Mr. Bennett], the Senator from Arizona [Mr. Goldwater], the Senators from Iowa [Mr. Hickenlooper and Mr. Miller], the Senator from New York [Mr. Javits], the Senator from Kentucky [Mr. Morton], and the Senator from New Hampshire [Mr. Murphy] are necessarily absent.

The Senator from Kentucky [Mr. Cooper] is absent because of a death in the family.

If present and voting, the Senator from Utah [Mr. Bennett], the Senator from Arizona [Mr. Goldwater], the Senator from New York [Mr. Javits], the Senator from Iowa [Mr. Miller], and the Senator from New Hampshire [Mr. Murphy] would each vote "yea."

The result was announced—yeas 69, nays 15, as follows:

So the motion to lay on the table was agreed to.

Mr. DIRKSEN. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. MANSFIELD. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

The Senate resumed the consideration of the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

Mr. KEFAUVER. Mr. President, I send to the desk a motion, and ask that it be read.

The PRESIDING OFFICER. The motion will be read.

The Legislative Clerk. The Senator from Tennessee [Mr. Kefauver] proposes:

> I move that the Senate proceed to the consideration of Senate 1552, the Drug Industry Act of 1962.

Mr. MANSFIELD. Mr. President, I move to table the motion of the Senator from Tennessee.

Mr. KEFAUVER. Mr. President——

Mr. DIRKSEN. Mr. President, that motion is not debatable.

The PRESIDING OFFICER. The motion has been made by the Senator from Montana to table the motion. The question is not debatable.

Mr. DOUGLAS. Mr. President, I ask for the yeas and nays.

The PRESIDING OFFICER. The yeas and nays have been requested.

The yeas and nays were ordered.

The PRESIDING OFFICER. The yeas and nays have been ordered, and the clerk will call the roll.

The legislative clerk called the roll.

Mr. HUMPHREY. I announce that the Senator from North Dakota [Mr. Burdick], the Senator from West Virginia [Mr. Byrd], the Senator from California [Mr. Engle], the Senator from Michigan [Mr. Hart], the Senator from Arizona [Mr. Hayden], the Senator from Missouri [Mr. Long], the Senator from Michigan [Mr. McNamara], and the Senator from Rhode Island [Mr. Pastore] are absent on official business.

I further announce that the Senator from New Mexico [Mr. Anderson] is necessarily absent.

I further announce that, if present and voting, the Senator from West Virginia [Mr. Byrd], the Senator from California [Mr. Engle], the Senator from Arizona [Mr. Hayden], and the Senator from Missouri [Mr. Long] would each vote "yea."

On this vote, the Senator from North Dakota [Mr. Burdick] is paired with the Senator from Rhode Island [Mr. Pastore].

If present and voting, the Senator from North Dakota would vote "nay" and the Senator from Rhode Island would vote "yea."

Mr. KUCHEL. So Mr. Mansfield's motion to table Mr. Kefauver's motion to consider S. 1552 was agreed to.

Mr. MANSFIELD. Mr. President, I move to reconsider the vote by which the motion to table was agreed to.

Mr. DIRKSEN. Mr. President, I move to lay that motion on the table.

The motion to lay on the table was agreed to.

Mr. MANSFIELD. Mr. President, is the Chair aware of the possibility of any proposals being offered at this time during the morning hour?

The PRESIDING OFFICER. The Chair has no information that any other proposals may be offered, though such proposals may be in order.

Mr. MANSFIELD. Mr. President, we have had votes on two or three measures during the morning hour, strictly within the rules and according to the procedures of the Manual of the Senate. They indicate that so far as authority and power is concerned, each individual Senator has as much power, authority, and responsibility as the majority and the minority leaders. As I have stated before, we operate on the basis of courtesy, self-restraint, and accommodation. What has occurred is an illustration of what any individual Senator can do. The leadership did not seek to call up certain bills this morning; individual Senators did. I hope that the Senate will be aware of that fact, because it emphasizes that the responsibility for any proposed legislation is not primarily the responsibility of the leadership but is primarily and absolutely the responsibility of each Senator and the Senate as a whole.

THE DRUG STORY IS NOW TOLD

Mr. DIRKSEN. Mr. President, this morning on the front page of the Washington Post is the announcement by Secretary Celebrezze of new regulations to be issued by the Food and Drug Administration as a result of the thalidomide incident. Here is the drug story as it should have been related long ago. No new legislation was needed for the issuance of these regulations. The Food and Drug Administration already has this power and has had it for a long time under existing law.

Mr. George Larrick, Commissioner of the Food and Drug Administration, on three different occasions while sitting this week with the Senate Judiciary Commitee in its consideration of Presidential suggested amendments to the drug bill which was reported by the committee and has been on the Senate Calendar since July 19, stated that the Food and Drug Administration did have authority to issue much more restrictive regulations but that for reasons unknown to him this authority was never exercised.

What an amazing situation that the legislative authority has always been there but has never been used. Here is an unparalleled example of bureaucratic inertia.

I ask unanimous consent to have printed at this point the article from the Washington Post and also an article from the New York Times.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post]

Regulations Proposed To Afford Tighter Control Over Drug Tests

(By Gardner L. Bridge)

The Government yesterday proposed a series of new regulations that would give it tighter control over drug testing.

One key proposal would give the Food and Drug Administration authority to halt a test if a substantial doubt developed as to the safety of the drug. The agency has no such authority now.

The proposed regulations, which will not go into effect for at least 60 days, were announced by Secretary of Health, Education and Welfare Anthony J. Celebrezze.

They were drafted in the wake of widespread concern over the new sedative thalidomide, which has been blamed for thousands of birth malformations in Europe, and President Kennedy's statement that "we ought to be tougher" with new-drug rules.

Celebrezze said the regulations were drawn with the dual purpose in mind of protecting the public against risks while at the same time imposing no unneeded restrictions on the conduct of investigational research.

The new rules would require:

That the Food and Drug Administration be put on notice and given the full details about the distribution of drugs for investigational use.

That clinical investigations involving human patients be based on adequate preclinical studies to assure safety.

That the clinical investigations themselves be properly planned and executed by qualified investigators, and that the Food and Drug Administration be kept fully informed during the progress of the investigations.

"Once a clinical investigation had been undertaken, if a substantial doubt developed as to the safety of the drug, the Food and Drug Administration and all investigators using the drug would be notified immediately," the statement said. "If necessary, the trial would be halted by FDA."

Present regulations do not require either an initial notice to the FDA of a clinical trial of a new drug or subsequent reports on its use.

One proposed new rule which may run into criticism in medical circles would require the drug manufacturer sponsoring the test to provide the FDA with the names and a summary of the training and experience of each investigator-physician.

John L. Harvey, Deputy Commissioner of Food and Drugs, told a reporter he did not expect any trouble "from what might be regarded as established and qualified investigators.

"But I would expect some questions to be raised about requiring a report on the qualifications of the investigators," he said, adding:

"It may be argued that every doctor is a qualified investigator."

Harvey said the proposal to require reports is "designed to increase the certainty that investigational drugs are handled with the maximum of safety by persons qualified to make the investigation."

In the case of new-drug investigations already underway, the proposed regulations would require prompt reporting to the FDA of information showing that these tests may be safely continued. Failure to submit such a report would automatically cancel the authority for the investigation.

One of the proposed rules says: "Where the clinical investigation involves use on infants or pregnant women, special assurance of safety for such use would be required."

[From the New York Times, Aug 10, 1962]

Drug Producers Wary Over Curbs—Most Bar Comment Pending Study of U.S. Proposals

The pharmaceutical industry generally took a wary attitude yesterday toward the Federal Government's proposed new regulations on the clinical testing of drugs.

Most of the drug houses that were questioned about the matter declined to comment. They pointed out that they had not seen an official copy of the regulations, announced yesterday, or had read about them only in newspaper accounts.

It seemed unlikely, however, that individual members of the drug industry would comment on this matter publicly before registering their views with the Food and Drug Administration. They have 60 days to do that before the regulations go into effect.

An indication of what the industrywide reaction to the proposals might be came from a statement issued by the Pharmaceutical Manufacturers Association in Washington, which represents the collective interests of the drughouses.

WILL SUBMIT COMMENTS

"Detailed comments on additional Federal controls over drug testing as proposed today by the Food and Drug Administration will be filed subsequently with that agency by the Pharmaceutical Manufacturers Association," the statement said.

"Those comments will reflect the judgment of responsible research scientists and others in the prescription drug industry.

"Final regulations, which obviously reduce substantially the need for additional legislation, must be promulgated in such a way as not to cause withholding from the medical profession of new drugs which may save lives or alleviate suffering."

Another indication of the industry's cautious attitude toward the proposed regulations came from a company scientist who has had considerable experience in testing drugs in the laboratory and clinically, or on patients.

He noted that most members of the industry had for a long time and as a matter of course given the Government information that some of the new regulations would require.

SUMMARIES REQUIRED

He was referring to the proposed requirements for a summary of all preclinical investigations, including animal studies; the need to indicate a reasonable degree of safety for use in human tests, and the providing of the names and summaries of training and experience of proposed clinical investigators.

On the other hand, the proposed requirement for special assurances of safety when the use of a drug would involve infants or pregnant women is new.

This proposal reflects more than any other the incident that prompted the Government's action, namely the birth of thousands of malformed infants to women in Europe who had taken a sedative, thalidomide.

The pharmaceutical scientist said that he and other more authoritative workers in the field of birth abnormalities were not certain that tests could be devised to assure that a drug would not injure the human fetus. He noted that only with the greatest difficulty had scientists been able to produce birth defects in animals, even when using very large doses of thalidomide.

FEARS EFFECT ON DOCTORS

The scientist questioned further how the new regulations would affect the availability of physicians to conduct the essential clinical trials of new drugs.

He said that many doctors had been scared out of participating in such programs by the thalidomide incident. Should the Government's action increase their reluctance to test drugs on patients, he said, this may noticeably affect the availability, cost and, possibly, the quality of new drugs.

Thus, he said, the cost of making drugs might be increased enormously because difficulties in getting doctors willing to make the tests may prolong the clinical testing.

Further, he said, the new regulations may delay the availability of new drugs and possibly prevent the development of others that would not appear immediately to be worth the gamble in view of the regulations.

Upon testing, he said, some of the latter drugs may prove to be better than anything else available.

These effects could, he said, force some smaller drug houses to consolidate or to be bought by bigger ones.

Asked for a possible solution, the scientist said that the only way out might be to establish a Government-organized central facility, similar to the National Institutes of Health, for the clinical testing of drugs.

U.S. CONCESSIONS ON DISARMAMENT AND NUCLEAR TEST BAN NEGOTIATIONS

Mr. THURMOND. Mr. President, the August 8, 1962, issue of the Dallas Morning News contains an excellent editorial on a subject which is causing much concern to many Americans and friends of the United States in other lands. I am speaking of the much-publicized concessions which the United States is proposing to make to the Soviet Union on negotiations for disarmament and a ban on nuclear testing. The Dallas Morning News editorial, which is entitled "Disarmament Concessions," makes many valid points against our Government's efforts to reach an accord with the Soviet Union, by continually modifying our position to come nearer to the adamant position of the Soviet Union.

This editorial makes the important point—which we should have learned long ago in trying to negotiate with the Communists—that the Soviets never accept our initial offers of appeasement. They know we will be back again, with hat in hand, making further concessions toward their position. The Soviet position is designed to get disarmament and nuclear test ban agreements without adequate safeguards and inspection procedures for the United States in order to facilitate their ultimate aim of conquering the world by deceit, subversion, infiltration, or any other foul method which is necessary.

The editorial also points up the fact that in our latest concession to the Soviets on a nuclear test ban agreement we are offering to cut our demand for on-site inspections.

In my estimation, our demand was already rather low. Now, however, our demand is being cut in half, this concession being based on a questionable new technique which is supposed to distinguish between underground nuclear explosions and earthquakes. I remember well, Mr. President, that President Eisenhower also made the mistake of relying on unproved scientific data when in 1958 he decided the United States would unilaterally halt nuclear testing in the atmosphere and underground. This scientific data indicated that underground as well as atmospheric testing could be detected, but we later discovered—too late—that not all underground testing could be detected or distinguished from earthquakes or other similar disturbances.

Mr. President, if we had ever profited materially or any at all from negotiations with the Communists, there might be some reason for moving with some haste into further negotiations with the Communists. However, based on the past record of our negotiations and hundreds of broken Communist promises, many Americans have every right to be fearful of the current rush to surrender our position without any indications that we can win a definite foolproof system of inspection on disarmament or a ban on nuclear testing.

During this week, I have received a number of telegrams in my office expressing concern that U.S. negotiators may conclude an agreement with the Communists on disarmament and/or a nuclear test ban, and that such an agreement or agreements may be embodied in executive agreements, rather than in treaties. As we know, Mr. President, executive agreements require no Senate ratification, but treaties require a two-thirds vote by the membership of this body.

I have inquired of the State Department as to the intention of our negotiators on this important point. The Department's response will be of interest to every Member of the Senate, as I am sure everyone here—as well as the American people—would want to have the Senate to pass on any such serious action as agreements to disarm our Nation and to end nuclear testing.

I ask unanimous consent, Mr. President, to have printed in the Record at the conclusion of these remarks the editorial which I have referred to from the Dallas Morning News and also a column written by that eminent newsman, Mr. Constantine Brown, as it appeared in the State of Columbia, S. C., on July 26, 1962.. This column, which is entitled "Paralyzed by Fear: Scared United States Makes Dangerous Concessions," gives an indication of the concern by foreign friends of our country as our negotiators continue to concede in order to reach an accommodation at or near the Communist position.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

Paralyzed by Fear—Scared United States Makes Dangerous Concessions

(By Constantine Brown)

Rome.—Our American statesmen and people find themselves confounded with such enormous problems of history-making import that we seem to have become stagnated in our thinking. We apparently are unable to make courageous decisions, lest we unleash a nuclear war.

Our policymakers are asking today: In the event of a nuclear war, how many Americans would die? The estimate of some is approximately 8 million.

The next question asked is: How can we avoid nuclear war? The apparent conclusion seems to be through negotiations and appeals to the enemy.

HAD ENOUGH

But we have had enough experiences with this theoretical solution through various conferences, exchanged notes and public discussion to realize that the Soviets are convinced of one thing.

That is, Americans and their government have become so frightened of nuclear war they are willing to make many concessions and do everything in their power to show their willingness to forget the past and be friends.

We have gone as far as to ignore the insults hurled at our Presidents and our Nation, shrug off the Berlin wall, wince at Cuba's Castro and remain mute when men struggle in rebellion against their slave master.

CONVINCED REDS

We anxiously welcome Soviet ballets, students, and technicians as our Nation's guests, and we even offer Soviet satellite countries weapons of war as well as food for their starving.

We have convinced the Soviets that we will not under any provocation initiate war and hence they believe they can use the threat of war for our defeat.

The present-day theorists have not only been blindly looking up the wrong alley to discover the way to bring about world peace, they have been shutting their eyes to all the ugly circumstances their theories create.

FORGET FREEDOMS

They prefer to forget the four freedoms and millions of people living in slavery we once swore to free. And they have systematically cast aside the tradition and examples in our past history as useless in this nuclear age.

But perhaps if we would review the pages of history and make the struggles of our forefathers in building this Nation we would find some simple truths and perhaps some guidance in solving today's problem of survival.

The estimate of some of President Kennedy's advisers that 8 million Americans would die in a nuclear war means that our chance of survival would be a little more than 1 out of 2. The early Virginia settlers who came to America had a survival ratio far less than that.

ONE OF TEN

Only 1 out of 10 survived the first 3 years in America. When the Mayflower touched our shores in 1620, the passengers had better luck. Fifty of the 100 aboard survived the first year.

But this ratio did not frighten the settlers whose desire for freedom was greater than their love of life. Between 1630 and 1640 some 20,000 of them dared to come to the land of the free.

And life for these courageous people was difficult. In a report of food scarcity, Isaac Backus later wrote, "Quoth one, 'My husband has traveled as far as Plymouth * * * and has with great toil brought a little corn home, and before that is spent, the Lord will assuredly provide.' "

KNEW SCORE

But with the full knowledge of the hardships to be endured, the American settlers made their irrevocable decisions. John Winthrop, Governor of the Massachusetts Bay Colony, wrote:

"God hath provided this place to be a refuge for many whom He means to save out of the general calamity, and seeing the church hath no place left to fly into but the wilderness, what better work can there be, than to go?"

Can the courage of these men and women, centuries dead, to make fateful decisions inspire us today? Dare we decide to fight for our Nation if need be? Have we the wisdom to make the best decision with faith that God will save many "out of this general calamity"?

Disarmament Concessions

When the U.S. proposal for "general and complete disarmament" was offered last April at Geneva, many Americans felt their leaders in Washington were playing with fire because the proposal was not a plan for disarmament at all. It proposed the scrapping of our Armed Forces in favor of an international "peace force," and in the opinion of the News would have led toward world government and the surrender of American independence if it had been accepted.

Fortunately it was not accepted; the Soviets vetoed the U.S. proposal. And this act seemed to convince many people that the proposal was all right. Without asking why the Soviets rejected the plan, they reasoned that if the Russians couldn't accept it, it must have been all right.

The Soviets, however, may have had different reasons for using their veto. It seems quite likely, for example, that they have learned that whenever they reject a U.S. disarmament proposal the United States will offer something better the next time around.

The Soviets are persistent. They have plenty of time. As long as they are winning the cold war—or as long as the United States refuses to try to win it—they can afford to hold out for the maximum gain.

It now seems fairly obvious that this is exactly what they were doing last April in Geneva, when they rejected the U.S. disarmament proposal out of hand.

Though the proposal went a long way toward meeting their demands, it did not meet all of them. They were probably fairly certain that by holding out for the limit, President Kennedy and his disarmament advisers would back down on the few remaining U.S. safeguards the next time they met.

This, of course, is what has happened. Last week, at a press conference, President Kennedy announced that the United States was willing to "compromise" on the disarmament issue by acceding to the demands of the eight "neutral" nations which have delegates at Geneva.

The President said that we are now willing to give up the demand for an international network of 180 seismic detection stations and to retreat on the number of on-site inspections within the Soviet Union.

Adequate inspection always has been demanded by the United States to insure against surprise attacks or secret testing of nuclear weapons by the Soviets—whose word we cannot accept on face value.

The United States traditionally has demanded at least 20 on-site inspections within the Soviet Union each year, and a network of seismic detection stations manned by representatives from Soviet, Western, and neutral nations.

Not long ago the President said the number of on-site inspections could be limited to 12 to 20, and last week he merely used the word "some" without specifying a number. In addition he has almost completely conceded on the matter of seismic stations, offering to let the Soviets man their own stations and holding out only for some kind of international "monitoring" or "supervision" of these control posts.

The President's latest concessions are based on a new technique we are supposed to have acquired which will distinguish between underground nuclear explosions and earthquakes. This technique supposedly was discovered during our recent atomic tests in the Pacific.

But Representative Craig Hosmer, Republican, of California, who is a ranking member of the Joint Congressional Atomic Energy Committee, claims that we can by no means be certain of our ability to distinguish between earthquakes and atomic tests without closer detection stations or onsite inspections.

He has pointed out that the Defense Department's Advanced Research Projects Agency—which was reported to have made the claim—merely announced that we have made progress toward the identification and location of underground disturbances.

Yet, the President is using this questionable achievement as the basis for his newest round of concessions to the Soviets. But maybe we don't have to worry much about these concessions, for the Soviets have indicated they will reject them as well. They have seen how the veto of our disarmament proposal last April brought out a few more concessions, and they will no doubt hold out for the limit.

Sooner or later, we will have reached that limit, and the Russian delegates will be directed to say "Da" instead of "Nyet." When that day arrives, maybe we will have learned our lesson. Unfortunately by that time it will be too late.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

The Senate resumed the consideration of the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

Mr. MORSE. Mr. President, I was much interested in the observation of the majority leader in his remarks on the floor of the Senate. He was quite correct when he said that each Senator must assume his own responsibility on the floor of the Senate for the course of action he takes, in keeping with his trust as he sees that trust.

I made a motion to modify, first, rule XXII along the lines of the Morse antifilibuster resolution, which I have submitted in the Senate almost in the form in which I submitted it this morning, although it has varied in form as we have developed new ideas in regard to it, since 1947.

I have taken the position that rule XXII should be changed. I have taken the position that filibusters which seek to prevent a vote from ever occurring on a bill ought to be outlawed in the Senate. My resolution would do that. I have taken the position that the minority, however, is entitled to adequate protection to present its point of view in adequate time, in order to give the American people an opportunity to take note of the merits and demerits of any issue that is pending in the Senate which may involve extended debate in the Senate.

During my almost 18 years in the Senate I have seen positions in the Senate shift as the American people became informed in regard to the subject matter of some issue which is of great public concern to the people of this country, but which sometimes in the views of some of us does not receive due consideration from a then predominant majority in the Senate.

How well do I recall, as I have said before, the situation in 1954, when the situation existed that a then administration sought to get through the Senate on the very day that the bill was brought to the floor of the Senate the atomic energy giveaway bill of 1954. Had they been able to do so, the American people, in the original form of that bill, would have lost a $14 billion investment in the atomic energy program, an atomic energy program that had been built up and developed at the complete cost of the taxpayers of the United States.

In 1954, the plan was to give it away to the private utilities of this country. Not only that, but we were asked for a unanimous-consent agreement, on that sad day in the Senate of the United States, to vote on that bill the very day that it came to the floor of the Senate. The record is perfectly clear that that is what happened over in the House. The bill went through the House, as I recall, under a no-amendment rule in less than an hour and a half.

We refused to give consent in 1954 to the atomic power giveaway, and we debated it for 13 days and 6 nights in the Senate.

As I have been heard to say before, and as I repeat for the record again, and for the information of the people, if any of this information gets out to the public, I held down the graveyard shift for 2 long nights during that debate.

We added to that bill amendment after amendment, not one of which would have been added to the bill if we had knuckled under on that day that a unanimous-consent agreement was asked for to vote on the bill on that day.

This is not the first time, in my many years in the Senate, that I have come to the conclusion that the greatest trust I owe to the American people is to stand with a minority, even though it is an unpopular minority at the time, and to do the best I can in accordance with my sights and my lights to present to the American people the issue that is involved in a bill.

I stand in that position again today.

Oh, I know what is going to happen to those of us who are taking this position. We are already hearing from powerful lobbies in this country which are seeking political action against us.

I meant it the other day, and repeat it today for the record, when I said to the majority whip, in reply to the majority whip in connection with a remark he made on the floor of the Senate as to possible political consequences that will flow from our opposition to the bill, that if I could be given assurance that a vote for the bill would guarantee my reelection in the election in November, or give me assurance that a vote against the bill would guarantee my defeat, I would still vote against the bill, because I never want my descendants to read that I voted for it. The bill is against the best interests of my country. It is such a bad bill that in my judgment its effects, if passed onto American foreign policy in the years ahead, can very well endanger even the security of this country. The legal program which is set up in the bill is such that it will have very bad effects on American foreign policy, and will play into the hands of our potential enemies.

It should not be passed if it has foreign policy defects. We shall develop those foreign policy defects in the days ahead, and get the American people to understand that this little group, already called a little band of willful Senators—are fighting in order to prevent the administration from getting through a bill which they say has already gone through three or four committees, is approved by the Attorney General, is approved by the Secretary of State, is approved by the head of FCC—and my answer to that is the question: "So what? So what?"

Does it follow that the counting up of noses makes the noses right? The issue before us is whether or not the bill is in the public interest, whether or not the bill will result in an instrument for the promotion of peace in the world, whether or not the bill in terms of history is in the interest of the welfare of this Republic.

The senior Senator from Oregon, as a member of the Foreign Relations Committee, as chairman of the Subcommittee on Latin American Affairs, as he sees the importance of the satellite communications bill in the great contest for freedom as against communism in the underdeveloped areas of the world, has come to the conclusion that the bill is against the interests of his country and that it is his patriotic duty to fight it no matter what the political sacrifices of that fight may be.

That is how deeply I feel about this bill. That is my dedication.

Now let me say that the senior Senator from Oregon made the motion to bring up the Morse antifilibuster resolution, and he made the motion to put the farm bill ahead of the satellite bill, because he believes that both of these subject matters, along with the drug bill, moved by the Senator from Tennessee [Mr. KEFAUVER], are much more important to the best interests of the American people in this session than the pending bill.

As I have said many times, and as I will be heard to say many times again in the days ahead, in my judgment there is no provable need for any "rush act" on this bill, and that it is not necessary to pass the pending bill prior to the election; and that what the administration ought to do—and I plead with my President from this floor again this morning—is to have the President use his influence to postpone action on the bill until a special session of Congress can be called immediately following the election in November.

Let me say that would result in no damage to the country. It would be in the interest of the country. It would give us an opportunity to hear many witnesses against the bill whom we have not had an opportunity to hear, because sending it to the Foreign Relations Committee, to be reported back here within a 10-day period, has not given the opponents of the bill an opportunity, for example, to call before us the witnesses who ought to have been called to testify in opposition to the bill.

Mr. GRUENING. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. Not now. I do not wish to speak at any length at this moment. I hope the Senator from Alaska will understand. I think he knows how much I admire and appreciate his courage in joining with us in opposition to the bill, because he, too, is a Senator who is up for reelection in November.

Mr. President, we moved to bring up these bills because we thought the proposed antifilibuster legislation ought to be considered now; we believe the millions of farmers across the land are entitled to have proposed farm legislation considered now—today, August 10, 1962. We do not believe there is any justification on the part of the administration in going along with a postponement of the farm bill, for it is at the desk and on the calendar. The planting season is just ahead. Farmers are entitled to know what their farm program will be. In my judgment, the Senate owes it to the farmers of America to get the farm bill behind us in the Senate. The satellite bill can very well be postponed until later in this session or can be postponed until the first week following the election. That will not cause injury of damage to anyone or any interest.

In my judgment, and expressing my personal opinion, by postponing action on the farm bill, the Senate today has done a horrendous wrong to the farmers of America. I think that upon reflection and second thought the administration had better reconsider the action it is taking in regard to the postponement of the consideration of the proposed farm legislation.

I feel the same way with respect to the drug bill. We all know that the drug bill could be brought to the floor of the Senate and in a very short time acted upon. In my judgment, we face a crisis. We have before us, with respect to protecting the health of the American population, a crisis, for we already know of some of the serious happenings of recent days. How I honor and admire the distinguished senior Senator from Tennessee [Mr. KEFAUVER] for the courageous fight he has put up for adequate drug control legislation. What castigation and abuse this great liberal from Tennessee has taken because of his courage, his foresight, and his insight in connection with the drug crisis that faces America. There is no question that the drug industry of the United States needs to be brought under tighter control. But when? I ask. When? Tomorrow? Next week? Next month? To use a figure of speech, Mr. President, it ought to have been yesterday, not even today. But certainly drug control legislation is needed now.

I take the position that first things should come first. Drug legislation, farm legislation, antifilibuster legislation, should be placed ahead of a satellite bill, which, as we shall show as the debate progresses, can be postponed for a considerable length of time. It will be a minimum of 2 to 3 years, at the earliest, before any satellite communications system can be put up in the heavens, and probably a little longer for the thing that will make the program which this administration is supporting—namely, a low-orbit satellite system—completely obsolete.

In fact, let the American people take note that the reason for the pressure that is now on is for the passage of a bill which involves an orbit satellite system at so-called low altitude, a system which will be obsolete almost as soon as the bill has been passed. Yet it will vest up there in space legal rights and legal interests to great monopolistic combines in this country, rights which it will be very difficult to dispel, except at high payment as compensation for the monopoly.

Oh, the proponents of the bill do not like to hear us talking about giveaways. But thank God for Harry Truman, for once again, in the statement he made yesterday, he pinpointed this issue. In my judgment, this is another horrendous giveaway of the taxpayers' interests, for the selfish, monopolistic combine which will be invested, under the bill, with terrific legal rights to control the space satellite comunications system. Other private industries in this country will come, hat in hand, to this great monopoly to get the crumbs from the monopolistic table by way of contracts from the monopoly itself, if they want to participate in a satellite communications system.

Mr. President, those are some of the issues involved in the bill; and the great ex-President of the United States saw through it very carefully and, in his typically courageous manner, once again warned the American people that the public interest is not protected by the bill.

So the majority leader is quite correct when he says that each Senator has his responsibility in the Senate; but so does the leadership of the Senate. We all know that it is the leadership of the Senate that really has the controlling voice as to the order of business which comes before the Senate. The leadership of the Senate would get the support of the Senate if the leadership of the Senate were willing to vote to take up the antifilibuster resolution. The leadership of the Senate would get the support of the Senate if it were willing to proceed now with farm legislation, which is so sorely needed by millions of farmers throughout the country. The leadership of the Senate would get the support of the Senate if it were willing to proceed with the proposed drug legislation. Therefore, the leadership of the Senate cannot pass the legislative buck to the small band of so-called willful Senators who feel that the bill is of such vital concern to the American people, considering its bad effects, that we do not intend, Mr. President, to be coerced into giving up our rights under the rules so long as we think we have a chance of preventing the passage of the bill until after the election and a special session of Congress is called for the consideration of the bill.

Mr. KEFAUVER. Mr. President, will the Senator from Oregon yield?

Mr. MORSE. Not just yet. I hope the Senator will permit me to finish my statement.

I want the American people to proceed to interest themselves in the Senate in the next few days, for I want the American people to know that we can take all the name calling that is thrown our way. We can take all the abuse and castigation that is thrown our way. We have done so before. Once they become convinced, as we are convinced, that we have a duty to perform in regard to the preventing at this time, and until there has been more adequate consideration, the passage of a bill that we believe would be very much against the interests of the American people, we will not be stopped. We will not rush to political cover because of the accusations which may be made against us.

We believe the American people should take a look at the lobbying activities of the great giant monopoly in this country which is known as American Telephone & Telegraph Co. Mr. President, not only is it the largest monopoly in the country; it is larger than a combination of some powerful business concerns in the country, such as General Motors, United States Steel, and a few others, combined. I shall place in the RECORD a list of great giant corporations which, if they were all put together, would still not equal the great, giant American Telephone & Telegraph Co. In my judgment, American Telephone & Telegraph Co. with respect to its lobbying activities, in respect to the economic pressures it brings to bear, is a formidable threat to private enterprise in this country, because, remember, a monopoly is not private enterprise. As was brought out in the hearings of the Committee on Foreign Relations, what we are dealing with here is cartelism.

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). The hour of 2 o'clock having arrived, the time for the morning hour has expired.

Mr. KEFAUVER. Madam President, I desire to suggest the absence of a quorum.

Mr. MORSE. Madam President, do I have the floor?

The PRESIDING OFFICER. The Senator from Oregon has the floor.

Mr. MORSE. Am I correct in understanding that the pending question is on agreeing to the Long amendment?

The PRESIDING OFFICER. That is correct.

Mr. MORSE. May I proceed to make my speech under the Long amendment?

The PRESIDING OFFICER. Yes.

Mr. MORSE. Will it not be my first speech under the Long amendment?

The PRESIDING OFFICER. That is correct.

Mr. MORSE. Madam President, as I was saying, in my judgment the A.T. & T., a monopoly, must not be confused with private enterprise, for a monopoly is not private enterprise. The private-enterprise system rests upon the precious principle of competition. But under this bill, competition is choked to death by the monopolistic combine which is set up under the bill, for under this bill the Hughes Corp., RCA, General Telephone, General Electric—any of these private-enterprise corporations working in the field of communications—are not given any vested rights. They would have to come hat in hand to the monopoly corporation created by this bill, to make whatever arrangements, if any, the monopoly might be willing to make with them to participate in the development of a satellite communications system.

As I pointed out at the Foreign Relations Committee hearing day before yesterday, behind the scenes in America a terrific economic battle is going on between some powerful corporations—for example, between the Hughes Corp. and A.T. & T. The record of the hearings shows, for example, that the Hughes Corp. is on the threshold of a breakthrough in regard to a high-altitude satellite communications system. There seems to be no difference of opinion among the scientists that a high-altitude satellite communications system more than 22,000 miles above the face of the earth, at the Equator, will revolve with the revolutions of the globe. The satellites will appear to be stationary, but actually they will be going with the movements of the globe. The evidence is rather clear that from one to four—not more than four, and possibly as few as two—satellites put that far above the surface of the earth will serve the satellite communications needs of the entire world.

Mrs. SMITH of Maine. Madam President——

Mr. MORSE. I am sorry, but I do not yield at this time. I will not yield until I finish my speech.

Mrs. SMITH of Maine. Madam President, will the Senator from Oregon yield for a question?

Mr. MORSE. No, Madam President; I will not yield for a question or for an insertion in the RECORD or for anything else.

The PRESIDING OFFICER. The Senator from Oregon declines to yield.

Mr. MORSE. Madam President, just consider the foreign-policy implications of a high-altitude so-called Syncom communications system, with from one to four satellites placed more than 22,000 miles above the surface of the globe, with the ability to serve the communications needs of the entire world, insofar as a satellite system is concerned. I need not tell the Senate that such a satellite system is pregnant with foreign-policy considerations; and for the regulation and administration of such a high-altitude system, there must be international agreements, for let us also keep in mind that no nation, including the United States, has any vested international-law rights in space. Whatever rights any nation—free or Communist—will have there will have to be worked out by international agreement.

It is interesting to note that this administration first sent to Congress a bill which specifically referred to the United Nations role in the development of an international-law system in regard to space. But, interestingly enough, all reference to the United Nations role in connection with the satellite system has been stricken out of the bill which now is before the Senate. The American people should take note of that deletion, because we must also keep in mind that it is an elementary principle of law that any court which passes judgment upon legislation takes note of the fact that a State legislature or the Congress never commits a meaningless act. So the elimination from the bill of the reference to the United Nations is bound to be interpreted by courts and—even more important—is bound to be interpreted by governments as a signal of meaning that—for some reason, apparently known only to ourselves—we eliminated from the bill any reference to the role of the United Nations.

But let me say that the United Nations cannot be erased from the face of the globe. The United Nations, as an international institution, in my judgment is here to stay—long after all of us are dust. The United Nations will continue to exercise its influence and its voice in the development of international understandings and agreements and international law as long as there is a globe itself, I believe.

But, Madam President, be that as it may, there is no question about the fact that, under the charter, the United Nations has jurisdiction of interests and rights in connection with the development of any program which could conceivably involve a question of peace or war.

So I believe it is a sad thing that the reference to the United Nations has been eliminated from the bill, because that elimination has many international implications. I am also at a loss to understand why my administration would send to us a bill containing a legal instrumentality which plays right into the hands of monopolistic combines. I would have the American people take note of the very great lobby power of the A.T. & T.

In this morning's Washington Post, in a column usually written by Drew Pearson, but during his vacation period written—as is shown by a note appearing in connection with it—by his associate, Jack Anderson, we have an interesting account of the way the A.T. & T. lobby works. I now read the article:

MINNESOTA WEEKLY IRKS A.T. & T.

(By Jack Anderson)

Apparently no critic is too small, no opposition too trifling to escape the ire of the communications Goliath, American Telephone & Telegraph, which has its eye simultaneously on outer space and Circle Pines, Minn. (population, 2,789).

Madam President, I hope the two brilliant, able, and distinguished Senators from Minnesota will take note of the activity of A.T. & T. in Minnesota.

I read the remainder of the article:

The object of A.T. & T.'s irritation in Circle Pines is gentle Andy Gibas, who publishes a weekly newspaper called Circulating Pines. By his own count, he has 1,100 subscribers, gives away another 400 copies free.

But Andy discovered what a great howl a small pinprick can cause when he printed an anti-A.T. & T. editorial.

"In the past 7 years," the editorial began, "American Telephone & Telegraph Co. (the Bell System) has overcharged the long-distance phone users a billion dollars. But this is going to look like peanuts if A.T. & T. succeeds in getting the Government to hand over its communications satellites."

This brought swift retaliation from Northwestern Bell, the local A.T. & T. subsidiary, which sent representatives into Circle Pines to talk to the town's business, civic, and religious leaders about their weekly newspaper.

The Bell task force was led by tall, genial Joe Cervenka, the company's public relations chief for Minnesota, who explained to this column: "We have a right to state our case to others in the community."

Cervenka acknowledged that he had put Andy's editorial on the teletype to Northwestern Bell's headquarters in Omaha and A.T. & T.'s headquarters in New York City.

DAVID AND GOLIATH

Here is the amazing sequence of A.T. & T.'s pressure on little Andy Gibas, a tale of a modern David and Goliath:

Shortly after the offending editorial appeared, Cervenka phoned the Circulating Pines office and ordered the telephone ad dropped from the next edition. He must have thought better of this, for he showed up later with a substitute ad and explained that he had merely wanted to make a change.

Cervenka also phoned Andy and suggested that, if he were interested in his newspaper, they had better have a talk. At this confrontation, Cervenka accused Andy of printing untrue and libelous statements about A.T. & T.

What particularly upset Cervenka was the claim that A.T. & T. had overcharged its long-distance users a billion dollars.

Andy's spitfire wife, Grace, later supplied the source of this information. It had been taken, she said, from a House speech by Congressman EMANUEL CELLER, New York Democrat.

"Congressman CELLER is not a friend of ours," replied Cervenka. "Now I understand. The trouble is you read the wrong things."

The Bell man's next step was to check at the Minnesota Newspaper Association for information on possible backers who might own an interest in Andy's paper. Somehow, he came up with the name of Ernest Madsen, and promptly made contact.

"We were curious to know whether this financial backer felt like the Gibases did," Cervenka explained to this column.

But it turned out that Madsen owned no part of the paper, that it belonged totally to the Gibases. (To keep it solvent, Andy is obliged to work by day as a chemist while his wife gathers the news.)

A.T. & T. INVASION

Finally, A.T. & T. launched its invasion of Circle Pines. Cervenka called upon Mayor Gerald Pehl, former Mayor Carl Eck, town councilmen, and other leaders. His assistants interviewed Andy's friends and neighbors.

Altogether, Cervenka insists they saw no more than 15 people. But reports reaching Gibas indicate the whole community must have been canvassed.

One who didn't like Cervenka's insinuations was the Rev. Harris Jesperson, pastor of St. Mark's Lutheran Church in Circle Pines. He told this column that Cervenka went so far as to imply the Gibases were pro-Communist in their attitude.

"If you are insinuating the Gibases are Communists and all that rot," the pastor lectured Cervenka, "you had better forget about it right now."

More easily influenced were Mildred Huse and her son, Gordon, who run one of the town's two leading grocery stores, Gordon's Market. They stopped advertising in the Circulating Pines after Cervenka's visit.

Gordon Huse, who answers to the nickname "Buz," assured this column that Cervenka hadn't suggested an economic boycott.

"We didn't want to get involved, so we dropped our advertising," explained Buz.

But Andy and Grace Gibas aren't easily intimidated. They struck back in a front-page editorial.

The questioning of friends and neighbors "gives us a very uneasy feeling," they wrote. "Something like the Russians must feel when they discover the secret police are making inquiries.

"But the real puzzler is this: Why doesn't A.T. & T. want the satellite giveaway talked about? Why is it afraid of criticism?"

I would have the American people take note of that column. I would have the American people take note of the fact that this little band of willful Senators in the Senate who are fighting the passage of the bill are not ready to turn over the satellite communications system to the powerful combine of a monopoly created as a legal instrument by this bill.

I would have the American people take note of the fact that A.T. & T. and its associates would be in violation of the antitrust laws of this country if they sought to do without the bill what this bill authorizes them to do.

I am very sad that the Department of Justice of my administration is supporting a bill which in effect amounts to a proposal of waiving the antitrust laws of this country in favor of A.T. & T. and the monopolistic instrument created by the bill.

I am shocked by a Department of Justice, headed by the brother of the President of the United States, advocating a bill passage of which is essential if the instrument created by the bill is to be protected from the application of the antitrust laws of the United States. If the bill were not passed and any monopoly sought to carry out the power created and vested in this bill, it would run headlong into the antitrust laws of this country.

The senior Senator from Oregon just does not think there is any justification for any legislation that in effect will weaken the antitrust law system of this country.

Merger after merger is being proposed. Why, Mr. Sarnoff made a speech in San Francisco the other day advocating a single monopoly for the whole communications system of America. I put it in the record of the hearings, and Senators will be able to read the Sarnoff speech when the hearings are printed and placed on their desks within the next day or two.

Mr. MORSE subsequently said: Madam President, the Wall Street Journal for August 8 reported that the Radio Corp. of America is proposing that all U.S. activities in the area of international communications be joined in a single independent, privately owned company.

The article, which I am submitting for inclusion in today's Record, reveals the truly monopolistic tendencies of the giant corporations that dominate our communications. RCA's proposal, according to this account of a speech by its chairman, Gen. David Sarnoff, would merge the company's cable and radio operations with those of the other carriers, including American Telephone & Telegraph—A.T. & T.—International Telephone & Telegraph—I.T. & T.—Western Union Telegraph Co., and others.

General Sarnoff believes that such a company, subject only to appropriate Government regulations, would be the most practical way to eliminate the illogical limitations and unnecessary handicaps for American companies involved in this field.

Madam President, those of us who have opposed the pending satellite communications bill have been concerned, among other things, about precisely this kind of thinking. It holds that such illogical limitations and burdensome handicaps as the free play of competition and Federal participation adequate to protect the public interest should be discarded in the interest of allowing the giant communications carriers the widest latitude in harvesting the benefits of this new dimension in communication, which is the product of research in which all American taxpayers have participated.

The bill before the Senate is loosely written and ambiguous. It joins private enterprise with public authority, without clearly defining the area of responsibility in either case. If anyone doubts that the private interests will construe their responsibility in the broadest possible terms, I would suggest that he read this article; and I ask unanimous consent that it be printed at this point in the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

RCA Proposes Privately Owned Monopoly for International Communications of United States

Radio Corp. of America, enlarging on the debate over private ownership of communications satellites, proposed that all U.S. activities in international communications be vested in an independent and privately owned American monopoly.

The proposal involves competing cable and radio operations of such companies as International Telephone & Telegraph Corp., American Telephone & Telegraph Co., United Fruit Co., Western Union Telegraph Co., and Firestone Tire & Rubber Co., as well as RCA and a few smaller companies.

However, the concept advanced by David Sarnoff, RCA chairman, faces a formidable obstacle in the historic hostility of Congress to such mergers. Similar proposals have died in Congress at least three times.

As recently as 1959, the Senate Commerce Committee heard testimony on merging the international telegraph companies, including all the affected carriers except A.T. & T. which practically has a monopoly on oversea voice communications. A high Federal Communications Commission source said yesterday there is no reason to think that congressional opposition to that idea has cooled. Mr. Sarnoff's inclusion of A.T. & T. this time would probably arouse even more controversy, the source added.

Donald K. de Neuf, president of Press Wireless, Inc., which provides communications for news services, said that company wouldn't wish to join a merged concern. But he said it would have no objection to a merger of other carriers if Press Wireless were protected against discrimination of unfair competition.

ITT URGES REEXAMINATION

Harold S. Geneen, ITT president, issued a statement urging the FCC to "reexamine the present regulatory distinction between voice and record (telegraphic) communications" and to take "a new look * * * at the right of the offshore carriers to interconnect freely * * * with domestic carriers."

Mr. Geneen said ITT in the past had supported unification of international telegraphic facilities, "as distinguished from the telephone voice carriers." However, "as Mr. Sarnoff points out," he continued, "the lines of distinction between telephony and telegraphy are swiftly being erased." And, Mr. Geneen said, the FCC should consider "whether the international and domestic functions must necessarily be segregated."

A.T. & T., Firestone, and United Fruit, which have oversea communications subsidiaries, had no comment on Mr. Sarnoff's proposal.

Mr. Sarnoff's suggestion was made in a speech delivered for him by his son, Robert W. Sarnoff, chairman of the National Broadcasting Co., an RCA subsidiary. The speech was made in San Francisco at the annual meeting of the American Bar Association's Section of Judicial Administration. The elder Mr. Sarnoff is convalescing after surgery.

RCA estimated the volume of the U.S. international communications industry last year at $146 million. RCA Communications, Inc., a subsidiary, grossed $35,225,000 in 1961, about 2 percent of RCA's total sales. The subsidiary has been "reasonably profitable for many years," RCA said.

A unified international company, "subject only to appropriate Government regulations," would be the "most practical" way to eliminate current "illogical limitations and unnecessary handicaps" for American companies, which will be compounded by the advent of satellite communications, Mr. Sarnoff contended. Space satellites, like A.T. & T.'s Telstar, will be able to relay telephonic, telegraphic, and televised messages from continent to continent in greater volume than ever before, Mr. Sarnoff said.

With a merger "our international communications services would become more flexible, more convenient, and more economical," he continued. "And our unified American company would be able, for the first time, to deal on equal terms with foreign government monopolies."

Such a company would be in line with Government-sanctioned monopolies for telephone and telegraph communications within the United States, he said.

Mr. Sarnoff didn't suggest that his proposal for the merger of conventional services be incorporated in the current satellite program. "We will take a meaningful step forward through the establishment of a communications satellite corporation, and the Kennedy administration deserves commendation for its foresight and initiative," he said. He advocated formation of a privately owned space communications corporation "at the earliest possible date."

The administration-backed bill calling for private rather than Government ownership of commercial satellite communications has encountered stormy opposition in the Senate from a group of 10 liberals. It is scheduled to be sent back to the Senate floor Friday after a week-long sojourn with the Senate Foreign Relations Committee; it faces resumption of a liberal Democratic filibuster.

The illogical structure of oversea communications grew up with the individual development of oceanic cables, wireless telegraphy, radiotelephones and radiobroadcasting, Mr. Sarnoff said. In some areas, such as telephone service, there is a monopoly; in others, such as telegraphy, there is competition, he noted. He also charged that foreign government monopolies play one American company against another in negotiations for connecting services and rates.

HINDRANCE TO CUSTOMERS CHARGED

Outmoded distinctions between types of service prevent individual U.S. companies from offering their customers the range of communications desired, Mr. Sarnoff contended. And he added that if the proposed satellite communications system is authorized to transmit both voice and printed messages, problems may result in connection with separated domestic services. Moreover, the owners of the satellite system through their conventional services may be competing simultaneously with their own space network and with each other, he said.

Mr. Sarnoff didn't specify how his proposal should be carried out. He called on legal experts to work with Government agencies to formulate a legislative program that could be introduced in Congress. "If we are to preserve and secure the benefits of the American concept—the privately owned and operated systems of national and international communications, functioning under appropriate Government regulations—and if we are to avoid the alternative of Government ownership * * * then we must develop and adopt * * * a unified national communications policy * * * sanctioned by the law," he said.

CONGRESSIONAL ANTITRUST IMMUNITY

The FCC didn't say whether it would favor Mr. Sarnoff's proposal, but its lawyers said it couldn't approve such a merger without a congressional grant of immunity from antitrust laws. At the 1959 hearing before the Senate Commerce Committee, the FCC, with RCA, ITT and Western Union, supported a merger of oversea telegraph concerns. The FCC felt the combination would compete better with A.T. & T. and with foreign government monopolies. It also agreed with the companies that the distinction between voice and printed communications had been blurred by technological developments, which could switch a larger share of the total business to powerful A.T. & T.

The Justice Department, however, opposed the combination, as did some smaller carriers.

The situation has been altered radically with the launching of Telstar.

Mr. MORSE. Madam President, when I think of the glorious record of the Senate of the United States in the decades gone by, when I think of men who trod the carpets of this historic forum, warning the American people to watch out for monopolies; when I think of our forebears here in the Senate who brought forth the protection of the antitrust laws and the Sherman and Clayton Acts, so vital to the economic freedom of the American people, I have no hesitancy, let me say, in seeking in my feeble way, to walk in their footprints on this carpet, daring to oppose a majority now as they for a time had to oppose a majority then, as they battled their way against the lobbying influences of powerful monopolies of America and finally wrote onto the books of this land the antitrust laws—the Sherman Act and the Clayton Act, the great protectors of a free society—so that they might enjoy economic freedom of choice, as citizens, to have the right to participate in free competition.

Mr. DOUGLAS rose.

Mr. MORSE. I cannot yield at the moment.

Economic freedom of choice in regard to free competition will be, in my judgment, throttled and destroyed by segments of the bill, or at least encompassed within the terms of the bill as to jurisdiction.

I ask Senators not to forget, Madam President, this is an awful precedent which is to be established. This will open the door. Do Senators think there will ever be any antitrust prosecutions in this country in the future, if this exception and exemption to the antitrust laws is passed in the form of this bill, in which the defendants will not say, "Ah, but the U.S. Government itself in the instance of the so-called satellite communications monopoly bill was perfectly willing to make an exception and an exemption."

I warn the Senate today that this is a proposal for a precedent which, in my judgment, bodes ill for the welfare of the taxpayers and ratepayers who will fall under the domination of this monopoly.

Who is speaking out about the ratepayers? How much talk has there been in the hearings about the rights of the ratepayers? There has been talk about the company having paid much of the cost of Telstar. Well, for the most part, two groups of Americans will pay the cost; the taxpayers, through tax deductions that A.T. & T. will get, and the ratepayers, for such costs as are left, will go into the ratemaking basis.

There has been talk about the fact that the stock is to be sold to those who wish to buy, although the bill leaves no room for doubt that A.T. & T. could buy as much as 50 percent of the voting stock. Witness after witness, under cross-examination, has admitted that undoubtedly A.T. & T. would buy 40 percent. Witnesses have come before us who have testified it is recognized that if someone really controls 10 percent of the voting stock he usually controls the company. If we permit A.T. & T. to get 10 percent of the stock, then its monopolistic power would undoubtedly be controlling. Certainly it would have more than 10 percent of the stock. There is to be authorized, under the bill, no limit in regard to the nonvoting stock and securities A.T. & T. could buy.

Someone had better talk about the interest of the taxpayers and of the ratepayers in connection with the bill.

Let us go back, Madam President, to the high-altitude communications satellite system, which witnesses admit is at the threshold. I want to take Senators to the testimony before one congressional committee, by Howard Hughes himself. Let all who want to deny his claim deny it, but nevertheless it is his testimony that he expects a breakthrough, through his corporation, in a high-altitude satellite by 1963.

So we see, Madam President, why A.T. & T. wants to get this sewed up and pinned down now. This is part of the great battle which is going on behind the scenes. A.T. & T. wants these vested legal rights now, through this bill. Then Howard Hughes can develop his high-altitude satellite, but he will have to deal with the corporation by way of the legal instrument which is to be created by this bill.

Is that in the public interest? It is decidedly against the public interest. That is not the way to preserve and perpetuate this precious principle of competition in the American economy.

I would have the American people remember that before a Hitler there was a cartelist takeover in Germany. Before a Mussolini there was a cartelist takeover in Italy. I warn that cartelism cannot be reconciled with economic democracy. I point out that cartelism cannot be reconciled with economic freedom of choice for the individual.

Yet this bill, in my judgment, would create and entrench a system of cartelism in this country which bodes ill for the welfare of the American people.

So those of us opposed to the bill have made very clear that we have a series of alternatives to propose. I offered two of them as complete substitutes for the bill yesterday afternoon in the Committee on Foreign Relations. I shall take only a moment to speak of one of them.

We had a witness before our committee, Madam President, named Ben Cohen, whom not a single proponent of the bill could challenge as to being a highly qualified legal authority, a recognized scholar in the field of international law, a man who has represented the United States in international conferences in connection with great international law issues. He testified before our committee in regard to what he considered to be the very serious defects of the bill particularly in respect to its international foreign affairs implications.

I think we can properly describe him as one who pleaded with the Foreign Relations Committee not to pass the bill but to perfect the bill. He supported a thesis which the senior Senator from Oregon from the very beginning of this debate has urged; namely, that these satellites up in space must remain American-flag satellites. They must be the satellites of the American people. They must belong to the American people. They must be up in space to serve all mankind in the great contest between freedom and totalitarianism in the decades ahead.

They must be used as a part of a global communications satellite system in keeping with what the record of our hearing shows was a farseeing pronouncement on the part of our chief Ambassador to the United Nations, Adlai Stevenson. In 1961, in behalf of the U.S. Government, he presented the resolution that became the United States-Soviet resolution, but it was first proposed by the U.S. Government. The resolution uttered some statements that will make history in this field. In offering the resolution Adlai Stevenson made clear that it was the position of our Government that a communications satellite system should be a global system. I ask, What has happened to that policy? What has happened to that announcement of the Government of the United States in 1961? In my judgment, my administration cannot square the bill with the program that Adlai Stevenson envisioned in 1961 when he made it clear that our national policy was a policy of establishing a global satellite system.

So I would have the American people understand the issues, as the debate starts, and as they are about to listen to the distinguished Senator from Utah [Mr. Moss] make the first major speech in the debate since the bill was brought back to the floor of the Senate. I would have the American people become students of the problem for some time, for I am satisfied that once they study the position of the so-called willful little band of Senators who are seeking to focus attention upon the dangers of the bill, they will understand the sincerity of our purpose, the dedication of our motivation, and our determination to be faithful to our trust as we see it.

In closing, let me say that I will continue to press the form and instrument that the great international lawyer, brilliant legal scholar, and a man with a great diplomatic background in the field of international negotiations, Ben Cohen, expressed so clearly in his brilliant testimony before the Committee on Foreign Relations.

What is it? It is a proposal that the jurisdiction of some Government agency, preferably NASA, be enlarged so that it would be made perfectly clear that NASA had jurisdiction over satellites. They will remain American-flag satellites. Then NASA will have the authority to enter into contracts, leases, and permits with any American private corporation for the development of a satellite communications system with equal opportunity to compete, in keeping with our competitive system of free enterprise in the United States, in contrast with the monopolistic power granted under the bill to the legal instrument proposed to be created by it in derogation of the maximum use of the competitive feature of free enterprise.

Therefore, all American corporations would be in on the ground floor on an equal basis. Contracts, licenses, and permits would be negotiated between NASA or some other Government agency, if it is desired to give the jurisdiction to some other Government agency, with the private corporation involved. As Ben Cohen said, that is our pattern; that is our policy in connection with much of our defense program.

There has been an attempt to misrepresent the position of those of us who are opposed to the bill by seeking to smear us with the charge that we are for Government ownership and operation. We are not. But we are for maintaining the satellites as American-flag satellites. We are for the operation of the satellites and the development of the system by way of contracts through a private enterprise system in relation to private corporations in this country.

The Atomic Energy Commission is a good example. We have been following such procedures under the Atomic Energy Commission with respect to some phases of the development of atomic energy and atomic power.

Madam President, we have done so to the tune of hundreds of millions of dollars in connection with the development of our defense program.

All we are saying is that if it is a sound system for defense, atomic energy, and other Government activities in which that legal instrument has been the one that we have followed, why not for a communications satellite system? Why the rush? What is the hurry? In my judgment, we can proceed to develop a communications satellite system faster by the Cohen program, about which he testified, than we could under the monopolistic instrument which would be created by the bill.

I wanted to make the statements I have today because I thought the American people should be told at least what the motivation of the so-called little band of willful Senators who are opposed to the bill really is. I thought the American people should receive the plea from me today: "Stop, look, and listen in regard to the bill. Do not permit your minds to be victimized by the attacks which you will read in the hundreds of editorials that will be written against this little group in the Senate. Do not overlook the fact that we, too, have a keen sense of public responsibility. We, too, took the same oath at the Vice President's desk that our opponents in the debate have taken. We, too, swore to uphold the Constitution in accordance with our laws, as did those who are opposed to us in respect to the bill."

I would have the American people never forget that the course of action we are following is not easy. It is not pleasant. But we have made the decision because we believe it is our patriotic trust and duty to do so.

We talk about sacrifice in America. We talk about being willing to sacrifice for our country. Senators cannot escape their obligation to make whatever sacrifice is necessary if they think a particular issue calls for a sacrifice. So far as the senior Senator from Oregon is concerned, there is no sacrifice that I am not willing to make in doing whatever I can do to prevent the passage of the bill until after the election, so as to give the American people an opportunity to study it and give their instructions to their elected representatives in the Senate to come back at a special session of the Congress the first week after the election.

I say to my President, "What is wrong with that? Do you think you would get a different bill after the election? If you think this bill is so sound, why do you hesitate to postpone action on it until the people have had an cpportunity to listen to a nationwide debate on the issue during the campaign ahead? Mr. President, I pray and trust that you will recognize before it is too late that the greatest service that can be rendered the American people in regard to the bill is to take some time for its consideration out at the precinct levels of America. That is what creates democracy. These people at the precinct level of America during this campaign have a right to have this bill a discussion point in the election. I pledge to you, as I have already pledged to my majority leader on the floor of the Senate some days ago, if you postpone action on this bill until the first week following the election, the senior Senator from Oregon will stand shoulder to shoulder with you in doing everything he can to see to it that the bill then goes through to an early vote following reasonable debate on the bill."

That is my case as of now. I shall discuss the matter at greater length upon my return. I want my opposition in the Senate to know that I am going home tonight. I have an election ahead of me. I will be home tomorrow. I will be back here on Monday. I know that my great colleagues and my leaders in this debate, like the two Senators from Tennessee and the junior Senator from Louisiana and the Senators from Alaska and that wonderful colleague of mine, the Senator from Oregon, will see to it that the people of this country continue to have an opportunity to learn about this bill as the debate over the weekend proceeds.

Mr. GORE. Madam President, will the Senator yield for a question?

Mr. MORSE. I was going to yield the floor. I have declined to yield to anyone else. I do not want to hold up any Senator. I am sure the Senator from Utah will be glad to yield. I want to be fair to all, and I hope the Senator from Tennessee will understand why I do not yield.

I yield the floor.

I suggest the absence of a quorum.

Mr. MANSFIELD. Madam President, will the Senator withhold that request briefly?

Mr. MORSE. With the understanding that it will be renewed immediately, I withhold it for the moment.

Mr. MOSS obtained the floor.

Mr. MOSS. Madam President, I ask unanimous consent that I may yield to the Senator from Maine for the purpose of making an insertion in the RECORD, without losing the floor.

Mr. MORSE. With the further understanding that his yielding does not count as a speech against the bill.

The PRESIDING OFFICER. Without objection, it is so ordered.

THE PRESIDENT'S VISIT TO MAINE

Mrs. SMITH of Maine. Madam President, it is my hope and my plan to be at Brunswick this afternoon to greet President Kennedy upon his arrival in Maine at the naval air station there at 6:15 p.m. I wanted to join in on giving him the warmest and most gracious welcome and reception.

In fact, 2 weeks ago, on July 23, 1962, I extended to him an invitation for him and Mrs. Kennedy to use my home at West Cundy Point—only 8 miles from the naval air station where he will be landing—while he was in Maine and in the Maine waters as the original publicity at that time reported that he would be sailing off the coast of Maine—and my home is on the shore of one of the most popular sailing areas in Casco Bay. This morning I received a reply from Mr. Kenneth O'Donnell on behalf of the President stating that he would not be staying in that area.

But it is doubtful that I can get to Maine in time to be present to welcome the President because this last rollcall vote, on which I voted at 1:27, leaves me practically no time, as the field will be closed down at 5:30 and no other planes are allowed to land there after that time.

The Navy Department was kind enough to arrange to fly me to Maine to join in the welcome to the President, but the R–4D plane that it made available is not jet aircraft—and they informed me that I would have to be at Andrews Air Force Base in time to depart not later than 1:30 this afternoon. Consequently, time closed in on me, and I sincerely regret it.

But I am sure that the President and everyone will understand fully that my official Senate duty to answer rollcall votes and to remain here to do what I was elected to do—to legislate and vote—takes priority over even the pleasant activity of greeting and welcoming the President of the United States to the State of Maine.

I wish him a most pleasant, enjoyable, and relaxing weekend in Maine, and that he will enjoy it so much that he will return many times to Maine.

PENALTY PROVISION IN THE ADMINISTRATION'S FARM PROGRAM

Mr. WILLIAMS of Delaware. Madam President, will the Senator yield?

Mr. MOSS. I yield to the Senator from Delaware with the understanding that I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. WILLIAMS of Delaware. Madam President, on August 8, 1962, I made the statement that under the Kennedy administration's farm program as it was recommended to the Congress there were penalty provisions under which a farmer could be fined or sent to the penitentiary for noncompliance. My remarks were immediately challenged by the spokesman for the Agriculture Department who said that the bill pending in the Senate did not contain such criminal penalties.

This rebuttal by the unnamed spokesman for the Agriculture Department is deliberately misleading. My remarks were clearly directed against the administration's bill as it was recommended to the Congress and not as the bill was pending in the Senate.

My statement still stands, and I repeat it again—the administration's farm program as recommended to the Congress definitely does carry a criminal provision for noncompliance, and as evidence of that point I ask unanimous consent to have incorporated in the RECORD section 379i(d) and section 440 as they appear on pages 79 and 96–97 of the administration's bill, S. 2786, as it was introduced by Senator ELLENDER on February 2, 1962.

There being no objection, the material was ordered to be printed in the RECORD, as follows:

SEC. 379(d) Any person who falsely makes, issues, alters, forges, or counterfeits any marketing certificate, or with fraudulent intent possesses, transfers, or uses any such falsely made, issued, altered, forged, or counterfeited marketing certificate, shall be deemed guilty of a felony and upon conviction thereof shall be subject to a fine of not more than $10,000 or imprisonment of not more than ten years, or both.

REPORTS AND RECORDS

SEC. 440. Each first processor and producer shall keep such records for such period of time and shall make such reports as the Secretary shall prescribe for the purposes of this subtitle. The Secretary is hereby authorized to examine such records and any other records, accounts, documents, and other papers which he has reason to believe are relevant for the purposes of this subtitle and which are in the custody or control of such first processor or producer. Any person failing to make any report or keep any record as required by the Secretary, pursuant to this subtitle, shall be guilty of a misdemeanor and, upon conviction thereof, shall be punished by a fine of not more than $2,000 or by imprisonment for not more than one year, or both.

NEGOTIATED CONTRACTS IN THE AIR FORCE

Mr. WILLIAMS of Delaware. Madam President, the Comptroller General under date of July 31, 1962, has submitted to the Congress another glaring example of unnecessary expenditures by the Air Force as the result of its continued determination to negotiate contracts rather than solicit competitive bids.

In this instance the Air Force negotiated with the Continental Motors Corp., Muskegon, Mich., for the procurement of 183 replacement engines for certain fire-crash vehicles at a price of around $4,725 each when the same engines were costing the company less than $2,650. This resulted in a profit of over 80 percent for Continental.

These engines were purchased under five separate contracts, and during the negotiations Continental refused to furnish the Air Force's contracting officials any available cost data or other evidence to support the reasonableness of the prices it was proposing. However, notwithstanding the absence of such necessary information the Air Force negotiated these five fixed-price contracts with Continental for the procurement of a total of 183 engines at an average price of about $4,725 each, or a total cost for the five contracts of $864,310.

Subsequent audit of this contract by the Comptroller General disclosed that the cost actually experienced by Continental in the production of these engines averaged less than $2,650 each, with the total cost of producing the 183 engines being only $479,060. This resulted in a total profit on the five contracts of $385,250, or 80.4 percent.

Thus we find that engines which cost Continental an average of around $2,650 each were being sold to the Government at an average price of around $4,725 each.

A list of the contracts along with the Comptroller's report on the cost as actually experienced and the profit thereon follows:

Contract				Costs actually experienced		Profit	
AF 40(604)	Quantity	Unit price [1]	Total [1]	Unit average [1]	Total [1]	Total amount	Percent of cost
-8021	65	$4,725	$307,120	$2,706	$175,890	$131,230	74.6
-8598	20	4,725	94,500	2,527	50,540	43,960	87.0
-8726	25	4,725	118,120	2,606	65,150	52,970	81.3
-9172	63	4,725	297,680	2,576	162,290	135,390	83.4
-9907	10	4,689	46,890	2,519	25,190	21,700	86.1
Total			864,310		479,060	385,250	80.4

[1] Excludes excise tax and freight where applicable.

After the Comptroller General had audited this contract and disclosed this 80-percent profit the Air Force was able to negotiate with Continental and obtained a voluntary refund of $110,000, but even after this refund it still leaves Continental with a profit of over 55 percent on the deal.

This is but another typical example of what has been happening and what will continue to take place as long as the Air Force insists upon continuing its irresponsible practice of negotiating contracts rather than adopting the businesslike procedure of soliciting competitive bids.

In commenting upon the Comptroller General's report the Air Force gave the same shopworn standard-form alibi which it has repeated so much it now sounds like a cracked record. I quote from the Comptroller General's letter:

> Subsequent to the award of the contracts discussed in this report, the Air Force and the Department of Defense have taken a number of actions aimed toward improving the pricing of contracts.

THE CAMPAIGN FOR SAFE DRIVING

Mr. CARLSON. Madam President, will the Senator yield?

Mr. MOSS. I yield to the Senator from Kansas with the same understanding, that I do not lose my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. CARLSON. Madam President, the National Junior Chamber of Commerce is entitled to much credit for its outstanding campaign for safe driving.

The District of Columbia Jaycee Committee has for 11 successive years been host to the National Jaycee Safe Driving Teen-age Road-e-o Finals. The District of Columbia chapter is entitled to much credit for arranging the contest, entertaining the State winners and rendering a real national service.

This year over 400,000 of our fine boys and girls competed in the national contest and last evening at the awards banquet, recognition was given these winners from most of the States of the Union.

The program was in charge of Mr. Doug Blankenship, president of the United States Junior Chamber of Commerce.

The national winner in the contest was Martin Leroy Pitrey, a 17-year-old boy from Bakersfield, Calif., who scored 850 out of a possible 1,000 points in the 5 days of competition. Second prize was won by Patricia Ann Scherer of Cheyenne, Wyo. She is the first girl to place among the three top winners since the beginning of the annual Road-e-o 11 years ago. Miss Scherer also won special recognition for outstanding community participation.

Third place went to Richard A. Morris, East Longmeadow, Mass. Miss Jean Gilbert, of Atlanta, Ga., won an award for sportsmanship and Leslie Hirahara of Honolulu, Hawaii, was recognized as the best State representative.

The junior chamber of commerce is entitled to much credit for carrying on the program. The sponsors of the Road-e-o contest are to be congratulated for assisting in this campaign of safe driving and the young men and women are to be congratulated for their achievement and the splendid campaign for safe driving they will be carrying on in every State of the Union, as a result of this contest.

I ask unanimous consent that the names and addresses of the contest winners be made a part of these remarks.

There being no objection, the list was ordered to be printed in the RECORD, as follows:

STATE ROAD-E-O WINNERS, 1962

Leonard Deal, Jr., Dothan, Ala.
Orlando Westover, Mesa, Ariz.
James Sanchez, Russellville, Ark.
Martin Pitney, Bakersfield, Calif.
Jack Sparby, Longmont, Colo.
Allan Borghesi, Torrington, Conn.
Warren Bader, Harrington, Del.
Peter Clendenin, Washington, D.C.
James Lawrence, De Land, Fla.
Jean Gilbert, Atlanta, Ga.
Leslie Hirahara, Honolulu, Hawaii.
Jerald Schwager, Wheaton, Ill.
Willard Colwell, Kokomo, Ind.
Allan Schlatter, Hawkeye, Iowa.
James Sager, Clyde, Kans.
Steve Cammuse, Frankfort, Ky.
Elwyn Prejean, Addis, La.
Robert Philbrook, Rockland, Maine.
John Kimball, Jr., Havre de Grace, Md.
Richard Morris, East Longmeadow, Mass.
Roger Ferm, Spring Lake, Mich.
David Domke, Hutchinson, Minn.
Billy Dudley, Winona, Miss.
Gary Atkinson, St. Louis, Mo.
Lonny Speas, Ames, Nebr.
John O'Connor, Cranford, N.J.
Roy Amold, Aztec, N. Mex.
Gordon Czelusta, Lockport, N.Y.
James Warren, North Wilkesboro, N.C.
Bill Neideffer, Wing, N. Dak.
Joe Deere, Guymon, Okla.
Robert DeSanto, Stroudsburg, Pa.
Philip Kalf, Cumberland, R.I.
William Tetterton, Camden, S.C.
Charles Weibel, Aberdeen, S. Dak.
W. B. Harrison, Jr., Ripley, Tenn.
Roderic Spain, Monahans, Tex.
Arthur Ball, Salt Lake City, Utah.
Robert Coburn, Newport Center, Vt.
Maurice Mitchell, Petersburg, Va.
Robert Yenney, Walla Walla, Wash.
Nick Miller, Glen Dale, W. Va.
Kirk Schleife, Tomahawk, Wis.
Particia Scherer, Cheyenne, Wyo.

THE RELIGION OF SECULARISM—ADDRESS BY FRANCIS CARDINAL SPELLMAN

Mr. MOSS. Madam President, I ask unanimous consent that I may yield to the Senator from New York, with the understanding that I do not lose the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KEATING. Madam President, the religious basis for many of our most cherished freedoms and traditions is recognized by almost all Americans. The wall of separation between church and state has never been considered justification for hostility between church and state or isolation of religion by the state. What it does require is absolute neutrality among the faiths and voluntarism in all matters affecting religion. This prohibits action by the Government favoring one religion over another, but it does not require the Government to discriminate against religion or to promote secularism in any of its undertakings.

These principles are discussed with great understanding and clarity in an address of His Eminence, Francis Cardinal Spellman, delivered at the 64th annual international convention of the Fraternal Order of Eagles which recently took place in Pittsburgh. In this address, Cardinal Spellman expresses his deep concern with efforts "to remove religion entirely from the public domain, and to commit our Government to the side of irreligion." He describes this as "the establishment of a new religion of secularism" and gives important examples of its development.

Cardinal Spellman warmly embraces in his address the principles of the first amendment, "one of the foundation stones of our American political system." His words will evoke a sympathetic response from many Members, regardless of their particular religious affiliation, and even those who disagree with his views will be impressed by the wisdom and light which he has shed on these issues. I therefore ask unanimous consent that the text of the address by His Eminence, Francis Cardinal Spellman, be printed at this point in the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HIS EMINENCE, FRANCIS CARDINAL SPELLMAN AT THE 64TH ANNUAL INTERNATIONAL CONVENTION OF THE FRATERNAL ORDER OF EAGLES, AUGUST 2, PITTSBURGH, PA.

My mind is still filled with vivid recollections of the friendly reception accorded me in Toronto 3 years ago when first it was my privilege to address the International Order of the Eagles. I was therefore delighted to accept your welcome invitation to attend your convention here in Pittsburgh and to speak again to your distinguished membership.

I read and hear with interest and with admiration of the great philanthropic work that your fraternal organization continues to accomplish. Surely the eagle is a most fitting symbol for your fraternity, for like the eagle, you soar high in social pioneering; you protect rights for all classes, regardless of creed; and you are farsighted in sponsoring projects of medical research. In behalf of Dr. John Madden, director of the Cardiac Research Center at St. Clare's Hospital in New York City, I wholeheartedly thank you for your latest grant to help in the important field of heart research.

An occasion such as this is a moving proof of your deep interest in all people and their needs. In your own campaign for social security legislation—in your desire to obtain Federal funds to assist the aging, you never considered placing un-American restrictions on the distribution of this public money. Indeed, every aspect of your many-faceted activities is devoted to spreading and strengthening moral and religious principles common among all who believe in God and love their country.

The story of your many contributions to our beloved country never once reveals any desire to judge men by a standard other than their need of your help. For this reason I am encouraged to speak to you this evening about the two-pronged attack on the American way of life as you and I have come to know it and to love it—and as your fathers and mothers, your sons and daughters, and you yourselves have lived for it and struggled for it and as multitudes have died for it. I refer to the movement to take God out of the public school and to force the child out of the private school.

You may already know of my deep concern over the recent Supreme Court decision banning the Regent's Prayer in the public schools of New York State. As you know, that prayer is a simple, short, nondenominational and voluntary acknowledgment of dependence upon God and a request for His blessing. I fully appreciate the high responsibility of the Supreme Court to guard our Constitution and the delicacy of its task. Moreover, I respect the integrity and the dedication of the men who are charged with this solemn commission. But I am convinced that in this case six Justices rendered a decision which will be harmful to America. As an American who loves his country more than his life, I feel that I have a responsibility to express my concern publicly.

The first amendment states that "Congress shall make no law respecting an establishment of religion." One of the foundation stones of our American political system, this amendment provides that the Government shall not place the mantle of its preference over any particular church.

Our Founding Fathers knew of the bitter experiences in Europe with established and state-supported churches, where in some lands preferment was given those who belonged to a particular church, and persecution was the lot of those who did not affiliate. Their solution to the troublesome church-state problem was to separate the two, to make them independent of each other, and thereby to assure equal rights to all citizens irrespective of their religious convictions.

This was their simple and clear objective when they wrote the first amendment. Few in America disagree with that purpose. Certainly no Catholic disagrees with it, for we are well satisfied with such separation of church and state as exists in our country. Almost half a century ago Cardinal Gibbons expressed the American Catholic position clearly when he stated: "No establishment of religion is being dreamed of here by anyone; but were it to be attempted, it would meet with united opposition from the Catholic people, priests and prelates." And Archbishop Vagnozzi, the representative of Pope John XXIII in the United States, recently expressed a similar opinion: "Whether they remain a minority or become a majority, I am sure that American Catholics will not jeopardize their cherished religious freedom in exchange for a privileged position."

Catholics do not want their church, or any other church, to be "state supported" in the United States. They are of one mind with the men who were the architects of our Republic.

By the first amendment, however, the Founding Fathers of our country never intended to purge public life in America of all religion. They never intended to establish irreligion. Their declaration of dependence upon God anteceded their Declaration of Independence from England. They were themselves religious men, whose faith in God and dependence upon Him permeated both their private and their public lives. They did not hesitate to mention Him in their public utterance, to open their deliberations with prayer to Him, to set up chaplaincies, and to ask the President to call a day of prayer and thanksgiving to God. On religious values they built this Nation and on these values it has ever stood firm.

But now there is abroad in our land a new spirit which seeks to change this religious tradition of America, to place a nontraditional interpretation on the Constitution, to remove religion entirely from the public domain, and to commit our Government to the side of irreligion. This is the establishment of a new religion of secularism. This should be ruled unconstitutional.

Followers of this new secularistic approach have seized upon an expression that Thomas Jefferson used years after the first amendment was written, and have made it their battle cry. Jefferson spoke of a "wall of separation" between church and state. For him this wall was a dividing line, a fence, if you will, between friendly neighbors. The secularists have breathed into his metaphor a new and sinister meaning which he never intended. Jefferson spoke of a wall, but they have made it a rampart between church and state as though they were hostile elements in our country, instead of friendly partners claiming, each in its proper sphere, the allegiance of men's hearts.

I went to a public elementary school and to a public high school in Massachusetts, and during those 13 years all my teachers but two were Protestant and from them I learned a reverence for God and religion. I am sure that you learned the same lessons. Now we are being told that education must have nothing to do with God. Now we are being told that the United States Government must have nothing to do with God. Now we are being told that if children stand in their classroom and voluntarily, in twenty-two simple words, ask God to bless them, their parents, and their country, they are violating the Constitution and breaking the law of this land. This decision disregards the traditional rights of the overwhelming majority of parents and children. Firmly do I believe with Justice Stewart that "to deny the wish of these schoolchildren to join in reciting this prayer is to deny them the opportunity of sharing in the spiritual heritage of our Nation."

Little by little the old America disappears from us—a country whose religious tradition and faith in God were her granite-like supports and the firm pledge of her strong endurance. As President Kennedy stated in his inaugural address, "Our forefathers fought for the belief that the rights of man come not from the generosity of the state but from the hand of God." Yet, at every opportunity, the secularists proclaim religion and the state as hostile forces in our country, instead of friendly partners, each in its own way, serving mankind.

Theirs is a crusade, not for freedom of religion, but for freedom from religion. Their goal is to strip America of all her religious traditions. A classic example of their technique is the controversy over Federal aid to education. They have so purposefully obscured and confused the question that millions of God-fearing Americans have been led to believe that there can be no peaceful cooperation between God and our country.

A year and a half ago, the proposal was made to use Federal funds to enable the schools of America to improve their standard of excellence. At once the administration assumed the position that children in nonpublic schools could not be helped, and there are nearly six million children in nonpublic elementary and high schools throughout the United States. The administration contended that these youngsters must not benefit from any Federal program of educational assistance. And why? Because in most cases their education is God-centered; it is religious.

As education, it equals that given in public schools. Certificates of transfer from private to public schools are honored without question. These students learn to read and write and they learn geography and mathematics and languages and science and American history and they love their country just as much as do their friends in public school. They are preparing for the same responsible citizenship. And, side by side, with their public school neighbors, they will later take their places as the workers, teachers, technicians, scientists, and the fathers and mothers of the next generation. If our country is attacked, they will fight for it; they will die for it, as so many of them have done before. In addition, they pay their taxes to the Government. But some argue that not one penny of Federal funds may be used to improve the excellence of their education because in their schools, in addition to their regular subjects, they are permitted to learn about God.

This is injustice. This is discrimination. This is an economic penalty against the schools performing a public service for our country parallel to that of the public schools. These parents are penalized for exercising their constitutionally protected right to send their children to the school of their choice—a right which even the Supreme Court has upheld.

When Catholics protested this evident injustice, the forces of secularism took the position that they would prefer to see the Federal aid program die than have it benefit the children in God-centered schools. Why are they so eager to gain Federal funds for one school system alone? If with a firm and even hand taxes are applied across the board without regard for race, creed, and color, it would seem reasonable to suppose that the money thus collected would be distributed across the board with an equally firm and even hand. When we speak of Government money, let us remember that the Government does not create money. Taxes for education are also collected from the parents of these children. If no part of these taxes is returned in any form to aid the nonreligious aspects of their children's education, how can this be just? Is not this taxation without participation? And eventually and inevitably will it not strangle the splendid independent school systems which so many God-fearing parents of all religions have, with so many sacrifices, established and maintained?

Catholics, as a group, are not opposed to Federal aid to education. Most take the position that it is for the Congress to decide whether the schools of our country really need Federal funds. They simply say that if legislation is enacted, it should apply to all children on a non-discriminatory basis. Furthermore, many Americans fear the creation of a monopoly in our educational system. They cherish the survival of their God-centered schools, and they realize that such control by the Government can easily lead to Iron Curtain education. Indeed, the more variety in our educational systems, the richer will be our culture. My prayerful hope is that other independent schools will flourish in our beloved land. For as these independent schools grow, our free society will become stronger through this diversity of education. The recent unfortunate decision of the Supreme Court, therefore, may well become a blessing in disguise, if it alerts us to the dangers of a uniformity which would blind our children to the world of the spirit.

I am gratefully encouraged that since the current controversy on Federal aid began, frank discussions have cleared the air and clarified the issues. Leading authorities on constitutional law state that aid given for the nonreligious aspects of the education of children in God-centered schools is certainly not unconstitutional.

Moreover, on last June 25th, Mr. Abraham Ribicoff, the Secretary for Health, Education, and Welfare, declared that there is a wide range of entirely permissible financial assistance to private schools. I applaud this judgment, and I rejoice in the greater understanding that has more recently been brought to this controversy.

I have chosen this subject for my address to you this evening with the desire to clarify further these issues, and also to encourage you to help your neighbors understand why we must not take God out of the public school and force the child out of the private school. As members of the Fraternal Order of Eagles, you have pioneered social legislation; you have safeguarded the rights of all individuals; you have been farsighted in maintaining the traditions of America. Our children are America's hope, and the education of every last one of them is tremendously important to us all. Liberty, truth, justice, equality—these you have emblazoned on your Eagle coat of arms, and what is more important, you have put them into practice.

In pleading for our children, I know that I speak to an understanding audience, for the work you have done for the betterment of youth is well known. In arguing for the godly traditions of America, I feel the same confidence, for your motto—"Freedom under God's law in our world"—is no dead letter, but one by which you live. It is a motto which, if lived by all, will protect and preserve our beloved America.

BIRTHDAY TRIBUTE TO HERBERT HOOVER

Mr. KEATING. Madam President, the Nation pauses today to mark with deep respect and warm affection the 88th birthday of one of the great men of our time, Herbert Hoover. It is eminently fitting that America should pay homage to Mr. Hoover on this anniversary of his birth, for he has spent a lifetime in making us proud that we are his fellow citizens. This great, wise, and gifted man has made the high cause of humanity his career, and over a long and distinguished span of years he has committed himself selflessly to the furtherance of that cause.

The peoples of Europe remember, and will ever remember, Mr. Hoover, for the heart-lifting mission of mercy he performed in feeding the hungry millions of the war-ravaged continent in the dark aftermath of the 1914–18 conflict. It may well be said that this uncommon man with the common touch has never retired from his self-imposed labor of striving to make the world a better place than he found it back in those early years of struggle that helped both to temper the steel of his character and to warm the compassion of his heart.

Our oldest living ex-President stands before us today as both a challenge and an inspiration. The years appear to have accentuated rather than diminished his zest for life, his prodigious energy, his unfailing involvement in the betterment of the human society. Today, as he travels back over the miles and the years, on a sentimental journey to the town of his birth, West Branch, Iowa, there to dedicate the library erected in his honor, let our hearts and minds take that same journey, and let us stand in spirit beside this magnificent American and take pride in the Nation that proudly calls him its son.

NEW ENGLAND STATES MAKE IT 32 STATES FOR NEW YORK WORLD'S FAIR

Mr. KEATING. Madam President, earlier this summer Mr. Robert Moses, president of the New York World's Fair, said:

> A genuine world's fair is much more than a spectacle and circus. It is an olympics of progress and healthy rivalry, a vast colisseum dedicated to new friendships.

April 22, 1964, will see the first of the 70 million expected visitors to the New York World's Fair of 1964 and 1965—almost 30 million more than attended the 1959 Brussels Fair. These visitors will see the flags of at least 66 nations represented at the fair. More than 30 of the States will also have exhibits. These State exhibits will make the visit even more meaningful for our foreign visitors, for from them they will gain greater insight into the tremendous variety of traditions and values in our American society.

I am delighted today to call attention to the announcement on Monday, August 6, that the six New England States will be added to the list of participating States. The New England region has contributed a great deal to our Nation's heritage. The New England pavilion is an important addition to the New York World's Fair and I am confident that it will greatly augment the success and excitement of the fair.

Madam President, I ask unanimous consent to have printed at this point in the RECORD a statement about the proposed New England exhibit at the fair.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT FROM WORLD'S FAIR CORP. ON NEW ENGLAND EXHIBIT

The six New England States were officially added to the roster of impressive exhibits to rise at the New York 1964–65 World's Fair, as the New England Council signed today with Robert Moses, president of the fair, for 81,518 square feet of space for an exhibit in the Federal and States area.

Signing for the council was its executive vice president, Gardner A. Caverly, who acted in behalf of the New England States of Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, and Vermont. Among those present for the ceremonies was Representative Peter J. Cloherty, chairman of the New England States World's Fair Committee, and other members of the committee.

On display at the signing ceremonies was a scale model of the six-State pavilion which is designed through several individual structures to convey the theme of "New England: Where Our Past Began, Our Future Begins." It will house an exciting variety of exhibits portraying the historical landmarks, culture, seafaring background, and industry of this major sector of the American community.

In the regional portion of the exhibit the visitor will see original or replica landmarks affecting the development of the United States and the world, and a relief model of New England. From this regional section the visitor will move out through beautiful landscapes that provide a flavor and fragrance of New England, to the village green and amphitheater where a wide variety of events is planned from a town meeting to a performance by the Boston Pops Orchestra. There will be separate exhibits for each New England State showing past achievements along with future aspirations and serving as information and tourist centers. Another building in the multiple-State exhibit will house the finest in New England industry. Planned also is a fish hatchery, a country store, and a restaurant featuring foods for which New England has become famous.

ORDER OF BUSINESS

Mr. KEATING. Madam President, I should like to discuss another subject for about 5 or 6 minutes, but I do not desire to interfere with the plans of either the Senator from Utah [Mr. MOSS] or the Senator from Oregon [Mr. MORSE].

Mr. KEFAUVER. Madam President, will the Senator from New York yield to me?

Mr. KEATING. The Senator from Utah has the floor. Would it be agreeable to the Senator from Utah if I spoke for about 5 minutes on another subject?

Mr. MOSS. Madam President, under the unanimous consent agreement that I will not lose my right to the floor, I agree that the Senator from New York may continue.

Mr. KEATING. I appreciate the Senator's courtesy.

Mr. MORSE. Provided, however, that the yielding does not count as one speech.

The PRESIDING OFFICER. Without objection, that is the understanding.

FORMER PRESIDENT TRUMAN'S VIEWS ON COMMUNICATIONS SATELLITE BILL

Mr. KEATING. Madam President, I wish to comment on the sprightly remarks of the penultimate President of the United States, a former Member of this body. I quote from the New York Times, a most reliable journal, his remarks to reporters yesterday with reference to the communications satellite bill:

> I don't think the President understands the bill. The damned Republicans and some Democrats are trying to give away public property. The public spent $25 billion or $30 billion developing satellites and the communications system ought to be publicly owned.
>
> The Republicans will give away everything if you don't watch them.

It occurs to me that there is much more heat than light in that statement. The first reference; namely, to the understanding of the bill by President Kennedy, rather baffles me. I would not cast any aspersions on any President, but I venture the suggestion that the President of the United States understands the bill as well as the penultimate President understands it.

As to the next statement, that "the damned Republicans and some Democrats are trying to give away public property. The public spent $25 billion or $30 billion developing satellites," I would have to question not only the penultimate President's knowledge of budgeting, as was done yesterday by the distinguished minority leader, but also his knowledge of the Scriptures and the causes of damnation. Certainly damnation and glorification are no special province or prerogative of any political party or anyone of any race, creed, or color.

If the Republicans are to be damned, we certainly are in good company. The phrase "some Democrats" is rather interesting in correlation with President Kennedy's reference to the "handful of Democrats" who defeated the medicare bill. The penultimate President speaks of "some Democrats," when, in fact, we know that all but perhaps 10 or 15 Democrats favor the satellite bill, as well as all Republicans.

I have never known such a party of shrinking violets, trying to diminish its Members by describing its leading Members, most of its committee chairmen, and, in the case of the satellite bill, the majority leader, the majority whip, and nearly all members of three different committees, as "some Democrats." If I were one of these continually downgraded Democrats, I would seriously think of becoming a Republican, where my talents might be honorably recognized and where open arms would be extended.

Furthermore, if we are to be damned for the position that the penultimate President thinks we should not have taken, our present President himself must be included. He must be one of the damned, because he has reiterated his approval of the satellite bill, even so recently as his past press conference.

According to the penultimate President, the present President apparently has perpetrated a giant giveaway without even understanding what he is giving away. I have served in the Senate with the former Senator from Massachusetts, who is now the President of the United States, as have most of the rest of us in this body. We always looked upon him as a highly intelligent man. It is hard for me to follow the statement of the penultimate President that President Kennedy does not understand the satellite bill.

But, Madam President, I have considerable difficulty anyway in determining what is given away by means of the bill and why there is constant reference, in connection with the bill, to giveaway. The word "giveaway," which the penultimate President of the United States uses so glibly, is like many cliches which are used over and over again, frequently with little or no meaning.

Now let me ask, Madam President, just what is being given away by means of this bill. The U.S. Government does not now own outer space; so we could not give it away, even if we wanted to. The communications know-how has never been the property of our Government, to start with; so we could not give that away, either, if we wanted to.

Mr. GORE. Mr. President, will the Senator from New York yield?

The PRESIDING OFFICER (Mr. METCALF in the chair). Does the Senator from New York yield to the Senator from Tennessee?

Mr. KEATING. Mr. President, the Senator from Utah [Mr. MOSS] has the floor. By unanimous consent, he yielded briefly to me; and I promised to speak for not more than 5 minutes. Of course I am perfectly willing to yield to the Senator from Tennessee if the Senator from Utah will permit me to do so, and if the Senator will first permit me to complete my statement. It will take me only about 2 more minutes to complete it.

Mr. MOSS. Mr. President, I yielded to the Senator from New York under a unanimous-consent agreement; and I prefer to have the Senator from New York complete his remarks.

Mr. KEATING. I shall complete them in about 2 minutes. If the Senator is then willing to have me proceed further, I shall be glad to engage in colloquy with the Senator from Tennessee.

Mr. President, the rockets and missiles necessary to shoot the satellites into space are indeed Government property, and the Government will be compensated for their use, as it was in connection with the Telstar firing. So we shall not be giving them away. The capital that this corporation needs will be obtained from the sale of stock. No stock is to be given away to anyone; on the contrary, it will be sold for $100 a share. So it is most difficult to see what is being given away.

The only gigantic giveaway that I have found is in the penultimate President's own statement that President Kennedy does not understand the bill. If that is true, it has so far been the most carefully guarded secret in the Democratic Party. Certainly the information will come as quite a surprise to most Members of the Senate. I wonder whether our penultimate President would also suggest that the chairman and the other members of the Foreign Relations Committee, the chairman and the other members of the Commerce Committee, and the chairman and the other members of the Space Committee do not understand the bill either, for it has been favorably reported to the Senate from all of those committees; and, in the case of the Foreign Relations Committee, the bill was reported to the Senate without changing a comma in it. I assume that such a conclusion would follow from Mr. Truman's statement.

Mr. President, in all seriousness, let me conclude by saying that there is one possibility of a giveaway in this situation—and, so far as I can see, only one. It is that by our delay and by the filibustering here in the Senate we shall be giving away—in fact, I would put it even more strongly, and would say we would be throwing away—the best opportunity to get a cooperative business-Government venture underway, the best opportunity to establish and maintain our clear leadership over the Soviets, and the best opportunity to prevent one company—namely, A.T. & T.—from setting up a monopolistic control of communications satellites, because that company has put up the Telstar; and if we do not enact this bill, that company can put up several more Telstars. Mr. President, this bill is being sought in an effort to let others participate in this development, including the general public.

It would be a tragic giveaway of the lead we have established in this field if we did not pass this bill. And if that genuine giveaway took place, the entire, full, and complete blame would have to rest on the members of our penultimate President's own party—not on all of them, but only on those who understand the bill, as he apparently says he does, and on those who share his views.

I thank the Senator from Utah for his courtesy in yielding to me.

TRANSACTION OF ROUTINE BUSINESS

Mr. MANSFIELD. Mr. President, will the Senator from Oregon yield to me on the same basis as that on which he yielded earlier to the Senator from Utah? I wish to propound a request.

Mr. MORSE. Yes. But first I wish to ask the majority leader about the understanding he and I had concerning the postponed quorum call. I asked for a quorum call; and the majority leader asked that I withhold that request until certain insertions were made in the RECORD. I do not think either of us contemplated at that time that the Senator from Utah would first be recognized. However, he has now been recognized; and that creates the parliamentary situation that if I now ask for a quorum call, I shall have to do it by unanimous consent, insofar as preserving the rights of the Senator from Utah are concerned. Otherwise, his yielding for this purpose would count as one speech by him.

Mr. MANSFIELD. I am willing to go along.

Mr. MORSE. Mr. President, I ask unanimous consent that when the Senator from Montana finishes with his request, I may ask for a quorum call, without having that charged against the Senator from Utah, in connection with any of his rights.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. MANSFIELD. Mr. President, with the same understanding, will the Senator from Oregon yield now to me?

Mr. MORSE. I yield.

Mr. MANSFIELD. Mr. President, I ask unanimous consent that various matters submitted by several Senators and now held at the desk be printed in the RECORD and that several bills and communications now held at the desk be considered as having been introduced and submitted, and appropriately referred.

The PRESIDING OFFICER. Without objection, it is so ordered.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

The Senate resumed the consideration of the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

Mr. MORSE. Mr. President, subject to my understanding with the majority leader that my suggestion of the absence of a quorum will not be charged as a first speech against the Senator from Utah [Mr. MOSS], I now suggest the absence of a quorum.

The PRESIDING OFFICER. With that understanding, the clerk will call the roll.

The Chief Clerk called the roll, and the following Senators answered to their names:

The PRESIDING OFFICER. A quorum is present.

Mr. MOSS. Mr. President, I have not yet taken occasion to speak on the bill or the amendment before the Senate. Earlier in the session today I supported the motion of the Senator from Oregon [Mr. MORSE] to call up his antifilibuster resolution (S. Res. 24). There should be a reasonable system for bringing debate to a conclusion so that the Senate may work its will after there has been ample time for discussion and debate. The motion of the senior Senator from Oregon was laid on the table.

Similarly I supported the motion to bring up the farm bill, which was also tabled, and the motion to bring up the drug bill. Those are both important measures with which the Senate should be concerned. I felt that we could well proceed to that business and thus serve the public interest, rather than prolong the discussion on the communications satellite bill because, in my opinion, the bill should not be voted upon in the Senate at this time. There has not been sufficient time to understand and discuss it. It could well be postponed until later in the year or until next year.

Mr. CLARK. Mr. President, will the Senator yield for a question?

Mr. MOSS. I am happy to yield to my friend the Senator from Pennsylvania for a question.

Mr. CLARK. Does the Senator agree with me that only four Senators, besides the Presiding Officer and the speaker, are now present in the Chamber?

Mr. MOSS. The Senator is correct, according to my count.

Mr. McCLELLAN. Mr. President, will the Senator yield? I observe six Senators.

Mr. CLARK. Mr. President, will the Senator yield for a further question?

Mr. MOSS. I yield to my friend from Pennsylvania for a further question.

Mr. CLARK. Am I not correct that unanimous consent was refused this morning to the request for any Senate committee to meet while the Senate is in session?

Mr. MOSS. I was present in the Senate and I heard the unanimous-consent request to authorize the meeting of committees.

Mr. CLARK. Mr. President, will the Senator yield for a further question?

Mr. MOSS. I yield for a further question.

Mr. CLARK. Is it not the general opinion that the reason for what I call the nonsensical rule that no committees may meet except by unanimous consent while the Senate is in session that Senators may be able to come to the Chamber and listen to the debate?

Mr. MOSS. It has been my understanding that that is the reason for the rule. But my experience during my term of service indicates that the rule does not operate with that result. Seldom are many Senators in their places on the floor of the Senate when there is a lengthy speech to be delivered.

Mr. CLARK. Mr. President, will the Senator yield for a final question?

Mr. MOSS. I yield again for a question.

Mr. CLARK. Will the Senator do everything within his power to help me have that rule changed next year?

Mr. MOSS. The Senator well knows that I favor a change in the rule, and I shall be most happy to support him in his efforts.

Mr. CLARK. I thank the Senator for his courtesy.

Mr. MOSS. Mr. President, in my view, the most important question which the Senate must decide with respect to space satellite communications in these critical last weeks of the session is: What do we have to gain by passing this legislation and what do we lose by deferring action for this session? I think the answer is clear: We have little to gain and much to lose by rushing legislation through at this time.

Less than a year ago there were Senators and Members of the other body who felt that there should be delay in the consideration of the communications satellite. I find in the printed record of the hearings before the Committee on Foreign Relations, which only today at noon reported the bill back to the Senate, a copy of a letter that was sent to the President of the United States about a year ago, signed by the Senator from Minnesota [Mr. HUMPHREY], the Senator from Tennessee [Mr. KEFAUVER], and the Senator from Oregon [Mr. MORSE]. The letter was also signed by 31 Members of the House of Representatives. I should like to read some excerpts from that letter:

> After such a [space communications] system has become full operational, but not until then, we believe, can decisions be intelligently made as to whether such a system should be publicly or private owned and under what circumstances. * * * We do not at present know which system can be put into use first, nor which system will be most efficient once in orbit. Given this technological uncertainty, the complicated question of ownership and control of this system must necessarily be covered with an even greater haze of uncertainty. In order to insure that the rapid development of this new system is not impeded by a premature decision as to ownership, we are of the opinion that prudence requires a further investigation of the broadest aspects of the ownership question. Specifically, we believe that the debate over ownership should be separated from the development question until the entire system becomes fully operational. During this period development should proceed with all possible speed while careful study is given to the decision as to the control of these unripened fruits of science. * * * We have seen from past experience how the American Telephone & Telegraph Co. has been able to expand its monopoly position and strengthen its hold on the American economy by combining, under the aegis of one holding company, its equipment manufacturing concern, the Western Electric Co., and the operating divisions of the Bell Telephone System. Only by insisting upon the widest participation by all interested communications and aerospace manufacturers and operators can there be any hope that such a monopoly can be forestalled in this new and vital field. * * * Nor is there any logical or rational basis for excluding U.S. domestic communications common carriers from ownership in the system while granting companies which have no interest and virtually no investment in international communications service opportunity to participate in the system's ownership, particularly since the space satellite could provide domestic as well as international communications services. * * * [There is no justification for excluding communications and aerospace manufacturers, particularly when the record clearly demonstrates that a number of these organizations have a far greater contribution to make in expert technology than any of the 10 [international] "communications carriers." * * * Because we believe time and study are essential to wise decisionmaking, and because we do not want to prejudice the ultimate question of control and ownership during the period of study, we urge that (1) no decisions concerning ultimate control be made until the entire system becomes fully operational; (2) no contracts, decisions, or acts which may prejudice the ultimate decision as to ownership be agreed to until the entire system becomes fully operational. * * * The United States can demonstrate to the world what a democratic system can accomplish in developing a space communications satellite system. But if decisions are taken in haste and allowed to cramp and prejudice the rational development of the new gift of science, it is likely that we may not only prejudice a question of vital national concern, but we may hinder the rapid development of the system itself.

I realize that there have been many developments since that time, notably the monumental success of Telstar. I do not understand, however, that there has been any change which in any way undercuts or changes the rectitude of the position taken in that letter. We still do not know which system can be put up first or which system will be the most efficent. The monopoly power of A.T. & T. is every bit as apparent today, as it was last July. There is no more rational basis, today, for limiting the participation of noninternational communications carriers to less than is allowed international communications carriers, than there was last July a year ago. It is still true that a number of aerospace and communications carriers—who, under H.R. 11040 would be limited to no more than 10 percent of voting control—have made far greater contributions to expert technology than have some of the international common carriers—who, under this bill, would be permitted up to 50 percent of voting control. There is no more reason, today, for taking any step which may in any way prejudice the ultimate system which is put into use, than there was last July.

So I say today on the floor of the Senate that we must not rush in headlong to establish a communications satellite owned and controlled by one of the great monopoly corporations. This measure should be considered and refined and should be considered quietly by the Senate after there has been time for full experimentation.

The Senate Commerce Committee Report contains a memorandum by Prof. Leon Lipson, of the Yale Law School, who is also a consultant to the Rand Corp. on space satellite problems. This memorandum, dated November 1961, states:

> At present, as was true at the time of the policy statement of July, we are in the phase of research and development. Several apparently promising approaches to a satellite communication system are being explored simultaneously; some involving low or medium altitude, random orbit, multiple satellite systems; others involving very high altitude, very large capacity, small number synchronous satellites; some being carried out by the Government; others by private industry under Government contract; and still others by private industry on its own initiative and at its own expense. So far as can be determined now, this duplication of effort is useful, and the fact that at some future date it may become evident that some of it led nowhere does not justify us in calling it wasteful now.
>
> This present phase of exploratory research and development is, inescapably, a very expensive phase. It is natural that we should be under a temptation to wish to cut it short. On the basis of previous experience in Government-sponsored (and other) research and development, in war and peace, we must beware of cutting it so short that the total expense ultimately is increased by the enormous cost of false starts in production which have to be written off as truly wasteful.
>
> The present situation enables us not only to await the result of the competition among ideas, systems, and subsystems; it enables us to await the result of competition among interested candidates for a central position in the management of whatever system is put into operation (A.T. & T., RCA, Hughes, etc.). So long as decisions on ultimate organizational form and operating franchise remain uncertain, the usual incentive toward doing the job well, fast, and relatively cheap will be powerfully supplemented by the hope of acquiring a preferred position by virtue of achievements in R. & D.
>
> Of course, this phase must not be prolonged beyond the point of maximum usefulness. The Government ought to announce that at some specified future date it will, on the basis of its regular review of progress in R. & D., make a decision on which of the various exploratory approaches shows sufficient promise of feasibility to justify the allotment of pilot operating funds and which ones ought to be closed out.
>
> Organizational decisions would be made at the same future date. The choice of the deadline should be made now by NASA; probably it would fall roughly 18 months from today. (This was said on November

> 14, 1961.) If necessary it could later be postponed; meanwhile, the various teams working on alternative approaches would have felt themselves under pressure to produce results relatively quickly.
>
> A subsidiary advantage of postponing organizational decisions until the exploratory phase of R. & D. is further advanced, is that it would buy time for the working out of a sensible governmental policy on the organizational questions. This time is needed.

I have supplied emphasis as I copied the quotation into my text of the speech I am delivering. I reiterate, that this time is needed.

This attitude is also reflected in a Rand Corp. memorandum for NASA entitled "Communication Satellites and Public Policy" which was originally issued in 1960 and reissued this past December, which states, at page 104:

> The more flexible the initial arrangements are, the better.

The same attitude appears in the thoughtful set of conclusions of the House Science Committee published on October 11, 1961:

> The committee advises the encouragement of private enterprise to participate in this development to the limit of its resources, talent, and capacity. However, it is also the view of the committee that because of the many significant questions of public policy raised, and the absence of precedents on which to rely, the Government must retain maximum flexibility regarding the central question of ownership and operation of the system. No final decision should be made during the early stages of development which might prejudice the public interest or U.S. international relations.

Flexibility is absolutely essential. In the first place, we do not yet have a clear idea of the magnitude of this facility in terms of utility or profitability. In other words, we really do not know how valuable a piece of taxpayer property we are being asked to commit to an A.T. & T.-dominated corporation. We cannot know this for some time to come. As the President said in a speech on March 11 of this year, space is: "a field which is growing and changing so quickly no one can predict in precise detail what our future course will be or what other benefits will unfold for the Nation."—New York Times, March 11, 1962, page 1.

The president of the Bendix Corp. told the Senate Small Business Committee:

> It is difficult at this early stage to visualize what is encompassed in space communications, but I am sure activities will probably exceed our imagination.

Second, as the Senator from Tennessee [Mr. Gore] and other Senators have shown, we have no clear idea of the type of international arrangements that will be necessary and how other countries will participate in the ownership or operation of this system. We are currently negotiating with the Russians and many others about space communications, along with many other space topics. We do not know what the outcome of these negotiations will be. We only know that they will be long and difficult and that they must succeed, for space cooperation is indispensable.

Third, numerous technical questions are unresolved. For example, we still have no idea whether the high system will be more effective than the low-orbit system. This decision is a momentous one, for the difference in cost and efficiency between the two systems is enormous. It has been estimated that the low system, with its dozens of satellites and complicated ground stations may cost more than $500 million, whereas the high system with its three satellites and simpler ground stations can be put up for possibly no more than $200 million. Decisions on this question cannot be made until next year at the earliest. The experimental prototype of the high system will not be launched before later in the summer. Relay is not due until sometime between now and September, according to NASA, and the experimental prototype for the high system, Syncom, will not be launched until the first of next year. Without the completion of these experiments, we cannot even begin to answer most of the vital questions.

Dr. Hugh Dryden, Deputy Administrator of NASA, told the Senate Committee on Aeronautical and Space Sciences:

> Although there is no disagreement among the experts as to the desirability and necessity of communication satellite systems, there is disagreement as to the type of communication satellite system best suited for operational purposes. This next year's activities should help to resolve many of the technical unknowns. We need answers to such questions as the following: Can we design and place in orbit satellites which will exhibit extremely long lives? I have mentioned, I think, 17 days, and this is hardly a practical life for us in a system. The Echo satellite was unsatisfactory because of its changing in shape. We feel fairly confident that as far as the passive system is concerned, it is possible to put up a reflector of a long life. As you all know, the passive system, however, has disadvantages as well, and the ultimate decision on what system should be used for certain purposes will rest on the outcome of technical experiments.
>
> What are the physical, chemical, and other characteristics of the space environment itself? What are the effects of the radiations and particles present in the space environment on the performance and life of satellite electronics? We made a recent experiment on Explorer 12 on the solar cells in which an unprotected cell lost its capabilities very quickly. The protection of a rather thin layer of glass caused some small decrease in capability for the particular exposure, which was not very severe. Cells under thicker glass showed no deterioration over the period in which Explorer 12 was giving data. We need much more information of that kind, and the satellites that you see here, in addition to the communications demonstration, will provide basic information of this kind.
>
> What are the required antenna sizes, power, and other technical characteristics of the ground communications stations which are a necessary part of these systems? Only when some of these questions are answered may we expect agreement on the most desirable operational system.

Dr. Dryden subsequently estimated that we would not have a communications satelite system in operation for 5 years; RCA's president, Dr. Engstrom, said the first priority is technical.

DR. ENGSTROM'S JUDGMENT IS THAT BILL MAY BE PREMATURE

In a colloquy with the Senator from Nevada [Mr. Cannon] and other Senators, Dr. Engstrom made the following statements at Senate Space Committee hearings held in March of this year:

> Senator Cannon. Doctor, in view of your testimony on this whole matter concerning the stage of advancement and the reluctance at this time to invest on behalf of your company, is it your view that this bill is premature at this time?
>
> Dr. Engstrom. That is a conclusion, sir, that you could draw. In testimony which I gave at an earlier time, I indicated that I believed that it was more important to select a right system than it was to attempt to freeze certain other matters at this time. This does not mean, however, that if such a corporation is set up, that this would tend to freeze things, because they would have to go through the same steps in any case to arrive at a full practical and operating system. So I think it is wholly a matter of judgment as to whether the bill is premature or not. It need not certainly be premature.
>
> Senator Cannon. Well, in your judgment, is it premature, in view of the fact that we are going ahead with the development program over the next period of time?
>
> Dr. Engstrom. I think in view of the answers that I have given to questions, you could draw the conclusion that I think it is somewhat premature and that we would be better off if we had more facts before we face the problems the bill presents. But this is a matter of judgment.
>
> Senator Cannon. If I correctly analyze your testimony, you feel that in a matter of 6 months or a period thereof that we would have more facts on which to base our judgment concerning the setting up of this organization?
>
> Dr. Engstrom. Yes, sir; and in a year from now we would be on very much more solid ground because the programs we heard about this morning will be accomplished in their first stages during the next 12 months.
>
> Senator Cannon. Do you see any specific disadvantages to not proceeding with this type of an organization at the present moment?
>
> Dr. Engstrom. No; I do not see any disadvantages, except the matter that has come up in the questioning here. When I indicate that we are not ready to make an investment, maybe there would not be enough to carry it forward.

WE WILL NOT NECESSARILY LOSE BY DELAYING ESTABLISHMENT OF CORPORATION

> Senator Cannon. Do you believe that if we do not set up this corporation in the immediate future, that that would put us behind in the schedule to be first in this area of space communication?
>
> Dr. Engstrom. Not necessarily so. I think that if the programs which are scheduled by NASA and by others are prosecuted to the best ability of everyone concerned, we need not necessarily lose because of this.

PASSAGE OF BILL IS NOT FIRST PRIORITY ITEM

> Senator Wiley. As I understand, you agree that the paramount national need is for the swiftest possible development of a practical operating satellite communications system. Is that correct?
>
> Dr. Engstrom. Yes.
>
> Senator Wiley. We have been talking about a bill that has not been born yet. I want to know how we are going to do this, how we are going to bring about the swiftest possible development of a practical operating satellite communications system. I would like to have your answer to that.
>
> Dr. Engstrom. Yes, sir. We are going to do that by prosecuting as actively as possible the research and development program that we heard about this morning. This is the basic need at the present time. We need the information that is to come from the Relay project, from the Telstar project, from

the Syncom project, from the Advent project, and the other projects which will be born as we go through this year.

Senator Wiley. Then the question of whether or not this is the kind of a bill that should be passed is not the important thing, is it?

Dr. Engstrom. It is not the first-priority item.

Senator Wiley. All right. The second question I wanted to ask you is: What improvement would you make in the bill, to bring about the swiftest possible development of this communications system?

Dr. Engstrom. I am not sure, sir, that I see that the swiftest possible movement in providing the basis for a communications satellite system is directly related to the bill. It is more directly related to the research and development program which is now underway, and which will be augmented as we go along. The bill is related to the potential of an organization to carry on the communications when the facilities have become available.

Mr. President, Professor Lipson has pointed out that the United States needs time to resolve many of the complex technical and organizational questions which are yet unsolved. If we plunge ahead now, we shall be making crucial decisions in the dark.

Let us make no mistake about it: If we set up this corporation at this time, we shall be prematurely freezing the situation and tying our hands. The corporation we create will unquestionably be dominated by A.T. & T. and the other carriers. They will understandably, and properly, be interested in profitable operations.

Moreover, A.T. & T. has been promoting the low-altitude system. To me, it is patently apparent that if this corporation is established now, the low-altitude system will be used, because A.T. & T. is not going to abandon its well-advertised sponsorship in Telstar, regardless of any superiority of the high-altitude system. Once the low-altitude system is used, no sensible board of directors will scrap an investment of millions invested in Telstar. Then we shall, I am afraid, be stuck with it, irrespective of the merits of potentially competitive systems.

Historically, the inherently high capital cost requirements of the telecommunications industries have necessitated enormous capital outlays by A.T. & T. Once funds are invested in plant equipment, resistance to replacement—even with superior facilities—is great. This is not intended in any way to be a condemnation of the A.T. & T.; rather, it is purely a question of sound finances and management.

Moreover, I direct the attention of Senators to section 201(c)(4) of H.R. 11040 which reads:

> The FCC shall—
>
> * * * * *
>
> (4) insure that facilities of the communications satellite system and satellite terminal stations are technically compatible and interconnected operationally with each other and with existing communication facilities.

Perhaps I fail to appreciate some sophisticated point of drafting, Mr. President; but I am struck by the fact that the only existing space communications facilities are owned by A.T. & T., and these are only compatible with the A.T. & T. system, Telstar. Further, 85 percent of the interstate communication facilities and all the international facilities are controlled by A.T. & T.

In view of these facts, it appears clear to me that section 201(c)(4) commits us to the A.T. & T. system, any other provisions of the bill notwithstanding.

Putting up and committing ourselves to the low-orbit system could hurt our international prestige immeasurably—as Vice President Troter of General Telephone told the Senate Small Business Committee:

> A random orbital system could discredit us before the world as a leader in space communications if Russia established a stationary satellite system.

That satellite system would be a high-orbit system, in which the satellite would remain in relatively the same position with the earth as it rotated.

I continue the quotation:

> If the United States went ahead with a low-random orbit system it would be possible for Russia to hold back until we are deeply committed to this system and had launched perhaps two-thirds of the satellites and then with three satellites the Russians could establish a truly worldwide system before our limited system was even in operation.

The Senator from Louisiana [Mr. Long], before the Small Business Committee, asked this question:

> In other words, we go ahead and strain and strain away and after getting about two-thirds of the way through, it would not be any good when we get it?

Dr. Trotter replied:

> That is right.

Further, Dr. Trotter indicated in that discussion, the Russians—unhampered by the problem of sunk capital—are working on the high-orbit system.

It is said that it is urgent for us to establish this system now. I do not understand these arguments, which seem to me to rest on mistaken facts and shibboleths.

The first and most frequent argument I hear is that we must establish this corporation to "beat the Russians." For example, in the House debate, when asked why we had to decide at this time, Congressman Harris said:

> The answer to that would be, let us sit on our thumbs and let the Russians take over. Unless we move forward and set up this organization, we are just sitting idly by and letting someone else take the leadership in just this program that is going to mean so much to our future.

But this is unsupported by Chairman Harris' own report accompanying the bill. In that report, it says:

> The bill reported by your committee seeks to lay the foundation for accomplishing these objectives insofar as concerns the arrangements for U.S. participation in such a global system. The actual establishment and operation of such a global system, however, will depend entirely on future international arrangements involving the allocation of radio frequencies for such a system.
>
> The international allocation of radio frequencies is under the control of the International Telecommunications Union (ITU) of which the United States is an active member. The need for international control of the radio spectrum has been recognized ever since the development of radio, and the need for such control has become more and more imperative as the uses for radio frequencies have increased with the growth of communications technology.
>
> Since the radio spectrum is one of the most important natural resources and a truly international resource which knows no national boundaries, international control of the radio spectrum has constituted over the years one of the outstanding examples of international cooperation. This cooperation is motivated by the compelling realization that in the absence of cooperation all nations stand to lose the opportunity which can be theirs of making efficient use of this valuable resource.
>
> This circumstance must be fully recognized in making our national plans for a global satellite communications system. In making these plans we must aim at machinery which will be flexible enough so that the United States will be in a position to secure general support for the allocation of frequencies for a global commercial communications satellite system.
>
> There is widespread recognition in other countries of the prospective economic and political benefits which may be derived from the successful development of communications satellite relays. The International Telecommunications Union (ITU) has given active and foresighted attention to the problem of making available the necessary allocation of radio frequencies. Allocations for experimental space communications were made in 1959, and an extraordinary administrative radio conference is tentatively scheduled for late 1963 to consider allocations for continuing space communications users. If we are to secure general support for the allocation of frequencies for a global commercial satellite communications system, it will be important for other nations to feel that they will share in and benefit from the establishment of such a system.
>
> The Federal Communications Commission, the Department of State, the National Aeronautics and Space Administration, and other interested Government agencies with the cooperation of the communications industry are now engaged in preparing the specific proposals for these allocations of frequencies which the United States expects to submit to the 1963 conference.
>
> ### WHY LEGISLATION NOW?
>
> In view of all of these facts which make the establishment of a global communications satellite system very much a thing of the future, the question might be asked why it is necessary to enact legislation now, and why the establishment of a communications satellite corporation cannot await the conclusion of the international agreements upon which the establishment and operation of such a global system depend. The answer to this question is very clear.
>
> If a national policy of private ownership and operation of the U.S. portion of the international system is to be assured, the instrumentality therefor must be established now. If this instrumentality is not created at the earliest possible date, all planning for U.S. participation in the international system will have to be done by Government agencies. Our private communications carriers, especially in view of the antitrust laws, will be prevented from cooperating effectively with each other and with the Government agencies in preparing effective plans for U.S. participation in the international system. The creation at this time of the needed instrument, in the form of a private corporation, will provide the machinery through which existing carriers and other private individuals and groups which desire to participate financially in this new venture may do so. As a private corporation its

> securities would, of course, be subject to applicable securities laws, including those administered by the Securities and Exchange Commission.

Whatever this means—and I have some doubts on that score—it clearly has nothing to do with beating the Russians, or getting the system operational 1 day sooner. What it seems to say is that the program must be turned over to A.T. & T. now because it will be harder to do so next year.

There is simply no relationship between passage of H.R. 11040 and achievement of an operational system. H.R. 11040 will have absolutely no effect on when we get a communications satellite system in operation.

In the first place, research and development are proceeding at top speed by the only organization which can do it—the U.S. Government. This is because, as Mr. Rubel said, 90 percent of the problem has to do with aerospace and only the Government can resolve these questions. Relay, Syncom, Advent, and other NASA and Department of Defense programs are moving as fast as possible and this proposed legislation will not affect them in the least.

The following colloquy between the Senator from Tennessee [Mr. KEFAUVER] and the vice president of Western Union at the Senate Antitrust and Monopoly Subcommittee hearings demonstrates this:

> Senator KEFAUVER. Suppose you had a corporation of $200 million right now. What would it do with the money?
>
> Mr. BARR. Well, for an appreciable period of time it would sit on its hands. Deferral of this legislation until next year will not delay the development of a space satellite communications system in any degree.

Mr. GORE. Mr. President, will the Senator yield for a question?

Mr. MOSS. I am happy to yield to the Senator for a question.

Mr. GORE. Does not the Senator think that a mistaken action such as the enactment of the pending bill picking a private corporation to be the chosen instrument of this country to conduct, on behalf of the United States, delicate and vastly important negotiations with foreign countries, might even hinder rather than help the achievement of a global satellite communications system?

Mr. MOSS. I agree that it might very well hinder the development. A private corporation is a creature of our law, a citizen in the sense of being a legal entity, and is beholden only to the Government which created it. It would have no status to negotiate in the international field, particularly with other governments involved. So the private corporation would be handicapped, would be unable to negotiate, or else would be put in the position, of necessity, of going to our own Government and asking our own Government to conduct negotiations on its behalf and to perhaps be a go-between, which obviously would complicate the problem, lessen the prospects, and make it much more difficult to work out any international agreement.

I think it is perfectly apparent to us all that this communications satellite which will orbit the earth and cross over the various countries of the earth will have to be controlled, if controlled at all, by an international agreement. There is no other way to do it.

The President, acting for the U.S. Government, is the only person who can speak for this country, for this sovereignty, in dealing with other sovereign states around the globe. Therefore, to tie this to a private corporation, when we are at the very beginnings, doing research and development, would be foolish indeed. It would tie the hands of this country in its attempt to move rapidly into this field of development of communications.

Mr. GORE. Mr. President, will the Senator yield for another question?

Mr. MOSS. I yield further to the Senator from Tennessee.

Mr. GORE. If the private corporation proposed to be established by the pending bill did not have authority to enter into negotiations looking toward and perhaps leading to the conclusion of binding agreements, does the Senator think that the governments of foreign countries would be particularly interested in negotiating with an agency which could not enter into valid and binding agreements?

Mr. MOSS. I am convinced that foreign governments would be very reluctant to do so. Most of them probably would not consider entering into any dealings at all with a private corporation which is a creature of this Government.

International law has developed over the years in respect to the field of treaty arrangements and bilateral national agreements between governments. Those have a certain status and stability, and have a certain meaning. Never at any time has international law contemplated an agreement between a private corporation, which is a creature of one of the sovereign governments, with another sovereign government to which it has no allegiance, which has no control over it, because there would be no basis for enforcing any kind of agreement of that sort. The parties would not be what we call, in law, privy to one another. They would have no basis for meeting. Sovereign governments must meet at the treaty level and adopt treaties or agreements, or else the government would have to speak for its entity. That is the only way there could be any agreement.

Mr. GORE. Is it the opinion of the Senator that if the corporation lacked authority to negotiate on behalf of the United States binding agreements with foreign nations, it would suffer a very severe—perhaps fatal—handicap in respect to development of a global satellite communications system, which this country earnestly seeks or should earnestly seek?

Mr. MOSS. That could very well be fatal. It poses so many problems either fatal or, if not fatal, so complex and unclear at this time that it would be wholly unwise to push on now to the creation of a corporation, until we clearly known what are the limits of authority and what may be done.

As I have tried to point out as I have discussed the problem today, nothing would be lost at all by delaying the creation of the corporation at this time because the research and development phase is going forward regardless. The Federal Government is responsible for the largest part of the research and development which is being conducted. That is moving now at top speed.

We would not handicap ourselves—in fact, we would free ourselves—if we put aside now the consideration of the bill until some of these things become clear in the development which is going on.

Mr. GORE. Mr. President, will the Senator yield for another question?

Mr. MOSS. I yield again for a question.

Mr. GORE. If, on the other hand, the private corporation should, by the pending bill, be vested with the right to negotiate international agreements on behalf of the United States under which the United States would be bound for its part in such a global satellite communications system as may be achieved, would the Senator think it a proper action on the part of the Congress so to vest a private corporation with a part of the sovereignty of the United States?

Mr. MOSS. I answer the Senator by saying I think it would be wholly improper. In fact, I think it would be unconstitutional, and very likely the question would be dealt with by the courts upon the bringing of a proper action before the courts. I do not believe the executive power and the Congress combined can alienate or assign to any private citizen, corporation, or group, any of the sovereign functions of our Government to deal in international relations. Therefore, I think it would be wholly ineffective to pass a measure of the kind before the Senate. But it could create great mischief if an attempt were made to take the necessary action and go through the proper steps to have a judicial declaration that it was an improper delegation.

Mr. GORE. Mr. President, will the Senator yield for another question?

Mr. MOSS. I yield for another question.

Mr. GORE. Then the Senator thinks that if the corporation were not clothed with the power to negotiate international agreements with other countries, foreign entities, and international agencies, it would be a handicap over which the conclusion of such agreements might be achieved only with the greatest of difficulty?

Mr. MOSS. I agree very heartily. The corporation, without the authority to negotiate agreements, could achieve very little because, as has been discussed, the satellite is one that would beam its rays down on many countries. If we should get into the high satellite system, only three satellites in outer space would cover the entire surface of the globe.

Therefore international agreement is absolutely essential to prevent chaos in the operation of a system of that sort. International agreement is essential to assign wavelengths, to stop interference, to agree not to interfere, and to consider questions of that sort. So international agreement is essential. In my opinion, international agreement cannot be negotiated by a private corporation. The only way a binding international agreement can be negotiated is by sovereign governments themselves. Therefore to attempt to assign the system to a corporation would be futile; or if it were assigned and the private corporation tried to exercise the assignment, it would not be effective.

Mr. GORE. I take it that the Senator is referring to international political agreements that have foreign policy implications.

Mr. MOSS. I am, indeed.

Mr. GORE. Mr. President, will the Senator yield for another question?

Mr. MOSS. I yield.

Mr. GORE. Does the Senator not think that the bill if enacted, should be explicit as to whether or not the corporation to be created pursuant to the authority contained in the bill would have such authority?

Mr. MOSS. I agree that it should be explicit. It should not be in doubt or in question. The bill must be explicit as to what powers the corporation would have in that field. We have discussed the disabilities under which a private corporation would suffer in the international policy field.

Mr. GORE. Mr. President, will the Senator yield for another question?

Mr. MOSS. I yield.

Mr. GORE. Is the Senator aware that the report of the Space Committee states that the bill contains one such provision with respect to the authority of the proposed satellite corporation while the Committee on Commerce takes a different point of view in its report to the Senate?

Mr. MOSS. I am aware of the fact that there is a conflict of views in the reports of the two committees. The bill having been assigned to several committees, it has been looked at by different eyes, and different conclusions have been drawn. Therefore, we must conclude the provisions are not explicit. Reasonable men may differ on the interpretation of those provisions.

Mr. GORE. Mr. President, will the Senator yield for one final question?

Mr. MOSS. I yield further.

Mr. GORE. Does not the Senator think it incumbent upon the Senate in legislating upon a subject of such vast importance, involving dealing with other countries, and a subject in which the indexes of international law have not yet been established, to remove the ambiguity and legislate explicitly and clearly on the subject of vesting authority or not vesting authority, as well as in many other respects?

Mr. MOSS. I most certainly do agree. I think the subject with which we are dealing is one of the most far-reaching importance. Its implications for our Nation and for all the nations of the world cannot even be clearly seen as yet. But we know they will be sweeping. They will bring changes in our mode of living and communication with one another that we do not now foresee. Therefore we should be most explicit and careful as we draw the proposed legislation. I have tried to make the point in my speech to show that not only do we lack the element of being explicit and clear, but it is unnecessary that we take the proposed action at this particular time. There is much to be done in the field of research, development and perfecting communication, which is now being carried forward by the U.S. Government through various agencies of the U.S. Government.

Therefore the part of wisdom—the thing that would serve the public interest best—is to delay action now on the question of the management of a satellite system until such time as we have reached these other conclusions.

I thank the Senator.

Mr. President, I should like to continue quoting from testimony given before the Subcommittee on Small Business at its hearings in November of 1961. At that time the vice president of Western Union was on the stand. He was asked the following question by Mr. Gordon:

> Mr. Gordon. Who will pay for the research and development? Will the research and development be paid for by the public?
>
> Mr. Barr. Certainly by the public.
>
> Mr. Gordon. Paid for by the public?
>
> Mr. Barr. Certainly it is paid for in every other area.
>
> Mr. Gordon. On September 6, representatives of the General Electric Co., in appearing before the ad hoc committee, made the following statement—and you were present.
>
> Mr. Barr. Yes, sir.
>
> Mr. Gordon. "If there were no economic consideration involved we feel 1965 is a reasonable objective to get there. On the other hand, we do feel that this time period could be accelerated by a year or more if the Government felt this were desirable, in which case we assume the Government would pay the additional cost of approaching it in that manner."
>
> Is this not an admission, Mr. Barr, that speed in establishing a system depends on efforts by the Government, and is outside the capabilities of the private sector alone?
>
> Mr. Barr. I will take it a step further. Not only speed but the mere fact of establishing such a system depends upon the amount and the speed at which the research and development under NASA is taking place. This ad hoc committee, and the carriers themselves, are not doing anything. They are not doing anything insofar as launching the satellites. It is wholly in the hands of the Government. So we depend upon the Government for that complete effort and, therefore, whether it is speed or whether it is just in being at all, will depend upon the Government.
>
> Mr. Gordon. The Government puts it up there?
>
> Mr. Barr. Yes, sir.
>
> Mr. Gordon. The Government does all the research?
>
> Mr. Barr. Yes.
>
> Mr. Gordon. Both for putting it up there and for the communications equipment?
>
> Mr. Barr. Yes, sir.

The Senate Space Committee report pointed out that Government spokesmen, including Mr. Webb, Dr. Welsh, and Judge Loevinger "do not necessarily feel that the ownership question must be decided immediately."

Second, international negotiations are proceeding as fast as possible at this very moment. These negotiations will be long, complex and difficult. They can only be conducted by the Government. No organizational decision can be made with respect to them at this time.

Moreover, the extraordinary conference of the International Telecommunications Union for the allocation of radio frequencies is not due to take place until late 1963. Without such an allocation, no satellite system could operate.

In short, as the vice president of Western Union said:

> There is no connection between research and development work that will bring the satellite into function at the earliest date and the date at which this bill is passed.

Legislation at this time will not speed up the achievement of an operational system by 1 day. Until we know the type of system, we cannot begin to build the hardware; until we build the hardware, we cannot train a staff to use it.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER (Mr. Hickey in the chair). Does the Senator from Utah yield to the Senator from Louisiana for a question?

Mr. MOSS. I yield for a question to the Senator from Louisiana.

Mr. LONG of Louisiana. I ask the Senator whether he does not agree that this is one of the worst bills that he has experienced while he has been in the Senate.

Mr. MOSS. Well, Mr. President, I certainly have very grave doubts about this bill, and I have tried to express my doubt at considerable length. I believe that it leads us into an area of questionable practice. Therefore I plead with the Senate to delay consideration of it. There is no reason for us to press forward on it now. As I have been quoting from the vice president of Western Union, not 1 single day will be gained or lost by the passage of the bill, because we are going forward with the research and development factor as rapidly as possible through the agencies of the Federal Government.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

Mr. MOSS. I yield for a further question.

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a question?

Mr. MOSS. I am happy to yield for a further question.

The PRESIDING OFFICER. The Senator yields. The Senator from Louisiana will state his question.

Mr. LONG of Louisiana. I should like to ask the Senator from Utah whether the telephone company has made any proposals to him.

Mr. MOSS. I can answer in all honesty that I have had no communications with the telephone company in any way concerning this bill or anything relating to it. I have to answer that in the negative.

Mr. LONG of Louisiana. Will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield for a question?

Mr. MOSS. I am happy to yield to the Senator.

Mr. LONG of Louisiana. For a question only.

Mr. MOSS. For a question only.

Mr. LONG of Louisiana. I will ask the Senator this question. Can he imagine how much money might be saved if instead of pushing a message through 50 microwave channels, it were possible to put it through 1? Can the Senator imagine what it would be worth A.T. & T. to prevent that from happening?

Mr. MOSS. My technical knowledge is not great enough to give any estimates of the amount of money involved, except to say that I realize that it is of immense size and immense value. The amount of money to be reaped in this field obviously is extremely great. If it should accrue to one corporation it might mean a tremendous profit.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield for a further question to the Senator from Louisiana?

Mr. MOSS. I yield for a further question to the Senator from Louisiana.

The PRESIDING OFFICER. The Senator will state his question.

Mr. LONG of Louisiana. Has the Senator had proposals made to him that he could own a telephone building in his State?

Mr. MOSS. I reiterate the answer I gave before, to a similar question. I have had no communication with representatives of the telephone company concerning this bill or any related aspect of it. So I must answer that I have had no proposition of that sort or anything akin to it suggested to me.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a question?

Mr. MOSS. I yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. It would not have been impossible for an attempt to have been made to approach the Senator in this matter, however, would it?

Mr. MOSS. I am tempted simply to say yes to that, but in all good humor I must say that I do not think that my reputation is any different from that of any other Senator. I simply have had no communications of that sort, and I would not expect that I would have.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield for a further question.

The PRESIDING OFFICER. The Senator from Louisiana will state his question.

Mr. LONG of Louisiana. Has my good friend ever heard the old saying, "Keep the price as high as the traffic will bear"?

Mr. MOSS. I have heard the saying. I believe it has various interpretations. I do not know which to apply at this point.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield for a further question to the Senator from Louisiana?

Mr. MOSS. I am happy to yield for a further question to the Senator from Louisiana.

The PRESIDING OFFICER. The Senator will state his question.

Mr. LONG of Louisiana. Did it ever occur to the Senator that what the American Telephone & Telegraph Co. is worried about is cheap rates, and the fear that if the bill should not become law, A.T. & T. might not be able to control the satellite, and, therefore, rates might be cut by 100 percent? Did it ever occur to the Senator from Utah that the whole object of the bill might be to enable A.T. & T. to control this operation and thus prevent telephone rates from coming down?

Mr. MOSS. It has occurred to me, and I have thought about it. This is a very competitive field, and since A.T. & T. is already in the international communications field with cables and microwave radios, it obviously would be concerned with any competitive system which might take away any part of the business it now has. Therefore, I assume A.T. & T. is very much interested in the operation and in being the operator of the kind of system which is provided in the bill. I am sure that is the reason for the great interest of A.T. & T. It is a competitive, economic question with them.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for another question?

Mr. MOSS. Mr. President, I am happy to yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. Did it ever occur to the Senator that he might be one of the few Members of Congress who has never had the opportunity to own a telephone building?

Mr. MOSS. It has occurred to me, but I must admit that I have never had any ownership in a telephone building, nor do I expect to own one.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana for a question.

Mr. LONG of Louisiana. Does it not appear to be unfair that some Members of Congress are permitted to own telephone buildings, while others are not, and that this is a matter of discrimination among Representatives and Senators?

Mr. MOSS. I must answer the Senator by saying that it is a type of discrimination with which I am sure we have all learned to live, in that some of us own much more of the world's goods than do others; and all of us, I suppose, are seeking to acquire a reasonable amount of the world's goods. But when the question is reduced to telephone buildings, that is a little beyond my immediate realm of experience.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for another question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for another question?

Mr. MOSS. I am very happy to yield for another question.

Mr. LONG of Louisiana. I ask my good friend, who is a moral, conscientious man, Would it not occur to him that if some Senators and Representatives are to own telephone buildings, others are also entitled to own such buildings?

Mr. MOSS. I certainly hope that if it became the style for some Senators to own telephone buildings, such ownership would be universal throughout the Senate, and that I might participate in it, provided that to gain such ownership I would not be required to violate my conscience in any way and could take whatever action I felt was called for on a measure before the Senate.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question?

Mr. MOSS. I am glad——

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. Did it ever occur to the Senator from Utah that if a Representative from one district in Louisiana should be permitted to own a telephone building in his hometown, Representatives from the other districts should be permitted to own the telephone buildings in their respective hometowns?

Mr. MOSS. The fact of ownership of the building does not disturb me so much as the question of how the ownership is acquired. If a Representative from a particular district, because of his economic resources, fairly mustered and expended, could obtain ownership, that would be perfectly all right. The other Representatives may not care to own a building or may not be able to muster the necessary resources.

But if it came down to the question of whether ownership is obtained in a questionable manner, then, of course, I think we would have something about which to be concerned. I would not want to be in a position to say that if one can acquire ownership in a questionable way, all others should also be able so to acquire it. I should say that one should have no advantage over another.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana for a question.

Mr. LONG of Louisiana. Does not the Senator from Utah come from an area where discrimination is opposed?

Mr. MOSS. That is correct. I come from an area which, I think, as an area opposes discrimination; and I should like to be counted personally as one who opposes any discrimination.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. If one is to become rich from this bill, why should not we all become rich?

Mr. MOSS. The Senator from Louisiana poses a most difficult question to answer. I can answer it only by saying that although I believe in uniform treatment, and to that extent would say that everyone should get rich, if any are getting rich, I must also hasten to include in the answer that I think no one should get rich by any improper motive or action of any sort. If any such question were involved, I would rather be counted among those who did not get an advantage, because I do not seek monetary reward by compromising principle.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield for a further question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. If this bill passes, it may be that some people will own telephone buildings, have their loans for such endorsed, and will get great advantages. Does the Senator feel he should be excluded from some of the beneficial advantages simply because he votes against the bill?

Mr. MOSS. I hope I shall never suffer any disability by reason of my voting either for or against it; but I would not expect to gain any monetary reward either by opposing or supporting the bill. I think my position should be, as I hope that of every other Senator and Representative would be, to do that which I feel is in the public interest. I think I should do whatever is for the good of the country and for all the citizens, and not be concerned about any personal advantage or disadvantage.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield to the Senator from Louisiana.

Mr. LONG of Louisiana. Has the Senator from Utah read the Drew Pearson column of this morning, which was written by Jack Anderson?

Mr. MOSS. I skimmed through that article quickly this morning, and earlier this afternoon the Senator from Oregon [Mr. MORSE] quoted the article on the floor of the Senate. I heard the article read at that time, so I have some familiarity with it.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. Mr. President, I am happy to yield for a further question.

Mr. LONG of Louisiana. Has the Senator from Utah ever heard the expression which the Senator from Louisiana learned when he was in his knee breeches; namely, "cross lobbying."

Mr. MOSS. Yes; I have heard of it.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I yield to the Senator from Louisiana for a further question.

Mr. LONG of Louisiana. Will the Senator from Utah please give his best understanding of the meaning of cross lobbying?

Mr. MOSS. Mr. President, since I am rather limited in my knowledge of cross lobbying, and since I have admitted that I heard of it only recently, I would prefer to have the Senator from Louisiana explain it, for he admits that he has heard about it since he was in knee breeches. My knowledge of cross lobbying does not go back that far.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I yield for a further question.

Mr. LONG of Louisiana. Will the Senator from Utah give me his understanding of cross lobbying, so that I might compare it with mine?

Mr. MOSS. Mr. President, not only do I feel some inability properly to define the term, but I also realize that if we were to reach a point where I obtained from the Senator from Louisiana, not a question, but a statement——

Mr. LONG of Louisiana. An invitation——

Mr. MOSS. Then I might be charged with having concluded my first speech. Inasmuch as I do not wish to find myself in that situation, I yield only for a question.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield for a further question.

Mr. LONG of Louisiana. Did it ever occur to the Senator from Utah that if the telephone company, the power company, and the water company decided that they had the same interest, they might join in an attempt to influence the press?

Mr. MOSS. Yes; and I believe there have been cases in which corporations have teamed together, as it were, to try to achieve such a result.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for another question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for another question?

Mr. MOSS. Mr. President, I am happy to yield for another question.

Mr. LONG of Louisiana. Did it ever occur to the Senator from Utah that the pincipal advocate of cross lobbying might be the American Telephone & Telegraph Co.?

Mr. MOSS. It has occurred to me—although I cannot say that I know it as a fact—that A.T. & T. might be involved in cross lobbying.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question.

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I shall be happy to yield for a further question, Mr. President.

Mr. LONG of Louisiana. Did it ever occur to the Senator from Utah that if every enterprise involved in cross lobbying with A.T. & T. and its 17 subsidiaries held true to its original agreement, no newspaper in the United States could survive unless it published the editorials written by A.T. & T.?

Mr. MOSS. I am well aware of the economic pressures which advertisers and others have with the press; and I assume that terrific pressure could be exerted by those companies if they acted jointly with that as a purpose.

Mr. LONG of Louisiana. Mr. President, may I ask the Senator from Utah to yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. I am happy to yield for a further question.

Mr. LONG of Louisiana. I regret that I did not hear the statement the Senator from Utah made about the Drew Pearson article. But did the Senator from Utah hear what happened to a poor little country weekly when it dared print the truth about this debate?

Mr. MOSS. I am aware of the report in the article as to what occurred, and I must say that I find it very shocking to read that in the article.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a further question?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for a further question?

Mr. MOSS. Mr. President, I am happy to yield, although I must say that I shall be able to yield only once or twice more, because I have invited a number of guests to attend a reception at 5 o'clock, and I must meet them; and I wish to finish my speech first.

Mr. LONG of Louisiana. Mr. President, under the circumstances, I shall not ask that question.

But does the Senator know that I am so outraged about this bill that I am going to take all day tomorrow to talk about it?

Mr. MOSS. Mr. President, I have learned—from discussions earlier today with the Senator from Louisiana and with other Senators—that the Senator from Louisiana expects to speak at considerable length tomorrow on the floor of the Senate; and I know the depth of his feeling in regard to the issue before the Senate. Therefore, I believe that the speech to be delivered by him on the floor of the Senate tomorrow will be a most interesting and powerful one, and I hope I can be in attendance at that time, because I should like to hear his speech.

Mr. LONG of Louisiana. Mr. President, will the Senator from Utah yield for a question—just one more?

The PRESIDING OFFICER. Does the Senator from Utah yield to the Senator from Louisiana for just one more question?

Mr. MOSS. I am happy to yield for a question.

Mr. LONG of Louisiana. May I ask the Senator from Utah, because nothing will happen in the Senate, which I can guarantee, why not get a good day's rest tomorrow?

Mr. MOSS. I thank the Senator from Louisiana very much. I assure him that I shall try to be present in person tomorrow, or else I will very carefully read the RECORD, because I will be most interested in the speech which will be delivered by him tomorrow on the floor of the Senate.

Mr. President, at this time I wish to continue with my prepared remarks.

A moment ago I discussed the testimony given by Mr. Barr, vice president of Western Union.

Nor will a newly formed corporation foot any substantial part of the research expenditures. As I have said, the necessary, expensive, and difficult R. & D. can be—and is being—done only by the Government. NASA Administrator Webb has stated that even after the corporation is established, NASA and the Department of Defense will continue to do this expensive and vital communications research.

I am, therefore, troubled by the possibility that the only reason for rush to pass H.R. 11040 is to insure A.T. & T.'s continued monopoly.

Let me be absolutely clear on this point. I certainly do not mean in any way to impugn the motives of the supporter of this bill. I know that the Senator from Rhode Island [Mr. PASTORE], the Senator from Oklahoma [Mr. KERR], and my other friends and colleagues are dedicated public servants who deeply believe in the rectitude of what they are trying to do.

It seems so clear to me, however, that in plunging blindly ahead at this early date with what is essentially a decision on financial policy—not on technological development—the road is strewn with grave pitfalls. To warrant the following of such a perilous course, strong justification is needed.

Despite all the hearings and debates which have been held, Mr. President, I do not believe any such strong justification has been shown.

Let us examine some more, specific reasons given for the creation of this corporation this year. I read from the report of the Senate Commerce Committee:

> However, if the existing and potential competence within the United States with respect to this technology is to be most effectively translated into practical application, it is necessary now to enact legislation which will guide further developments toward this goal. It is important that the roles of private enterprise and the Government be defined at this time and that an appropriate instrumentality be created by which such national policies are to be effected. It is to these ends that your committee recommends enactment of this legislation.

Mr. President, that is not a reason. It is a conclusion. We are told it is important; but why is it important? What shall we lose by waiting at least until next year? In this connection, I should like to quote from the forceful statement made by the distinguished senior Senator from Oklahoma [Mr. KERR], during the Senate debate in 1954 on atomic energy patents.

He said:

> Mr. President, I ask, why rush, in the closing days of this session, to give it away? We shall still be sovereign when we return in January. If, when we return, our hearts are pierced with regret that we have let pass this great opportunity to give this away, we could rectify that next January; we could give it away then. [Laughter.]
>
> But, Mr. President, I remind Senators of this irrefutable fact: If we give it away this July, we cannot recapture it next January.
>
> So why all this hurry, Mr. President? We have done pretty well, this session, in the field of giving things away.

On June 19 last, the following was said by my good friend, the distinguished senior Senator from Rhode Island:

> The Senator [GRUENING] has asked me, "Well, why do we have to do it now?"
>
> First of all, because I personally think it is a good thing to get going; second, we have the instructions of the President of the United States. I cannot give the Senator a better answer than that.

With the deepest respect for my colleague and my President, I submit that that is less than a fully convincing answer. As a part of the legislative branch in the Goverment, we have an obligation to consider the wisdom of such a measure on an independent basis. We have no right to abdicate our legislative responsibility to the President.

And while I have the fullest respect for my friend from Rhode Island, I think we have a right to a more detailed answer than "it is a good thing to get going." It is certainly important to get going on developing the operational system, and this is being done. But it is much more important to get going in the right direction and at the right time.

When we turn to the House report, we find little further enlightenment:

> WHY LEGISLATION NOW?
>
> If a national policy of private ownership and operation of the U.S. portion of the international system is to be assured, the instrumentality therefore must be established now. If this instrumentality is not created at the earliest possible date, all planning for U.S. participation in the international system will have to be done by Government agencies. Our private communications carriers, especially in view of the antitrust laws, will be prevented from cooperating effectively with each other and with the Government agencies in preparing effective plans for U.S. participation in the international system. The creation at this time of the needed instrument, in the form of a private corporation, will provide the machinery through which existing carriers and other private individuals and groups which desire to participate financially in this new venture may do so.

But most of the space planning must be done by governmental agencies for the next few years. Necessary planning is so broad that it must be on an intergovernmental level. There will be no so-called purely business arrangements to be made for a long time, for there will be no commercial system for the next few years.

Private carriers will not be able or required to cooperate more than they do now by the mere passage of H.R. 11040. And, there is nothing to prevent them from cooperating with any governmental agency if necessary.

And as to machinery for financing, if Chairman HARRIS is correct in his statement that many brokers have full orderbooks for this stock, it will not take long for individual and corporate investors to buy in. It will certainly not take the year or more that will elapse before we know enough to begin using the corporation's capital for buying and building equipment for the right system.

It thus seems clear to me that there is nothing to gain and much to lose by enacting this legislation now.

We stand on the threshold of one of the greatest adventures in human history—the entry into the space age. Our accomplishments so far have made it possible to envision an operational satellite communications system. Future activities may make a space transportation system possible. We dare not start off on the wrong foot with a hasty, prematurely conceived form of organization which will become a binding precedent.

Americans are an impatient, active people. We want to settle problems quickly and finally. But we should go slowly in giving up public control of one of the first fruits of space age, financed by the taxpayer. It is especially wrong to do so by prematurely freezing a situation that should remain fluid. The administration and the American people need a chance first to think about what is involved.

Let me briefly summarize the points I have attempted to emphasize to my colleagues—points which convince me that our wisest course at this time would be to defer final decision on the financial mechanics of our Nation's space satellite program, pending further consideration.

First, the problem which most troubles me, and which apparently is most disturbing to my colleagues, is the problem of international negotiations. It is essential that the United States represent itself in the world communications arena—full and free communication between peoples is our greatest hope for world peace. Negotiations by proxy, through the instrumentality of a private business space satellite monopoly would be intolerable.

I realize that we have been given many assurances by H.R. 11040's proponents that this will not happen. However, on the face of the bill itself, the answer is far less certain. Moreover, I am not aware of any extensive deliberations of the problems of international law relating to space satellite communications having been made in hearings either in the House or Senate committees.

That includes the hearings before the Senate Foreign Relations Committee.

Second, it seems clear to me that at this early stage in our technology and research and development, the establishment of a financial organization which may in anyway limit our technical horizons would be suicidal. I must confess that I find the possibility inescapable that a private corporation, dominated by a company with vast capital commitments, will be less than completely willing to accept each and every new improvement which is developed.

Third, as RCA and Western Union, among others, have pointed out, there is no connection whatsoever between the enactment of H.R. 11040 and the achievement of an operational space communications system.

I have heard it argued that the wonderful success of Telstar demonstrates and proves the need to immediately establish this corporation. I cannot understand this argument. It seems to me that the launching of Telstar demonstrates quite the reverse, to wit: that research and development is proceeding at full speed and will continue to do so with or without H.R. 11040.

I have noted several other arguments which, in my opinion, cut in the same direction. On some, it is inescapably clear to me that the wisest course for us to follow at this time would be full speed ahead on research and development, but cautious, further study and appraisal of the establishment of a corporate form of business organization to be created.

TRANSACTION OF ROUTINE BUSINESS

By unanimous consent, the following routine business was transacted:

REPORTS OF COMMITTEES

The following reports of committees were submitted:

By Mr. FULBRIGHT, from the Committee on Foreign Relations, without amendment:

H.R. 11040. An act to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes (Rept. No. 1873).

(See the reference to the above report when submitted by Mr. FULBRIGHT, which appears under a separate heading.)

By Mr. ERVIN, from the Committee on the Judiciary, with amendments:

H.R. 10431. An act to revise, codify, and enact title 37 of the United States Code, entitled "Pay and Allowances of the Uniformed Services" (Rept. No. 1874);

H.R. 10432. An act to amend title 39, United States Code, to codify certain recent public laws relating to the postal service and to improve the code (Rept. No. 1875);

H.R. 10433. An act to amend title 10, United States Code, to codify recent military laws, and to improve the code (Rept. No. 1876); and

H.R. 10931. An act to revise and codify the general and permanent laws relating to and in force in the Canal Zone, and to enact the Canal Zone Code, and for other purposes (Rept. No. 1878).

By Mr. JOHNSTON, from the Committee on Post Office and Civil Service, without amendment:

H.R. 8564. An act to amend the Federal Employees' Group Life Insurance Act of 1954 to provide for escheat of amounts of insurance to the insurance fund under such act in the absence of any claim for payment, and for other purposes (Rept. No. 1877).

REPORT ON DISPOSITION OF EXECUTIVE PAPERS

Mr. JOHNSTON, from the Joint Select Committee on the Disposition of Papers in the Executive Departments, to which was referred for examination and recommendation a list of records transmitted to the Senate by the Acting Administrator of General Services Administration on August 2, 1962, that appeared to have no permanent value or historical interest, submitted a report thereon, pursuant to law.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred, as follows:

By Mr. DIRKSEN:

S. 3629. A bill for the relief of Dr. Louis Brandes; to the Committee on the Judiciary.

By Mr. TOWER:

S. 3630. A bill for the relief of Lolita G. Soriano; to the Committee on the Judiciary.

By Mr. JOHNSTON (by request):

S. 3631. A bill to amend title 13, United States Code, to preserve the confidential nature of copies of reports filed with the Bureau of the Census on a confidential basis;

S. 3632. A bill to amend the Federal Employees Health Benefits Act of 1959 to provide additional choice of health benefits plans, and for other purposes; and

S. 3633. A bill to amend the Retired Federal Employees Health Benefits Act with respect to Government contribution for expenses incurred in the administration of such act; to the Committee on Post Office and Civil Service.

TRADE EXPANSION ACT OF 1962—ADDITIONAL COSPONSORS OF AMENDMENTS

Under authority of the order of the Senate of August 2, 1962, the names of Senators LONG of Missouri and RANDOLPH were added as additional cosponsors of the amendments submitted by Mr. MUSKIE (for himself, Mr. BARTLETT, Mr. CHAVEZ, Mr. COTTON, Mr. DODD, Mr. MURPHY, Mr. PASTORE, Mr. PELL, and Mr. WILEY) on August 2, 1962, to the bill (H.R. 11970) to promote the general welfare, foreign policy, and security of the United States through international trade agreements and through adjustment assistance to domestic industry, agriculture, and labor, and for other purposes.

NOTICE OF HEARINGS ON NOMINATIONS OF E. AVERY CRARY AND JESSE W. CURTIS, JR., TO BE U.S. DISTRICT JUDGES, SOUTHERN DISTRICT OF CALIFORNIA

Mr. EASTLAND. Mr. President, on behalf of the Committee on the Judiciary, I desire to give notice that public hearings have been scheduled for Friday, August 17, 1962, at 10:30 a.m., in room 2228, New Senate Office Building, on the following nominations:

E. Avery Crary, of California, to be U.S. district judge, southern district of California, vice Ernest A. Tolin, deceased.

Jesse W. Curtis, Jr., of California, to be U.S. district judge, southern district of California, a new position.

At the indicated time and place persons interested in the hearings may make such representations as may be pertinent.

The subcommittee consists of the Senator from South Carolina [Mr. JOHNSTON], the Senator from Nebraska [Mr. HRUSKA], and myself, as chairman.

UNIONS AND THE ANTITRUST LAWS

Mr. METCALF. Mr. President, on May 3 the junior Senator from Texas spoke on the floor of the Senate on the subject "The Labor Antimonopoly Bill." In his speech the Senator from Texas discussed a bill he has introduced, S. 2931, entitled the "Labor Union Antitrust Laws Amendments of 1962." This bill proposes to enlarge in certain respects the application of the antitrust laws to unions.

We are all familiar in a general way with the considerations which led the courts and the Congress to exempt unions, generally speaking, from the provisions of the antitrust laws. Workers form unions so that by acting together they can increase their bargaining power in negotiations with employers, and thus secure better wages and working conditions. Thus if the labor of a worker is treated as being just like a commodity which a merchant has for sale, the functioning of a union necessarily involves monopoly or restraint of trade, since it involves the elimination of wage competition, that is of competition among employees for jobs by offering to work for lower wages. The whole notion of a union is that by acting together workers will be able secure higher wages. On the other hand, any agreement among competing sellers of goods fixing the prices at which they will sell is a violation of the antitrust laws.

Thus, if antitrust doctrines are to be applied to unions, and the labor of a worker is to be treated as being the same as a commodity for sale, all labor unions should be forbidden, and replaced by periodic auctions at which jobs are parceled out to workers bidding to work at the lowest wage. Unions would be eliminated under this theory, because the very purpose of unions is to limit the power of employers to drive down wage rates and enforce substandard working conditions.

At one time the courts did regard the labor of a worker as being in the same category as a commodity offered for sale, and on that basis they held that unions were illegal as a conspiracy to raise wages. However, this point of view fell into disfavor more than a century ago. Today no one really proposes to establish an economic system under which workers compete with each other to supply labor at the lowest possible cost.

No responsible social critic believes that competition among manufacturers should be carried on on the manufacturer's ability to obtain the lowest possible labor rates instead of on the basis of relative efficiency or ability to produce. The social advantage of competition is that it rewards the most efficient producer and thus guarantees the optimum use of our economic resources. There is no social advantage to be gained by allowing manufacturers to compete on the basis of sweatshop wages.

These considerations led the courts and the Congress to conclude that labor should not be regarded as a commodity, for purposes of antitrust law.

No one today thinks it socially desirable to force workers to compete with each other for jobs by offering to work for lower wages.

And very few people contend that unions should compete with other unions by offering to supply labor to employers for lower wages. In this country we do not believe in a low wage economy, and we do not believe that the labor of a person should be equated with a commodity for sale.

In his speech the junior Senator from Texas said that in the early years of union development it was recognized that a union's bargaining power was in proportion with its economic strength and it was, therefore, felt by many that a union should be free to organize as completely as possible the total labor supply in an area. Otherwise, according to the junior Senator from Texas, the employer could replace union workers with nonunion workers, and thus destroy the union. In recent years, however, according to the junior Senator from Texas, the National Labor Relations Act has obviated this danger by protecting the rights of workers to organize and by requiring an employer to bargain with a union if it represents a majority of its employees. Therefore, according to the Senator's syllogism, the need for a union to achieve monopoly status no longer exists.

I cannot agree with this analysis. The reason why unions were exempted, for the most part, from the antitrust laws was simply that it was not deemed to be socially desirable to compel workers to compete for work for their members by offering to undercut the wages negotiated by other unions. It is for these reasons that unions were exempted in important respects from the antitrust laws. The concept that a union needed to organize the total labor supply of an area hardly entered the picture, and industrial unions have never sought at all to control labor supply.

Unions are exempted, to a degree, from the antitrust laws for somewhat the same reason that farmers' cooperatives are exempted. Congress has adopted a philosophy that it is not socially desirable these days to compel farmers to compete in selling their produce by undercutting the prices their neighbors ask, for similar reasons that it does not think that workers should be compelled to compete for jobs by wage cutting. It is not socially or economically desirable to drive farm prices down to a level that results in substandard conditions, just as it is not socially or economically desirable to drive wages down. That is why the Clayton Act, which was passed in 1914, states:

> Nothing contained in the antitrust laws shall be construed to forbid the existence and operation of labor, agricultural, or horticultural organizations, instituted for the purposes of mutual help * * * nor shall such organizations, or the members thereof, be held or construed to be illegal combinations or conspiracies in restraint of trade, under the antitrust laws.

The fact that the rights of workers to organize are now to some extent protected by the National Labor Relations Act, and that employers are now required in some situations to bargain with unions, has little or nothing to do with the issue of the application of the antitrust laws to unions. That issue turns on whether we really want to compel workers to compete for work by offering their services at lower wages, or whether we have some notion that unions should act like employment agencies and compete with each other by offering the labor of their members at lower wages.

The impression that since the enactment of the National Labor Relations Act it is no longer possible for an employer to hire nonunion workers and thus destroy a union is, incidentally, quite without foundation. In some situations the act requires employers to bargain with unions, but it specifically states that an employer is not required to agree to anything, or even to make any concession. Whenever a strike results over economic issues, such as a wage increase or decrease, an employer is legally free—as free now as he was in 1840—to hire strikebreakers and undertake to break the union. Quite often employers do just that, and quite often they succeed. However, as I have said, all of this is pretty irrelevant to the issue whether the antitrust laws should apply in their totality to unions.

The junior Senator from Texas, despite some of the things he said in his speech, really concedes in part that the basic considerations which led to the partial exemption of unions from the antitrust laws are as operative today as they were 50 or 100 years ago. For in his bill the Senator does not propose either that unions be made illegal as necessarily involving restraint of trade, or that unions be required to compete with each other in selling labor. What he proposes is rather that it be made a violation of the Sherman Act for unions to engage in any of four types of practices enumerated in his bill. The junior Senator from Texas then goes on to discuss the four types of activities or cases involving unions which, he says, demonstrate the need for his bill. I would like to examine some of these situations or cases and I think that I can demonstrate that the contents and administration of the National Labor Relations Act are not as described in the speech of May 3.

The general reasons are given for bringing these four types of practices within the antitrust laws. First, that enforcement through an administrative agency involves delay and, second, that the practices in question are not now covered by the labor law, or likely to be covered by amendment of that law.

The first situation discussed as showing the need for amending the antitrust laws so as to apply to unions has to do with a union's refusal to refer workers to an employer. The particular case cited is the *Joilet Contractors* case, decided in 1953 by the U.S. Court of Appeals for the Seventh Circuit (202 F. 2d 606, 31 LRRM 2361). In that case a local union of the Painters Union in some instances refused to refer workers to construction jobs and in other instances caused them to quit work as part of a campaign against the use of preglazed sash. The court held that the Taft-Hartley Act did not apply to the union's refusals to refer workers, as distinguished from its calling of strikes by workers already on the job. It is thus correct to say that the Joilet case held that the Taft-Hartley Act did not apply to a union's refusal to refer workers to a job.

However, one thing is overlooked. That is that the Landrum-Griffin Act amended the secondary boycott provisions of the Taft-Hartley Act for the express purpose, among others, of making it applicable to a union refusal to supply labor. Since the adoption of the Landrum-Griffin Act, the National Labor Relations Board and the courts have uniformly ruled that it is an unfair labor practice for a union to refuse to refer workers in situations like that in the Joilet case. *Operating Engineers Union* (135 NLRB No. 62, 49 LRRM 1535 (1962)); *Electrical Workers Union* (131 NLRB No. 120, 48 LRRM 1172 (1961)); *Penello* v. *Local 5, Plumbers Union* (46 LRRM 2740 (July 1, 1960)).

The second situation that the junior Senator from Texas says, in his speech, demonstrates the need for applying the antitrust laws to unions, is, in his language "the refusal of the union to permit its members to handle certain types of goods." The Senator states, and that is a quotation from his speech:

> In this type of situation the union prohibits work on goods or materials which do not have a union label or have the label of another union. A concrete example was presented in the case of *Neon Products Co.* (74 NLRB 766). In that case the company manufactured neon signs for distribution and erection throughout the country. This case arose prior to the merger of the AFL and the CIO. The company bargained with a CIO union and the signs it produced carried a CIO union label. However, where sign-erecting companies had contracts with an AFL union, the latter prohibited work by its members on the erection of the signs. Although this type of situation occurs quite frequently, the NLRB held that this was not a violation of the National Labor Relations Act (108 CONGRESSIONAL RECORD 7673 (May 3, 1962)).

There is the *Neon Products, Inc.*, case reported at 74 NLRB 766. The Neon Products case was decided by the Labor Board in 1947, under the Wagner Act. The employer had a contract with the UE, a union then affiliated with the CIO, and the IBEW, a union affiliated with the AFL, asked for an election. The employer and the UE contended that an outstanding bargaining agreement barred the holding of an election, but the Board ordered an election. That is all that appears in the decision.

According to the description of this case given by the junior Senator from Texas, the NLRB held in this case that a union refusal to handle certain types of goods was not a violation of the National Labor Relations Act. That is not what the case was about. The Neon Products decision was decided in 1947 under the Wagner Act, before the Taft-Hartley Act became effective and under the Wagner Act there were no union unfair labor practices. The Wagner Act declared certain types of employer practices to be unfair labor practices, but it contained no parallel enumeration of union unfair labor practices. Under the Wagner Act employers could not file charges against unions, and the NLRB could not issue complaints against unions. The Congress heard a great deal about this asserted inequality of treatment between employers and unions during the years between 1935 and 1947. The proponents of the legislation which became the Taft-Hartley Act never ceased talking about it.

The junior Senator from Texas would of course have been quite correct if he had said that the sort of boycott he described did not violate the Wagner Act, since that act did not deal with union unfair labor practices at all. However, the sort of boycott he described is the clearest possible violation of the secondary boycott provisions of the Taft-Hartley Act. Boycotts of that sort had been explicitly illegal ever since 1947, and have been held illegal by the Board and the courts in innumerable cases. The Joliet case which I have already discussed is one of those cases. As already noted the court distinguished between a union's request to refer workers, which was not a violation of the National Labor Relations Act as it stood in 1953, though it is a violation since the Landrum-Griffin amendments, and causing workers already on the job to stop work. As to the latter the court said:

> However, if they discover the use of preglazed sash after they are on the job and then refuse to work, it is a violation because they have done so in the course of their employment.

I come now to the third type of union practice asserted as demonstrating a need for applying the antitrust laws to unions. This is what is said in this portion of the speech, and I read:

> Third. Geographical restrictions on employers.
>
> By means of this practice, a union which has effective control of the labor supply can limit the geographical area in which an employer is permitted to operate. An example of this is set forth in the 1953 hearings before the House Education and Labor Committee—volume 8 at page 2809 of the hearings. A Chicago roofing firm was ordered by the union not to operate north of 47th Street in Chicago because it would thereby compete with another employer whose employees were represented by the same union. When the employer refused to abide by this restriction, the union cut off his labor supply and also advised other contracting firms that they would be put out of business if they utilized the services of this roofing firm.

When I read this part of the speech, I, of course, supposed that the junior Senator from Texas was giving us what he regarded as another type of situation which is not covered by the Labor Act and which should, therefore, in his view, be brought within the antitrust laws.

So, Senator TOWER went back to some 1953 House committee hearings on a bill which was never reported. However, I participated in those hearings and I did not recall the situation quite in the same way it was described. I looked up in my file copies and when I examined those 1953 hearings I found that the operator of the Chicago roofing firm had testified that the National Labor Relations Act did apply to his situation and that he had gotten relief under it. He said—page 2811:

> On September 19 our attorney filed charges with the National Labor Relations Board under section 8(b)(4) of the National Labor Relations Act. A little more than a month later, on October 21, we obtained a settlement agreement in which they agreed to cease this secondary boycott activity.

We went on to testify that he had had some further trouble with the union, but that he had gotten most of his customers back and was able to continue to do roofing work "with this settlement agreement that we have"—page 2815.

There are other cases where the National Labor Relations Act has been applied against unions which were seeking to impose geographical restrictions on the operations employers. See, for example, *Lexington Electric Products Co., Inc.* (124 NLRB 1400, 45 LRRM 1029).

Thus in the first three types of situations listed by the junior Senator from Texas as demonstrating a need for amendments to the antitrust laws because the situations are not covered by the National Labor Relations Act, the Senator from Texas has not cited cases which afford the slightest support for his position.

As I noted earlier, the junior Senator from Texas, in addition to saying that the Labor Act does not cover these situations, also asserts that amendments to the antitrust laws are needed because enforcement through an administrative body, such, presumably, as the National Labor Relations Board, involves delay.

This proposition, I must confess, leaves me absolutely flabbergasted. It is true that unfair labor practices which are handled in normal course by the National Labor Relations Board are subject to the delays which normally attend administrative, and for that matter, judicial proceedings. The National Labor Relations Board advises me that at present the average time required to process an unfair labor practice case from the filing of a charge to final decision by the Board is 301 days. I am sure that the average time required for disposing of cases in the Federal district courts is much longer.

In any event, however, the National Labor Relations Act establishes a special expedited procedure, known as the mandatory injunction, for securing relief from certain categories of unfair labor practices by unions. Those categories include secondary boycotts and strikes, jurisdictional boycotts and strikes, recognition and organizational picketing, and hot cargo clauses. These are the very practices which at one stage in the development of our law were adjudicated under the antitrust laws, but which are now adjudicated under the National Labor Relations Act, though the junior Senator from Texas would like to place them under the antitrust laws once more.

I consider that these mandatory injunction provisions are grossly unfair and one sided, for the reason that they apply only against unions and that there is no parallel provision for summary relief against employer unfair labor practices, no matter what their nature. I noted earlier that back in 1947 and earlier many employers and many legislators complained that the Wagner Act was one sided because it operated only against employers. These mandatory injunction provisions are unfair for the same reason, because they operate only against unions.

However, they are in the act. Let us see how they operate.

Section 10(l) of the National Labor Relations Act provides that whenever any person files a charge, and that would normally be an employer, that anyone has engaged in an unfair labor practice of the sorts I have named, the Labor Board shall investigate the charge on a priority basis and that if the regional attorney has reasonable cause to believe that the charge is true and that a complaint should issue, he shall petition a Federal district court for appropriate injunctive relief pending the Board's adjudication of the matter on the merits. Upon the filing of such a petition the district court may grant such injunctive relief or temporary restraining order as it deems proper. A temporary restraining order may be issued even without notice to the union enjoined, though in that event it is not to be effective for more than 5 days.

Under these mandatory injunction provisions, relief is obtained very rapidly against union unfair labor practices. The office of the General Counsel at the National Labor Relations Board advises me that the average time elapsing between the filing of the charge by the employer and the issuance of a temporary injunction is 3 weeks to a month. In cases where a temporary restraining order precedes the temporary injunction, relief is obtained in an even shorter time, usually just a few days.

In a typical antitrust proceeding, the lapse of a month is just the flickering of an eyelid. I happened to read recently that the antitrust proceeding growing out of Du Pont's ownership of General Motors stock, which was disposed of the other day by a settlement agreement, was initiated by the Government in 1949. That was 13 years ago. Is that the sort of speedy relief which the junior Senator from Texas wishes to substitute for the injunctions now obtainable at the behest of employers under the National Labor Relations Act in 3 or 4 weeks?

Let me comment on another portion of the Senator's speech, the portion in which he deplores the 1941 decision of the Supreme Court in the *Hutcheson* case (312 U.S. 219), and urges that Congress amend the antitrust laws to correct the effects of that decision. This is a familiar proposal of those who agitate in favor of applying the antitrust laws to unions. I think I can demonstrate, however, that this proposal has no more sound legal basis than various other items on the Senator's program which I have already discussed.

I said earlier that back during the first part of the 19th century, the courts held that unions were illegal per se, as conspiracies to fix the price of labor. Beginning with the famous decision of Chief Judge Shaw—*Commonwealth* v. *John Hunt* (Mass., 1842, 4 Metcalf 111)—the courts abandoned this doctrine as socially and economically destructive. Thereafter for a period of nearly 100 years, the courts used the rationale that, while unions were not per se illegal, whether particular union activities were illegal as restraints of trade was to be determined on a case-by-case appraisal of whether the union sought legitimate or illegitimate ends, and whether it employed legitimate or illegitimate ends. Under this doctrine, the courts themselves decided what ends or means were legitimate or illegitimate. Particular union activities, such as strikes or boycotts, primary or secondary, or jurisdictional strikes or boycotts, might be held legal or illegal, according to a court's social or economic predilections. As Justice Brandeis put it in his dissenting opinion in *Duplex Printing Co.* v. *Deering* (254 U.S. 443, 485):

> By virtue of that doctrine, damage resulting from conduct such as striking or withholding patronage or persuading others to do either * * * became actionable when done for the purpose which a judge considered socially or economically harmful and therefore branded as malicious and unlawful.

During this 100-year period, the Congress enacted the Sherman Act—1890, and the Clayton Act—1914. These acts had the effect of centering antitrust litigation in the Federal courts, and of bringing the U.S. Government into the picture as prosecutor, but did not, as the Supreme Court majority interpreted those statutes, basically alter the restraint-of-trade doctrine regarding legitimate means and ends as it had developed during the latter part of the 19th century.

Then in 1932 the Congress enacted the Norris-LaGuardia Act and in 1941 the Supreme Court decided the Hutcheson case.

That case grew out of a dispute between the Carpenters and the Machinists Unions as to which unions, or rather the members of which union, were to erect certain machinery being installed by the Anheuser-Busch Co. It was in other words a jurisdictional, or work assignment, dispute. The Carpenters called a strike and established a picket line, and the president of the Carpenters and various others were indicted for a criminal combination and conspiracy violation of the Sherman Act.

The Supreme Court, in an opinion by Justice Frankfurter, pointed out that since the enactment of the Norris-LaGuardia Act the activities engaged in by the Carpenters could not be enjoined, either at the suit of the Government or of the employer. And the Court concluded that the Congress had meant to charge the substantive, as well as the procedural law, and to repudiate the whole doctrine under which the courts had been ruling on whether union activities during labor disputes involved legitimate or illegitimate means or ends. The Court pointed out that there was good reason to think that Congress had meant to eliminate that doctrine by the enactment of the Clayton Act in 1914, but that the Supreme Court's interpretation of that act had stultified the intention of Congress.

Justice Stone concurred in the result in the Hutcheson case, on the ground that the antitrust laws, properly interpreted, did not apply to the union activities in question, regardless of the Norris-LaGuardia Act. Two Justices dissented.

The junior Senator from Texas says that the Congress should by legislation overturn the results of this decision.

In 1947, when the legislation which became the Taft-Hartley Act was under consideration, the Senate and the House were in agreement that the Hutcheson case should be overturned. The bill which the House passed accomplished that in two ways. It amended the National Labor Relations Act to make certain types of union activities unfair labor practices, including jurisdictional strikes or boycotts. Second, the House bill restored the application of the antitrust laws to certain types of union activities. The conference report states:

> Section 301 of the House bill contained a provision amending the Clayton Act so as to withdraw the exemption of labor organizations under the antitrust laws when such organizations engaged in combinations or conspiracies in restraining of commerce where one of the purposes or a necessary effect of the combination or conspiracy was to join or combine with any person to fix prices, allocate costs, restrict production, distribution, or competition, or impose restrictions or conditions upon the purchase, sale, or use of any product, material, machine, or equipment, or to engage in any unlawful concerted activity (as defined in sec. 12 of the National Labor Relations Act under the House bill).

The Senate bill, however, employed only the unfair labor practice approach, and rejected the antitrust approach. In the conference the Senate conferees, led by Senator Taft, prevailed. The conference report, after referring to the House proposal to bring union activities back under the antitrust laws, states:

> Since the matters dealt with in this section have to a large measure been effectuated through the use of boycotts, and since the conference agreement contains effective provisions directly dealing with boycotts themselves, this provision is omitted from the conference agreement.

That is how it came about that the Taft-Hartley Act amended the Wagner Act by adding an enumeration of union unfair labor practices, but discarded the proposal to revert to handling these issues under the antitrust laws. I agree with Senator Taft's solution as respects this basic issue, though I of course do not agree with every detail of the Taft-Hartley Act.

One of the union unfair labor practices which the Taft-Hartley Act prohibits is for a union to engage in a strike for the purpose of "forcing or requiring any employer to assign particular work to employees in a particular labor organization rather than to employees in another labor organization." That is section 8(b)(4)(D) of the National Labor Relations Act, as amended by the Taft-Hartley Act. This provision is explicitly directed to the sort of union activity involved in the Hutcheson case, and it in effect reverses the outcome of that case. As I noted earlier, this is one of the provisions of the act that is speedily and summarily enforcible by mandatory injunction.

In his speech the junior Senator from Texas quotes a statement made by Thurman Arnold in 1941 to the effect that new legislation is needed to deal with union abuses legalized by the Hutcheson decision.

The junior Senator from Texas then adds:

> Twenty years have passed since Mr. Arnold made that recommendation, but no legislation has been passed and the evil has continued to grow (CONGRESSIONAL RECORD, p. 7674, May 3, 1962).

But as pointed out above, legislation has been in effect for 15 years. There are serious problems and issues in the field of labor-management relations, and I do not by any means undertake to defend everything that every union does. Neither do I assert that the legislation already on the books is necessarily adequate to handle every problem in the field of labor-management relations with which we are confronted. As far as I am concerned, however, these problems deserve reappraisal in the light of modern legislation and not rehashing of charges which Congress has investigated and adopted legislation as a result of its hearings and investigations.

LT. COL. ANDREW DUVAL, JR.

Mr. WILEY. Mr. President, I recognize that the military has its own way in bestowing medals and recommendations for services well rendered by giving advancements, and so forth; however, occasionally Army officers stationed in various communities perform services to the public in areas far beyond their line of duty and they deserve special commendation. Such services have been rendered by an Army officer in my State and since this man is now being transferred to Germany, I wish to read into the RECORD this special commendation from the Milwaukee area, Military Chaplains' Association. This is not only a recognition for the officer who is cited but for all those other officers who serve beyond the call of duty.

COMMENDATION TO LT. COL. ANDREW DUVAL, JR.

By action of its executive committee, the Milwaukee area chapter of the Military Chaplains' Association, commends Lt. Col. Andrew Duval, Jr., commanding officer of the Wisconsin sector of the 14th U.S. Army Corps, for his great efforts in support of all projects enhancing the ideal of God and country in the Milwaukee community, specifically, and in Wisconsin communities generally.

This action of the executive committee is based upon—

1. His support of the religious program of the Armed Forces Week in the last 3 years, which program, because of his support, was one of the most effective in the country. This Armed Forces Week religious program in Milwaukee was recognized by the National Convention of the Military Chaplains' Association this year—1962. Colonel Duval was project officer for Armed Forces Week for the past 3 years.

2. His support of the highly successful Christmas party for a thousand children, dependents of the reservists and the National Guard called up for a year's active duty. This program was sponsored by the Non-Commissioned Officers' Council of the Milwaukee area and by the Milwaukee area chapter of the Military Chaplains' Association, and was held last December 16.

3. His support of the first national security seminar for pastors to ever be held in Milwaukee, last January, and produced by the staff of the Industrial Council of the Armed Forces, Washington. This was very successful in Milwaukee and was recommended as the national project of the Military Chaplains' Association in all of its chapters. Colonel Duval originated this project which was sponsored by the Milwaukee area chapter of the Milwaukee Chaplains' Association.

4. His personal suggestion that our Milwaukee chapter of the Military Chaplains' Association be organized in the first place. His tremendously constructive attitude and approach to all projects of serious, moral worth, and to projects that would enhance the religious and charitable work within the military.

Rev. MARTINUS E. SILSETH,
President, Milwaukee Area Chapter Military Chaplains' Association.

CAPTIONED FILMS FOR THE DEAF

Mr. PELL. Mr. President, as the cosponsor of S. 2511 to provide captioned films for the deaf, I am delighted with the Senate's favorable action on this measure. I know that the distinguished Senator from Maine [Mr. MUSKIE], who introduced the bill, must feel a great sense of satisfaction. I want to pay tribute to his tireless dedication toward insuring that the deaf receive adequate Federal assistance.

It was a very real pleasure and honor for me to preside over the special subcommittee which held hearings on S. 2511 and I thank my colleagues, Senators YARBOROUGH, WILLIAMS, TOWER, and MURPHY for their support. I am pleased to be able to note that it was reported unanimously by the full Labor and Public Welfare Committee. In this connection, I would particularly like to thank our chairman, Senator Hill, the senior Senator from Alabama, for all his guidance and Mr. McClure, Mr. Forsythe, and Mr. Barclay of our committee staff for all their help.

Our special subcommittee was privileged to hear testimony from a distinguished group of experts in the field of education for the deaf. We also had some moving statements by deaf people outlining, as only they can, how this bill will help them to help themselves. As Miss Joan Fontaine of West Warwick, R.I., said when testifying about the expanding program of captioned films, which S. 2511 provides for:

> If we can have this, we can learn a great deal more than we already know. All we need is a chance, an opportunity.

Mr. President, I am also happy to be able to state that the program of captioned films which S. 2511 would expand to meet vital needs, is a truly nonpartisan program. The present program was made possible by the diligent work of former Senator Purtell, of Connecticut, who, in April 1957 introduced S. 1889 in the 85th Congress, which resulted in Public Law 85-905. I very much regret that Senator Purtell was unable to accept our invitation to testify.

I might also point out that S. 2511 provides for research in the most effective use of captioned films for teaching the deaf as well as for training of professional people in the most efficient use of these films. More than 500,000 of our fellow citizens would derive great benefit from the program envisioned by S. 2511 and I very much hope that the House will take prompt action on this bill. In this connection, I am heartened by the fact that my very able colleague in the House of Representatives, Congressman JOHN FOGARTY, has introduced a companion bill, H.R. 9456, and that he submitted a statement which was included in the record of our hearings.

In closing, I express my appreciation for the thoughtful remarks made by our distinguished majority leader when the bill was passed last evening.

AN ESTABLISHMENT OF RELIGION

Mr. ROBERTSON. Mr. President, as soon as I learned that the U.S. Supreme Court in the now celebrated New York prayer case of Engel against Vitale had held that a 22-word nonsectarian prayer, prepared by the joint action of Protestants, Catholics, and Jews in the State of New York and promulgated by its State board of regents for use in public schools on a voluntary basis, violated the first amendment, I said on the floor of the Senate that the Supreme Court had misconstrued that amendment.

Subsequently, in testimony before the Senate Judiciary Committee, I contended that the amendment should be construed in the manner intended by those who framed it and, to that end, I quoted Thomas Jefferson as saying in a letter to William Johnson of June 12, 1823:

> The capital and leading object of the Constitution was to leave with the States all authorities which respected their own citizens only, and to transfer to the United States those which respected citizens of foreign or other States: to make us several as to ourselves, but one as to all others. In the latter case, then, constructions should lean to the general jurisdiction, if the words will bear it; and in favor of the States in the former, if possible to be so construed * * *. On every question of construction, carry ourselves back to the time when the Constitution was adopted, recollect the spirit manifested in the debates, and instead of trying what meaning may be squeezed out of the text, or invented against it, conform to the probable one in which it was passed.

At that time Jefferson was complaining of the position taken by Chief Justice John Marshall that the Supreme Court had the power to nullify State laws. Jefferson claimed, and of course correctly so, that no such power was definitely granted the Supreme Court by the Constitution and that if the Supreme Court would interpret the 10th amendment in the spirit manifested by the ratifying States it would have to give the States the benefit of all possible doubts on all Federal powers not specifically delegated to the Federal Government by the Constitution. And so at the outset of the decision of the Supreme Court in the New York prayer case we have jurisdiction to invalidate a State law, concerning the use of a prayer in public schools, taken by a Federal Court purely by assumption and not through any authority delegated to it by the Constitution itself.

The next step taken by the Supreme Court in violation of the 10th amendment was in holding that the 14th amendment automatically related to the States all other amendments to the Constitution, including the Bill of Rights. That again is a pure assumption of power, because those who framed and adopted the 14th amendment, were dealing exclusively with the future protection of the civil rights of those in the Nation who but recently had emerged from slavery.

The third step taken by the Supreme Court in violation of the 10th amendment in the New York prayer case was when it deliberately distorted the meaning of the 1st amendment. Even if it be conceded that the "due process" clause of the 14th amendment automatically related the 1st amendment to State acts, the 14th amendment could certainly put nothing in the 1st amendment that was not placed there by those who framed it.

In my testimony before the Senate Judiciary Committee in connection with an effort in the U.S. Senate in 1854 to abolish the office of chaplain in the Army, Navy, and at West Point, at Indian stations, and in both Houses of Congress, I quote Representative James Meacham, of Vermont, who prepared the report of the Judiciary Committee in rejecting the proposal, as saying:

> Another article supposed to be violated is article I of amendments:
>
> "Congress shall make no law respecting an establishment of religion." Does your present practice violate that article? What is an establishment of religion? It must have a creed, defining what a man must believe; it must have rites and ordinances, which believers must observe; it must have ministers of defined qualifications, to teach the doctrines and administer the rites; it must have tests for the submissive, and penalties for the nonconformist. There never was an established religion without all these.

In view of the fact that in a concurring opinion, Mr. Justice Douglas claimed that to be consistent the Supreme Court would have to outlaw all laws relating to the employment by the Government of chaplains, it will be interesting to see whether Mr. Justice Black, who wrote the opinion of the

Court in the New York prayer case, will in the three prayer cases that will come before the Court next October, find an excuse in his footnote to the New York case for refusing to extend the application of the New York school doctrine to the use of The Lord's Prayer in Maryland and to the use of religious hymns and art in the schools of Florida.

In any event, when the Supreme Court acts next October it will not be able to claim ignorance of the law if at that time it continues to misconstrue the meaning of the words "establishment of religion" as used by the First Congress that framed the first 10 amendments, commonly called our Bill of Rights.

No one can successfully challenge the history of the first amendment as recently presented to the Senate Judiciary Committee by the distinguished Bishop Pike of California or his conclusion that, as used in the first amendment, the words "establishment of religion" clearly referred to the establishment of a religious sect or a religious organization commonly referred to as a church.

Since that time, Mr. Stewart Robb of Jersey City, N.J., has written an article on the New York prayer case in which he establishes beyond a shadow of a doubt that the Supreme Court in the New York case misinterpreted the meaning of the first amendment. Incidentally, Mr. Robb is a Canadian scholar and writer with degress from Manitoba University and Oxford and his books have been published in this country by Dutton, Scribner & Doubleday.

Mr. President, I ask unanimous consent to have printed in the RECORD at this point an article by Mr. Stewart Robb, entitled "An Establishment of Religion."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AN ESTABLISHMENT OF RELIGION

(By Stewart Robb)

PART 1. WHAT IT MEANT AT THE TIME OF ITS ADOPTION

After all, an amendment to the Constitution should be read in a sense most obvious to the common understanding at the time of its adoption.—Justice Felix Frankfurter.

Had the Thirteen States thought the clause in the first amendment "respecting an establishment of religion" might be used as a weapon against school prayers they would not have ratified the Constitution.

The true meaning of the amendment was much on their minds. Its wording was specific. It did not apply to school prayers, which were approved of even by that extraordinary man who did more than anyone else to bring about the complete separation of church and state.

Yet Justice Black, in his statement of the majority decision of the U.S. Supreme Court against the Long Island school prayer, writes:

"The establishment clause, unlike the free exercise clause, does not depend upon any showing of direct governmental compulsion and is violated by the enactment of laws which establish an official religion, whether those laws operate directly to coerce nonobserving individuals or not."

Forsooth, to establish an official religion is now to have children recite a nondenominational school prayer, such as the following:

"Almighty God, we acknowledge our dependence upon Thee, and we beg Thy blessings upon us, our parents, our teachers, and our country."

To apply the "establishment of religion" clause to such a prayer, or to any prayer, will be proved to be a gross misreading of the intentions of the men of the Constitution. To demonstrate the Supreme Court error it is only necessary to intelligently follow the advice of Learned Hand who, speaking of the Constitution and the Bill of Rights, said: "Their meaning is to be gathered from the words they contain read in the historical setting in which they were uttered." At one time Frankfurter would have agreed.

So let us read the meaning of "an establishment of religion" in the historical setting in which the pregnant words were uttered. The temper of those times will help us by throwing light as well as heat upon the first amendment.

Among those whose fathers and forefathers had packed up and come to the free land there was the greatest concern that in this new nation which had no established national church there should never sometime be one. Hence, in the speeches, documents, letters, and daily talk of the founders of American freedom there is an ever-so-frequent mention made of the words "establishment," "church establishment," "religious establishment," "establishmentarian," "establishmentarianism," "disestablishment," "disestablishmentarian," and "disestablishmentarianism." The root word was, of course, "establishment."

A university, for instance, was an establishment. So was a charitable institution. So was a church. But bear in mind that the most frequent use of establishment was this last: a church, or an established church.

Let us take as our first of many exhibits this quotation from Jefferson:

"But every State, says an inquisitor, has established some religion. No two, say I, have established the same. * * * Our sister States of Pennsylvania and New York, however, have long subsisted without any establishment at all. * * * They flourish infinitely. Religion is well supported; of various kinds, indeed, but all good enough."

Here Jefferson is arguing that the Nation does not need "an establishment of religion" because certain American States have done well without any "establishment" at all.

Philip Alexander Bruce, speaking of the great disestablishmentarian in his "History of the University of Virginia," says:

"Jefferson was fully resolved to tear up the Episcopal establishment of Virginia root and branch, whenever the hour seemed opportune to do so."

The same historian informs us that an anonymous signer who had subscribed for the endowment of Hampden-Sidney College, a Presbyterian institution, decided to withdraw his contribution until that institution had been put under masters who belonged to the established church. He said, in his letter:

"If this school is thus encouraged, we may reasonably expect in a few years, to see our Senate House as well as our pulpits filled with dissenters, thus they may, by an easy transition, secure the establishment in their favor."

Establishmentarian Patrick Henry delivered a speech in favor of religious assessments, to which disestablishmentarian James Madison replied that the true question was not, "Is religion necessary?" but "Are religious establishments necessary for religions?" He answered his own question, "No, for religion is corrupted when established by law. The 'downfall of states' mentioned by Mr. Henry happened when there was establishment." That is, when there was a national religion.

Madison was alertly aware that Patrick Henry was confounding, possibly deliberately, religion and religious establishments, just as the 1962 Supreme Court was, but in the opposite direction. Patrick Henry wanted a religion in; the Supreme Court wants religion out.

In his Virginia Convention, 1788, the disestablishmentarian wrote:

"Fortunately for this Commonwealth the majority of the people are definitely against any exclusive establishment."

That is, they were against a monopolizing state church.

And in a letter to Monroe, Madison uses establishment in the same sense, speaking of "The Presbyterians who seem as ready to set up an establishment which is to take them in as they were to pull down that which shut them out."

Again, in a letter to Robert Walsh, dated March 2, 1819, the meaning of establishment is the same:

"It was the universal opinion in the century preceding the last, that civil government could not stand without the prop of a religious establishment."

Establishments were very much on his mind. In a letter under date of July 10, 1822, Madison wrote to his friend Edward Livingstone:

"It was the belief of all sects at one time that the establishment of religion by law, was right and necessary; that the true religion ought to be established in exclusion of every other; and that the only question to be decided was what was the true religion. The example of Holland proved that a toleration of sects dissenting from the established sect, was safe and even useful. The example of the Colonies, now States, which rejected religious establishments altogether, proves that all sects might be safely and advantageously put on a footing of equal and entire freedom."

In another letter he spoke of "the Indian establishment at Paraguay by the Jesuits." Notice that the word is always associated with a particular religious belief, as it is in the following letter to Frances Wright, 1825:

"The example of the Moravians, the Harmonians, and the Shakers * * * have no doubt an imposing character. But it must be recollected that in all these establishments there is a religious impulse in the members."

Establishments appear again the same year in a letter to Thomas Ritchie:

"Waiving the rights of conscience, not included in the surrender implied by the social state, and more or less invaded by all religious establishments."

In 1832 establishments are still very much on Madison's mind, and of course, always with the same meaning. He writes to the Reverend Adams:

"In most of the governments of the Old World, the legal establishment of a particular religion without or with very little toleration of others makes a part of the political and civil organization.

"Until Holland ventured on the experiment of combining a liberal toleration with the establishment of a particular creed it was taken for granted, that an exclusive and intolerant establishment was essential. * * * The prevailing opinion in Europe, England not excepted, has been that religion could not be preserved without the support of government nor government be supported without an established religion. * * * It remained for North America to bring the great and interesting subject to a fair, and finally to a decisive test."

Historians also give the term "establishment" a meaning unlike that of the Supreme Court when applying it to a prayer. W. Gordon McCabe, in his "Virginia Schools Before and After the Revolution," writes concerning the State church of Virginia:

"The cold and worldly spirit which pervaded the Church of England at the time in the mother country, was only too faithfully reflected in the Colonial Establishment."

Of Samuel Davies, the virtual founder of the Presbyterian Church in Virginia, he informs us that he was "liberal in his feelings toward the establishment."

The historian does not here mean that Davies was liberal in his feelings toward school prayers but toward the established Episcopal Church.

Again, he writes:

"One of the clergy, Rev. Archibald McRoberts * * * in 1776 left the establishment and embraced Presbyterianism."

The same historian, McCabe, says the Presbyterian dissenters were "revolting from the worldly preaching and practices of the establishment."

Turning now to documents that the new States forged to their needs we find establishment passages that lead directly into the forthcoming first amendment, and that doubtless even helped to fix its phraseology. For instance, an amendment proposed to the Maryland Convention reads in part:

"12. That there be no national religion established by law."

While the Constitution of North Carolina, adopted in 1776, provided that—

"There shall be no establishment of any one religion, church, or denomination in the State in preference to any other."

Looking back, we can see that the first amendment was on its way. It was a specifically and stylistically worded outgrowth of what was weighing on the minds of the shapers of the new nation.

PART 2. WHAT IT MEANT TO MADISON

We now know the meaning of the "establishment of religion" clause as seen in the context of the times, when the expression was in its heyday. But let us study it still more, this time by looking through the window of the mind of the first amendment's first and final framer, James Madison.

His first penning of the amendment read:

"The civil rights of none shall be abridged on account of religious belief or worship, nor shall any national religion be established."

Note that, "national religion." This wording Madison presented to the committee of 11 on July 21, 1789. It came back to him shortened to—

"No religion shall be established by law, nor shall the equal rights of conscience be infringed."

At this point let "The Annals of Congress," written as the events took place, pick up the story of the amendment:

"Mr. Sylvester had some doubts of the propriety of the mode of expression used in the paragraph. He apprehended that it was liable to a construction different from what had been made by the committee. He feared it might be thought to have a tendency to abolish religion altogether."

Such a construction might have been satisfactory to the Supreme Court of 1962, but it proved less than so to the committee, which had no intention of wording the amendment in a way that might make it harmful to religion.

"Mr. Gerry said it would read better if it was, that no religious doctrine shall be established by law.

"Mr. Sherman thought that amendment altogether unnecessary, inasmuch as Congress had no authority whatever delegated to them to make religious establishments; he would, therefore, move to have it struck out."

Observe that even while the amendment read thus unsatisfactorily no one would have applied it to the making or breaking of a school prayer. Law was still considered to be Congress, even before the wording made it so.

"Mr. Madison said, he apprehended the meaning of the words to be, that Congress should not establish a religion, and enforce the legal observation of it by law, nor compel men to worship God in any manner contrary to their conscience. Whether the words are necessary or not, he did not mean to say, but they had been required by some of the State conventions, who seemed to entertain an opinion that under the clause of the Constitution, which gave power to Congress to make all laws necessary and proper to carry into execution the Constitution, and the laws made under it, enabled them to make laws of such a nature as might infringe the rights of conscience, and establish a national religion; to prevent these effects he presumed the amendment was intended, and he thought it as well expressed as the nature of the language would permit."

It is clear that Madison was concerned that a national religion might be set up by Congress. The danger lay in what Congress might do in this direction.

"Mr. Huntington said that he feared, with the gentleman first up on this subject, that the words might be taken in such latitude as to be extremely hurtful to the cause of religion. He understood the amendment to mean what had been expressed by the gentleman from Virginia, but others might find it convenient to put another construction upon it. The ministers of the congregations to the eastward were maintained by the contributions of those who belonged to their society; the expense of building meetinghouses was contributed in the same manner. These things were regulated by bylaws. If an action was brought before a Federal court on any of these cases, the person who had neglected to perform his engagements could not be compelled to do it; for a support of ministers or building of places of worship might be construed into a religious establishment.

"By the charter of Rhode Island, no religion could be established by law; he could give a history of the effects of such a regulation; indeed the people were now enjoying the blessed fruits of it. He hoped, therefore, the amendment would be made in such a way as to secure the rights of conscience, and a free exercise of the rights of religion, but not to patronize those who professed no religion at all."

The danger that might come from a misuse of the amendment is still felt to run within the groove of the accepted definition of religious establishment, a particular church One of these might suffer, is the fear of Mr. Huntington.

"Mr. Madison thought, if the word 'national' was inserted before religion it would satisfy the minds of honorable gentlemen. He believed that the people feared one sect might obtain a preeminence or two combine together and establish a religion to which they would compel others to conform. He thought that if the word 'national' was introduced it would point the amendment directly to the object it was intended to prevent."

Here we see that Madison wanted to get part of the original wording back into the amendment: "national religion." He did not succeed. Mr. Gerry, the main mover against inclusion of "national" reasoned cogently that if this word were retained the phrasing would alienate the antifederalists, who would suspect in it a wish to weld the States into a nation.

After considerable debate the first amendment was given the wording it now has:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof."

This was considered satisfactory. The amendment simply made it illegal for Congress to make a law respecting an establishment of religion, that is—as everyone knew at that time—a particular church. With such a safeguard how could a national church be established?

So there is an enormous wealth of evidence that when the Supreme Court prayer-ban supporter argues that he is upholding the principle of separation between church and state he is not talking to the point. By such separation, Jefferson, Madison and their fellow nation-makers meant church not as religious principles or religion in general but denominational and state religion. To repeat Madison's words:

"If the word 'national' was introduced it would point the amendment directly to the object it was intended to prevent."

The object directly pointed at, then, was a national church, not a nondenominational school prayer which no one really fears.

The Supreme Court of 1962 has, however, pointed the amendment directly to an object it was not intended to prevent.

SANCTUARY FOR THE AMERICAN EAGLE

Mr. SCOTT. Mr. President, the city of Pittsburgh and the Commonwealth of Pennsylvania was honored to have His Eminence Francis Cardinal Spellman visit the International Convention of the Fraternal Order of Eagles, Thursday, August 2. We would like to share his excellent address with Members of Congress.

Noting that Cardinal Spellman speaks of the characteristics of the eagle in commenting upon it as the symbol for this great fraternal organization prompts me to call attention to the location in Pennsylvania of the world's only sanctuary for any eagle. The sanctuary, under the supervision of the National Audubon Society, is Johnson Island in the Susquehanna River, 8 miles above Conowingo.

It is inhabited by nesting bald eagles, the bird also represented in our national emblem.

It is a matter of the deepest concern that the sanctuary is now threatened by plans to erect a nuclear powerplant at Peach Bottom with a new high voltage line tower to be constructed on Johnson Island.

Efforts by the Fraternal Order of Eagles, Senator J. Glenn Beall, and all others interested in preserving this unique sanctuary for the American Eagle are most commendable and deserve the cooperation and support of everyone who is interested in conservation.

I ask unanimous consent to have the address printed in the Record.

There being no objection, the address was ordered to be printed in the Record, as follows:

Address of His Eminence Francis Cardinal Spellman at the 64th Annual International Convention of the Fraternal Order of Eagles, Thursday, August 2, Hotel Hilton, Pittsburgh

My mind is still filled with vivid recollections of the friendly reception accorded me in Toronto 3 years ago when it was my privilege to address the International Order of the Eagles. I was, therefore, delighted to accept your welcome invitation to attend your convention here in Pittsburgh and to speak again to your distinguished membership.

I read and hear with interest and with admiration of the great philanthropic work that your fraternal organization continues to accomplish. Surely the eagle is a most fitting symbol for your fraternity, for like the eagle, you soar high in social pioneering; you protect rights for all classes, regardless of creed; and you are farsighted in sponsoring projects of medical research. On behalf of Dr. John Madden, director of the Cardiac Research Center at St. Clare's Hospital in New York City, I wholeheartedly thank you for your latest grants to help in the important field of heart research.

An occasion such as this is a moving proof of your deep interest in all people and their needs. In your own campaign for social security legislation—in your desire to obtain Federal funds to assist the aging, you never considered placing un-American restrictions on the distribution of this public money. Indeed, every aspect of your many faceted activities is devoted to spreading and strengthening moral and religious principles common among all who believe in God.

The story of your many contributions to our beloved country never once reveals any desire to judge men by a standard other than their need of your help. For this reason I am encouraged to speak to you this evening about the two-pronged attack on the American way of life as you and I have come to know and love it—and as your fathers and mothers, your sons and daughters and you yourselves have lived and fought and multitudes have died for it. I refer to the movement to take God out of the public school and to force the child out of the private school.

You may already know of my deep concern over the recent Supreme Court decision banning the regent's prayer in the public schools of New York State. As you know, that prayer is a simple, short, nondenominational and voluntary acknowledgment of dependence upon God and a request for His blessing. I fully appreciate the high responsibility of the Court to guard our Constitution and the delicacy of its task. Moreover, I respect the integrity and the dedication of the men who are charged with this solemn commission. But I am convinced that in this case six Justices rendered a decision which will be harmful to America. As an American who loves his country more than his life, I feel that I have a responsibility to express my concern publicly.

The first amendment states that "Congress shall make no law respecting an establishment of religion." One of the foundation stones of our American political system, this amendment provides that the Government shall not throw the mantle of its preference over any particular church.

Our Founding Fathers knew of the bitter experiences in Europe with established and state-supported churches, where in some lands preferment was given those who belonged to a special church, and persecution was the lot of those who did not affiliate. Their solution to the troublesome church-state problem was to separate the two, to make them independent of each other, and thereby to assure equal rights to all citizens irrespective of their religious convictions.

This was their simple and clear objective when they wrote the first amendment. Few in America disagree with that purpose. Certainly no Catholic disagrees with it, for we are well satisfied with such separation of church and state as exists in our country. Almost half a century ago Cardinal Gibbons expressed the American Catholic position clearly when he stated: "No establishment of religion is being dreamed of here by anyone; but were it to be attempted, it would meet with united opposition from the Catholic people, priests and prelates." And Archbishop Vagnozzi, the representative of Pope John XXIII in the United States, recently expressed a similar opinion: "Whether they remain a minority or become a majority, I am sure that American Catholics will not jeopardize their cherished religious freedom in exchange for a privileged position."

Catholics do not want their church, or any other church, to be state supported in the United States. They are of one mind with the men who were the architects of our Republic.

By the first amendment, however, the Founding Fathers of our country never intended to purge public life in America of all religion. They never intended to establish irreligion. Their declaration of dependence upon God anteceded their Declaration of Independence from England. They were themselves religious men, whose faith in God and dependence upon Him permeated both their private and their public lives. They did not hesitate to mention Him in their public utterance, to open their deliberations with prayer to Him, to set up chaplaincies, and to ask the President to call a day of prayer and thanksgiving to God. On religious values they built this Nation and on these values it has ever stood firm.

But now there is abroad in our land a new spirit which seeks to change this religious tradition of America, to place a nontraditional interpretation on the Constitution, to remove religion entirely from the public domain, and to commit our Government to the side of irreligion. This is the establishment of a new religion of secularism. This should be ruled unconstitutional.

Followers of this new secularistic approach have seized upon an expression that Thomas Jefferson used years after the first amendment was written, and have made it their battle cry. Jefferson spoke of a "wall of separation" between church and state. For him this wall was a dividing line, a fence, if you will, between friendly neighbors. The secularists have breathed into his metaphor a new and sinister meaning which he never intended. Jefferson spoke of a wall, but they have made it a rampart between church and state as though they were hostile elements in our country, instead of friendly partners claiming, each in its proper sphere, the allegiance of men's hearts.

I went to a public elementary school and to a public high school in Massachusetts, and during those 13 years all my teachers but two were Protestant and from them I learned a reverence for God and religion. I am sure that you learned the same lessons. Now we are being told that education must have nothing to do with God. Now we are being told that the U.S. Government must have nothing to do with God. Now we are being told that if a group of children stand in their classroom to acknowledge voluntarily and in 22 simple words their faith in God, they are violating the Constitution and breaking the law of this land. This decision disregards the traditional rights of the overwhelming majority of parents and children. Firmly do I believe with Justice Stewart that "to deny the wish of these schoolchildren to join in reciting this prayer is to deny them the opportunity of sharing in the spiritual heritage of our Nation."

Little by little the old America disappears from us—a country whose religious tradition and faith in God were her granite-like supports and the firm pledge of her strong endurance. As President Kennedy stated in his inaugural address, "Our forefathers fought for the belief that the rights of man come not from the generosity of the State but from the hand of God." Yet, at every opportunity, the secularists proclaim religion and the state as hostile forces in our country, instead of friendly partners, each in its own way, serving man.

Theirs is a crusade, not for freedom of religion, but for freedom from religion. Their goal is to strip America of all her religious traditions. A classic example of their technique is the controversy over Federal aid to education. They have so purposefully obscured and confused the question that millions of God-fearing Americans have been led to believe that there can be no peaceful cooperation between God and our country.

A year and a half ago, the proposal was made to use Federal funds to enable the schools of our country to improve their standard of excellence. At once the administration assumed the position that children in nonpublic schools could not be helped, and there are nearly 6½ million children in nonpublic elementary and high schools throughout the United States. The administration contended that these youngsters must not benefit from any Federal program of educational assistance. And why? Because in most cases their education was God centered; it is religious.

As education, it equals that given in public schools. Certificates of transfer from private to public schools are honored without question. These students learn to read and write and they learn geography and mathematics and languages and science and American history and they love their country as well as their friends in public school. They are preparing for the same responsible citizenship. And, side by side, with their public school neighbors, they will later take their places as the workers, teachers, technicians, scientists—and the fathers and mothers of the next generation.

If our country is attacked, they will fight for it; they will die for it, as so many of them have done before. In addition, they pay their taxes to the Government. But some argue that not one penny of Federal funds may be used to improve the excellence of their education because in their schools, in addition to their regular subjects, they are permitted to learn about God.

This is injustice. This is discrimination. This is an economic penalty against the schools performing a public service for our country parallel to that of the public schools. These parents are penalized for exercising their constitutionally protected right to send their children to the school of their choice—a right which even the Supreme Court has upheld.

When Catholics protested this evident injustice, the forces of secularism took the position that they would prefer to see the Federal aid program die than have it benefit the children in God-centered schools. Why are they so eager to gain Federal funds for one school system alone? If, with a firm and even hand, taxes are applied across the board without regard for race, creed, and color, it would seem reasonable to suppose that the money thus collected would be distributed across the board with an equally firm and even hand. When we speak of Government money, let us remember that the Government does not create money. Taxes for education are also collected from the parents of these children. If no part of these taxes is returned in any form to aid the nonreligious aspects of their children's education, how can this be just?

Is not this taxation with participation? And eventually and inevitably will it not strangle the splendid independent school systems which so many God-fearing parents of all religions have, with so many sacrifices, established and maintained?

Catholics, as a group, are not opposed to Federal aid to education. Most take the position that it is for the Congress to decide whether the schools of our country really need Federal funds. They simply say that if legislation is enacted, it should apply to all children on a nondiscriminating basis. Furthermore, many Americans fear the creation of a monopoly in our educational system. They cherish the survival of their God-centered schools, and they realize that such control by the Government can easily lead to iron-curtain education. Indeed, the more variety in our educational systems, the richer will be our culture. My prayerful hope is that other independent schools will flourish in our beloved land. For, as these independent schools grow, our free society will become stronger through this diversity of education. The recent unfortunate decision of the Supreme Court, therefore, may well become a blessing in disguise, if it alerts us to the dangers of a uniformity which would blind our children to the world of the spirit.

I am gratefully encouraged that since the current controversy on Federal aid began, frank discussions have cleared the air and clarified the issues. Leading authorities on constitutional law state that aid given to the nonreligious aspects of the education of children in God-centered schools is certainly not unconstitutional.

Moreover, on last June 25, Mr. Abraham Ribicoff, the Secretary for Health, Education, and Welfare, declared that there is a wide range of entirely permissible financial assistance to private schools. I applaud this judgment, and I rejoice in the greater understanding that has more recently been brought to this controversy.

I have chosen this subject for my address to you this evening with the desire to clarify further these issues, and also to encourage you to help your neighbors understand why we must not take God out of the public school and force the child out of the private school. As members of the Fraternal Order of Eagles, you have pioneered social legislation; you have safeguarded the rights of all individuals; you have been farsighted in maintaining the traditions of America. Our children are America's hope, and the education of every last one of them is tremendously important to us all. Liberty, truth, justice, equality—these you have emblazoned on your eagle coat of arms.

In pleading for our children, I know that I speak to an understanding audience, for the work you have done for the betterment of youth is well known. In arguing for the godly traditions of America, I feel the same confidence, for your motto—no dead letter, but one by which you live—is: "Freedom under God's law in our world." It is a motto which, if lived, will protect and preserve our beloved country.

UNESCO ANTIDISCRIMINATION PROGRAMS

Mr. McGEE. Mr. President, it has been a part of the history of UNESCO to be the victim of heated and emotional attacks from the rightwing know-nothing segment of our society. These attacks, based on fear and suspicion rather than on even a shred of truth, have now been directed against the UNESCO convention and recommendation against discrimination in education.

It is hard to understand, Mr. President, how one could be for discrimination in education because of race, creed, or sex but apparently there are those who feel this way because pressure has been put upon school boards in southern California to pass resolutions against the UNESCO antidiscrimination programs.

The issues at stake here are clearly set forth in the "Dixon Line," a newspaper column by Dixon Gayer in the Garden Grove News. I ask unanimous consent that this article be printed in the Record to be followed by copies of the UNESCO convention and recommendation against discrimination in education.

There being no objection, the material was ordered to be printed in the Record, as follows.

A Vote for Discrimination

(By Dixon Gayer)

Last week the Lowell Joint School District in La Habra was asked to adopt a resolution opposing the UNESCO convention against discrimination in education. The La Habra City School Board is due to consider the same request for the second time this week.

The request has been brought before the Garden Grove Elementary School District, where it is awaiting its second hearing—due to come before the board again within a month.

Other school districts which have been asked to lash out against the Convention and Recommendation Against Discrimination in Education are Los Alamitos, Orange, Santa Ana, Fullerton, Anaheim, Tustin, Laguna Beach, etc., etc.

The continued harassing of local school boards to deal with this matter is deplorable in view of the facts. That school boards should be asked to go on record favoring discrimination in education—which is, in essence, what such a resolution would suggest—is incredible.

The fact that some boards actually have acceded to the demands of the isolationists who have steamrollered this campaign is beyond belief—but it is true.

What are the facts to be considered in this matter?

The Convention Against Discrimination in Education, approved at the 11th General Conference in September of 1960, was drawn up at the request of member nations which have found it difficult to achieve equality of education in their countries because of many different socioeconomic-religious reasons.

The convention, which applies only to those member states which wish to become a party to it, insures these things:

1. It prohibits discrimination by means of exclusion, distinction, limitation, or preference of schooling for reasons of sex (male versus female), race, color, language, religion, political or other opinion, national or social origin, economic condition, or birth.

2. It recognizes separate but equal facilities for pupils of the two sexes, or those with religious and linguistic differences in countries where this might be desirable. (Remember in some countries, men and women could not study in the same facilities, for instance.)

3. It recognizes the right of minority groups to have private schools, but insists that private education be equal in quality to that of public education.

4. It makes primary education free and compulsory, secondary education generally available and accessible to all, and higher education equally accessible on the basis of individual capacity.

5. It insures equivalent standards of education and would insure the provision of teacher training without discrimination.

6. It asks that education be based upon concepts of the full development of the human personality and strengthening respect for human rights and fundamental freedom; it promotes understanding, tolerance, and friendship among all nations, racial and religious groups, and it shall promote peace. (Oooops.)

7. It recognizes the first rights of parents and legal guardians to choose institutions other than public schools if they so desire—provided these conform to minimum standards of education.

8. Standards of education are determined by the competent authorities in each member state, and the International Court of Justice shall enter the picture only in the event of a dispute on interpretation between two or more states (countries) which are party to the convention.

9. Religious and moral education of the children must be in conformity with their own convictions, and no child shall be compelled to receive religious instruction inconsistent with his convictions.

It is difficult, since our Founding Fathers conceived the above ideas almost two centuries ago, for this Nation to know what part of the convention school boards are being asked to oppose.

But it is not really necessary to consider this question at length, for the greatest inconsistency of all from those who demand that the U.S. Congress deny ratification of the convention is this:

Because the convention contains no provision for Federal-State education systems, the United States cannot be a party to the convention, since ours is a local form of education.

UNESCO has flatly stated that the convention is not to come up before the U.S. Congress—and the State Department has announced that it has not placed the convention before the U.S. Government and does not intend to do so.

I am in possession of statements from Senator Carl Hayden, of Arizona; Brooks Hays, Assistant Secretary of State; Senator Thomas Kuchel, of California; State Senator John Murdy; and Senator Clair Engel, of California—all saying that the convention is not coming before the Senate for ratification.

Why, then, should local school boards, charged with running the schools in their district, be burdened with a consideration which is not a consideration? Why should they waste time on a nonexistent Senate action?

What about the UNESCO recommendation against discrimination in education, then? Unlike the convention, the recommendation does have the endorsement of the United States. It is exactly what the name says—a recommendation—and it doesn't require ratification by the Senate. It will not come before the Senate for ratification or any other action.

The recommendation includes all of the major points listed above in the convention, but because it is only a recommendation it cannot possibly have any binding effect upon anyone. It leaves individual countries free to determine what suggestions, if any, they may wish to support.

In the United States such decisions (to adopt any or all of the recommendations), rest with the local school boards. It might, in fact be more appropriate to ask local school boards to read and vote upon the acceptance or rejection of the different points of the recommendation than it is to ask them to advise Congress of their overall rejection of the convention.

We would be interested in which points they might wish to reject. (And we rather suspect that there would be none.)

One wonder at the motives of those who have pressed so hard to urge school boards to oppose the convention and recommendation against discrimination in education.

Are they, then, for discrimination in education?

Or are these people simply isolationists who oppose our participation in the United Nations and are using this as a means of downgrading the U.N. in the eyes of the uninformed public?

In Laguna Beach, late in June, the school board met the typical "concerned parents" demand for action on the UNESCO Convention with a flat refusal to take any action at all.

In a simple statement the board said that "It is the belief of the board of education that a local school board is elected to operate the schools of its district and should confine itself to that responsibility.

"It is our policy as a board not to support or oppose any issue which is or might become political or partisan and beyond our legal prerogatives. This is such an issue.

"As individuals, we may and should support or oppose any issue which concerns us on the local, State, national or worldwide scene.

"As a board we should remain dedicated to the task of providing the best schools in the Nation for our children."

This, we believe, is the only answer to the "concerned parents" who would involve local school boards in "one-world" controversy. If this kind of petty politicking is permitted to continue in school board meetings, it will do more to destroy local control of the schools than anything UNESCO can contrive in 5 years of trying.

THE UNESCO CONVENTION AND THE UNESCO RECOMMENDATION AGAINST DISCRIMINATION IN EDUCATION

(By J. Boyer Jarvis)

During recent months the U.S. Commissioner of Education, other Government officials, and some Members of Congress have received a number of letters which reveal an unfortunate public misunderstanding of the nature and purpose of the United Nations Educational, Scientific and Cultural Organization (UNESCO). Some of these letters even express concern lest the United States permit UNESCO to exercise jurisdiction over American education. This concern is occasioned by a definite misconception of the status and purpose of the UNESCO convention and the UNESCO recommendation against discrimination in education.

The following statement seeks to correct such misunderstanding. It also provides a concise report concerning the convention and the recommendation.

UNESCO, as one of the specialized agencies of the United Nations, is dedicated to enhancing the possibility of peace among nations by seeking constantly to extend the range of international understanding and to bring the benefits of modern science and technology to more and more of the world's population. Through its support of important research and development projects, involving participation by scientists, scholars, and educators from many countries, UNESCO is helping to enlarge man's store of knowledge and to make it more readily accessible wherever it can contribute to the advancement of human welfare. UNESCO makes its resources available, on request, to countries which desire assistance in developing, expanding, and strengthening their educational systems. Recognizing and respecting the independence and autonomy of its more than 100 member states, UNESCO is interested in insuring that in the new and developing nations of the world the opportunities for education, at all levels, will be equal to the needs of peoples who are striving, sometimes against great odds, to overcome the handicaps of centuries of poverty, disease, and ignorance.

UNESCO is clearly prohibited from interfering in the educational policies, or in any other domestic concerns, of its member states. This restriction is written without equivocation into the UNESCO constitution (art. I, par. 3):

"With a view to preserving the independence, integrity and fruitful diversity of the cultures and educational systems of the states members of this organization, the organization is prohibited from intervening in matters which are essentially within their domestic jurisdiction."

In keeping with its broad purposes and in full harmony with the above restriction, the UNESCO General Conference, consisting of representatives from all UNESCO member states, adopted in 1960 a convention and a recommendation against discrimination in education. The decision to draft these documents was made by the UNESCO General Conference in 1958, following studies dating back to 1955 and carried on by a special U.N. Subcommission and by members of the UNESCO staff. Both in these earlier studies and in the actual work of drafting the convention and the recommendation, official representatives of the Government of the United States played a prominent role. At each stage in this rather long process, they received guidance from officials in the Department of State. In addition, they consulted with officials of the Department of Health, Education, and Welfare, the Department of Justice, the Department of the Interior, the Department of Labor, and other Government agencies having an interest in the general problem of discrimination.

At a very early point in the development of the convention and the recommendation against discrimination in education, the United States announced that it did not intend to ratify the convention. That decision was reaffirmed in a letter written by Assistant Secretary of State Brooks Hays to Senator CARL HAYDEN on July 29, 1961. The letter was entered in the daily CONGRESSIONAL RECORD for August 3, 1961 (pp. A6013 and A6014).

This position was taken in recognition of the fact that in the United States the administration of education is a legal responsibility of State and local agencies. Nevertheless, the representatives of the United States made positive and very helpful contributions to the drafting of both the convention and the recommendation. Working with representatives from 40 other countries, they exercise great care to insure that the principles and provisions in the final texts of the two instruments would not be in conflict with the policies and purposes of the United States.

The distinction between the UNESCO Convention Against Discrimination in Education and the UNESCO recommendation against discrimination in education needs to be emphasized. While the two documents are alike in their basic content and in their purpose to encourage elimination of discrimination based on considerations of race, sex, religion, national or social origin, or economic condition, they differ in one very significant respect. The convention is subject to ratification by member countries of UNESCO, and when ratified it has the status of an international treaty among the ratifying countries. Thus far only five nations—the Central African Republic, France, Israel, the United Arab Republic, and the United Kingdom—have ratified this convention.

The recommendation is simply a carefully written statement of ideals and principles which merit serious consideration by the member states of UNESCO. For the United States, as well as for other nations, it can serve as a basis for comparing our actual achievements with our generally accepted principles of equal educational opportunity for all. The recommendaton clearly recognizes that education is the responsibility of each individual country. An objective examination of this document will show that its purposes are entirely compatible with the traditional administrative pattern of public and private education in the United States, where operation and control of public schools rest firmly in the hands of State and local authorities and operation and control of private schools resides with their sponsors.

Mr. MOSS. Mr. President, I suggest the absence of a quorum.

The PRESIDING OFFICER. The clerk will call the roll.

The legislative clerk called the roll, and the following Senators answered to their names:

[No. 154 Leg.]

Aiken
Allott
Bartlett
Beall

Young, N. Dak.
Young, Ohio

The PRESIDING OFFICER (Mr. METCALF in the chair.) A quorum is present.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

The Senate resumed the consideration of the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

Mr. MANSFIELD. Mr. President, when the Senate commenced its session this noon, I made the following statement.

> If legislative paralysis once again besets us—

Let me say parenthetically, Mr. President, that as yet legislative paralysis has not beset us—

> a motion for cloture may be in order. To choose that course, if it comes to that, will be the responsibility of the Senate but the leadership shall not be hesitant in recommending it to the Senate. In such an event the issue will be simply: Are two-thirds of the Senators present and voting determined that a decision shall be made, one way or the other?

Mr. President, my purpose in calling this matter to the attention of the Senate is to notify the Senate that, beginning tomorrow morning or any day thereafter, if the leadership feels that it is in the best interests of the legislative processes of the Senate to lay down a petition for cloture, it will do so. This is just a notification of what may happen either tomorrow morning or any morning thereafter.

Mr. MUNDT. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. MUNDT. Did the majority leader say that legislative paralysis has not yet set in?

Mr. MANSFIELD. Yes, not yet.

Mr. MUNDT. Would the majority leader agree that the patient is beginning to show some of the symptoms of the disease?

Mr. MANSFIELD. Which patient?

Mr. MUNDT. The patient Senators.

Mr. MANSFIELD. Some, yes. [Laughter.]

Mr. AIKEN. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. AIKEN. While we are talking about things that have set in, let me ask whether mortification has set in?

Mr. MANSFIELD. Not quite. [Laughter.]

Mr. DIRKSEN. Perhaps the Senator mistakes paralysis for rigor mortis.

Mr. MANSFIELD. Mr. President, the purpose of these remarks is to serve notice on the Senate that at any time from now on, a petition for cloture may be filed.

RECESS UNTIL 9 A.M. TOMORROW

Mr. MANSFIELD. Mr. President, I move that the Senate stand in recess until 9 o'clock tomorrow morning.

The motion was agreed to; and (at 6 o'clock and 7 minutes p.m.) the Senate took a recess until tomorrow, Saturday, August 11, 1962, at 9 o'clock a.m.

NOMINATIONS

Executive nominations received by the Senate August 10, 1962:

National Science Foundation

Dr. Harvey Brooks, of Massachusetts, to be a member of the National Science Board, National Science Foundation, for a term expiring May 10, 1968, vice Julius A. Stratton.

SENATE

Saturday, August 11, 1962

(Legislative day of Friday, August 10, 1962)

The Senate met at 9 o'clock a.m., on the expiration of the recess, and was called to order by the Honorable Lee Metcalf, a Senator from the State of Montana.

The Chaplain, Rev. Frederick Brown Harris, D.D., offered the following prayer:

O God, whose rule is law, but in whom there is love that never fails and a mercy like the wideness of the sea: Thou hast given us our yesterdays, and in that record of what we have written, we have written of good or of ill. Our grateful memories of temptations resisted and victories won are secure. Our tomorrows are within Thy care, as the future lies before us.

Today is ours, fresh from Thy hands. It is sustained as in the morning we write at the top of its page "In the beginning, God." Grant us the grace to command it, to seize it, to mold it to Thy purposes, and so to number its hours that we may apply our hearts unto the wisdom that shall be as healing balm for this ailing world.

We ask it in the holy name of the One who has said: "As thy day, so shall thy strength be." Amen.

DESIGNATION OF ACTING PRESIDENT PRO TEMPORE

The legislative clerk read the following letter:

U.S. Senate,
President pro tempore,
Washington, D.C., August 11, 1962.

To the Senate:

Being temporarily absent from the Senate, I appoint Hon. Lee Metcalf, a Senator from the State of Montana, to perform the duties of the Chair during my absence.

Carl Hayden,
President pro tempore.

Mr. METCALF thereupon took the chair as Acting President pro tempore.

THE JOURNAL

On request of Mr. Mansfield, and by unanimous consent, the reading of the Journal of the proceedings of the calendar days of Thursday, August 9, and Friday, August 10, 1962, was dispensed with.

TIME SPENT ON CONSIDERATION OF SPACE COMMUNICATIONS BILL

Mr. MANSFIELD. Mr. President, I wish to comment on my calculations concerning the time spent by the Senate in consideration of the space communications bill. Yesterday, I noted—as is to be found on page 16121 of the Record—that this measure had been thoroughly studied by five committees in the Senate, and by one in the House, and had been the subject of well over 3,000 pages of testimony, which took 45 days to present. I wish to make clear, if it was not already so, that these 45 days and 3,000 pages represent a total of the time spent in both the five Senate committees and the single House committee. I may add that the total pages of hearings recited did not include those of the Foreign Relations Committee which are now available, and swell the total. I also mentioned that this measure had consumed 308 pages of the Record during 14 days. This figure was incorrect; actually, there had been 308 pages of debate in 12 days on the Senate floor, or 358 pages of debate in 14 days in both the House and Senate. Yesterday's proceedings raised these totals.

I make this statement in order to make sure that the Record is clear, and to correct a misstatement which I made yesterday.

TRANSACTION OF ROUTINE BUSINESS

Mr. MANSFIELD. Mr. President, at this time I should like to propound a unanimous-consent request, and I do so for the purpose of allowing some of our Members who may be interested in what I am about to do to arrive on the floor: I ask unanimous consent that I may be allowed to suggest the absence of a quorum, and that the quorum call be rescinded at the end of 15 minutes.

The **ACTING PRESIDENT** pro tempore. Is there objection?

Mr. BUSH. Mr. President, reserving the right to object—although I shall not object—let me ask whether there is to be a morning hour.

Mr. MANSFIELD. No.

Mr. PROXMIRE. Mr. President, reserving the right to object, in order to comment on the same point, let me say I think the Senator from Connecticut and I have the same objective. I wish to speak on several matters for perhaps 4 or 5 minutes, and I believe that perhaps the Senator from Connecticut has the same purpose.

Mr. BUSH. I wish to speak briefly.

Mr. MANSFIELD. Then, Mr. President, I ask unanimous consent that there may be a morning hour for the next 15 minutes, and that at the end of that time I may be recognized.

The **ACTING PRESIDENT** pro tempore. Is there objection?

Mr. KEFAUVER. Mr. President, reserving the right to object——

Mr. MANSFIELD. Mr. President, I am trying to be accommodating to all Members of this body, especially those who are opposed to the pending bill. I am trying to make it possible for Senators who are on their way to the Chamber to arrive here in time. If I cannot obtain the acquiescence of the entire Senate in the latest request I have made, then I shall be forced to go ahead and just take my chances. But I hope the Senate will do what it can to bring about an accommodation for the benefit of Members who are on their way to the Chamber.

Mr. LONG of Louisiana. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. LONG of Louisiana. Let me suggest that the Senator from Montana has now made two unanimous-consent requests, and neither one has been objected to. So far as I am concerned, either one is all right.

Mr. MANSFIELD. The Senator from Louisiana is most kind; and if we can discuss this matter for 15 minutes, then I shall be prepared to make my statement—or even sooner, depending on the circumstances.

Mr. KEFAUVER. Mr. President, will the Senator from Montana yield?

Mr. MANSFIELD. I yield.

Mr. KEFAUVER. So far as I am concerned, I have no idea of objecting to the unanimous-consent request. But I believe it should be pointed out that while the Senator from Montana is making it convenient for Senators who are opposing the bill, we are trying to make it convenient for the leadership and for Senators who favor the bill.

I also wish to reserve the right to object in order to observe that the Senator from Montana has spoken of the time used for debate on the bill. I know he wishes all Members to have an opportunity to state their position. This bill is very technical, important, and complicated. I happen to know that some 4 or 5 Senators have not had a chance to speak on the bill itself, or, at least, not to the extent they want to. I had a speech of approximately 90 pages; but, because of interruptions, I got through only about 5 pages.

Mr. MANSFIELD. Then, Mr. President, I request unanimous consent that a 15-minute period be set aside, in order to permit Senators to make insertions in the Record and speeches not to exceed 3 minutes in length, at the end of which time I shall be given the floor.

The **ACTING PRESIDENT** pro tempore. Is there objection?

Mr. LAUSCHE. I should like to speak also.

Mr. MANSFIELD. I am trying to make that possible.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Montana? The Chair hears none, and it is so ordered.

BILLS INTRODUCED

Bills were introduced, read the first time, and, by unanimous consent, the second time, and referred as follows:

By Mr. CASE:

S. 3634. A bill for the relief of Mrs. Angela Puccio; and

S. 3635. A bill for the relief of Antonio Credenza; to the Committee on the Judiciary.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM—AMENDMENTS

Mr. SPARKMAN submitted amendments, intended to be proposed by him, to the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes, which were ordered to lie on the table and to be printed.

Mr. GORE (for himself and Mr. LAUSCHE) proposed an amendment to House bill 11040, supra, which was ordered to be printed.

Mr. CHURCH (for himself and Mr. LAUSCHE) submitted an amendment, intended to be proposed by them, jointly, to House bill 11040, supra, which was ordered to lie on the table and to be printed.

Mr. LONG of Louisiana submitted amendments, intended to be proposed by him, to House bill 11040, supra, which were ordered to lie on the table and to be printed.

Mr. LAUSCHE submitted amendments, intended to be proposed by him, to House bill 11040, supra, which were ordered to lie on the table and to be printed.

Mr. KEFAUVER submitted amendments, intended to be proposed by him, to House bill 11040, supra, which were ordered to lie on the table and to be printed.

Mr. YARBOROUGH submitted amendments, intended to be proposed by him, to House bill 11040, supra, which were ordered to lie on the table and to be printed.

AUTHORIZATION OF APPROPRIATIONS FOR CONSTRUCTION OF CERTAIN HIGHWAYS—AMENDMENTS

Mr. METCALF (for himself and Mr. RANDOLPH) submitted amendments, intended to be proposed by them, jointly, to the bill (H.R. 12135) to authorize appropriations for the fiscal years 1964 and 1965 for the construction of certain highways in accordance with title 23 of the United States Code, and for other purposes, which were referred to the Committee on Public Works and ordered to be printed.

MOREHEAD PATTERSON

Mr. BUSH. Mr. President, last week I lost a good friend of more than 40 years' standing.

Morehead Patterson, chairman of the board and chief executive officer of American Machine & Foundry Co., died in his sleep Sunday morning, in Washington.

An international industrialist and public servant throughout his career, Mr. Patterson became chief executive officer of American Machine & Foundry Co. in 1943.

Himself the holder of more than a score of patents, Mr. Patterson was instrumental in the development of tobacco handling and automatic bakery equipment. He foresaw the possibilities of the American Machine & Foundry Co. automatic pinspotter, led patient efforts over many years to its perfection, and made tenpin bowling a new sport available to millions of people around the world.

Mr. Patterson successfully directed application of the company's ingeniousness to weapons production. The company helped develop radar antennas for aircraft carriers, battleships, and B–29 bombers. It recently developed ground-handling and launching equipment for the intercontinental ballistic missile programs.

Mr. Patterson was a scholarly man who, at the time of his death, was chairman of the board of trustees and a member of the executive committee of the Brookings Institution. He was a member of the advisory committee of the School of Advanced International Studies, the Johns Hopkins University.

A native of Durham, N.C., he graduated from Groton School, 1916, Yale University, B.A., 1920, Harvard Law School, LL. B., 1924. He attended Oxford in 1920.

He had been associated with American Machine & Foundry Co., since 1926. He was president of American Machine & Foundry Co. from 1941 to 1958 and had served as chairman of the board since 1943. Under his direction, the company increased its volume from some $15 million to over half a billion by 1961.

Mr. Patterson's career was marked by frequent periods of public service. He served in the Army in World War I. During World War II he was a member of the Rubber Director's Office in Washington.

In 1954, he was a member of the State Department's Public Committee on Personnel Policy, as well as Chairman of the U.S. Committee for the United Nations. In the same year he went to London as Deputy U.S. Representative on the United Nations Disarmament Commission, with the personal rank of Ambassador. Later he served as the U.S. Representative for International Atomic Energy Agency Negotiations, also with the rank of Ambassador.

He was chairman of the nuclear standards board of the American Standards Association and a vice president and member of the executive committee of the Machinery & Allied Products Institute. He was also a member of the Council on Foreign Relations and the Commerce Department's National Export Expansion Council. Recently he became a member of the Defense Department's Defense Industry Advisory Council. Also he was president of the New York Southern Society.

Mr. Patterson is survived by his widow, Margaret Tilt Patterson, a son, Herbert Parsons Patterson, his mother, Mrs. Rufus L. Patterson, a sister, Mrs. Casimir deRham, and two grandchildren.

On behalf of Mrs. Bush and myself, I take this opportunity to express to the members of his family our sincere sympathy at the loss of this very outstanding American citizen.

I wish that more American businessmen had the high sense of public duty and responsibility possessed by Morehead Patterson.

NASA PATENT POLICIES: THE NEED FOR REVISION

Mr. KUCHEL. Mr. President, the controversy over the proper policy for our Government to follow when dealing with patents—or more properly inventions—that arise out of Government-sponsored research and development continues to grow in direct proportion to the growth of Federal research and development programs.

Recently, for example, the Senate adopted the conference report and cleared for the President H.R. 11737, authorizing $3.7 billion in appropriations for the National Aeronautics and Space Administration. This agency, which is responsible for the successful conduct of our vital nonmilitary space programs, will spend almost $2.4 billion on research and development alone in fiscal 1963.

Our achievement in outer space is a matter of continuing concern to a Congress which has authorized and a nation which is supporting a far-reaching, costly, and critically important space program. How well we succeed will depend almost entirely on the results obtained from the vast research and development programs which are carried out by American private enterprise under contracts let by NASA. Unless we make optimum use of all the research resources of our country, particularly those in the private sector of our economy, these huge expenditures will be for naught.

There can be no question that the space program, as a matter of national policy, deserves the most intensive and best effort it can obtain. President Kennedy has said of it:

> This decision demands a major national commitment of scientific and technical manpower, material, and facilities, and the possibility of their diversion from other important activities where they are already thinly spread. It means a degree of dedication, organization, and discipline which have not always characterized our research and development efforts.

Congress recognized this need in the National Aeronautics and Space Act of

1958 when it imposed the requirement for "the most effective utilization of the scientific and engineering resources of the United States."

Yet the patent provisions (section 305) of that act—provisions regrettably adopted behind closed conference doors with no hearings and no debate—have been challenged from the start as deterring the full utilization of America's scientific resources as well as the determination of the American people. Indeed, to many, these provisions appear to be a reversal of the long-established constitutional provision which authorized Congress "to promote the progress of science and useful arts by securing for limited times to authors and inventors the exclusive right to their respective writings and discoveries."

How can we continue restrictive patent provisions that run completely contrary to the constitutional incentives established almost 175 years ago and still expect American industry to divert often limited scientific resources from projects of a commercial nature to public programs which have frequently an infinitesimal return as far as their stockholders and their commercial survival are concerned? Some of the patent provisions of various statutes which have been adopted in recent years reflect a departure from American constitutional precepts. These provisions, if continued, are sure to hamper individual and corporate creativity. I am confident that my colleagues will agree with me that our Nation in its peaceful conquest of space can ill afford avoidable delays and impediments.

The patent provisions of NASA have brought into focus a highly controversial, complicated, and often emotionally charged issue: Private versus Government ownership of those inventions which result from the expenditure of public funds.

Different Federal agencies have varied views on this subject. There is no single Government-wide policy in existence today. If such a Government-wide policy would mean rigidity without regard to the circumstances of a particular case and would mean a hampering of this Nation's scientific and technological effort then perhaps it is just as well that we do not have a Government-wide policy.

Certainly many who have studied this matter over a period of time generally agree that a rigid, inflexible patent policy is not practical. However, a Government-wide uniform policy with some administrative flexibility should and could be established. There are very real and basic differences, however, between a general policy that vests title of the patent in the company and a general policy that vests title in the Government.

The concept of Government ownership of patents is a radical departure from the traditional practice of the American patent system. More has been written and said about this concept in the past few years than at any time in our history. The idea of Government ownership was inaugurated in the early days of the top-secret Manhattan atomic bomb project. This policy did serve some useful purpose at the time.

The Atomic Energy Act was fashioned by Congress based on the wartime Manhattan project experience.

When the National Aeronautics and Space Act was written in 1958, a patent section somewhat similar to that of the Atomic Energy Act was included, as I have said, behind closed doors. A special Subcommittee on Patents and Scientific Inventions of the House Committee on Science and Astronautics, has recommended on two separate occasions that this provision be changed.

After more than 3 years of intensive study and hearings, with witnesses representing a wide spectrum of belief on this issue the subcommittee concluded that:

> Present space patent policies damage small business, cost the taxpayers money, dilute the national effort to be first in space and waste the products of scientific research as a result of the reluctance to market new inventions without the necessary patent protection.

A bill to amend the patent provisions of the Space Act was reported and passed the House by a vote of 235 to 31 in the 86th Congress. The Senate failed to act on that bill.

During this Congress the House subcommittee has concentrated on the marshaling of evidence which might further tend to support a present and future need for either a title or a license approach for Government-sponsored space research.

Once again the subcommittee recommended an amendment to the patent section of the Space Act which follows the general philosophy set out by Congress in the National Science Foundation Act of 1950, but with special safeguards added to insure protection of the public interest.

When the hearings began in 1959 virtually every member of the House subcommittee was completely convinced that the equities demanded title to the Government. After hearing testimony from 70 witnesses and after full discussion all but 1 of the subcommittee members are now completely convinced that the equitable solution lies in a license policy, with such exceptions as may be appropriate, rather than in a policy of title to the Government with possible waiver.

The House Committee on Science and Astronautics has ordered the subcommittee bill, H.R. 12812, reported to the House. I would predict that the other body will once again pass the bill. This legislation seeks to revise the Space Act to provide needed flexibility with respect to the current patent restrictions on NASA. The bill would give the NASA Administrator the option of securing a royalty-free license or a greater right, including complete title, depending on the equities involved. For the first time, standards are set out to guide the NASA Administrator in making this determination. Several other improvements are made. These improvements are long overdue.

The Senate should have an opportunity to act on this matter during this session of Congress. I would like to see the Senate Committee on Aeronautical and Space Sciences hold hearings on such a House-passed bill.

As I have noted, considerable controversy exists regarding the existing patent policy of various Federal departments. Proponents of the title and license theories have both tended to overstate their case.

Those who favor the Government taking title claim, for example, that the public interest demands that what the Government pays for, it should own. They claim that any other policy is unfair to the taxpayer and to other contractors who would not be free to use the invention.

This argument has a superficial appeal, but it is seriously misleading. Only in rare instances does the Government bear all or even the major costs in developing inventions. The Government awards research contracts based on the experience, knowledge, and skill of a particular research and development organization. The Government takes advantage of an organizational situation which exists. It puts up money in order to translate the know-how and ideas of the contractor into knowledge useful to the Government. This is what the Government bargains for and what the taxpayer pays for. The Government should be entitled to receive in all such cases a royalty-free license to use the results arising from a Federal research contract, including any patentable inventions. The Government should be free to make use of these results by utilizing any manufacturer it chooses in accordance with existing law and procurement regulations.

It is untrue that contractors cannot make free use of inventions to which the Government holds a license. Other contractors can make free use of such inventions if the Government wishes them to do so for its own purposes.

These contractors cannot use inventions developed with funds from all the taxpayers for commercial purposes, however, without a license or without paying royalties to the inventor, depending on his equities. This has been common practice within the free enterprise system since the founding of the Nation.

Other arguments have been presented in favor of a Government title policy, including the claim that there would be a freer flow of scientific information. Under scrutiny, these arguments simply do not stand up.

The arguments of those who favor an ironclad license policy also fail to be completely convincing under all circumstances. A very large part—some 65 percent—of the research money available to private industry today comes from the Federal Government. This fact alone is sufficient reason for extra precautions to assure that the public interest is protected and served by the manner in which the fruits from research contracts are utilized.

It is obvious, too, that some firms doing research for profit exist entirely or almost entirely on Government contracts. In still other cases, the Government has done the original research and turned its findings over to a private organization for further application and development. Where conditions such as these exist, distinctions will have to be carefully made and the relative rights of the Government and the contractor equitably determined.

Thus, in some instances, the Government will sometimes need to acquire a greater equity in an invention which arises as a result of a Federal contract than merely a free license to use it. The evidence before the House Subcommittee, however, does not show that this will occur sufficiently often to overbalance the benefits of a license approach in general.

The House bill will not satisfy the demands of extremists on either side. Those who insist on a rigid Government title policy will, in all probability, cry "Government giveaway" when anything less is proposed. On the other hand, those who insist that the Government has no right or interest in the inventions arising from Government contracts will cry "Government confiscation," when anything more is proposed.

The House bill is an excellent starting point. It is a step in the right direction of improved relations between Government and private, competitive enterprise because it starts from the license premise.

The present restrictive NASA patent provisions which were adopted in a closed conference as an afterthought, and as a hedge against space domination through the possible development of one or two unforeseen but key inventions, should be modified. I hope this Congress will be able to get on with a reasonable solution to this problem.

I personally would welcome the opportunity for free and full debate on the floor of the Senate on legislation along the lines of the House bill. The will of the Senate on this important issue should be made known. I believe the result will be a speeding up of our space effort, an elimination of cumbersome administrative procedures, and an improved relationship between Government and business which will benefit all our people.

TAX CUT NOT WARRANTED

Mr. PROXMIRE. Mr. President, on Monday night the President of the United States will speak to the Nation on fiscal and tax policy. During the past week the Joint Economic Committee has been holding hearings on the state of the economy and the wisdom or unwisdom of making a tax cut.

In the most recent issue of the New Republic, the distinguished senior Senator from Illinois [Mr. DOUGLAS], the only professional economist in the Senate, has a very thoughtful article opposing tax reduction now. In the article he says he thinks a tax cut at this time would be unwise.

He says, in the first place, we would use up ammunition which might be vitally necessary in the event of a recession, and the statistics show we are not in a recession now. In the second place, in his judgment, it might very well result in killing off all prospects of a real tax reform next year. In the third place, a tax cut might result in a huge increase in the deficit. In the fourth place, monetary ease—lower interest rates should be relied on first—before a tax cut; whereas in fact monetary restraint has actually depressed the economy and promises to be even more restrictive in the future.

I ask unanimous consent that the article by the Senator from Illinois [Mr. DOUGLAS] be printed at this point in the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IT WOULD BE WISER TO WAIT

(By Senator PAUL DOUGLAS)

Many highly placed economists, of whom Professor Benoit is one, and many business leaders are urging a tax cut now in order to avert a predicted severe recession and to get the economy moving again. If we were in a recession or if there were clear and unmistakable indications that we were about to enter one, I would strongly favor the right kind of cut, for that is the quickest way to stimulate demand and consequently production and employment. That is why in February 1958, when the reality of a recession was clear, I urged such a cut concentrated upon reducing the taxes on durable goods and building up consumer purchasing power. This recommendation was not only opposed by the Eisenhower administration but also by the leaders of my own party in the Congress.

It is certainly true that the rate of recovery in the economy has slowed down and in some sectors has come to a stop. Unemployment is still regrettably high. Orders for capital goods have dipped. But visible unemployment has not increased. It was indeed slightly lower in July (5.3 percent) than in the preceding months. I do not place too great reliance on this apparent decrease since it may have been due to the margin of error inherent in the sampling process. Certainly, also, there is a large amount of concealed unemployment consisting mainly of young people who have dropped out of school and failed to get a job and who have not become a part of the working force. But there is no evidence that unemployment or part-time employment has increased. Nor is there any turndown in industrial production. Indeed this index has gone up from 113.5 in January to 117.8 in June.

What then about the index so dear to modern economists, familiarly known as the gross national product? This amounted to an annual rate of $545 billion for the second quarter of this year or an increase of $4 billion over the figure for the first quarter and of nearly $9 billion above the last quarter of 1961. We are certainly going to fall far short of the official estimate by the Council of Economic Advisers that the GNP for calendar 1962 would be no less than $570 billion. This falling short will, in itself, create a large fiscal deficit for fiscal 1962–63, which may reach from $7 to $10 billions. Thus there will be an appreciable built-in stabilizing force which will be particularly strong during the next half year. But here again there is no evidence of any downturn. Quite the contrary. Disposable personal income at an annual rate is also up—$6 billion over the first quarter of 1962 and $9 billion over the last quarter of 1961.

The truth of the matter is that economists, like the speculators and the general public, are subject to alternate waves of excessive optimism and pessimism. Most of those who are now gloomy in August were hilariously bullish in January. The fact of the matter is that economic forecasting is in no sense an exact science and the percentage of error in such predictions is extremely high.

In economic policy, as in battle, we need to remember two basic principles. The first is not to fire on the enemy prematurely. William Prescott was quite right when he shouted to the continentals at Bunker Hill, "Don't fire until you see the whites of their eyes."

The second precept is one every officer from second lieutenant to general should know and act upon; namely, not to commit one's reserves too early. What at first seems to be a main attack often turns out to be merely a diversionary one. If a nervous commander rushes his reserves in to counter an initial skirmish, he will have nothing left to back up his line when the real attack comes. In Churchill's "Their Finest Hour," he tells how when in the early summer of 1940 the Germans broke through the French line at Sedan in the Ardennes, the French did not make the expected counterattack though the Germans had outrun their supply lines. "Where," asked Churchill of General Gamelin, the French commander, "is your strategic reserve?" To this Gamelin replied, "Aucune"—there was none. Let us not make Gamelin's mistake. For if we do not have a recession, a tax cut and resultant deficit might well amount to between $15 and $20 billion. I have sufficient Scotch blood in my veins not to welcome such a deficit as being good in itself and I think I am aware of the political consequences which would inevitably follow a deficit of this size.

And if even after such a cut a recession or depression were to follow, what would we have in reserve?

Finally, a tax cut now would inevitably make tax reform next year impossible. Our tax system is shot full of loopholes and injustices which enable certain groups to pay far less in taxes than others with equal income. The 27½-percent depletion allowance on the income from oil and gas is the most notorious of these. But there are many other abuses such as stock options, the improper use of capital gains instead of ordinary income rates, the evasion and avoidance of taxes on dividends and interest, excessive deductions for entertainment, travel, lobbying and other prerequisites, and many others.

The Kennedy administration made a mild beginning on this reform last year when it proposed to withhold the basic tax on income from dividends and interest, as has been done for 20 years in the case of wages and salaries, and to plug certain minor loopholes. To sweeten this reform for the business interests, it proposed a tax cut of 7 percent of the net investment in personal property in fields other than building. After a year and a half we are now nearing the end of this struggle. The result is that while the sweetener has been accepted in a vulgarized form most of the tax reforms have been rejected. The one remaining hope for thoroughgoing tax reform in the next year is to accompany it with a cut in personal income and other taxes. But if we use up the cut this year, there will be nothing left with which to purchase tax reform next year. This is precisely why some business groups are urging a tax cut now.

SHORT TERM VERSUS LONG TERM SOLUTIONS

Some advocates of a tax cut are shifting from the argument that such a reduction is necessary to prevent a recession to the prescription that it is the best medicine for a sluggish economy. But any such stimulation would be temporary and the effects would soon wear off. Is it proposed to make continual injections of monetary purchasing through governmental deficits in order to stimulate the capitalistic system? This was the basic method followed by the New Deal, and it may have been justified in the 1930's by the severity of the depression and the paucity of economic analysis about the causes of and remedies for low-level employment and production. But after a quarter century we should know better.

If, because of monopoly, partial monopoly and imperfect competition, the sum total of price tags on the potential output of industry is greater than the total monetary purchasing power in the pockets of buyers, the remedy would seem to be to reduce prices to the level of incomes rather than to build up incomes to the level of prices by the hypodermic injections of continuous Government deficits. But to effect this we need a vigorous procompetition and antimonopoly policy which even a liberal government shies away from and which most of the advocates of free enterprise oppose.

The best immediate remedy for sluggishness as well as for the prevention of recession is what is termed "monetary ease," or a lower interest rate. This has long been a truism among qualified economists. It was admitted last winter by the Chairman of the President's Council of Economic Advisers, Walter Heller, when he testified before the Joint Economic Committee. But as the growth rate fell off and predictions of a recession deepened, Chairman Martin, of the Federal Reserve Board, sold rather than bought Government bonds. He has consequently forced interest rates up during these last months and has thus repressed investment and employment. This has been one of the causes of the present sluggishness, and now Mr. Martin and the European bankers, whom he loves to quote, are prescribing more of the same as a cure. This has led a wag to suggest that a new Chairman of the Federal Reserve Board would be worth more than a $10 billion tax cut. With proper accompanying measures, such a reduction in long-term interest rates need not create an untoward flow of gold. But that, as Kipling used to remark, is another story.

There are indeed clear evidences that the failure of the Federal Reserve in recent years to let the money supply increase at the normal growth rate has kept interest rates above the marginal productivity of capital and hence has exerted a permanent depressing influence on the economy. In a similar fashion, monopoly, quasi-monopoly and imperfect competition, by keeping prices above and production below what they would be under competitive conditions, has dampened down consumption, production and employment. And with a high rate of idle capital caused by a lack of effective demand, it would hardly seem that a tax bonus on investment would be an adequate stimulus in that field. It would be well for the President's advisers to return to these simple truths rather than to urge tax cuts at this time.

But if we should be drifting into a recession, then in default of other action, I would favor a tax cut of the right kind; namely, one which would be concentrated on building up consumer demand. If that is shoved up, then investment will follow. But a wrong kind of tax cut at the wrong time would ultimately set us back rather than move us forward.

I also believe the President should be armed with the discretionary authority he has asked for to cut taxes if the figures on employment and production justify it. But he should not be hurried into doing so by trigger-happy economists.

BUSINESSMEN OPPOSE A TAX CUT NOW

Mr. PROXMIRE. Mr. President, in connection with the same subject, Business Week has, in the current issue, concluded a survey of the feelings of businessmen on a tax cut. It found that businessmen are inclined to oppose a tax cut, although the lineup is pretty close: 3 to 2 against a "quickie" tax cut. In some cities, including Milwaukee, a tax cut was favored. However, businessmen are almost unanimously against additional Government spending. There appears to be a feeling on the part of some businessmen that, if they favor a tax cut, the main reason is it would discourage additional Government spending. Incidentally, economists generally want a deficit—that is, higher Government spending and lower taxes to stimulate the economy.

I ask unanimous consent that the article from Business Week be printed in the RECORD at this point.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS WEEK SURVEY FINDS BUSINESSMEN AGAINST A TAX CUT, BUT THEY'RE UNANIMOUS IN WANTING TO CUT GOVERNMENT SPENDING

Consensus of 150 high-ranking executives Business Week asked to put themselves in the shoes of Congressmen was a "nay" to tax cutting, but on the surface, hardly a resounding one. This week Business Week reporters in 16 cities asked businessmen this question: "If you were a Congressman, how would you vote on a bill for an immediate across-the-board tax cut?"

Overall, the lineup was 6 to 4 against a quickie tax cut. In Atlanta and Milwaukee, a cut was favored by small margins; in Detroit and Cleveland, Business Week reports, it got overwhelming support.

But businessmen were not so split as it might seem. Many, no matter how they voted, were agreed on the importance of a cut in spending; if they opposed a tax cut now, it was for lack of assurance of a commensurate cut in spending on foreign aid, farm subsidies, welfare programs, and a growing bureaucracy.

Business Week found that opinions about the business outlook range generally from an expectation of "static" conditions to outright fear of a major recession, in a few cases. The degree to which executives fear a decline is closely correlated with their warmth about favoring a tax cut soon.

Many businessmen told Business Week they are optimists, yet most expect some decline in the next 6 months.

The best an avowed optimist can seem to say is typified by the remark of a Detroit executive: "Even if business doesn't get better, it won't get very bad."

Businessmen's opinions vary greatly on how much stimulus a tax cut would give the economy—and on whether this is a justifiable use of tax policy.

For the long run, the Business Week survey reveals, businessmen are virtually unanimous in hoping for general tax reform. Many favor something like the Baker-Herlong bill, which prescribes a 5-year tapering of the personal tax rate to a range of 15 to 38 percent and the corporate rate to 42 percent. One Boston executive commented: "There is growing recognition in Congress and the administration that our tax system is holding us all back."

According to the Business Week survey some executives think President Kennedy has lost prestige through his delay in deciding for or against a quick cut, though, one man suggests, "one good speech will undo any damage."

"Kennedy isn't antibusiness," a Boston businessman summed up for Business Week, "but he should send those professors who are around him back to the classrooms."

UNIVERSITY OF MICHIGAN EXPERT KATONA SURVEY SHOWS OPPOSITION TO FEDERAL INCOME TAX CUT

Mr. PROXMIRE. Mr. President, George Katona who is a distinguished professor and head of the Research Center at the University of Michigan, conducted a nationwide survey of the entire population on a tax cut in 1961 with very fascinating results. It showed the people were equally divided on a tax cut. The interesting thing related to whether the tax cut should be in Federal income tax, property tax, or sales tax. The only group that favored a tax cut was that in which family income was under $3,000 a year. The vast majority of these people, on the basis of statistics which are available, pay no Federal income tax. So it is evident that what they really wanted was a cut in property and sales taxes. Those in the higher incomes, whose taxes would be primarily in income taxes, opposed a tax cut in every category.

Another interesting aspect of the study is that, the higher the income, the more emphatic was the opposition to a tax cut.

I ask unanimous consent that the table showing the results of the survey be printed in the RECORD at this point.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

Opinions on the advisability of a tax reduction, spring and fall, 1961

[In percent]

Tax reduction	All families [1]	Family income				
		Under $3,000 [2]	$3,000 to $4,999	$5,000 to $7,499	$7,500 to $9,999	$10,000 and over
A good idea	42	53	43	39	32	33
Pro-con	6	4	7	6	6	4
A bad idea	43	29	44	47	57	55
Don't know, not ascertained	9	14	6	8	5	8
Total	100	100	100	100	100	100
Number of cases	2,256	564	462	581	250	282

[1] Includes cases whose income was not ascertained.

[2] Pay little or no Federal income tax.

The questions were: "There has been discussion about reducing taxes at the present time. Do you think this would be a good idea or a bad idea?" "Why do you think so?"

Reasons given for opinions—All families

	Percent
Good idea because:	
Demand needs to be increased; to stimulate recovery	13
Taxes are too high	22
Bad idea because:	
Government needs money; defense expenditures high	35
Tax cut would cause deficit; budget should be balanced	8

HELLER'S EXCELLENT STATEMENT BEFORE JCC AND PLEA FOR MODERATE INTEREST RATES

Mr. PROXMIRE. Mr. President, on the same subject, one of the finest presentations which I think the Joint Economic Committee or any committee has had in a long time was the presentation of the Chairman of the Council of Economic Advisers, Dr. Walter Heller. I happen to disagree with some of his conclusions, but I think it was a superb presentation. I call particular attention to the statement on monetary policy, in the latter part of the statement.

In the course of his presentation on monetary policy, Dr. Heller had this to say:

> There has been a compelling need for general monetary ease, as part of expansionary economic policy for full employment and adequate utilization of our resources. It has been especially vital to maintain reasonably long-term interest rates and a plentiful supply of investment funds in order to stimulate private investment and quicken the tempo of growth in potential output.

He goes on to point out that this is essential. He recognizes that the balance-of-payments situation somewhat modifies this objective. Nevertheless, he seems to conclude that a more restrictive monetary policy would be unwise under the circumstances and should be avoided at virtually all cost, if possible.

Mr. President, since neither Chairman Martin of the Federal Reserve Board nor the Assistant Secretary of the Treasury Roosa, who specializes in monetary policy, contend that high interest rates are vital to our balance-of-payments position I can see no reason for not moderating interest rates.

And in the colloquy which followed Dr. Heller's statement it seemed clear that there was no very persuasive reason offered by Dr. Heller or any other economist before our group so far which would argue that high interest rates are essential to maintain our balance-of-payments position.

I ask unanimous consent that the fine statement by Dr. Heller be printed at this point in the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PERFORMANCE OF THE ECONOMY IN THE PAST 5 YEARS

We are examining the economic outlook today because the current expansion has not been as vigorous as all of us hoped and most of us expected. The expansion has slowed down in 1962 and we must be alert to the danger that the current recovery, like its immediate predecessor, will not carry us to full employment. Nevertheless, we should recognize the important economic gains that have been scored during the past year and a half. From the first quarter of 1961 to the second quarter of 1962 gross national product rose from $501 billion to $552 billion, a rise of 10.2 percent (or a rise of 8.5 percent after price correction), consumption in constant prices increased by more than $250 per family (annual rate), corporate profits before taxes have increased by roughly one-fourth, labor income increased by nearly 9 percent, unemployment (seasonally adjusted) declined by about 1 million persons, with the rate falling from 6.8 to 5.5 percent (and to 5.3 percent in July).

(For further details, see the "Summary of 1961–62 Economic Expansion and Policies" [not printed in RECORD].)

If advances could be maintained at this pace, on the average, we would achieve full employment—full utilization of our resources consistent with our interim goal of 4 percent unemployment—sometime late in 1963. But obviously we are all concerned by evidence that the next five qurters are not likely to yield equally strong advances. Gross national product (in constant prices), after rising at a rate of 9 percent per year from the first to fourth quarters of 1961, has been rising at a rate of only about 3¼ percent per year in the first half of 1962. Personal income increases averaged $4.6 billion (annual rate) per month during the 10 months of recovery in 1961, but have been averaging only $1.6 billion since December. After rapid gains during 1961, corporate profits seem to have changed little in the past two quarters. On the other hand, the first half of 1962 has witnessed a more rapid improvement in employment and a more rapid decline in unemployment than we experienced last year.

In early 1961 we were in the position of having to recover not from one but from two recessions—for the recession of 1960 came on top of the incomplete recovery from the recession of 1957–58. There can be no doubt that impressive gains in employment and output have been made in the past year and a half. But the economy has not yet regained the reasonably full utilization of its labor and capital which it last experienced in early 1957. It is in this context that we must reexamine the means for achieving the goals of the Employment Act of 1946: "Maximum employment, production, and purchasing power."

The postwar era taken as a whole has, to be sure, witnessed remarkable progress in the achievement of these goals. The worst rates of unemployment in the postwar era were about 7½ percent of the labor force, much better than the best performance of the economy in the 1931–40 decade, when the unemployment rate remained consistently above 14 percent. But the record of the past 5 years—while a great improvement over the prewar era—has not matched that of the first postwar decade. From 1946 until mid-1957, full utilization of resources was the normal state of the American economy. Unemployment significantly exceeded 4 percent of the civilian labor force only about one-third of the time, principally during and immediately after the two brief recessions of 1948–49 and 1953–54. Since late 1957, unemployment has fallen below 5 percent of the labor force only briefly. It reached a peak of 7 percent in the recession of 1960–61, and has averaged 6 percent for the 5-year period. Nor has the plant and equipment capacity of American industry been fully utilized. According to one widely used measure, manufacturing operating rates in the past 5 years have averaged 6 percentage points lower in relation to capacity than in the previous decade and have consistently remained well below the peak efficiency rates preferred by businessmen. After dropping to 77 percent at the beginning of 1961, the average operating rate rose to an estimated 87 percent in the second quarter of 1962, still several points short of preferred levels.

Our capacity to produce has continued to expand since mid-1955 by roughly 3½ percent per year, reflecting (1) a growing labor force, and (2) higher productivity stemming from improved and expanded equipment and plant, greater skill of workers and management, and technological innovations. But our actual production has grown less rapidly: at an annual rate of 2.7 percent from mid-1955 to date. Actual gross national product has not kept pace with the economy's potential: Beginning with 1958, unused potential output has amounted annually to an estimated $25 to $50 billion (1961 prices). The gap between potential and actual output has narrowed from over $50 billion early in 1961 to roughly $30 billion today. But idle resources have continued to be the Nation's outstanding extravagance and inefficiency.

It is important to improve this record of recent years. Our leadership of the free world, the opportunities for our youth, the security of our aged, the mobility of our surplus farm population, the prospects for meeting growing public needs, the rejuvenation of our chronically depressed regions, the capacity of our economy to adapt smoothly to the expansion of our international trade—all of these are linked to the goal of maximum employment. As President Kennedy said in his Economic Report for 1962:

"A full employment economy provides opportunities for useful and satisfying work. It rewards enterprise with profit. It generates saving for the future and transforms it into productive investment. It opens doors for the unskilled and underprivileged and closes them against want and frustration. The conquest of unemployment is not the sole end of economic policy, but it is surely an indispensable beginning."

DEVELOPMENTS IN THE FIRST HALF OF 1962

At the end of 1961, the rise of GNP in three quarters of recovery had exceeded the upswing from the low point of GNP in the comparable periods of the preceding two recoveries. While certain factors were weaker than in 1954–55 and 1958–59, others were stronger, leading to an expectation that the economy would continue upward at a relatively strong pace in 1962.

Nevertheless, on the basis of past experience, the growth during 1962 was projected to be more modest than in the recovery quarters of 1961. The shift from inventory liquidation to restocking that follows a recession normally yields large gains in the early stages of recovery. Some slowdown in the rate of advance must be expected as the expansion continues. But the change of pace was sharper than anticipated—in the three quarters of recovery in 1961 GNP advanced at an annual rate of nearly $13 billion per quarter; its increases in 1962 were only $6.4 billion in the first quarter and $7 billion in the second. Apart from statistical adjustments resulting from the revision of 1961 data, actual GNP in the second quarter, at $552 billion, ran at least $10 billion below projections.

The disappointing outcome is virtually all traceable to investment in plant and equipment and inventories. In relation to income consumer buying has held up relatively well; housing is now close to its predicted flight path after an erratic dip in the first quarter; exports are slightly above expectations; and Government purchases have behaved about as expected.

Although business fixed investment began to rise more promptly in this expansion than in earlier recoveries, its performance since the turn of the year has been disappointing. As against an expected increase of roughly 14 percent in 1962 over 1961, it now appears that the gain for the year will be closer to 3 percent.

This weakness of investment has sometimes been attributed to a profits squeeze. In fact, corporate profits have increased, as already noted, by one-fourth over the period since the first quarter of 1961, although in the aggregate further profit gains do not appear to have been made so far in 1962. In the logic of our private enterprise system an adequate level of profits is essential to economic progress. Profits should be higher than they are today, and they will be higher when our productive capacity is more fully utilized. It can be estimated that if the economy were operating at a 4-percent unemployment level, corporate profits after taxes would be a healthy $30 billion—compared to a $25.6 billion annual rate in the first quarter of 1962.

Corporate profits after taxes reached a peak of $22.8 billion in the inflationary year of 1950, a peak which they did not surpass until 1955, and which even today they surpass by only a modest margin despite the considerable growth in corporate sales and in the total investment in corporate assets since 1950.

Still, we cannot look at corporate profits in isolation. Since 1950, corporate depreciation and other capital consumption allowances have risen from $9.4 billion in 1950 to $28.7 billion (annual rate) in the first quarter of 1962. Together, corporate profits after taxes plus corporate capital consumption allowances—often called corporate cash flow—have risen from $32.2 billion in 1950 to $54.3 billion in the first quarter of 1962.

A comparison of business fixed investment with corporate cash flow can only be approximate since noncorporate investment is included in the investment figures, but it gives some indication of business attitudes toward investment in relation to the flow of depreciation and after-tax profits. Most of the time from 1951 to 1957, business fixed investment exceeded corporate cash flow; since mid-1958, the reverse has been true continuously, and the distance has widened in the current expansion: cash flow has grown about $7 billion (annual rate) above the $47 billion level of the first quarter of 1961; business fixed investment has meanwhile advanced $5.4 billion from its $44.7 billion rate in the trough quarter. Although investment for moderization and cost cutting is rising moderately—and surveys suggest that about 70 percent of plant and equipment investment is for these purposes—the gains in profits during 1961 did not generate enthusiasm for a major expansion of plant and equipment. The overall willingness of business firms to invest has not kept pace with their overall ability to invest out of internal funds.

Inventory investment in the second quarter is estimated at the relatively low annual rate of $3.4 billion. The working down of steel inventories was a factor in recent months, but even apart from steel, the general pattern of inventories reflects a cautious policy by business firms. Inventories were growing less rapidly than sales through most of 1961 and into the spring of 1962. Inventory-sales ratios which were declining from levels already relatively low by past standards would typically have heralded a speedup in inventory accumulation, but this has not occurred in 1962.

Business conservation toward capital goods and inventories appears to be grounded in the experience of the past 5 years. The American economy since 1957 has had continuously slack labor markets, buyers' markets for materials, and persistent excess capacity. It has proved difficult for businessmen to work up much enthusiasm for buying or building ahead of minimal needs with that history still fresh in their memories. The Nation's businessmen have had their share of disappointments in the past 5 years. They saw markets contract in 1957 just as they were adding new plant capacity and new labor to meet expected growth in demand. Much of the expanded capacity had to remain on the sidelines when the 1958–60 expansion fell short of full use of the Nation's great productive strength. To be caught long on capital and labor and short on markets tends to breed caution the next time around.

We do not have the stimulus of large backlogs of demand that marked the early postwar years. We do not have—and do not want—the stimulus to buying that inflationary expectations can provide. Against this background, it is difficult for private demand to carry the economy to full employment under existing tax rates.

During a period of recovery, an appreciable share of the growth in business and personal incomes is drained off into Federal taxes. This tends to hamper the growth in both consumer and producer demand upon which continued expansion depends. During the five quarters of the current expansion, Federal taxes (net of transfers) have taken $12 billion of the $51 billion increase in total incomes, but Federal purchases have taken only $7 billion of the $51 billion increase in total output. The difference between the $12 billion of added taxes (net of transfers) and the $7 billion of added purchases is a measure of the drag on the recovery exercised by the Federal budget. If tax receipts had grown less rapidly, or expenditures more rapidly, total demand would have grown faster, and the expansion of output and income would have been greater. The automatic stabilizing effects of the Federal budget, which help to cushion a recession, also tend to retard a recovery.

If the economy were at full employment today, we estimate that total income and total output would be about $30 billion higher than at present. But Federal tax receipts would be about $9 billion above present levels, and private saving would be $5 or $6 billion higher than today. Thus, taxes and savings would be drawing $14 or $15 billion from the economy, which would have to be offset by additional investment and Government expenditures for full employment to be maintained. This means that, at present levels of Government expenditure, our present tax system bars the way to full employment unless we are able to raise private investment about $14 or $15 billion above present levels.

PROSPECTS FOR THE MONTHS AHEAD

The most recent evidence on economic activity, though mixed, offers cause for concern. After a slow start in January-February, and then a brisk pickup in March and April, the 1962 economic expansion slackened in May and June. Those measures of overall activity which primarily reflect the results or the execution of past decisions to hire, buy, and produce—e.g., the overall measures of income, employment, production, and construction—kept setting new records almost every month.

However, as previously indicated, the pace of advance was not satisfactory. And any appraisal of the outlook must also recognize the recent softness of many indicators which record current decisions and which point toward future economic decisions. For example, the movements of orders and contracts are likely to foreshadow changes in production and shipments. New orders for durable goods have been moving downward since January and in June were 7 percent below their January peak. Machinery and equipment orders are lower than in January, although they recovered some lost ground in May and held almost even in June. Housing starts and building permits have shown considerable strength in recent months, even though the latest figures are considerably below the high points of the present expansion. Commercial and industrial construction contracts are another area of recent strength on which the latest returns point downward. The factory workweek frequently indicates the needs of manufacturing firms for additional labor. It has declined during both May and June. The stock market is one of the many factors which help mold and reflect economic expectations and attitudes toward spending, but the full implications of the slide in the market from March to June will not be clear for many months.

As we look ahead, we see mixed evidence on the various components of expenditure.

Consumption: Consumers have raised their spending in pace with gains in their income during the current expansion, and there is little evidence to suggest a marked departure from that pattern in the months ahead. A rather sharp and widespread decline in retail sales during June was worrisome, but preliminary data for July indicate a strengthening in department store sales, new auto sales, and total retail sales, after allowing for seasonal changes. Past experience and current surveys indicate only a limited possibility that consumers will spark a renewed advance in the economy. Such a spark would probably have to arise from the volatile area of durable goods purchases. In the current expansion, autos have supplied most of the strength in that sector, and it would be surprising if demand for 1963 autos were to top the brisk activity in 1962 models.

Housing: With the aid of rising incomes, readily available mortgage credit, and lower interest rates, homebuilding has done very well. The sharp rise in starts this spring carried housing activity to high levels. But, following a sharp decline in starts for June, total housing outlays fell in July. Permits come first in the chronological sequence of permit-start-construction activity. The recent data on permits point neither to a continued slide in starts below the June level nor to a resurgence to the high levels of April and May.

Plant and equipment: Surveys of business intentions point to continued modest increases in fixed investment during the remainder of 1962. The recent McGraw-Hill survey found no evidence of cutbacks in late June after the stock market decline. Recent softness in orders for equipment raises some doubts about the outlook for plant and equipment investment but the evidence is not conclusive. At the same time, the recently announced reform of depreciation guidelines and the pending tax credit for investment serve as sources of future buoyancy in this sector.

Inventories: In the postwar period, every recession has been dominated by inventory cutbacks. But today, given the conservative inventory-sales ratios already prevailing, it would be surprising if large-scale inventory liquidation were initiated. Reduction in stocks of steel has been an important factor holding down inventory investment in recent months. With that adjustment apparently nearing completion, inventory investment might revive this fall or winter. On the other hand, new orders and unfilled orders are important determinants of inventory policy, and strong incentives to build stocks probably would arise only in response to a reversal in recent trends in such orders.

Government: Purchases of goods and services by the Federal Government are expected to increase at a moderate rate in the next few quarters, giving some support to the private economy. The upward trend of State and local outlays will surely continue.

The prospects for various components are difficult to add up. They do not sum up to a crisis in the economy, nor do they offer any assurance of spontaneous resumption of brisk advances in the private economy. A continued period of modest upward movements or leveling off is one reasonable possibility. We experienced this in 1956–57, with gains in output just large enough to prevent a significant rise in unemployment. But we cannot rule out the alternative possibility that the recent slowdown in the expansion represents advance warning of an economic decline. A more explicit verdict would not do justice to the perplexing and inconclusive crosscurrents in the evidence before us—nor to the limitations of the science of economic forecasting.

But even in the face of much greater uncertainty than usual about the pace of further advance and the possibility and timing of an economic downturn, this much is clear: The U.S. economy is still operating considerably short of its potential and action on the important economic measures recommended by the President is needed to strengthen its performance.

POLICY ACTIONS

Pending proposals

The slowdown in the rate of expansion in 1962, combined with the current uncertainties in the economic outlook, underscore again the importance of action on the President's recommendations in the Economic Report last January for "a defense-in-depth against future recessions," "a three-part program for sustained prosperity which will (1) provide standby power, subject to congressional veto, for temporary income tax reductions, (2) set up a standby program of public capital improvements, and (3) strengthen the unemployment insurance system."

These three measures, or reasonable alternatives—providing up to $10 billion of temporary income tax reduction (at annual rates), $2 billion of public works acceleration, and stronger unemployment compensation—would, as the President said in January, "enable Federal fiscal policy to respond firmly, flexibly, and swiftly to oncoming recessions."

By enacting the foregoing proposals or the related measures that now lie before it, the Congress could provide a significant economic stimulus at the present time:

As the President noted in his statement on June 7:

"I have asked the Congress to provide standby tax reduction authority to make certain, as recommended by the eminent Commission on Money and Credit, that this tool could be used instantly and effectively should a new recession threaten to engulf us. The House Ways and Means Committee has been busy with other important measures, but there is surely more cause now than ever before for making such authority available."

The public works acceleration legislation which has passed the Senate and is pending in the House will provide for additional Federal, State, and local public works in areas of heavy unemployment. (The Senate bill also includes provision for additional standby authority permitting the extension of the program should conditions warrant.)

The temporary extension of the period of unemployment compensation benefits earlier authorized by the Congress has now lapsed, and its renewal has been requested. Such a program alleviates in some measure the hardship of those most directly and immediately affected by continued excessive unemployment. Moreover, the resulting addition to consumer purchasing power strengthens consumer buying.

Other measures now pending before the Congress can also provide immediate as well as sustained support for further economic expansion:

The investment tax credit, part of the 1962 revenue bill, promises further significant incentive to business investment, in addition to the encouragement already provided by the new depreciation guidelines.

The proposed Trade Expansion Act of 1962 will contribute to the administration's program to expand our exports—a potential source of increased demand for the output of our farms and factories, important for this reason as well as for its contribution to improving our balance-of-payments situation.

The proposed Youth Employment Opportunities Act, aimed especially at the severe unemployment and underemployment of our young people out of school, would make inroads on a particularly unfortunate byproduct of slack in our economy.

Tax reduction

Beyond these important and timely measures now pending before the Congress, a program to improve the rate of utilization of our resources and the rate of growth of our economy must include the even more fundamental measures of tax reduction and tax reform. On June 7, President Kennedy stated:

"Our tax structure, as presently weighted, exerts too heavy a drain on a prospering economy. * * * A comprehensive tax reform bill * * * will be offered for action by the next Congress, making effective as of January 1 of next year an across-the-board reduction in personal and corporate income tax rates which will not be wholly offset by other reforms. In other words, it is a net tax reduction."

The President has also indicated the possibility of asking for earlier action on tax reduction if economic developments should require it.

Apart from the announced intention to recommend both individual and corporate income tax reduction effective January 1, 1963—unless adverse economic developments require earlier action—no decision has been made on the size, composition, and timing of a recommended tax reduction. But the basic case for easing the net tax drain on the economy, as well as the broad principles which should guide tax reduction, are reasonably clear in the light of our unsatisfactory economic experience of the past 5 years.

A reduction in net tax liabilities of both consumers and business spurs the economy's advance toward full resource utilization in three important ways:

First, it increases the disposable income of consumers. The statistical record indicates that consumers consistently spend from 92 to 94 percent of their total disposable income. And past experience also confirms that increases in such incomes are very largely and very quickly translated into higher consumer spending. As the private income released by tax reduction is spent, markets strengthen, production rises, new jobs are created, and incomes and profits rise accordingly. This generates added cycles of private spending and leads to further increases in output and employment. This process alone—the so-called multiplier effect—translates the original personal tax reduction into an increase in gross national product considerably larger than the reduction itself.

Second, by bolstering sales and pushing production closer to capacity, tax reduction stimulates investment in inventories and in plant and equipment—the so-called accelerator effect. This further expands gross national product, raises profits, and reduces the deterrent effect of excess capacity that since 1957 has plagued the economy and curbed expansionary investment.

Third, by reducing the Government's share of business earnings, tax reduction improves profit margins and increases the supply of internal funds available for investment. This strengthens both the incentives and the financial ability of businessmen to undertake the risks involved in new investment.

Decisions on size, composition, and timing of tax cuts will need to give appropriate weight to the following economic considerations:

1. The longer term need for reducing the excess of Federal revenues over Federal expenditures that would be realized at full employment, a need that depends on:

(a) the current size of the full employment surplus, estimated at $7 to $8 billion on a national income accounts basis;

(b) its prospective size in the light of projected growth in Federal expenditures and Federal revenues as the economy expands;

(c) the amount of surplus at full employment that is needed to curb inflationary pressures while maintaining a high level of investment.

2. Any short-term need that may exist for overcoming temporary deficiencies in consumer and investment demand.

3. The necessity of combining individual and corporate income tax reduction in the manner best suited to stimulating both consumption and investment, to support both markets and incentives.

4. The appropriate relationship to the projected reform of the tax structure, a reform designed to improve equity and remove the artificial tax barriers or concessions that divert resources from their most efficient uses and thus impair our rate of economic growth.

5. The invigorating effect of tax reduction on the economy and the resulting "feedback" of revenues to the Federal Treasury which limits the net budgetary cost of the reduction and, over time, may even wipe out its initial addition to a budget deficit.

6. The monetary policy being pursued—for example, if monetary policy becomes more restrictive for balance-of-payments reasons, a larger tax reduction would be needed to yield a given economic stimulus.

Monetary policy

As the last point indicates, fiscal policy and monetary policy are tightly interwoven, indeed are in part substitutes for one another. A given stimulus to the economy can be achieved by a relatively easier fiscal policy coupled with a relatively tighter monetary policy, or vice versa, but the effects on the balance of payments and on the investment-consumption balance in the economy may be rather different in the two cases.

During this economic recovery, the task of monetary policy has been especially difficult. There has been a compelling need for general monetary ease, as part of expansionary economic policy for full employment and adequate utilization of our resources. It has been especially vital to maintain reasonably low long-term interest rates and a plentiful supply of investment funds in order to stimulate private investment and quicken the tempo of growth in potential output. Yet, concurrent with these objectives, it has been necessary to discourage large flows of capital out of this country that could complicate the task of restoring a healthy balance of payments and confidence in the dollar.

The problem of capital outflow is tied primarily to our level of short-term interest rates relative to those of other countries, and it has therefore been necessary to prevent short-term rates from falling too low. At the same time, the monetary and debt authorities have tried to shield long-term rates, so critical to economic expansion, from the restrictive impact at the short end of the maturity spectrum. Since February 20, 1961, the Federal Reserve has conducted its open-market operations in all maturity sectors of the U.S. Government securities market. On balance, the Federal Reserve has actually sold short-term U.S. Government securities in the open market since that date, but it has bought longer-term securities, primarily 1 to 5 years, in amounts much larger than the sale of short-term securities. Most of the purchases of long-term securities took place in 1961. Since then, such purchases have been more limited. The Treasury Department has also adapted debt management policies in part to these same objectives, primarily through concentrating new cash offerings of securities in the short-term area, but also by buying long-term securities for the Treasury investment accounts to the extent that such purchases were consistent with the objectives of these funds.

The action that the Federal Reserve took, effective January 1 this year, in raising the maximum interest rate payable on commercial bank time deposits to as high as 4 percent, has increased the total flow of funds put pressure upon these institutions to find investment outlets and has helped to reduce yields on both mortgages and municipal bonds. Actually, at this point of time, 17 months after the beginning of economic recovery, long-term private interest rates are generally below their levels at the cyclical trough in February 1961. They are also below the levels at the corresponding stage of the 1958–59 recovery, despite the postwar peak in interest rates that intervened. The reduction in long-term rates has had to overcome two psychological barriers: first, some persistence of inflationary psychology in the financial community despite the lack of tangible inflation; and, second, vivid memories of the experience of 1958–59, when economic recovery was accompanied by sharp increases in long-term rates.

The total of demand and time deposits and currency has been increasing since February 1961, by more than 7 percent per year, and the availability of bank reserves has been generally favorable to the expansion of bank credit. Banks have been going more heavily into municipal bonds and mortgages. Very little of the expansion of bank loans and investments over the past year has been in U.S. Government securities. In relation to economic activity, liquidity in the economy is not much changed from its postwar low.

A special word is in order on the relation of monetary policy to the balance-of-payments situation. We have, from the beginning, taken a number of determined and effective measures to improve our balance of payments and maintain confidence in the dollar. In dealing with the balance of payments, however, it would be self-defeating to adopt policies that would undermine the vigor of the economy—for example, through restrictive monetary-fiscal policies. Confidence in the dollar is dependent upon a strong, growing American economy. Further, a revival of vigorous growth here will make the United States a more attractive outlet for long-term investment funds, both domestic and foreign. As a result, monetary and debt-management policy must continue to aim at providing ample credit and liquidity to support needed recovery and growth, consistent with the requirements of balance-of-payments policy.

Finally, as monetary and fiscal policies are brought into coordinated focus, these points stand out:

1. At a time when the Federal budget was becoming progressively less expansionary in its net impact on the economy during the 1961–62 recovery, monetary policy remained easy, partly through conscious effort of the monetary authorities, partly because expansionary forces have not been as strong as expected, and partly because 1961–62 may mark the end of a rising trend—related to inflationary expectations—in interest rates.

2. Balance of payments and gold outflow considerations currently demand a more restrictive monetary policy than would be desirable from the standpoint of the domestic economy. To this extent, fiscal policy must be more expansionary than would otherwise be necessary in order to promote domestic economic expansion and narrow the excessive gap between our economic performance and our economic potential. Indeed, closing this gap can play an important role in building long-run confidence in the dollar. As the steps currently being taken to eliminate the balance-of-payments deficit and strengthen our international monetary position achieve their objective, the curbs on our freedom to use monetary policy to meet the needs of the domestic economy will be progressively reduced.

3. Any move toward sizable tax reduction must, of course, be accompanied by a willingness to move toward higher interest rates if this should prove to be necessary (a) to discourage any adverse capital flows that might develop, or (b) to offset any inflationary pressures that might ensue if the rebound toward full employment should prove to be unexpectedly rapid.

4. If budget deficits are incurred, the method of financing them must be carefully adapted to the prevailing economic circumstances. A careful balance must be struck between bank and non-bank financing, a balance which will not thwart or nullify the expansionary effect of budget measures in an economy with excessive unemployment and excess capacity, but will prudently shift Federal debts into nonbank hands as the economy comes close to or reaches full employment.

Summing up, let me say that relative monetary ease has facilitated economic expansion in the recovery of 1961–62; that even greater ease would have been possible in the absence of international payments pressures; that those pressures throw an additional burden on fiscal measures as part of a coordinated economic policy for full employment and faster growth; and that care must be exercised not to overcompensate for such international monetary pressures by premature or excessive tightening of credit and interest rates.

CONCLUSION

We would be dangerously complacent if we focused only on such impressive advances in our economic well-being in recent years as—

The rise of over $50 billion in gross national product since the first quarter of 1961, and the accompanying rise in employment, personal income, and profits.

The shrinkage of our balance of payments deficit from $3.9 billion in 1960 to $2.5 billion in 1961, and the prospect of further shrinkage to $1.5 billion or less this year.

The 4 years of stability in our wholesale price level since 1958.

The continued growth in our economic potential at rates exceeding prewar averages.

But when we look ahead, instead of backward, it is the size of the job yet to be done that demands attention and commands action; the continued hardship, inequity, and waste of unemployment; the excessive amounts of unused industrial capacity; the unsatisfactory pace of economic expansion in 1962; and the remaining gap in our balance of payments. My statement today has put its emphasis on this unfinished business of economic policy. The uncertainties of current economic developments and prospects underscore the urgency of that unfinished business. They also intensify the need for action on those economic measures that the President has already put before Congress, and the need for forethought on the tax adjustments which are needed to remove barriers to the expansion and full utilization of the great potential of the American economy.

UNEMPLOYMENT BIG ECONOMIC PROBLEM—TAX CUT NOT APPROPRIATE REMEDY

Mr. PROXMIRE. Mr. President, this morning, on the front page of the New York Times, there were a series of charts which show that personal income has been up, retail sales have been up, but only the production workweek is down.

I think we should recognize that the heart and soul of our economic problem is unemployment, and particularly factory unemployment; and to try to hit the whole economic system with a tax cut under these circumstances would be most unwise. What we should do is have a measure which aims at reducing unemployment, without the kind of budget unbalancing and deficit spending which would be the inevitable results of a tax cut.

I ask unanimous consent that the article from the New York Times to which I have referred be printed in the Record at this point.

There being no objection, the article was ordered to be printed in the Record, as follows:

Workweek Drops Third Month in Row—Cut in Factory Hours Offset by Gains in Nonfarm Jobs, Retail Sales, and Income

Washington, August 10.—The factory workweek, a key economic indicator that usually starts dropping before total economic activity does, declined in July for the third month in a row.

But an assortment of other indicators published by Government departments today pointed upward.

The Commerce Department reported for July a 2-percent advance in retail sales and a slight improvement in personal income.

The Labor Department, which issued the workweek figure, also said that nonfarm payroll employment, seasonally adjusted, had gone up last month to a new record of 55,632,000. This represented a slight rise of 124,000.

Last week the Department announced its summary labor market figures. These showed that the seasonally adjusted percentage of the labor force out of work declined in July from 5.5 to 5.3 percent.

Retail sales, according to preliminary Commerce Department figures, increased from $19,100 million in June to $19,500 million in July, after seasonal adjustment. The figure fell short of the record of $19,600 million set in April. It was about 8 percent higher than 1 year before.

Personal income, seasonally adjusted, rose to an annual rate of $442 billion in July, $1,30C million higher than June, and a record.

Most of the increase was in wages and salaries, which were $900,000,800 higher than in June. Contract construction payroll accounted for more than half the gain.

Manufacturing payrolls declined by $200 million on an annual rate, principally because the steel industry is in the doldrums.

Labor Department figures also reflected steel's difficulties.

Payroll employment in the primary metals industries, which include steel, dropped 24,000 between June and July and 85,000 in the last 4 months—seasonally adjusted.

Primary metals employment dropped 193,000 during the 1960–61 recession. Thus far in the recovery, Labor Department figures showed, it has gained back only 54,000 of that loss. Total nonfarm payroll employment, by contrast, has gained back all of its loss during the recession, plus 1,048,000.

The Labor Department's manpower experts think the lackluster performance of steel in recent months resulted from efforts to work off inventories acquired in anticipation of a steel strike that did not occur.

JOB OUTLOOK AFFECTED

But Seymour L. Woltbein, Deputy Assistant Secretary of Labor, said at a news conference today that steel was an industry that also was feeling the impact on employment of automation and other technological changes.

Automobile industry employment, on the other hand, has climbed each month for the last six. The transportation equipment category, which includes cars, has gained back all of its loss of 187,000 workers during the 1960–61 recession, plus 51,000 more, after seasonal adjustments.

Over the year, all durable goods industries except primary metals have increased employment

Neither manufacturing nor durable-goods employment changed significantly last month.

The small rise in nonfarm payroll employment, seasonally adjusted, was accounted for by the end of a construction strike on the west coast and by employment increases in the trade and service sectors, which have been steadily turning upward.

LEVEL IS STILL HIGH

Factory hours, despite their decline from 40.8 a week in April to 40.6 in May to 40.5 in June and 40.4 in July, still remained at a high level. The July figure has not been higher since 1950.

Steel, with unadjusted weekly hours averaging 38.5 in primary metals, caused a drag here, as well as on the employment figures.

Today's Labor Department report contained an analysis of the characteristics of persons out of work 6 months or more.

The number of persons unemployed that long was 260,000 in 1957, rose to 1,026,000 in 1961 and now is 576,000.

Nonfarm blue-collar workers account for a smaller percentage of the long-term unemployed now than they did in 1957. The percentage has moved down from 60 to 52.

MORE SKILLED

Both the semiskilled and unskilled have declined as a percentage of the long-term unemployed, while the percentage of the skilled has risen. The proportion of white-collar workers also has edged up—from 17 to 22 percent.

Men under 25 years of age now comprise 15 percent of the long-term unemployed. In 1957, they were 9 percent. The proportion of women under 25 in this category has doubled—from 4 to 8 percent.

THE HUNGARIAN QUESTION AND THE UNITED NATIONS

Mr. LAUSCHE. Mr. President, word is becoming increasingly more current that the United States may not renew its request to have the Hungarian problem placed on the agenda of the United Nations at the next, 17th General Assembly.

In my opinion, the elimination of the Hungarian problem from the agenda would involve open recognition by the United Nations that its solemn resolutions can be totally defied with impunity and without penalty, thus destroying the moral authority of the United Nations as an agency to promote peace by opposing aggression.

If this subject is not placed on the agenda, it would remove the main obstacle to the acceptance of the Hungarian delegations' credentials in the United Nations and the establishment of full American diplomatic relations with the present puppet regime in Budapest.

As for the United States, the final abandonment of American efforts even to seek justice for Hungary through the United Nations would constitute a long step toward the fulfillment of Khrushchev's main purpose, which is to bury the West by destroying faith in the steadfastness of the United States.

In September 1957, following the revolution in Hungary, the United Nations declared:

> (a) The Union of Soviet Socialist Republics, in violation of the United Nations Charter, has deprived Hungary of its liberty and political independence and the Hungarian people of the exercise of their fundamental human rights;
>
> (b) The present Hungarian regime has been imposed on the Hungarian people by the armed intervention of the Union of Soviet Socialist Republics.

Mr. President, the status of the situation in Hungary has not been changed. The present government has been imposed upon the Hungarian people. Its existence was achieved through armed aggression and intervention of the Soviet.

Yet, 6 years later, the word is current that this subject will be dropped by the United Nations.

I cannot understand it. It would mean that the world could well believe that the powerful nations can defy the United Nations and get away with it.

The ACTING PRESIDENT pro tempore. The time of the Senator has expired.

Mr. LAUSCHE. May I have 2 more minutes?

The ACTING PRESIDENT pro tempore. Only 2 minutes for the morning business remain.

Mr. HUMPHREY. Mr. President, can the Senator from Minnesota take 1 minute?

Mr. MANSFIELD. Mr. President, I ask unanimous consent that the time be extended 3 minutes.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. LAUSCHE. Mr. President, the excuse given for not putting the subject on the agenda is that we cannot succeed; that we will fail. I cannot subscribe to that excuse. It is better to try and fail than not to try at all. By yielding to the argument that we cannot succeed, we are giving encouragement to the Soviets to challenge every order that is made by the United Nations.

Aggression and persecution still exist, and yet we contemplate abandoning standing by the high principle which our country proclaims and the United Nations declares it stands for.

I submit that we ought to ask that the subject be placed on the agenda. We ought to let the world know that the demands of the Soviet Union are not the only ones that are honored, but the demands of the West, when properly based, are given due consideration.

Even though this year it may be difficult because of the increased membership in the United Nations to win a majority to uphold the past United Nations resolutions on Hungary, it is vital that the fight should be made even if it should fail. Our cause is just; that of the opposition wrong. If our country stands firmly by its just position, even if it stands alone, the majority of mankind ultimately will stand with us, regardless of the attitude of the diplomats in the United Nations.

There is more that I should like to say on this subject, but my time has expired.

NEW U.S. NUCLEAR TEST BAN PROPOSALS

Mr. HUMPHREY. Mr. President, the recent criticism of the new U.S. nuclear test ban proposals is based more on politics than science. The criticisms wholly ignore the new technical developments produced by Project Vela and by experience with detection of American, Soviet, and French tests.

We have not spent $75 million on Project Vela for nothing. That project, encouraged by the Senate Subcommittee on Disarmament and started in the Eisenhower administration, has now begun to bear real fruit in large part because of President Kennedy's decision in the fall of 1961 to resume underground nuclear testing.

Briefly, there have been two key technical developments on which the new U.S. suggestions are based. The first establishes a better capability for long-distance detection of earth tremors caused by nuclear explosions or earthquakes, and makes it possible to propose a simpler and more economical system of internationally supervised long-range detection stations, manned largely by the country where located.

The control system proposed in the United States-United Kingdom draft treaty tabled on April 18, 1961, contemplated eventual construction of a worldwide network of 180 control posts, including a total of 34 such posts in the United States, the United Kingdom, and the Union of Soviet Socialist Republics. Substantial improvements in long-range detection now permit us both to design an effective control system with many fewer seismic control posts and to rely much more on stations outside the U.S.S.R. to detect explosions in the U.S.S.R. Needless to say, the control system would still have to be under careful and effective international supervision.

The second key technical development is that an earlier estimate of the number of tremors from earthquakes which might be confused with tremors from nuclear explosions has been shown by actual observation and research to be several times too large. Since there are fewer earthquakes which produce tremors similar to those of an explosion, the number of on-site inspections needed to identify the cause of the tremor is less.

At the time that the April 18, 1961, draft treaty was submitted, it was estimated that there would be on the average about 125 annual shallow earthquakes equivalent in size to a 19-kiloton explosion in the U.S.S.R. and that about 100 of these would not be positively identified as earthquakes and not explosions by 10-element detector arrays. It was also estimated then that there would be about 620 total and 590 unidentified earthquakes equivalent to a 2-kiloton explosion in tuff. Actual observation and research now indicates that there will only be about 175 earthquakes in the U.S.S.R. equivalent to a 2-kiloton explosion in tuff. Furthermore, with a well designed control system composed of stations largely outside the Soviet Union, all of these would be detected and all but 75 identified as earthquakes by instrument readings. Other information would reduce the number of 75 still further.

With 75 instead of 100 potentially doubtful earthquakes to worry about, a reduction in the number of on-site inspections may be possible. There would, however, still need to be on-site inspections to make sure that none of these earthquakes were really nuclear explosions. On-site inspections are essential to any safeguarded agreement.

These technical developments have shown the way to a control system which would cost less to construct and run, which would be simpler to manage, which could begin operation in a matter of months from ratification of a treaty, and would in no way jeopardize our national security.

Construction cost estimates for the control system proposed in the April 18, 1961, draft treaty ranged up to about $3.2 billion, and annual operating costs, up to almost $1 billion. The system now under consideration would cost perhaps one-fifth as much to build and one-third as much to operate. At the same time, the capacity to detect is not diminished—it is improved.

The April 18, 1961, draft treaty contemplated that all control posts would be new ones and that the first group of posts would not be required to begin operation for 2 years. The new proposal would bring seismographic stations already in operation under an international commission within a matter of months, and the new stations would be constructed in a shorter time than the earlier 2-year period.

The new proposals were approved by the President on the unanimous recommendation of the Secretary of Defense, the AEC, the Director of CIA, the Secretary of State, and the Director of the Arms Control and Disarmament Agency. The Kennedy administration is strongly of the view that an adequately verified ban on all nuclear weapon tests is in the national interest.

These changes are not "concessions" in any meaningful sense. If they are concessions in any sense, they are concessions to scientific progress. In this sense, the communication satellite is also a concession to science. If the new proposals are also closer to the Soviet position than our earlier proposals, so much the better. We cannot reach agreement by standing still. It is only sensible and honest to recognize the facts of scientific development and such is not a "concession" to the Soviets, but acknowledgment of scientific advance.

Our purpose in discussing a nuclear test ban is to reach an agreement banning nuclear tests under adequate safeguards. It is true that the Soviets have made no recent concessions to our point of view. But this has not always been the case and our hope is that it will not forever continue to be the case.

To show my colleagues that there has also been movement on the Soviet side, I ask unanimous consent to submit for the record a table showing the major Western and Soviet shifts of position in the direction of agreement in these negotiations up to the time of our new proposals. This shows that there were significant moves by both sides during the period 1958–60, a period, I might point out, in which the last administration was responsible for our participation in the negotiations.

There being no objection, the table was ordered to be printed in the RECORD, as follows:

(See exhibit 1.)

Mr. HUMPHREY. Mr. President, let me conclude by saying a word about why a test ban is desirable, something that has been ignored by some of the critics. Each series of weapon tests produces less of significance to the development of new weapons by the United States. While there is always something new that can be tested, really significant advances are less frequent the more we test.

At the same time, if the Soviet Union is now behind us in some areas of nuclear weapon testing, further tests by it will inevitably permit it to catch up. The scientists tell me that unlimited testing on both sides will ultimately produce a situation where neither side is ahead.

Unlimited testing will also spur other countries which do not now have the bomb to bend every effort to produce it. The dangers of accidental nuclear war would be multiplied many times over. Moreover, a small nuclear war between countries other than the Soviet Union and the United States could well bring a nuclear holocaust upon us all.

The important objective is, therefore, to find a way to end all testing, so that we can prevent the nuclear arms race from spiraling out of control and take the first step toward disarmament.

I ask unanimous consent that a statement I made yesterday concerning the comments of Governor Rockefeller and the Senator from Illinois [Mr. DIRKSEN], be printed in the RECORD. I also ask unanimous consent that a letter addressed to me as chairman of the Subcommittee on Disarmament of the Senate Foreign Relations Committee by the Director of the Arms Control and Disarmament Agency be printed at this point in my remarks. This letter makes a significant contribution to the Senate's understanding of U.S. disarmament proposals and negotiations.

There being no objection, the statement and letter were ordered to be printed in the RECORD, as follows:

HUMPHREY HITS ROCKEFELLER, DIRKSEN ATTACKS ON TEST BAN POLICY

Senator HUBERT H. HUMPHREY, Democrat, of Minnesota, has made the following comment on recent attacks on U.S. policy on a nuclear test ban:

"Governor Rockefeller's statement on the recent U.S. proposals on the nuclear test ban are either the product of misinformation and lack of understanding or election year politics. The facts are available and the Governor should have studied them before speaking on such an important and sensitive issue affecting our national security.

"The minority leader, Senator DIRKSEN, has had all scientific facts available to him, and his partisan criticism of U.S. proposals on a nuclear test ban violates bipartisan responsibility in the field of foreign relations and severely hampers the conduct of diplomacy by the President and our representatives abroad.

"Modifications on U.S. proposals are based on known scientific evidence as to the number of earth tremors occurring annually in the Soviet Union and the improved capability of long-range detection devices. Our previous calculations were in error. Recent tests and research and actual observation have necessitated reassessment. Our proposals must be based upon truth and fact, not deceit and fiction. The only concession we are making is to science and truth. We neither protect our national security nor enhance our national prestige by irresponsible statements or wilfully ignoring scientific developments.

"Half-truths may contribute to partisan politics, but make no contribution to peace."

U.S. ARMS CONTROL
AND DISARMAMENT AGENCY,
Washington, D.C., August 9, 1962.

Hon. HUBERT HUMPHREY,
Chairman, Disarmament Subcommittee of Senate Foreign Relations Committee, U.S. Senate.

DEAR MR. CHAIRMAN: During the recent hearings before your subcommittee on disarmament, Senator SYMINGTON raised a question concerning Mr. John J. McCloy's article "Balance Sheet on Disarmament" which appeared in the April 1962 edition of Foreign Affairs. In that article, Mr. McCloy described four areas where Soviet and United States interests might coincide in respect to disarmament. The four areas were: (1) desire to avoid general nuclear war; (2) desire to avoid nuclear war by accident, miscalculation, or failure of communication; (3) desire to avoid the spread of nuclear weapons to countries not now possessing them; and (4) desire to avoid the economic burdens of the arms race. Senator SYMINGTON inquired why the Soviet Union had not shown more inclination to reach early agreement with the United States in these areas.

It is very difficult to speculate what may motivate the Soviet Union in adopting positions with respect to disarmament and arms control. However, there are some factors that may be pointed to, factors both of a long range and of an immediate character that may have a bearing on recent Soviet attitudes.

Two longstanding problems which may affect a great many of our efforts with the Soviet Union in the field of disarmament are: (1) the problem of military parity, that is, the problem of agreeing to any disarmament or arms control measures at a time when either the United States or the Soviet Union feels that it might be prejudiced by a possible freezing of the status quo and (2) the problem created by the Soviet Union feels that it might be prejudiced by a possible freezing of the status Union regards much of the inspection believed desirable by the United States to verify various measures as "espionage" or "control over armaments."

These two factors, although of a general nature, may have considerable effect on Soviet willingness to undertake disarmament or arms control measures which would lessen the likelihood of general nuclear war or which would substantially tend to lessen the economic burdens of the arms race. An obvious illustration of this is found in the efforts to negotiate a test ban treaty, a measure which might have both the effect of lessening the ultimate likelihood of nuclear war and easing the economic burdens of the arms race. From recent Soviet actions and statements it appears that the Soviet Union may be reluctant to commit itself to stop testing if that would result in having to accept a position of possible inferiority with respect to the development of nuclear weapons, and if conclusion of a test ban treaty would require acceptance of inspection measures which, in the Soviet view, would result in an undesirable degree of admittance into the Soviet Union.

In addition to these fairly general and long-range considerations, there are perhaps some more immediate causes for apparent Soviet reluctance to agree at this particular time to measures suggested by the West, even when those measures are in areas of logical self-interest to the Soviet Union. Some persons have speculated that present domestic policy within the Soviet Union is a significant factor. According to this theory, the Soviet Government would have a hard time justifying such measures as the June 1 increase in the price of meat and butter and the heavy expenditures for defense, if agreements were being concluded with the West in the field of arms control or disarmament. An additional theory which has been advanced by some persons is that the Soviet Union must appear somewhat militant and uncompromising with the West in order not to lose leadership within the Soviet bloc to the more truculent Red Chinese. Finally, some persons are also of the opinion that Soviet attitudes on reaching agreement with the West concerning disarmament or arms control are influenced by Soviet aims in negotiations with the West on other sensitive matters, such as Berlin. Under this view, the Soviets might wish to take fairly inflexible positions on disarmament, so long as they do not obtain the concessions they are seeking with regard to Berlin.

I am sure you will understand that the considerations which I have outlined constitute speculation; no one is able to say with certainty what motivates the Soviet Union in assuming particular stances.

There is one other factor, however, which I would like to stress. Even where the Soviet Union wishes to enter into agreement with the United States or with the West, it has generally been necessary to engage in arduous and prolonged negotiations. The Soviet Union appears to approach all negotiations with the West with extreme caution, even in relatively unsensitive areas, and this has been an important factor in recent times in making the negotiation of multilateral treaties a lengthy process.

For instance, it took about 14 months to negotiate the 1957 Convention on Conservation of North Pacific Fur Seals, a negotiation in which the Soviet Union as well as Japan, Canada and the United States participated. I might mention also that it took over a year and a half, including 60 preparatory meetings prior to a conference, to negotiate the Antarctic Treaty of 1959 in which the Soviet Union and 11 other countries participated. I would say, therefore, that even in the areas of mutual interest which Mr. McCloy outlined, it cannot be expected, although one would not like to rule out the possibility of exceptions, that results can be achieved rapidly.

I hope that the considerations I have set forth in this letter will be of help to your subcommittee and to Senator SYMINGTON.

Sincerely yours,

WILLIAM C. FOSTER.

EXHIBIT 1

MAJOR WESTERN AND SOVIET SHIFTS OF POSITION IN THE DIRECTION OF AGREEMENT DURING INTERNATIONAL NEGOTIATIONS FOR TERMINATING NUCLEAR WEAPONS TESTS

FOREWORD

The following table summarizes major shifts of position by the United States and United Kingdom on the one side and the Soviet Union on the other in the direction of agreement during international negotiations for terminating nuclear weapon tests. These negotiations took place mainly, but not exclusively, at the Geneva Conference on Discontinuance of Nuclear Weapon Tests (1958–62). The circumstances surrounding these policy developments are briefly described in the accompanying explanatory notes.

The record shows that there were significant moves by both sides during the period 1958–60. By the end of that time there was a considerable record of agreement, as shown by formal approval of the preamble, 17 articles, and 2 annexes of the draft treaty. Informal understandings also had been reached on many other questions.

The United States and the United Kingdom continued to make compromise proposals in the 1961 negotiations, but the Soviet Union then hardened its attitude and refused to offer any new concessions. The first clear sign of a Soviet shift away from agreement appeared when the Soviet Union withdrew its consent to a single Administrator for the control system and demanded instead a tripartite administrative council or "troika." The suggestion for merging the test ban with general and complete disarmament, and persistent denunciation of control as espionage, were further indications that Soviet policy was moving away from a test-ban treaty with international controls.

A reason for this retrograde movement on the part of the Soviet Union became manifest when Moscow announced on August 30 that it was resuming nuclear weapons tests. It then rejected an Anglo-American proposal for a ban on atmospheric tests only and carried out more than 40 tests, mostly in the atmosphere in spite of many appeals by other nations.

While the United States and the United Kingdom continued to advocate a test-ban treaty with international controls—the goal to which the Soviets had also subscribed since 1957—the Soviet Union climaxed its evolution away from this goal on November 27, 1961, when it proposed a test-ban agreement without any international controls. This step on the part of the Soviet Union completely wiped out all the compromises made by its negotiators during the previous 4 years.

The United States and the United Kingdom have completely rejected the new Soviet proposal and have made it clear that they are interested only in a treaty with effective international controls. It is with this aim that they have proposed renewed negotiations with the Soviet Union at the 18 Nation Conference. They have informally outlined to the Soviet Union certain changes in their draft treaty of April 18, 1961. Some of the suggested changes, without departing from the principle of effective international control, would reduce the difference between the two sides. Other changes are intended to strengthen the treaty by providing for earlier installation of the control system and furnishing minimal safeguards against secret preparations for testing.

Subject	United States and United Kingdom	Soviet Union
1. Relationship to disarmament	Separated test ban from disarmament package (1958). Dropped link between progress toward disarmament and continued suspension of tests (1959). Offered to negotiate on test ban in 18-nation disarmament conference (1962).	
2. Principle of international control	Temporary offer of atmospheric test ban without international controls (1961).	After maintaining that international controls were unnecessary (1955–56), proposed international commission and control system to supervise suspension of tests (1957). Participated in Geneva conference of experts (1958) and accepted their report recommending control system.
3. Threshold and moratorium	Proposed ban on tests above threshold of seismic magnitude 4.75 and agreed to moratorium on tests below threshold for duration of seismic research program (1960). Later proposed eventual scientific review of threshold question by international experts and also offered to discuss ways of immediately lowering or abolishing threshold (1961). Proposed comprehensive treaty without threshold (1962).	Advocated comprehensive treaty but accepted threshold provided West agreed to continuing moratorium on tests below threshold (1960).
4. De facto suspension of tests	Announced they would not test for 1 year after beginning of Geneva Conference (1958). United States later extended this period until end of 1959 and refrained from tests until September 1961. United Kingdom said it would not test as long as negotiations showed prospect of success (1959).	Unilaterally renounced tests (1958), then temporarily resumed but stopped again after Nov. 3, 1958. Later declared it would not test unless Western Powers tested first (1959)
5. Veto	Originally proposed majority rule in Commission. Negotiated compromises or alternative arrangements for various items in Soviet veto list.	Originally demanded veto on all substantive decisions, submitted detailed list of veto items. Withdrew some veto demands and accepted alternative arrangements on others. Offered 3 veto-free onsite inspections a year.
6. Onsite inspections	Originally proposed onsite inspection of all unidentified seismic events above equivalent yield of 5 kilotons and 20 percent of unidentified events below that yield (1958). Offered 3 alternative formulas for determining annual quotas: (1) 20 percent of all events above threshold located by control system; (2) 30 percent of all such events still unidentified after application of U.S. criteria; (3) a flat figure of 20 inspections (1960). Proposed sliding scale of 12 to 20 inspections, depending on number of unidentified seismic events (1961). Offered to limit number of inspections in aseismic areas to low-level without increasing quota in context of comprehensive treaty (1962).	
Technical working groups on high-altitude tests, seismic problems, seismic research program.	All groups proposed by Western side.	Participated in all groups. (1) Accepted report of high-altitude group. (2) Produced dissenting report on seismic problems. (3) Reached informal understanding on many projected activities for seismic research program; technical understanding repudiated at political level.

Subject	United States and United Kingdom	Soviet Union
8. Seismic research program	After Soviets refused to participate, United States offered to carry out program; proposed "black box" procedure and pooling arrangement for nuclear devices used in program to guarantee no weapons improvement intended (1960). Accepted Soviet demand to inspect interior of nuclear devices (1961).	Agreed to let United States conduct program if Soviet scientists participated and obtained right to inspect interior of nuclear devices used (1960).
9. Peaceful-uses nuclear explosions	Proposed "black box" procedure for nuclear devices (1959). Accepted Soviet demand to inspect interior of nuclear devices (1961).	Qualified acceptance of peaceful-uses nuclear explosions.
10. Composition of Control Commission	Was willing to accept Control Commission of 3 Western, 2 Communist, and 2 neutral states if U.S.S.R. dropped veto demands (1959). Accepted Soviet demand for parity by agreeing to Commission of 4 Western, 4 Communist, and 3 neutral states (1961).	
11. Administrator	Offered to give Control Commission right to remove Administrator (1961).	Initially denied need for Administrator but accepted single Administrator (1958).
12. Deputy Administrators	Proposed 1 Deputy but later offered (1960) to agree on 5 Deputies (2 from each side and a 1st Deputy).	Originally proposed 2 Deputies (1959). Later accepted Western proposal for 5 Deputies (1960) but differed on manner of appointment.
13. Headquarters staffing	Originally proposed international staffing (1958). Later offered selection by equal thirds from United States, United Kingdom, U.S.S.R., and others (1959).	Proposed selection on basis of parity between 2 sides (1958). Accepted thirds formula but insisted on subdivision of last third among Western, Communist, and neutral states (1959).
14. Staffing of control posts	Originally proposed that staff should be entirely international and that host-country nationals be excluded (1958). Offered thirds formula: ⅓ from United States-United Kingdom, ⅓ from U.S.S.R., ⅓ from other countries (1959). Suggested compromise on last third (1961).	Originally proposed staffing by host-country nationals, with 1 control officer from the other side (1958). Accepted thirds formula but insisted on subdivision of last third among Western allies, Communist allies, and neutrals (1959).
15. Staffing of onsite inspection teams	Originally proposed international staff (1958). Later proposed that teams be made up of nationals of other side (1960). Offered to accept up to ½ neutral staff (1961).	Originally proposed teams made up entirely of host-country personnel, with 1 foreign observer (1958). Later proposed ½ from each side (1960).
16. Number of control posts	Originally proposed 21 control posts for U.S.S.R. (1960). Later offered to reduce number of control posts on Soviet territory to 19 (1961).	
17. Special aircraft flights	Originally proposed giving Administrator right to determine flight patterns with approval of Commission (1958). Later offered to agree that flights should be made along routes selected from those previously agreed with Commission (1960).	

EXPLANATORY NOTES

1. Relationship with disarmament: The American and British actions described above were all moves toward the Soviet position. The first Soviet proposals for a separate ban on nuclear weapons tests, apart from a general disarmament agreement, date from the end of 1955, and the Soviet Union continued to press the issue during the next 3 years. The United States and its allies during this period wished to deal with the problem of tests in the context of a first-stage disarmament agreement including provisions for a cutoff of the production of fissionable materials for weapons purposes, safeguards against surprise attack, reduction of forces and arms, and other measures. The Western working paper, submitted to the Disarmament Subcommittee on August 29, 1957, made the permanent cessation of tests contingent on the introduction of a nuclear cutoff and the satisfactory working of an inspection system.[1]

President Eisenhower declared on August 22, 1958, that the United States accepted the report of the Geneva Conference of Experts and was prepared to negotiate an agreement on the suspension of tests on a year-by-year basis, providing that the inspection system continued to work satisfactorily and satisfactory progress was made "in reaching agreement on and implementing major and substantial arms control measures." The British Government made a similar statement.[2]

The Soviet Union strongly attacked the United States and the United Kingdom for continuing to link agreement on a test ban with progress on disarmament. The issue was frequently raised by the Soviet delegation in the early days of the Geneva Conference on the Discontinuance of Nuclear Weapon Tests. In order to remove what seemed to be a serious obstacle to agreement, the United States and the United Kingdom announced on January 19, 1959, that they would no longer make continuation of a test ban contingent on progress toward disarmament.[3]

The Soviet position on separability underwent considerable change in the summer of 1961. Premier Khrushchev's aide-memoire of June 4, given to President Kennedy at Vienna, suggested the possibility of merging the test ban with general and complete disarmament.[4] Other Soviet statements, before and after the resumption of Soviet tests on September 1, 1961, indicated that the Soviet Union would not accept any international controls apart from general and complete disarmament and sought to justify Soviet testing by blaming the United States and its Allies for failure to reach agreement on disarmament.

After negotiations were resumed in November 1961, the Soviet Union reversed all its previous positions and introduced a completely new proposal for an uncontrolled treaty. When it became clear that the Soviet Union was not willing to negotiate on the basis of a treaty with international controls, the United States and the United Kingdor offered, in January 1962, to transfer the test-ban negotiations to the forthcoming 18-nation Conference on Disarmament and to set up a tripartite subcommittee in that Conference to consider the problem of testing. They made it clear that they were making this proposal only because of the Soviet refusal to negotiate for a controlled treaty. In spite of its previous position, however, the Soviet Union initially rejected the Anglo-American proposal to transfer the negotiations.[5] After the 18-nation Conference convened, it agreed to the establishment of a tripartite subcommittee. As this record shows, this can hardly be characterized as a concession.

2. Principle of international control: On June 14, 1957, the Soviet Union tabled a proposal in the U.N. Disarmament Subcommittee to suspend tests, "if only for a period of 2 or 3 years." Citing American insistence on control as the "main obstacle" to agreement, the Soviet Union asserted that it would agree to control in order to remove this obstacle. It proposed the establishment of an international commission to supervise the test ban and the establishment of control posts on Soviet, American, and British territory and in the Pacific Ocean area.[6] The Soviets rejected a Western counterproposal for an experts meeting to work out a control system on the ground that the West was still linking a test ban with agreement on a nuclear production cutoff.[7]

Both sides accepted the report of the 1958 conference of experts. For 3 years the Soviet Union, though unwilling to accept many control proposals tabled by the United States and the United Kingdom at Geneva, did not question the need for international control in principle. Just before the Soviet Union resumed testing, however, Ambassador Tsarapkin stated that test-ban controls without disarmament would be a "system of espionage" and that the Soviet Union would not agree to any control while the arms race continued.[8]

Immediately after the Soviet Union resumed testing, President Kennedy and Prime Minister Macmillan proposed to Premier Khrushchev a ban on nuclear tests in the atmosphere. The aim of this proposal was to "protect mankind from the increasing hazards from atmospheric pollution and to contribute to the reduction of international tensions." They declared that existing means of detection were adequate and that international controls were not needed for an atmospheric test suspension. At the same time they reaffirmed their desire for a more comprehensive treaty covering other forms of testing.[9]

This was the only American test-ban proposal which did not provide for international controls. It remained open only until September 9, when Premier Khrushchev rejected it.[10] It has not been renewed.

3. Threshold and moratorium: Review of seismic data from the Hardtack series of

tests (October 1958) showed that the Geneva system was less capable of distinguishing underground explosions from earthquakes than the conference of experts had believed. The United States presented the new seismic data at Geneva on January 5, 1959,[11] and subsequently urged a technical view of the problem of detecting and identifying underground nuclear explosions. This problem was also reviewed by the Berkner Panel, a group of American experts.[12] The Western and Soviet members of technical working group II, finally convened in November 1959, were unable to reach agreement on interpretation of the new data.[13]

Since there then seemed to be no ready way of improving the capabilities of the Geneva control system without insisting on a level of inspection unacceptable to the Soviets, the United States decided to try a new approach. On February 11, 1960, Ambassador Wadsworth proposed a ban on all tests in environments where control was possible under a control system acceptable to all concerned. These environments included the atmosphere, the oceans, and (to the extent possible) outer space. They also covered underground tests above a threshold of seismic magnitude 4.75. Ambassador Wadsworth made it clear that the United States hoped to achieve a comprehensive treaty as soon as this was technologically feasible and that it was planning an experimental seismic research program aimed at the development of improved means of detection and identification.[14]

The Soviet Union, after denouncing the United States for allegedly turning its back on a comprehensive treaty, eventually accepted the 4.75 threshold, and it also proposed a moratorium on tests below the threshold while the research program was being carried out.[15] President Eisenhower and Prime Minister Macmillan announced on March 29 that they would be willing to institute a "voluntary moratorium of agreed duration" on nuclear weapons tests below the threshold, by "unilateral declaration of each of the three powers." [16]

The Soviets agreed that the moratorium could be instituted by parallel declarations. They insisted, however, that it should last for 4 or 5 years and that states should not be automatically released from their obligations even if the research program proved unsuccessful.[17]

The United States and the United Kingdom hoped that the research program would succeed and that it would be possible to reduce or eliminate the threshold when the moratorium expired, but they would not commit themselves in advance to continue the moratorium without knowing what the results of the research program would be. Moreover. the longer the moratorium continued after the completion of the research program, the longer the period of an uncontrolled obligation not to test below the threshold. The United States tabled a definite proposal on the length of the moratorium on September 27, 1960. It then proposed that the moratorium should "become effective, upon the signature of our treaty, for such period as then remains of the 2-year seismic research program, plus a period of 3 months to review the results of that program." [18] Ambassador Dean proposed extension of the moratorium to 3 years on March 21, 1961.[19]

The United States regarded extension of the moratorium as a definite step toward meeting Soviet views on its duration. The Soviet Union nevertheless refused to change its position on this question, and it persistently charged that the United States was plotting to resume tests below the threshold as soon as the moratorium expired. This charge was repeated in the Soviet aide memoire of June 4, 1961.

Ambassador Dean offered two further proposals on the moratorium issue on August 28, 1961. The first proposal called for a review of the results of the research program by a group of scientists from countries represented on the Control Commission. Acting by majority vote, these scientists could recommend changes in the control system and the lowering or abolition of the threshold. The Control Commission, also acting by majority vote, could then formally recommend amendments to the treaty. The second proposal was even more thoroughgoing. It was a suggestion for an immediate reexamination of the Geneva system in order to find ways of immediately lowering or abolishing the threshold.[20] Both proposals were rejected at once by the Soviet Union.

In the March 1962 discussions at the 18 nation conference, the United States indicated that it was now prepared to drop the threshold and to make the treaty comprehensive at the outset. Moreover, it was willing to do this without increasing the annual quota of on-site inspections or the number of control posts on Soviet territory. Under the new American proposal, most on-site inspections would be specifically allocated to seismic areas, and only a few would be assigned to other regions.

4. De facto suspension of tests: On March 31, 1958, just after the completion of a series of nuclear tests, the Supreme Soviet adopted a decree suspending Soviet nuclear tests. The decree stated that the Supreme Soviet was "prompted by the desire to make a practical start toward a general discontinuance of atomic and hydrogen weapons tests" and appealed to other nations to follow suit. If other countries did not do so, the Soviet Union reserved the right to resume testing.[21]

The United States and the United Kingdom refused to cancel their planned tests in response to the Soviet action. On August 22, 1958, immediately after the Conference of Experts had produced an agreed report, President Eisenhower declared that the United States was prepared, unless the Soviet Union resumed testing, to withhold further tests for 1 year after the beginning of negotiations (October 31). The British Government took a similar position.[22]

The Soviet Union attacked the United States and the United Kingdom for their continued testing after the Soviet action of March 31. On August 29 Premier Khrushchev told Pravda that the American and British tests released the Soviet Union from its unilateral obligation.[23] Soviet tests were later resumed and continued until November 3, 1958. After that date both sides refrained from testing.

The Department of State announced on August 26, 1959, that the President had directed extension of the unilateral suspension of American tests to the end of the year. The Department stated that, as far as could be determined, the Soviet Union had conducted no tests since November 3, 1958. It explained that the United States wished to allow "a reasonable time for the negotiations to proceed following their resumption on October 12, 1959." [24] The British Foreign Office also announced on August 27 that the United Kingdom would not resume testing while useful discussions continued at Geneva.[25] Immediately after the American and British statements, the Soviet Government declared that its Council of Ministers had resolved not to resume tests in the Soviet Union if the Western powers did not resume testing.[26]

President Eisenhower, stating that no satisfactory agreement was in sight, said on December 29, 1959, that the voluntary moratorium would expire at the end of the year as scheduled. The United States would then consider itself free to resume testing but would not do so without giving advance notice.[27]

In an address of January 14, 1960, to the Supreme Soviet, Premier Khrushchev reemphasized that the Soviet Government would continue to abide by its pledge not to renew tests unless the Western Powers started testing.[28] Later that year the Soviet Union supported two U.N. General Assembly resolutions urging states participating in the Geneva negotiations to continue their voluntary suspension of tests.[29] The United States abstained on both resolutions. As Assistant Secretary of State Wilcox explained, the United States was "frankly concerned over the possibility that an indefinite extension of the voluntary suspension of nuclear testing may come to be regarded as an acceptable alternative to the achievement of a safeguarded agreement on nuclear testing." [30]

Both in 1959 and in 1960 the General Assembly passed resolutions urging France to refrain from testing.[31] These resolutions were supported by the Soviet Union, which charged from time to time that the French were testing on behalf of their American and British allies. The Soviet delegation at Geneva, however, did not raise the question of French tests until March 21, 1961.[32] On May 15 Ambassador Tsarapkin read into the Conference record a statement by the Soviet Government warning that continuation of French tests might "compel it to resume atomic and hydrogen bomb tests" [33] Although there were no further French tests before it announced resumption of testing, the Soviet Government cited the French testing program as an excuse for its action.[34]

Moscow announced resumption of Soviet tests on August 30. After the third Soviet test, President Kennedy stated on September 5 that the United States would resume tests "in the laboratory and underground, with no fallout." [35] In spite of Soviet rejection of the Anglo-American proposal for a ban on atmospheric tests, and extensive Soviet testing in the atmosphere, the United States conducted no atmospheric tests in 1961. On November 2 the President declared that the

United States would undertake such tests if they were necessary to "maintain our responsibilities for free world security," and he ordered preparations for atmospheric tests to be made.[36]

At the 16th session of the General Assembly the majority of nations favored an Indian resolution urging a new moratorium on testing while negotiations continued for a controlled test-ban treaty.[37] Passed by a large majority, this resolution was opposed by both the Soviet Union and the United States. The Soviet Union took the position that the test ban should be dealt with in the context of general and complete disarmament. The United States opposed the Indian resolution because it amounted to a return to the kind of uninspected moratorium which the Soviet Union had just violated, and the U.S. representative declared that the United States reserved the right to take necessary measures to preserve its security and the security of its allies.[38] The General Assembly also approved by a large majority an Anglo-American resolution urging renewed negotiations for a test-ban treaty with effective international controls. The renewed efforts to negotiate an effectively controlled treaty with the Soviet Union failed. After careful review by the National Security Council, President Kennedy announced on March 2, 1962, that the United States would conduct atmospheric tests over the Pacific Ocean in the latter part of April unless the Soviet Union agreed to a treaty before that time.[39]

5. Veto: Early in the Conference, the United States and the United Kingdom indicated that they expected most of the decisions of the control organ to be made by majority vote. On November 29, 1958, the Soviet Union attacked the Western position, alleging that it meant that "instead of all questions relating to the carrying out of the agreement on the cessation of nuclear weapon tests being decided unanimously, a method involving the dictatorship of two countries—the United States and the United Kingdom—would be set up in the control organ, thus imposing the will of those States on the Soviet Union."[40] The Soviet delegation later introduced a formal proposal stipulating that all substantive decisions by the Control Commission should include the affirmative votes of the three original parties.[41]

The British had meanwhile proposed that all decisions by the Control Commission should be made by majority vote, "except as otherwise expressly provided." Ambassador Wadsworth replied to Soviet criticisms by pointing out that the Western proposals did not permit either obstruction by one side or domination by the other. At the same time he characterized the Soviet demand for broad veto authority as a proposal to permit obstruction of necessary action.[42]

The problem of a veto on on-site inspections was of crucial importance, since there could be no assurance that States were fulfilling their obligations to refrain from underground nuclear tests unless the international control organization could make on-site inspections of seismic events that could not be positively identified as of natural origin by analysis of data received by the control posts. By demanding an absolute veto of on-site inspectors, however, the Soviet Union was in effect insisting that the Western Powers accept its word concerning unidentified seismic events without any verification procedures.

When Prime Minister Macmillan visited Moscow at the end of February, he informally suggested to Premier Khrushchev the possibility of agreeing in advance on a certain number of on-site inspections to be carried out each year. He did not propose a specific quota, and the Soviets did not immediately accept the British suggestion.

Since there seemed to be no basis for agreement on this vital question, President Eisenhower suggested, in a personal message of April 13, 1959, to Premier Khrushchev, that agreement might initially be limited to tests in the atmosphere below an altitude of 50 kilometers.[43] By thus restricting the scope of coverage of the treaty to the atmosphere, the need for on-site inspections would be eliminated. Premier Khrushchev rejected this proposal but stated that agreement would be possible on the basis of the Macmillan suggestion.[44] In a letter of May 14 to the President, he said that agreement on a definite number of inspections each year would preclude the need of voting and that inspection teams could be sent to the sites of unidentified events at the request of any of the original parties, when readings obtained by control posts provided a basis for suspecting a nuclear explosion.[45]

The Soviet delegation at Geneva tabled a formal proposal for annual inspection quotas on July 9, 1959,[46] but it did not then specify a number. The Soviets consistently took the position that the quota should be a political "compromise" and should not bear any relation to the number of seismic events which would be detected but not identified by the control system. Finally, on July 26, 1960, Ambassador Tsarapkin proposed an annual quota of three on-site inspections.[47] As noted below, this figure was far removed from the number which the United States considered necessary for minimum deterrence against violation.[48]

Compromise solutions or alternative arrangements were found for other items on the Soviet veto list. The agreed amendments article gave the Control Commission the right to recommend amendments by a simple majority. The conference of parties could then adopt them by a two-thirds majority, and they would go into force when ratified by two-thirds of the parties, including the three original parties.[49] This procedure removed the veto from the Commission but preserved it in the final stage of the amendment process.

Another item on the Soviet veto list was that on "treaty violations." The Western Powers had proposed giving the Commission the right to determine formally that the treaty had been violated. Ambassador Tsarapkin charged that the other side might use alleged treaty violations as a political weapon in the cold war. He took the position that the Commission, if it could not agree on the facts after thorough discussion, should simply report to the governments concerned and the U.N.[50] The Western Powers did not press the "treaty violations" question. They tacitly dropped the idea in the 1959 negotiations, and the Soviet Union agreed to eliminate this item from the veto list.[51] The agreed duration article recognized the "inherent right of a party to withdraw and be relieved of obligations hereunder if the provisions of the treaty and its annexes, including those providing for the timely installation and effective operation of the control system, are not being fulfilled and observed."[52] Each government was thus to judge whether the treaty was being faithfully observed. By dropping their proposal for a formal finding of violation, the Western Powers in effect made a move toward agreement.

The United States and the United Kingdom agreed that the three original parties should have a veto in the appointment of the Administrator. They made an attempt to write into the treaty exact language describing his functions. The negotiations on this subject were long and complex, and only partial agreement had been reached by the end of 1960. When negotiations were resumed in the following year, the Soviet Union completely destroyed this by insisting on a tripartite administrative council or "troika."

After initial Soviet resistance it was provisionally agreed on December 11, 1959, that the Administrator should have the power to develop and arrange for the execution of a program of research and development.[53] It was understood, however, that any major revisions in the control system would require treaty amendment, which could not be finally implemented without the unanimous concurrence of the three original parties. Thus, both sides modified their original positions on this question.

The Soviet representative offered on July 16, 1959, to drop the demand for a veto on the location of control posts and the routes for aircraft flights if the treaty contained provisions for determination of these matters by agreement with the host governments.[54] The Western Powers proposed that if a location recommended by the Commission proved unacceptable to the host government, the latter should provide an alternative site which in the judgment of the Commission met the requirements of the system.[55] A Soviet proposal of January 26, 1960, accepted this principle.[56]

Agreement in principle on the siting of control posts did not, however, solve the problem of routes for aircraft flights. That question was exhaustively examined by the Conference in the early months of 1960. The Western Powers finally offered a compromise package proposal: They would agree to the Soviet demand that special aircraft flights must be made over routes laid down in advance if the Soviet Union accepted their proposal that the Administrator should be allowed to select two technical observers for the flights.[57] The Soviet Union, however, still refused to accept the Western proposal for technical observers.

On November 25, 1959, Ambassador Tsarapkin assured the Western delegations that there was no question of enlarging the veto list, and he said that there then remained on it only the items on staffing and the budget.[58] A Soviet package proposal of December 14, 1959, was addressed to these problems. Ambassador Tsarapkin asserted that it contained "important concessions" to the Western position. The Soviet Union then offered to agree to the Western proposal for staffing control posts by thirds, provided that the West agreed to subdivide the "third third" of the staff into Western, Communist, and neutral thirds. It also offered to have decisions on an itemized budget made by a two-thirds majority of the Commission. Both the staffing and the budget provisions, however, were contingent on acceptance by the West of the Soviet demand for a Commission composed of three Western states, three Communist states, and one neutral state.[59] As the U.S. representatives pointed out, no decisions on the budget could be taken if the Communist side objected, since a two-thirds majority in a 3–3–1 Commission would be unobtainable in that case.[60] The staffing question is examined below.

In 1959–60 the Conference made substantial progress in overcoming the serious obstacle posed by the Soviet veto demands. The area of agreement thus achieved represented a significant achievement, and the remaining differences might well have been solved if the Soviet Union had shown any desire to find solutions acceptable to both sides. On March 21, 1961, however, the Soviet Union introduced a completely new demand for a tripartite administrative council, or troika, to replace the single Administrator. All decisions in the troika, consisting of one Westerner, one Communist, and one neutral, were to be made on the basis of unanimity.[61] The Soviet Union thus reintroduced at the administrative level the veto demands which it had expressly abandoned in the work of the Control Commission. The Western powers rejected the troika and refused to compromise on the question of a single Administrator.

6. On-site inspections: The 1958 Conference of Experts recognized that it would not be possible, on the basis of data obtained by the control posts, to identify as earthquakes all seismic events. On-site inspection was therefore necessary to ascertain whether unidentified seismic events detected by the control system were really of natural origin.

The United States and the United Kingdom realized from the beginning that onsite inspection of all unidentified seismic events would not be politically or logistically feasible. Article 7 of U.S. draft annex I, tabled December 16, 1958, provided for inspection of all unidentified seismic events with an estimated equivalent yield of 5 kilotons or more, 20 percent of unidentified events below that yield, and any events below that yield that had an "unusually high probability of being of nuclear origin." The events to be inspected were to be selected "on a random basis." [62] As was shown above, the Soviet Union reacted to the U.S. proposals by demanding an absolute veto on onsite inspections.[63]

The 1958 U.S. proposals was based on the assumption that the Geneva system had the capabilities outlined in the report of the conference of experts. The new seismic data obtained from the Hardtack series of tests, however, required a complete review of the whole problem of identifying seismic events. The conference of experts had based their conclusions to a considerable extent on the "sign of first motion" on seismographs, and the new data showed that this sign was much less reliable than had been previously believed. The Soviet members of technical working group II, convened at the end of 1959, did not concur in the American interpretation of the data and held that the Geneva system was still as valid as ever. In the Western view, however, the control system would detect but be unable to identify many times the number of events estimated by the Geneva experts in 1958.

To find a way out of this technical impasse, the United States decided to embark on a seismic research program to improve the capabilities of the system. Moreover, in an attempt to get agreement on a level of on-site inspections that might be acceptable to the Soviets and still provide adequate deterrence against violation, the United States introduced its phased treaty proposal of February 11, 1960, which did not cover underground tests below a threshold of seismic magnitude 4.75. When he introduced this proposal, Ambassador Wadsworth stated that either of two formulas could be used for computing the number of unidentified events above the threshold that should be inspected: (1) 20 percent of all unidentified events located by the system, or (2) 30 percent of all events left unidentified after U.S. criteria had been applied. Since the United States estimated that there would be about 100 unidentified seismic events above the threshold in the Soviet Union each year, about 20 on-site inspections would be required under either formula.[64] The United States was also willing to agree on a flat figure of 20 inspections.

In the 1961 negotiations, after Ambassador Tsarapkin had charged the Western powers with greatly overestimating the number of unidentified seismic events that would take place each year in Soviet territory, the United States proposed a "sliding scale" to cover this eventuality. The maximum would remain at 20, but if the number of located seismic events did not rise above 60 in a given year, only 12 inspections would take place. There would be a right to conduct one additional inspection for each five unidentified events above 60.[65]

The Soviet Union rejected all the Western proposals for an inspection quota, and offered in return only three veto-free inspections a year. This represented a change in the original Soviet position of demanding a veto on all inspections, but the Western powers regarded the proposed figure as entirely inadequate.

On the question of technical criteria of eligibility for inspection of unidentified seismic events, the Soviet Union made a move toward the Western position on February 16, 1960, when it proposed criteria based in part on the recommendations of the American members of Technical Working Group II,[66] and it later accepted an American amendment clarifying the foreshock criterion.[67] The Western powers felt, however, that the Soviet criteria contained two potential loopholes: (1) They required an event, in order to be eligible for inspection, to be precisely located within an area of 200 square kilometers, and (2) they referred to "suspicious" events—a term not used in the Western proposals.[68] All attempts to persuade the Soviets to alter the language of their proposal in order to eliminate these possible loopholes are unsuccessful.

In March 1962 the United States offered to abolish the threshold and make the treaty comprehensive from the outset, without raising the number of onsite inspections it had previously proposed. As Secretary of State Rusk explained to the 18th nation Conference on March 23, 1962, these moves were made possible by "increased experience and increased scientific knowledge." At the same time the United States suggested that the quota of inspections could be so allocated that most inspections would be conducted in highly seismic areas and only a few would be permitted in the heart of the Soviet Union, which is virtually aseismic.

7. Technical working groups: During the course of the conference, the Soviet Union accepted Western proposals for three technical working groups. Only one of these resulted in substantial agreement. Of the others, one produced radical disagreement between the Western and Soviet experts; and the other resulted in a technical understanding which was repudiated by the Soviet Union at the political level.

The 1958 conference of experts did not recommend a control system for the detection and identification of tests in outer space or at high altitudes in the earth's atmosphere. In the summer of 1960 the Soviet Union, in response to repeated Western proposals, agreed to participate in a special technical working group on these problems. The agreed report of this group, dated July 10, 1959, recommended the launching of earth and solar satellites and the installation of certain additional equipment at ground stations, to detect and identify high-altitude tests.[69] In the 1961 negotiations the United States submitted concrete proposals based on the report of this group,[70] and these were accepted by the Soviet Union.[71]

On the other hand, technical working group II on seismic problems was almost a total failure. On January 5, 1959, the United States had tabled the new seismic data obtained from the Hardtack tests.[72] The Western Powers had repeatedly urged the need for review of these data by an international group of experts. Since the data cast grave doubt on the capability of the Geneva system to identify seismic events, such a review was urgently needed in order to enable the political Conference to deal with the problem of underground testing. The Soviet Union did not agree to set up the group until November. Agreement was reached only on a few minor technical improvements in the equipment of control posts. The Soviet experts, apparently responding to political direction by their Government, refused to accept the Western interpretation of the Hardtack data and argued that the Geneva system was still as valid as ever. The American and British experts submitted separate reports in which they showed that the sign of first motion and other criteria relied on by the 1958 conference of experts were much less valid than had been supposed and that the capability of the Geneva system was greatly reduced.[73]

The problem of identifying underground explosions remained unsolved. On February 11, 1960, the United States proposed a treaty banning underground tests above a threshold of seismic magnitude 4.75, and it invited the Soviet Union to join in a research program to improve the capabilities of the control system to permit eventual lowering or abolition of the threshold.[74] The Soviet Union responded by proposing a moratorium on tests below the threshold and it agreed to participate in a coordinated research program.[75]

A seismic research program advisory group was convened in May to discuss the research program. In the course of its meetings, the scientists of the United States, the Soviet Union, and the United Kingdom discussed various research projects, and the Soviet experts indicated that they regarded nuclear exposions as technically useful for research purposes. The Soviet position was reversed, however, on May 27, 1960, when Ambassador Tsarapkin declared that the Geneva system was still valid and that the Soviet Union saw no need for conducting any research nuclear explosions. At the same time, he demanded full participation by Soviet scientists in the American program.[76]

8. Seismic research program: After the refusal of the Soviet Union to participate in a coordinated program, the United States continued with its own plans. Although the Soviet Union claimed that the program was unnecessary, it was willing for the United States to carry it out. At the same time, it expressed great concern that the United States might use the program as a cover for nuclear weapons tests.

In an effort to allay Soviet concern on this score, Ambassador Wadsworth proposed on June 2, 1960, that the nuclear devices to be used in the program should be placed in a special repository (the "black box") under international supervision until use, that no diagnostic instrumentation be permitted near the site of detonation, and that all yield measurements be made under the surveillance of other parties.[77] Ambassador Tsarapkin rejected these proposed safeguards as "fictitious" and demanded full participation by Soviet scientists and the right to examine the interior structure of all nuclear devices used. He warned that the Soviet Union would regard any research nuclear explosions conducted without agreed safeguards as weapons tests and that the Soviet Union would resume weapons testing in that event.[78]

On July 12 Ambassador Wadsworth offered a new proposal. He then suggested that the three nuclear powers pool a number of obsolete nuclear devices for use in the program and keep them under surveillance until use. Representatives of the three powers would be allowed to examine the internal structure of the devices, and the President was prepared to request revision of the Atomic Energy Act for this purpose, if the Soviets agreed to the proposal.[79] The Soviet Union was unwilling to contribute any nuclear devices to the proposed pool and reiterated its previous demands.[80]

As part of a group of compromise offers, Ambassador Dean stated on March 21, 1961, that the United States was now willing to accept the Soviet demand for internal inspection of the nuclear devices used in the research program and that the President was willing to request revision of U.S. legislation to permit this if agreement on other treaty provisions was in sight.[81]

The Soviet Union accepted the new American proposal, which substantially embodied its own previous "safeguards" demands.[82] But it still opposed any research on "decoupling," i.e., the muffling of deep underground explosions, with the argument that such research was designed to find ways of evading the treaty.[83]

9. Peaceful-uses nuclear explosions: From the beginning of the negotiations, the United States advocated treaty provisions permitting nuclear explosions for peaceful purposes under proper safeguards. To provide assurance that such explosions would not be used as a cover for weapons tests, Ambassador Wadsworth tabled the "black box" proposal on January 30, 1959. This proposal provided that nuclear devices to be used for peaceful purposes should be placed in a depository on or before the date the treaty was signed and kept under continuous surveillance until used. The devices placed in the "black box" were not subject to internal inspection, but any other devices used for peaceful purposes could be inspected internally by representatives of the original parties.[84]

The Soviet Union rejected the "black box" proposal. It initially took the position that all nuclear explosions, even those conducted for peaceful purposes, should be banned. It later agreed that some explosions could be conducted, if the other side was given the right to inspect the internal structure of the devices used. It also demanded absolute parity between the two sides in the number of peaceful nuclear explosions.[85]

On March 21, 1961, the United States offered to accept examination of the internal structure of devices used for peaceful explosions, provided agreement on other treaty provisions was forthcoming.[86] The Soviet Union professed to be satisfied with these safeguards but still insisted on parity in the number of peaceful explosions.[87] The United States did not accept the Soviet demand for a one-for-one correspondence between Western and Soviet explosions. As Ambassador Dean pointed out, this might mean that after the first American explosion, the United States might not be able to carry out a second until the Soviet Union had followed suit.[88]

10. Composition of the Control Commission: The conference early agreed that the Control Commission should consist of the United States, the United Kingdom, the Soviet Union, and four states elected by the conference of parties.[89] On February 11, 1959, Ambassador Tsarapkin demanded that the elective seats should be so distributed as to give the Soviet Union and its allies "parity" with the Western powers. This meant that the Soviet Union was proposing a Control Comission consisting of three Western states, three Communist states, and one neutral state.[90] The United States did not accept this proposal. On March 2, Ambassador Wadsworth offered, if the Soviet Union dropped its veto demand, to agree to a Control Commission consisting of three Western, two Communist, and two neutral states.[91] The Soviet Union, however, continued to insist on parity.

When the negotiations were resumed on March 21, 1961, Ambassador Dean stated that the United States was now willing to accept the Soviet demand for parity provided agreement was reached on other treaty provisions. He proposed that the Commission be enlarged to 11 members and consist of 4 Western, 4 Communist, and 3 neutral states.[92] This proposal was accepted by the Soviet Union.[93]

11. Administrator: The initial Soviet control proposals, tabled December 8, 1958, contained no provision for an Administrator and provided for operation of the control system by the Control Commission itself.[94] In response to Western arguments, however, the Soviet Union consented to article 3, which provided for an Administrator.[95] During the 1959–60 negotiations it also reached agreement with the United States and the United Kingdom on many of the Administrator's functions. It is true that the Soviet Union showed a persistent desire to restrict the powers of the Administrator in these negotiations, but it did not retract its previous agreement that there should be a single Administrator.

A crucial shift of Soviet policy away from agreement with the Western Powers occurred on March 21, 1961, when Ambassador Tsarapkin introduced a radically new demand for replacement of the Administrator by a tripartite administrative council or troika composed of one Western member, one Communist member, and one neutral member. Since the troika was to operate on the basis of unanimity, the Soviet Union would have a veto on vital operations of the control organization, although it had withdrawn or compromised the items on its list of Control Commission decisions requiring a veto.[96]

The Western Powers felt that the troika demand struck at the heart of the control system and would make effective control impossible. They therefore made no moves toward the Soviet position on this question. They did, however, propose formal treaty language on August 30 giving the Control Commission the right to remove from office any Administrator who was insubordinate, incompetent, or incapable of carrying out his office. They felt that this safeguard should meet any legitimate concern on the part of the Soviet Union that the Administrator might prove partial to the Western side.[97]

12. Deputy Administrators: On December 3, 1959, the Soviet representative proposed the appointment of two Deputy Administrators, one from each side, who were to advise the Administrator on all his activities.[98] This proposal was unacceptable to the Western Powers. On January 14, 1960, the U.S. representative proposed a single Deputy Administrator, whose appointment was to be subject to the veto in the Control Commission, and who would act as Administrator if necessary.[99] The Soviet Union rejected this proposal and countered with a proposal for three Deputies—one Westerner, one Communist, and one neutral.[1] The Western representatives refused to accept this forerunner of the troika.

Later in 1960 the British representative proposed a plan for five Deputies. The First Deputy, chosen by the Control Commission with the concurrent votes of the three original parties, would replace the Administrator if the latter should be absent or incapacitated. The other four Deputies, equally divided between the two sides, would be chosen by the Administrator.[2] The Soviet Union accepted the British compromise on the number of Deputies,[3] and the United States also concurred. The United States, however, did not commit itself to the proposition that the First Deputy would necessarily have to be a neutral, as the British and Soviet representatives stated.[4]

The Conference remained split on the method of appointing the deputies. It was agreed that the Control Commission should appoint the first deputy, but the Soviet Union refused to agree that the other four should be named by the Administrator. It rejected a British compromise of October 20, 1960, to have all five chosen by the Administrator with the approval of the Control Commission.[5]

Soviet acceptance of the original British compromise on the number of deputies was withdrawn when the Soviet Union introduced its demand for a "troika" to replace the Administrator.[6]

13. Headquarters staffing: At the beginning of the Conference the Western Powers took the position that the headquarters staff of the control organization should be chosen on a purely international basis.[7] The Soviet Union, on the other hand, proposed selection on the basis of parity between the two sides, i.e., one-half would come from the United States or the United Kingdom and the other half from the Soviet Union.[8]

In an effort to reach agreement on this question, Ambassador Wadsworth proposed on March 5, 1959, that the headquarters staff be divided into thirds: one-third from the United States and the United Kingdom, one-third from the Soviet Union, and one-third from other countries.[9] In its package proposal of December 14, 1959, the Soviet Union accepted the thirds formula but insisted that the last third should be equally subdivided among Western allies, Soviet allies, and neutrals.[10] As noted below, the Soviet Union rejected a 1961 Western compromise on the "third third."

When the Western Powers proposed their compromise on the five Deputy Administrators, they also agreed that the assistants to the four deputies chosen from the two sides should come from the other side than the deputies themselves, i.e., if a deputy was in American or British national, his assistant would be a Soviet national. In this way they met the Soviet demand for parity in the top echelons of the headquarters organization.

14. Staffing on control posts: Starting from diametrically opposed positions, both sides made considerable moves toward agreement on the staffing of control posts. The United States and the United Kingdom proposed at the beginning of negotiations that the staff be selected on an entirely "international" basis, except that no host-country nationals should be included.[11] The Soviet Union, on the other hand, proposed that the control posts be manned entirely by host-country nationals plus one control officer from the other side.[12]

After the Soviet Union had shown some willingness to raise the number of foreigners at control posts, the Western Powers proposed on July 20, 1959, to recruit the staff in equal thirds from the United States and the United Kingdom, the Soviet Union, and other countries.[13] They thus accepted the Soviet contention that host-country personnel should participate.

The Soviet package proposal of December 14, 1959, accepted the thirds formula for staffing control posts but stipulated that the "third third" should be subdivided among Western allies, Soviet allies, and neutrals.[14]

The Western Powers did not accept the Soviet formula for exact subdivision of the third third but offered various compromises to assure the Soviet Union that its legitimate interests would not be prejudiced. On March 28, 1961, Ambassador Dean proposed a treaty provision requiring the Administrator "to keep a numerical balance within the 'third third' between the U.S.S.R. and its associated powers, on the one hand, and the United States and the United Kingdom and their respective associated powers, on the other." The remainder of the third third, if any, would be made up of neutrals.[15] The Soviet Union rejected this compromise on the ground that it was vague, elastic, and gave too much power to the Administrator.[16]

15. Staffing of onsite inspection teams: As in the other staffing questions, there was an initial clash between a Soviet demand for inspection by host-country nationals [17] and a Western proposal for selection on an international basis.[18] But the Western Powers never acceded to Soviet demands for the participation of host country personnel in the teams, even on a partial basis, since they believed that this would be tantamount to self-inspection.

The Soviet Union modified its original demand to the extent of allowing one-half of the personnel of inspection teams to be made up of nationals of the other side.[19] As indicated above, this was not acceptable to the Western Powers. In order to give the Soviet Union additional assurance that the inspection teams would not engage in any improper activities, they proposed on August 30, 1961, to allow up to one-half of the personnel to be recruited from neutral countries.[20] The Soviet Union did not accept this proposal.

16. Number of control posts: U.S. draft annex I, submitted July 21, 1960, proposed 21 control posts on Soviet territory.[21] The Soviet Union refused to accept this figure and argued that it was too high. The controversy involved the technical problem of distributing control posts on the continent of Asia. The total number for the continent had been laid down by the 1958 conference of experts, but the Soviet Union and the Western Powers and conflicting views as to the proper allocation of posts from the Asian allotment. The Soviet Union advanced a counterproposal for only 15 posts on its own territory,[22] a figure which the Western Powers considered too small.

In an effort to reach agreement on this question, the Western Powers offered on March 21, 1961, to reduce the number of control posts on Soviet territory to 19.[23] The Soviet Union refused to modify its previous position and dismissed the Western compromise as a "propaganda trick." [24]

17. Special aircraft flights: The 1958 conference of experts had recommended special aircraft flights in certain cases to intercept clouds suspected of containing radioactive debris from possible nuclear explosions. Both sides agreed that these flights should be carried out by host-country planes and that their routes should generally be selected from those laid down by previous agreement between the host country and the Control Commission. The Western Powers, however, insisted that the observers from the control organization responsible for the technical operation should not come from the host country, while the Soviet Union demanded parity, i.e., one observer from the Soviet Union and one from the Western side. The Western Powers also felt that the flight routes might sometimes require departure from previously agreed routes.

These questions were debated at great length in the early months of 1960. The Western Powers eventually offered to drop their reservation on ad hoc routes, provided that the Soviet Union accepted two foreign (and no host-country) obserevrs on the flights.[25] The Soviet Union rejected the proposal on observers.[26]

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have three editorials relating to this subject, one from the Washington Post and Times Herald and two from the New York Times, printed in the Record.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Washington Post, Aug. 8, 1962]

DIFFERENCES AT GENEVA

The Soviet Union's apparent disinterest in the new American test-ban proposals will only deepen the dismay and helplessness already felt by the millions of people, including the Russians, who look to the negotiators at Geneva to express their feelings in treaty form. Mr. Zorin, having heard only a preliminary exposition of the altered American position, has announced that he sees "no great hope" in it.

The Soviet diplomat is so cheerless because, he says, "the United States continues to adhere to old principals which are not acceptable." Presumably, these are the principles of international supervision of control posts and of the right to on site inspection. The Soviet Union equates these with a license for espionage and on that ground continues to reject them both.

Unhappily, the differences at Geneva go beyond the tabled issues. The United States is trying to put its science at the service of both Soviet and American security by making the Project Vela findings the basis of a proposed ban that would be both effective and self-enforcing. No comparable Soviet effort to meet its own or American security needs with technology is visible. Instead, the Soviets have elevated their obsession with espionage to the level of a legitimate preoccupation with national security. This merely compounds the very problem, of mutual distrust, which our control proposals are designed to obviate.

We do not trust the Soviets to abide by a test-ban agreement without built-in policing measures. They do not trust us to use such measures only for their stated purpose. Our distrust flatly exists; it will continue until the Soviets allay it. The Soviet distrust of us, however, would seem subject to diplomatic ingenuity. Surely a set of rules can be devised that would decrease and perhaps eliminate the potential for espionage while at the same time allowing adequate treaty enforcement. The deadly thud of the tests at Novaya Zemlya and Semipalatinsk makes a search for such rules essential.

[From the New York Times, Aug. 11, 1962]

One More Soviet "No"

The Soviets have dealt another damaging blow to the 17-nation Disarmament Conference at Geneva. One day after their categorical rejection of even a minimum of international inspection of possible nuclear test-ban violations on their soil, they now just as categorically reject any international verification of general disarmament within their territory. In doing so they have also rejected the further American concessions designed to meet Soviet objections to unlimited inspection by proposing a sampling technique confined to designated zones that would be expanded only as disarmament progressed.

After 5 months of intermittent debate the Geneva Conference has thus arrived at the same deadlock on the same basic issue that wrecked previous disarmament talks but is crucial to any disarmament agreement—the issue of inspection and control. The Soviets have paid lipservice to international inspection and control, but have evaded any practical steps toward it and have now rejected the very principle of it. And they have done so on the absurd ground that any inspection by foreigners constitutes espionage.

The Soviet plan for total disarmament submitted at Geneva still provides for international inspection of disarmament measures which could be staged for the benefit of guided inspectors in the same manner in which Potemkin, a Russian Governor, staged fake villages for the benefit of his Empress. But even that concession is now in doubt, and in any case the Soviets adamantly reject any verification of any armament they retain or rebuild. On such verification, however, depends the balance of power that now preserves peace.

[From the New York Times]

Our Test Ban Concessions

As the Soviets continue their nuclear test explosions the United States launches a new effort for agreement on a treaty to ban such tests forever. Secretary Rusk has called in Soviet Ambassador Dobrynin to urge more serious consideration of the new American inspection proposals containing important concessions to the Soviet. At the same time Ambassador Dean, who has already outlined these proposals to the Soviet delegate at the 17-nation Disarmament Conference at Geneva, began to lay them before the Conference itself.

The proposals are in line with President Kennedy's statement that scientific advances in detecting underground explosions permit a simpler inspection system with adequate safeguards. Heretofore the United States has called for 180 control posts around the world, as recommended by an East-West scientific conference in Geneva in 1958. Now the United States offers to reduce that number to "around 80." This means that the number of control posts in Soviet Russia would also be reduced to less than half. Furthermore, as a halfway concession to Soviet demands for national self-inspection, these control posts would be manned by nationals of the country in which they were situated.

But the United States continues to insist that these national control posts must be internationally supervised by an appropriate number of on-the-spot inspections to verify instrument readings and the nature of an explosion. That is and remains necessary because, as Ambassador Dean explained, the scientific advance in detection is not matched by a similar advance in identification. Like safeguards are necessary even for atmospheric tests, for which the East-West scientific conference recommended aerial patrols for air sampling. As Secretary Rusk told the Geneva Conference, present air samplings far from the scene are adequate to detect only large and medium nuclear detonations but are not reliable for small atmospheric tests.

But the Soviets continue to oppose international inspection at espionage and see "no great hope" in the new American proposals. The world must judge them accordingly.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Record two editorials, one from the New York Times and one from the Washington Post and Times-Herald, relating to the current debate on the satellite communications bill, both of which express this Senator's view.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the New York Times]

The Dawdling Senate

The small band of Democrats in the Senate opposed to the administration's communications satellite bill appears determined to continue its battle. Although the amount of time these Members have had to express their views has been far greater than that given to any other legislative measure, they threaten a new filibuster, with the obvious intention of talking the communications bill to death. Unless the Senate votes to limit debate, they stand a good chance of getting their way.

The effort to kill the bill by labeling it a giveaway and insisting on Government ownership should be abandoned. There is ample precedent for sharing the fruits of Government research with private industry. Moreover, communications have always been the preserve of private enterprise, with Government in a supervisory role. These principles are part and parcel of the bill, which would promote a pooling of public and private interests in the development of a new communications network.

The art of communications by satellite is still in its infancy, and the administration-endorsed measure, which has already passed the House and won the approval of several Senate committees, should be enacted to facilitate further development. A new filibuster could only delay progress at a critical stage.

Attacks on the bill have had one beneficial effect, that of underlining the need for rigorous policing of the proposed privately owned corporation that will be created to operate the U.S. part of the global communications system. In its present form, the bill contains specific safeguards, and calling attention to potential areas of abuse has served a useful purpose in putting the Federal Communications Commission on notice that these regulations must be effectively enforced to protect the public interest.

The proposals for getting affirmative action on the rest of the administration's legislative program are in sufficient jeopardy without a renewed filibuster. The White House wants action before adjournment on trade expansion, drugs, agriculture, transportation, public works, tax revision and other proposals, yet passage of these measures, which are generally supported by the foes of the communications bill, will be obstructed by any new delay. The legislative program now regarded as politically possible is limited enough. And the liberal Democrats who are waging this battle against the communications satellite bill will be working to impair, however unintentionally, the achievement of even this not wholly satisfactory record of the Congress.

Debate and Vote

The Senate Foreign Relations Committee may have been unwise in rejecting all the amendments offered to the satellite communications bill. Apparently the committee was determined not to allow even a crumb to go to the liberal Senators who are fighting the bill. This may well have been justified by the testimony which the committee heard in the brief period since the filibuster ended, but a more conciliatory attitude might have eased the problem of bringing debate to an end and passing the bill.

Senator Gore's key amendment provided that the State Department should conduct or supervise negotiations between the proposed satellite communications corporation and foreign governments. It would also have required that "the corporation shall comply with such direction." In our opinion, this language would not essentially change the relations between the Government and the corporation. Full power to speak for the Nation in matters of foreign policy are granted to the President and the State Department by the Constitution, which cannot be altered by a congressional act. It is also noteworthy that the President and Secretary of State are quite satisfied with the present language of the bill. No damage would have been done, however, by tightening up the present language on this point as a means of easing the emotions that have been aroused.

All indications point to passage of the bill by a large majority of the Senate if it can be brought to a vote. It is clear that the group of liberal critics will continue their opposition, and they may succeed in bringing about some improvements in the measure without changing its general direction. Certainly the issues that Senator Kefauver, Senator Morse and others have raised ought to be debated. Mr. Kefauver has, for example, asked some pointed questions about the financing of the proposed corporation. Does the bill contain ample safeguards to keep 50 percent of the corporation's stock in the hands of the public? Does it make ample provision for regulation of the satellite corporation in the public interest? The Senate needs to give serious thought to these questions and many other details, but it should do so without a resumption of filibuster tactics.

The issue here is not basically different from many other issues that must be decided by Congress. A small minority favors public ownership of the satellite communications system and a large majority favors private ownership. The only rational course is to debate the merits of both plans and then let the Senate vote. Any other course would play havoc with the administration's legislative program and bring discredit upon the Senate.

LESSONS TO BE LEARNED FROM THE SUGAR GROVE, W. VA., RADIO TELESCOPE CANCELLATION

Mr. HUMPHREY. Mr. President, 3 weeks ago Secretary of Defense McNamara halted all work on the world's largest movable radio telescope, which had been under construction by the U.S. Navy at Sugar Grove, W. Va.

Since that time, I have been interested to note what has and what has not appeared in the public press and elsewhere in the form of comments on this subject.

Regrettably, there has been, with but few exceptions, all too little analysis of the significance of this news.

It is my intention, however, as chairman of the Subcommittee on Reorganization and International Organizations, to help assure such analysis.

It is important, I believe, that our Government try to learn from every experience of this nature as much as can be learned.

Thereby, we may avoid repeating mistakes in the future.

Sizable amounts of taxpayers' funds have been involved. But—as important, or more so—sizable numbers of scarce U.S. scientific and engineering manpower have now seen much of their efforts, unfortunately, go down the drain.

MY COMMENTS IN JULY 1961

My interest in this subject is not new; it is not based on hindsight. It was a year ago on the floor of the Senate that I stated, on July 24, 1961, in an announcement of hearings on "Budgeting for Research and Development":

> VARIATION IN COSTS FROM ORIGINAL ESTIMATES
>
> One of the phases which bears study is the variation between, first, original estimates of research and development costs; and second, final actual totals. Consider for example the fact that the Navy Department is building a 600-foot "big dish" radio telescope at Sugar Grove, W. Va. Started in 1958, its initial target date was 1962 and its overall cost was estimated at $80 million; at present its target date is 1964 and its cost may reach $180 million.
>
> The question in our minds is to what extent are these cost and time variations due to first, the inherent problems of unprecedented research and development of fantastic complexity and/or, second, faulty agency and interagency planning. Numerous other Federal agencies are, for example, interested in radio astronomy, such as the National Science Foundation which is 2 years behind on a (doubled in cost) $10 million radio telescope, and the Department of Defense, as a whole which is building still another radio telescope in Puerto Rico. The last named was started in late 1959 with completion scheduled for this summer at a cost of $4.6 million; now it is apparently scheduled for next summer at a cost of $7.6 million.

I added:

> CONCLUSION
>
> The Subcommittee on Reorganization and International Organizations is interested in advancing Federal economy and efficiency. It is interested in helping the American taxpayer get $1 worth of value out of every dollar expended. Nine billion dollars for Federal research and development will soon become $10 billion and more. It is our purpose to help make sure that this money is planned to be spent in the soundest possible way.

MY REQUEST FOR SUMMARY OF COSTS

I have now sent a request to Secretary of Defense McNamara for a summary and breakdown as to the total of costs expected to be involved in the Sugar Grove project. It is my intention—very frankly—to send this summary of costs to the General Accounting Office for a test audit.

The Navy has already stated:

> As of June 30, 1962, $9,549,733 has been obligated and $41,761,759 expended. The cost to terminate is dependent on results of termination negotiations and disposal actions but is estimated to be in the neighborhood of $85 million.

The Navy has pointed out that some valuable and useful findings did emerge from the project. The investment will produce some good.

But, one would have to wear rose-colored glasses to fail to see the enormous loss involved.

No one knows this better than our able Secretary of Defense—who has so brilliantly installed cost evaluation yardsticks throughout the Department's operation.

Could at least part of Sugar Grove's losses have been saved? It is doubtful that a constructive answer to this question can be given at this time within the Congress, particularly because a veil of military secrecy shrouds much of the chronology in the project.

What we do know is this:

EARMARKS OF A "WHITE ELEPHANT"

First. For a long time, the radio telescope appeared to have many of the earmarks of other research and development projects which turned out to be "white elephants."

There were warnings and hints in many quarters that technological developments; for example, perhaps in space satellites or as regards possible use of lasers had made Sugar Grove's plans completely obsolete.

UNDERESTIMATION OF COSTS

Second. The original cost estimates bore virtually no relationship to the final announced or unannounced estimates. The original cost estimate was $79 million. As of the time of cancellation, that figure jumped to $200 million. Science magazine, in its August 3, 1962, issue, said that this latter figure was "only a guess" and that $300 million might have been the ultimate price.

Third. In our subcommittee's contact with the Defense Department, we have pointed out that there has been a tendency for proponents of R. & D. projects to underestimate costs; in that way, they can get their foot in the door so as to get a project started. Once the project is underway, proponents can justify successive requests for higher and higher ceilings, and Congress will often go along with the requests, rather than "write off" a project.

It is not contended that a deliberate underestimation of costs was made in this particular instance.

One cannot read men's minds.

We have a very high regard for the Office of Naval Research and for the Bureau of Yards and Docks.

I know the sense of dedication of their uniformed and civilian personnel.

I am merely pointing out that there is a disturbing pattern which recurs over and over again in many Department of Defense research and development projects.

THE HAZARDS OF RESEARCH

Research is, by definition, a venture into the unknown. In this instance, research and development were occurring not after one another, but almost simultaneously.

To assume, particularly under such circumstances, that a research source could be infallible or could offer very reliable estimates as to ultimate costs, is to assume the unlikely.

Congress does not seek infallibility. It does seek and have a right to expect candor and good judgment.

Sugar Grove involved unprecedented scientific and engineering problems. No thinking person underestimates the difficulties which the Navy was inevitably going to encounter in so formidable an undertaking into the unknown.

The Defense Department must take research and development risks. An overcautious, low-risk policy would "be just what the Kremlin would enjoy seeing" on our part.

PROBLEMS OF CONTRACT CANCELLATION

Fourth. For several years, the Senate Government Operations Subcommittee has considered problems posed by the cancellation of major research and development projects.

Our subcommittee pointed out—"Coordination of Information on Current Scientific Research and Development Supported by the U.S. Government," committee print, April 17, 1961, page 54—1¼ years ago that, for the 3 fiscal years preceding, a total of $2.1 billion in 14 research and development projects had been canceled prior to termination. This was out of a total of $16.1 billion in research and development obligations for those 3 years. This is a sizable fraction of the total.

We pointed out also that it is inevitable with the rapid pace of science and technology that many research and development projects will not be carried to completion. Indeed, an act of cancellation is often the very best way to conserve the taxpayers' resources. The question is, however: Is the decision to cancel timely; that is, is it made at the right time or too early or too late?

It has been our judgment that, very often, the act of cancellation occurs far later than it should occur. The result is that more money goes down the drain than would have otherwise taken place.

Understandably, there are forces which are "built in" to each project which will resist cancellation. It takes firm counterforces to protect the public interest.

CONCERN OF APPROPRIATIONS COMMITTEES

Fifth. The Senate and House Appropriations Subcommittees have been keenly aware of the problems posed by Sugar Grove. The record reveals the concern expressed by the respective chairmen as to the escalation of costs, year by year. The $135 million ceiling imposed by the Congress on the project reflects that concern.

IMPORTANCE OF SALVAGING INFORMATION

Sixth. The Sugar Grove telescope is dead. The people of the great State of West Virginia are naturally keenly disappointed.

Some good will be salvaged from the Federal investment, fortunately. That good can be maximized if there is thorough exchange of information in the canceled contract and subcontracts.

PROBLEMS OF LONG-RANGE FINANCING

Seventh. The problems represented in research and development financing will persist. One of these problems is how the executive and legislative branches can improve their own machinery for scrutiny of research and development projects.

Research and development is getting to be more and more of a long-range proposition, as our July 1961 hearings demonstrated. The Congress has proven its willingness to provide funds on a long-range basis. It knows that "stop-and-go" financing of research and development on a year-by-year basis is not wise. But, it also knows that it must continue to guard its powers of the purse and that a long-range "blank check" may mean that executive agencies—particularly one or another military service—will continue to pump money into obsolescent projects.

INTEREST BY EXECUTIVE OFFICE OF PRESIDENT

Eighth. The Director of the Office of Science and Technology and the U.S. Bureau of the Budget are sophisticated enough to know the lessons taught by Sugar Grove. The question is: Will they be firm enough so as to make certain that the lessons do not have to be relearned later on?

As for ourselves, the Committee on Government Operations is under the rules of the Senate, rule XXV, and under Senate Resolution 276, 87th Congress, 2d session, responsible for studies of "interagency coordination, economy, and efficiency." We intend to continue to do our duty.

EXHIBITS

I ask unanimous consent that there be printed at this point in the Record—

First. A release on the Secretary of Defense's decision of July 18, 1962.

Second. A chronology of recent actions on the telescope, "picking up" from where a previous summary, which had been presented to the Senate Appropriations Committee, left off.

Third. An article from Business Week of July 28, 1962.

Fourth. An article from Science, published by the American Association for Advancement of Science, August 3, 1962.

There being no objection, the release, chronology, and articles were ordered to be printed in the Record, as follows:

[News release from the Department of Defense, July 18, 1962]

Naval Radio Research Station Construction Halted

Work on the 600-foot radio telescope under construction by the U.S. Navy at Sugar Grove, W. Va., has been halted on instruction of the Secretary of Defense.

The Secretary's action followed an intensive study of the potential usefulness of the telescope and a determination that the need originally established in 1954 for classified research in ionospheric physics, space communications, navigation, and radio astronomy has been substantially reduced by major advances in science and technology not foreseen at that time. In addition, design and construction phases of this project have proven to be far more complex than the original cost estimates indicated, and the estimated overall project cost has increased from about $80 million to more than $200 million during the last 4½ years.

Because of this decrease in potential usefulness and the increase in costs, the Secretary of Defense instructed the Secretary of the Navy to issue a stop order on the construction. The project currently is being carried on at the rate of about $1 million a month.

Department of the Navy research activities now being conducted with the 60-foot radio telescope at the same West Virginia site will not be affected by this action.

The Secretary of Defense is consulting with other agencies of Government, including the Department of Commerce, the National Aeronautics and Space Administration, and the National Science Foundation to determine the extent to which the work already accomplished can be modified, adapted, or utilized to contribute to the programs of those agencies.

Department of the Navy Supplemental Information to the Statement for the Record of the Senate Defense Appropriation Subcommittee Hearing on Military Construction 1962 Program July 12, 1961, on Naval Radio Research Station, Sugar Grove, W. Va.

In fiscal year 1962, Public Law 87–57 authorized and Public Law 87–302 funded $36,600,000 additional for a total project military construction funding of $126,257,000. Public Law 87–302 also placed an overall obligation limitation of $135 million on the project.

Faced with this statutory cost limitation, it was necessary to reduce construction obligations to a minimum and concentrate on design completion in order to obtain more definitive cost estimates than would normally be available in a developmental project of this nature. This approach also assured that obligations would not exceed the statutory limitations.

By October 1961 design efforts had reached a point where a forecast estimate made at that time indicated that overall project cost would probably exceed the statutory limit. As design progressed through the early part of 1962, additional trial estimates confirmed that the cost to complete the project to the requirements laid down would exceed the statutory limitation by a significant amount.

On July 18, 1962, the Secretary of Defense announced his decision to stop further work on the project as a result of an intensive review of potential uses. This review indicated that major advances in science and technology not foreseen when the project was first established have reached the stage where many functions of the project can now be achieved at less cost by other means. In addition, design and construction phases of the project have proved to be a far more complex enterprise than the original cost estimates indicated with a consequent increase in estimated overall project cost from about $80 million to more than $200 million during the past 4½ years.

Pursuant to the decision by the Secretary of Defense, action is being taken to terminate the project in an orderly manner as rapidly as possible.

As of June 30, 1962, $95,549,733 has been obligated and $41,761,759 expended. The cost to terminate is dependent on results of termination negotiations and disposal actions but is estimated to be in the neighborhood of $85 million.

Design is approximately 70-percent complete. At the site, in addition to work previously completed, 12 aluminum reflector panels (50 feet by 50 feet) are in storage with 6 others in various stages of assembly. The structural shell of the underground laboratory operations building has been completed. The 15,000-kilovolt-ampere powerplant is nearly complete. A 25-mile, 6-inch gas service line to this plant has been installed. Off site in various plants, developmental engineering and production of several of the major control systems for the instrument have been underway for the past 2 years and are in various stages of completion.

Engineering design drawings, specifications, and calculations including computer programs, control systems, and prototypes will be summarized, cataloged, packaged, and stored for future use as required. Achievements of this type which may have future application include:

1. New and refined methods for analyzing wind effects on large structures.
2. New methods of analyzing stresses, deflections, and motions in large and complex structures by use of mathematical models adopted to solutions by computers.
3. New knowledge of the behavior of metals especially fatigue deformation under high local loadings.
4. An advanced understanding of the causes and means of preventing brittle fracture in alloy steels.
5. The use of coke backfill around an underground laboratory as a means of absorbing undesired radio frequency energy.
6. Development of eddy current clutch systems 10 times larger than industry had previously been able to achieve.
7. Use of the dry lubricant capability of Teflon in large precision bearings.

The Office of the Secretary of Defense is consulting with other agencies of the Government to determine the extent to which the work already accomplished might contribute to the program of these agencies.

[From Business Week, July 28, 1962]

Biggest Research White Elephant?

Spiraling costs, construction delays, and advancing technology last week rang down the curtain on the Navy's "big dish" radio telescope at Sugar Grove, W. Va. Defense Secretary Robert S. McNamara gave the order to end the multimillion-dollar program—which had been plagued by controversy, rising costs, and confusion since it was first conceived.

In calling a halt to operations, Secretary McNamara said the need for the radio telescope had been "substantially reduced by major advances in science and technology." These advances are primarily the emergence of U.S. satellites capable of collecting Soviet intelligence.

BIG TAB

Since its conception, the estimated cost of Sugar Grove had risen from $79 million to $200 million. Its completion date had been pushed back from mid-1962 to late 1964. To date, the Navy has actually spent $41.8 million on planning construction work—with another $53.7 million obligated to contractors. Congress has voted some $126.2 million and authorized a total expenditure of no more than $135 million for the Sugar Grove facility.

Currently, the Navy is negotiating closeout costs with its contractors and trying to find other Government agencies that may salvage the work already completed. One possibility is the construction of an 85-foot-diameter radio telescope at the Sugar Grove site by the National Aeronautics and Space Administration.

ENGINEERING CHALLENGE

Original plans for the Sugar Grove facility were bold and imaginative. The Navy envisioned a huge 600-foot-diameter radio telescope so sensitive it could reach out 38 billion light-years into space. Weighing some 33,000 tons, it was to have been the world's largest steerable structure.

Delicately balanced on a 116-ton bearing, the telescope was to have tolerances of one four-thousandths of an inch. To minimize noise, all cabling and a laboratory building to service the telescope were to be constructed underground. Plans called for prohibiting aircraft from flying overhead and installing noise suppressors on all electrical equipment.

Officially, the Navy stated the radio telescope was to be used in navigation and communications. Unofficially, however, it was known that the facility was really intended for eavesdropping on Soviet communications as they were reflected off the moon's relatively smooth surface.

BIRTH TRAUMAS

Controversy surrounded the Sugar Grove project from the start. Conceived in 1954 by the Naval Research Laboratory, it was opposed by many of the Nation's top scientists. When Navy finally started work on the facility in mid-1958 and labeled it as a $60 million radioastronomy facility to be used for scientific purposes, the project came in for scrutiny on Capitol Hill. Under congressional questioning, Navy brass were forced to admit that the scope's main purpose was military, not scientific.

DESIGN SNAFU

Next came design problems. To save time, the Navy decided to do its final designing while construction was in progress, keeping just ahead of the actual construction work. But engineers soon found that the structure's actual weight was running 50 percent over their original estimates. This meant that work had to stop until weight-saving designs were developed.

Dispute over the design of the facility reached its peak in 1960 when the Navy canceled its design contract with Grad, Urbahan & Seelye of New York and gave the job to another New York firm, Ammann & Whitney.

Loyal Navy spokesmen still claim that Sugar Grove was a feasible and scientifically sound research project. It will probably go down in Government annals, however, as one of the United States biggest research white elephants.

Navy's Big Dish: Zooming Costs, Reduced Need, Bring End to Plans for Biggest Radio Telescope

The Defense Department, under prodding from Congressmen who were alarmed at the growing cost, has canceled construction of what was to have been the world's largest movable radio telescope.

The device was originally priced at $79 million, but now, after 4 years and $95 million worth of construction and purchasing orders, the completion cost is estimated at over $200 million; however, it is said that this is only a guess and that $300 million could be the ultimate price. The Defense Department explains that money is a secondary reason for the cancellation. The main reason is that the department has found that it no longer needs the telescope. According to a Defense announcement, the need that was felt when the telescope was conceived in 1954 "has been substantially reduced by major advances in science and technology not foreseen at that time." While the cancellation decision was in the works, spending was held down to $1 million a month, the Department said.

The telescope thus will not bring in any information about the heavens, but its demise has produced some revelations of interesting and odd things here on earth, notably involving the financial never-never land of military research, development, and construction. This is a multibillion area over which Defense Secretary McNamara and his research and development director, Harold Brown, are seeking to establish tight reins; the telescope case suggests the immensity of their tasks, and illustrates the rule that, once born, R. & D. ventures have a way of obstinately hanging onto life and are disposed of only by direst means.

The telescope was a Navy project evolving from research in radioastronomy conducted by the U.S. Naval Research Laboratory. Since it was one of the few space efforts alloted to the Navy, that service, looked upon it with considerable pride and was not at all reluctant to tell the world about the unique and monumental piece of hardware that it was going to construct. Precisely what this hardware was expected to do was a military secret, but it appears that electronic snooping inside the Soviet Union was one of its missions. (The Defense Department announcement referred to "classified research in ionospheric physics, space communications, navigation, and radioastronomy.") Not at all classified were the physical features of the telescope itself, which was to have a reflecting dish 600 feet in diameter, capable of being aimed precisely at any point in space, and constructed to maintain its parabolic configuration under extreme wind and temperature conditions. The reflector was expected to weigh 20,000 tons; the supporting structure, another 10,000 tons. The dish—slightly over 7 acres in area—was to be faced with aluminum panels, 50 feet by 50 feet, secured to hydraulic jacks which were electronically controlled to adjust the position of the panels and thus maintain the desired shape of the surface of the dish. The Navy proudly pointed out that nothing like the telescope had ever been built before.

Although the decision to build the telescope was made in 1954, it was not until 1957 that detailed studies actually got underway. A feasibility study that was completed the next year produced the pleasant news that the telescope was possible to put together. The Navy then searched for a site and decided upon the vicinity of Sugar Grove, W. Va., a wooded, sparsely settled area, almost free of manmade electrical interference, a prime requirement for the telescope's site.

Work at the site got underway shortly afterward, although the final designs had not yet been completed. The Navy explained that "due to the known urgent military and research requirements" it was decided to proceed "concurrently with design and construction." Almost at once the telescope encountered a stream of unforeseen and perplexing problems. According to an engineer who headed a major phase of the project, "We had to keep making it heavier to meet the requirements for stability, but every time we increased the weight in one place, we had to increase it in some other, so that the whole thing started to balloon. Every time we made a move we found we needed another thousand tons of steel."

As the weight rose, the costs rose, too, and the Navy found it necessary to go to Congress to explain that the original estimate of $79 million was not being borne out. The first request for additional money, $17.8 million, came in 1960. It was followed last year by a request for an additional $36.6 million, accompanied by assurances that the problems of the big telescope were well in hand. In their account Navy officials attributed their difficulties to the necessity for speed. "The subcontract for steel," they explained, "was awarded in March 1959, in advance of detailed design, based on a calculated assumption as to the size of the main structural members. It soon became apparent that further refinement of these assumptions was necessary before detailed structural design could be completed. As this design refinement proceeded, it became evident that the tonnage of steel required would exceed the original engineering estimate."

The House Appropriations Committee, which was becoming increasingly skeptical of the project, set a $135 million ceiling on the project last summer and demanded that the Defense Department "bring order out of a situation which is rapidly becoming chaotic."

The ceiling, if maintained, actually was a death warrant for the telescope, since it was obvious that even $135 million could not meet the cost. Construction tapered off, and emphasis was placed on design work. (At that point, a considerable amount of construction had already been completed, including a 17,000-cubic-yard concrete foundation, as well as most of the turntable on which the telescope would be placed. In addition, a 550-ton pintle bearing had been installed. Its function was to transfer horizontal wind forces up to 12.7 million pounds from the structure to the foundation. The Navy said it was the largest ever built and cost over $1 million. Also completed were the shell for a 55,000-square-foot underground laboratory, access roads, a 25-mile gas pipeline, and an onsite plant for fabricating the reflector plates.)

While the Navy was tapering off construction, the economically depressed West Virginians were laying plans to make the big dish a tourist attraction, as well as the symbol for the State's centennial next year. To help them, the Area Redevelopment Administration bestowed upon the State its largest grant to date, $1.4 million, to assist in the construction of tourist facilities. The grant came 3 weeks before the Department of Defense canceled the project, and it has been suspended until a decision is made about the remains of the Sugar Grove radiotelescope. The Defense Department says it is looking into whether other Government agencies would like to carry on the project, but as might be expected, no takers have appeared. The Navy, not too long ago, was eager to publicize its giant telescope and even conducted press tours at the site. All inquiries are now referred to information officers who have very little to say.—D. S. Greenberg

---

ADDRESS BY FORMER PRESIDENT HOOVER AT DEDICATION OF HOOVER LIBRARY

Mr. SALTONSTALL. Mr. President, I ask unanimous consent to have printed in the body of the Record a thoughtful speech looking to a more peaceful world by a most distinguished citizen of our country, a former President, Herbert Hoover, on his 88th birthday.

Always forward looking, always practical, he continues to be one who believes in our country's future and the future of a free man wherever he may be and of whatever country he may be a citizen.

There being no objection, the speech was ordered to be printed in the Record, as follows:

Text of Speech by Former President Herbert Hoover Urging Union of Free Nations

When the Members of the Congress created these Presidential libraries they did a great public service. They made available for research the records of vital periods in American history—and they planted these records in the countryside instead of allowing their concentration on the seaboard.

Already the three libraries of President Roosevelt, President Truman, and President Eisenhower, by their unique documentation, serve this purpose and today we dedicate a fourth—my own.

Within them are thrilling records of supreme action by the American people, their devotion and sacrifice to their ideals.

DIFFERING REMARKS

Santayana rightly said: "Those who do not remember the past are condemned to relive it." These institutions are the repositories of such experience—hot off the griddle.

In these records there are no doubt, unfavorable remarks made by our political opponents, as well as expressions of appreciation and affection by our friends.

We may hope that future students will rely upon our friends. In any event, when they become sleepy they may be awakened by the lightning flashes of American political humor.

It is exactly 88 years since I first came to Iowa. Since that visit, I have seen much of peoples, of governments, of their institutions, and of human woes. I can count 50 nations with which I had something to do. I was not a tourist; I worked with their people. In my professional years I brought to them American technology with its train of greater productivity and better living. In two wars I served amidst famine. And in the war-shattered aftermath I directed reconstruction in many nations. I have worked with great spiritual leaders and with great statesmen. I have lived under governments of free men, of kings and dictators, and facism and communism.

PRAYERS FOR PEACE

Uppermost in the minds and prayers of the plain people everywhere was that war should cease and that peace would come to the world. They treasured a confidence that America would maintain freedom and that we would cooperate to bring it to all mankind.

During my long years I have participated in many world negotiations, which we hoped, would promote peace. Today we have no peace.

From all this experience and now as the shadows gather around me, I may be permitted to make an observation and to offer a course of action.

Leaders of mankind have for centuries sought some form of organization which would assure lasting peace. The last of many efforts is the United Nations.

The time has come in our national life when we must make a new appraisal of this organization.

UNDER NO ILLUSIONS

But first, let me say that I have, in all my official life believed in a world organization for peace. I supported the League of Nations when it was unpopular. I went down to defeat when, as President, I urged the Senate to join the World Court. I urged the ratification of the United Nations Charter by the Senate. But I stated at that time, "The American people should be under no illusions that the charter assures lasting peace."

But now we must realize that the United Nations has failed to give us even a remote hope of lasting peace. Instead, it adds to the dangers of wars which now surround us.

The disintegrating forces in the United Nations are the Communist nations in its membership.

The Communist leaders, for 40 years, have repeatedly asserted that no peace can come to the world until they have overcome the free nations. One of their fundamental methods of expanding communism over the earth is to provoke conflict, hostility, and hate among other nations. One of the proofs that they have never departed from these ideas is that they have, about 100 times, vetoed proposals in the Security Council which would have lessened international conflict. They daily threaten free nations with war and destruction.

DESTROYED BY COMMUNISTS

In sum, they have destroyed the usefulness of the United Nations to preserve peace.

When Woodrow Wilson launched the League of Nations, he said:

"A steadfast concert for peace can never be maintained except by a partnership of democratic nations. No autocratic government could be trusted to keep faith within it or observe its covenants."

More unity among free nations has been urged by President Truman, President Eisenhower, and President Kennedy. In cooperation with farseeing statesmen in other free nations, five regional treaties or pacts have been set up for mutual defense. And there are bilateral agreements among other free nations to give military support to each other in case of attack. Within these agreements are more than 40 free nations who have pledged themselves to fight against aggression.

COUNCIL OF FREE NATIONS

Today, the menace of communism has become worldwide.

The time is here when, if the free nations are to survive, they must have a new and stronger worldwide organization. For purposes of this discussion I may call it the Council of Free Nations. It should include only those who are willing to stand up and fight for their freedom.

The foundations for this organization have already been laid by the 40 nations who have taken pledges in the 5 regional pacts to support each other against aggression. And there are others who should join.

I do not suggest that the Council of Free Nations replace the United Nations. When the United Nations is prevented from taking action, or if it fails to act to preserve peace, then the Council of Free Nations should step in.

Some may inquire where the offices of such an organization should be. Fortunately, there are ample buildings in the world's most accepted neutral nation. Geneva has been the scene of great accomplishments in peace until poisoned by the Communists and the Fascists.

Although the analogy of the Concert of Europe formed in 1814 is not perfect, yet with much less unity and authority, it fended off world wars for a hundred years.

Some organized council of free nations is in the remaining hope for peace in the world.

Another subject lies heavily on American minds today. Our people are deeply troubled not only about the turbulent world around us but also with internal problems which haunt our days and night. There are many despairing voices. There are many undertones of discouragement. The press headlines imply that corruption, crime, divorce, youthful delinquency, and Hollywood love trysts are our national occupations.

And amid all these voices there is a cry that the American way of life is on its way to decline and fall.

I do not believe it.

Perhaps amid this din of voices and headlines of gloom, I may say something about the inner forces from which come the strengths of America. They assure its future and its continued service to mankind.

IMPACT OF AMERICA

The mightiest assurances of our future are the intangible spiritual and intellectual forces in our people, which we express, not by the words "the United States," but by the word "America." The word "America" carries meanings which lie deep in the soul of our people. It reaches far beyond the size of cities and factories. It springs from our religious faith, our ideals of individual freedom and equal opportunity, which have come in the centuries since we landed on these shores. It rises from our pride in great accomplishments of our Nation and from the sacrifices and devotion of those who have passed on. It lifts us above the ugliness of the day. It has guided us through even greater crises in our past. And from these forces, solutions will come again.

This representative government, with its 186 years of life, has lasted longer than any other republic in history.

If you look about, you will see the steeples of tens of thousands of places of worship. Each week a hundred million people come to reaffirm their faith.

If you will look, you will find that the Bill of Rights is an enforced law of the land; that the dignity of man and equality of opportunity more nearly survive in this land than in any other on earth.

EDUCATION IN FOREFRONT

If you look, you will also find that from our educational system there comes every year a host of stimulated minds. They bring new scientific discoveries, new inventions and new ideas. It is true that they revolutionize our daily lives. But we can steadily adjust ourselves and our Government to them without the assistance of Karl Marx.

I could go on and on reciting the mighty forces in American life which assure its progress and its durability.

Perhaps on this occasion it would not be immodest or inappropriate for me to cite my own life as proof of what America brings to her children.

As a boy of 10, I was taken from this village to the Far West 78 years ago. My only material assets were two dimes in my pocket, the suit of clothes I wore. I had some extra underpinnings provided by loving aunts.

But I carried from here something more precious.

I had a certificate of the fourth or fifth grade of higher learning.

I had a stern grounding of religious faith.

DISCIPLINES OF HARD WORK

I carried with me recollections of a joyous childhood, where the winter snows and the growing crops of Iowa were an especial provision for kids.

And I carried with me the family disciplines of hard work. That included picking potato bugs at 10 cents a hundred. Incidentally, that money was used for the serious purpose of buying firecrackers to applaud the Founding Fathers on each Fourth of July.

And in conclusion, may I say to the boys and girls of America that the doors of opportunity are still open to you. Today the durability of freedom is more secure in America than in any place in the world.

May God bring you even more great blessings.

SONIC BOOMS OVER WISCONSIN

Mr. WILEY. Mr. President, the air age—now speeding ahead with supersonic speeds—brings with it a revolutionary impact both upon civilian transportation and defense.

To take full advantage of the potentials of the air age, there is a need to fully utilize all such potentials: both for service to our civilian population, and for national security.

One of the great nationally disturbing overtones of traveling faster than sound, however, has been the event of sonic booms created by supersonic flight.

We recognize, of course, that when such activities have a widespread impact upon the populace—upon whom the Nation depends for support for defense and other national-scope programs—there is a need to attempt to obtain as great a public understanding and consideration of public interest as possible.

Following the practice of overflying Wisconsin with supersonic aircraft, the people of my State have reported a variety of adverse effects, ranging from disturbance of the peace to real damage of property.

Reflecting upon a problem that exists not only in Wisconsin, but elsewhere in the Nation, I ask unanimous consent to have two items printed at this point in the RECORD: First, an editorial relating to sonic booms by WITI-TV of Milwaukee; and, second, my letter to the

Secretary of the Air Force, urging public hearings in Wisconsin to work out an equitable solution to problems relating to effects of sonic booms upon the populace.

There being no objection, the editorial and letter were ordered to be printed in the RECORD, as follows:

[Editorial No. 131 of WITI-TV, Aug. 3, 1962]

AIR FORCE SHOULD EXPLAIN WHY SONIC BOOMS ARE LOUDER AND MORE FREQUENT

Why are the sonic booms becoming louder? Milwaukee and Wisconsin residents deserve an answer.

There's no doubt about it. They're louder now, these sonic booms over Milwaukee. They're coming with more frequency, and they're more annoying. Few people complained when the Air Force started their supersonic flights in January. And through the months, they accepted the sonic sounds with the understanding that this was necessary; this was needed if we wanted to maintain an alert, ready Strategic Air Command.

They were told by Air Force officials that the large industrial complex of Milwaukee-Chicago-Gary was a potential target should war ever occur. It was necessary for SAC bombers to run continual practice flights over the area with ground-based radar tracking the incoming bombers to determine the success of a simulated attack. Milwaukee people were told a sonic boom, much like a sharp clap of thunder, would result when these B-58's flew faster than the speed of sound. They were told that some slight damage might occur such as breaking windows, shaking up the chinaware, but that no physical injury to any persons was likely.

We in Milwaukee and Wisconsin accepted all this. We were glad that those planes were our planes up there, and their training flights were for the general good of all. But, during the last week or 10 days the sonic booms have become more frequent. They've become louder, much louder with more reverberation. Babies and children are awakened and frightened; older people have become unnerved by these thunder claps that now sound more like tremendous explosions.

Now the people, still trying to be reasonable and understanding about these flights, are asking officials to do something about them. They're not insisting that the Air Force stay out, that all training flights be cancelled. They do want Air Force officials to take a close look, not from their base in Omaha but right here in Milwaukee. We want these questions answered: Why are these sonic booms louder now? Why do all flights have to be at night? Can the noise and the reverberation be minimized in some manner? Milwaukee and Wisconsin people deserve answers to these questions, and they should have them soon.

Hon. EUGENE M. ZUCKERT,
Secretary of the Air Force,
Washington, D.C.

DEAR MR. SECRETARY: I am writing to respectfully urge public hearings by the Air Force on sonic booms in Wisconsin along the sonic corridor.

After the establishment of the practice of overflying Milwaukee and other cities with supersonic aircraft, I have received a succession of reports of hazards to health, damage to property, and great citizen irritation over day-and-night sonic booms which disturb the peace of the communities.

Because of these factors, I respectfully suggest that a public hearing in Milwaukee would accomplish the following purposes:

Provide the public with a better understanding of the reasons for overflying metropolitan communities with supersonic aircraft.

Obtain a better knowledge of how the sonic booms are disturbing the community; and in some instances may be creating damage to health and property.

Explore for possible revisions of the overflying policy to serve both the public interest and defense.

With appreciation for the consideration I know you will give this mater, and with kind regards, I remain.

Sincerely,

ALEXANDER WILEY.

Mr. MANSFIELD. Mr. President, how much time remains?

The ACTING PRESIDENT pro tempore. Under the unanimous consent agreement, all time has expired.

COMMERCIAL COMMUNICATIONS SATELLITE SYSTEM

The Senate resumed the consideration of the bill (H.R. 11040) to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes.

The ACTING PRESIDENT pro tempore. The question is on agreeing to the amendment offered by the Senator from Louisiana.

Mr. MANSFIELD. Mr. President——

The ACTING PRESIDENT pro tempore. The Senator from Montana is recognized.

Mr. MANSFIELD. Mr. President, yesterday, the Senate resumed consideration of H.R. 11040. As I noted at the time, the Senate had already devoted an extraordinary amount of time to this measure. I have no doubt, Mr. President, that those who have a passionate involvement with this measure could go on for many days more, for weeks. But I would point out to the Senate that we have other legislative chores—the agriculture bill, appropriations bills, a drug control, bill, as several Senators stated on the floor yesterday, and any number of other measures. It is my intention, therefore, to ask the Senate in a moment to entertain a unanimous-consent agreement. It is designed, after a most liberal allowance of time for the exhaustion of final argument on H.R. 11040, to bring the debate to a close and the issue to a vote.

I submit this request, Mr. President, as a last hope that all Members will act as they usually act, with the self-restraint and mutual consideration which permits this body to get on with the business of the Government in spite of strong feelings and controversial issues.

Mr. President, I ask unanimous consent that, on H.R. 11040, debate be limited to 1 hour on each amendment, to be divided equally between proponents and opponents, and that on final passage debate be limited to 8 hours, equally divided between proponents and opponents, with the majority leader controlling the time for the proponents and the Senator from Oregon [Mr. MORSE] controlling the time for the opponents.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Montana?

Mr. LONG of Louisiana. Mr. President, I object.

Mr. KEFAUVER. Mr. President, reserving the right to object——

The ACTING PRESIDENT pro tempore. Objection is heard.

Mr. KEFAUVER. Mr. President, will the Senator from Louisiana withhold his objection?

The ACTING PRESIDENT pro tempore. Does the Senator from Montana yield?

Mr. MANSFIELD. Mr. President, has there been objection?

The ACTING PRESIDENT pro tempore. Objection has been heard.

Mr. MANSFIELD. Mr. President, I wish to be heard.

The ACTING PRESIDENT pro tempore. The Senator from Montana has the floor.

Mr. KEFAUVER. Mr. President, will the Senator yield for a reservation of objection?

Mr. LONG of Louisiana. Mr. President, will the Senator yield to me for just one moment, with respect to my objection?

Mr. MANSFIELD. I am glad to do so.

Mr. LONG of Louisiana. I wish to say to the Senator, as one of those who are opposing the bill, I am not committed—and I have urged those who are opposing this bill not to commit themselves—to debate of the bill endlessly. We feel that we are making progress in our opposition to the proposed legislation, and we feel we would prejudice our case at this time by agreeing to limit debate. Perhaps we will be willing to consider it at a later time; but, at this time, no.

Mr. MANSFIELD. Mr. President, the Senator has objected. I should like to be heard.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. MANSFIELD. Mr. President, the request which the leadership has just made and which, under the rules, has been denied, is, as the Senate knows, the ordinary means of bringing to a close debate on a controversial measure. In refusing the request, opponents of H.R. 11040 have not acted in the usual fashion. But they have, of course, acted within their rights, under the rules.

May I say that not only in this instance but, indeed, throughout the past few weeks the opponents of H.R. 11040 have acted entirely within the rules in prolonging the discussion of this issue. They have demonstrated the enormous protection which is accorded to the rights of every individual Member against a preponderant majority. They have demonstrated how the Senate may tie itself into inaction for prolonged periods under its rules in order to indulge the individual wisdom or whim of each Member. They have demonstrated, finally, what the leadership has been at pains to point out on several occasions in recent weeks: The rational operation of the Senate under its present rules depends on the self-restraint of every Member of this body and on mutual cooperation of the Members with the leadership. I reiterate: The leadership has no special power but the Senate collectively has. The leadership has only certain courtesies which are normally extended by Senators and the Chair.

The leadership operates under the same rules as every other Senator. So if controversial issues are to be resolved in a rational fashion, the leadership can only suggest procedures based upon the same rules which apply to all Members.

The leadership is not unaware of the possibilities of disposing of issues by a test of physical endurance. But the leadership—this leadership—seeks the operation of the Senate by reason.

Therefore, Mr. President, as far as the leadership is concerned, the Senate will proceed on this issue as on any other. We shall arrive at a point where we shall vote for or against this issue or at a point where it is clear beyond any reasonable doubt that the Senate has no intention of reaching that point under a rational application of its rules.

When we reach the kind of parliamentary situation in which we now find ourselves on H.R. 11040, the rules permit of only one rational outlet—only one. Before I propose it, however, I wish to comment on certain remarks which have been made at various times during this debate.

Earlier in the debate, some Senators expressed the view that the treatment accorded the opponents of H.R. 11040 was less considerate than that accorded opponents of the literacy test bill or the poll tax amendment. I do not know whether this view is still held, but Senators are certainly entitled to their opinions. So is the Senator from Montana, who has no apologies for the procedural course which has been followed. As far as the Senator from Montana is concerned, he holds the view that the treatment of the opponents of this measure by the Senate—by the Senate—has been most tolerant, even as it was in the other situations. It is true that the daily sessions of the Senate have on occasion been longer of late and that there has been a Saturday session, indeed as there was on the poll tax amendment.

It is true that unusual procedures were used—unsuccessfully, may I say—in attempting to lay down H.R. 11040. But unusual procedures were also used in connection with bringing up the poll tax amendment and the literacy test measure. It is true that the Senate accorded unanimous consent to the Finance and other committees to meet while the Senate is in session, whereas in the earlier situations it did not. But I would point out that we are coming to the end of this Congress. I would point out that significant elements of the President's program are before the Finance Committee and that we owe the President at least the courtesy of considering these matters before final adjournment.

As I said, Mr. President, Senators are entitled to their opinion. If they are still convinced that they have been put upon by the leadership, I can only assure them that the leadership had no desire to treat with them unfairly. I can assure them, but I do not expect that I can persuade them.

May I say that there has been one significant difference in the procedural situation with regard to the poll tax amendment and the space satellite bill. In the first instance the Senate did indeed engage in a somewhat lengthy debate. But the debate did come to a close by the usual processes. The Senate did eventually vote that constitutional amendment. In the present instance there has been no indication that opponents are prepared to permit this debate to come to a close by such processes despite the extraordinarily lengthy consideration which has already been given to H.R. 11040 and the liberal unanimous consent agreement which was just rejected.

The present procedural situation is very similar to that which existed with respect to the literacy test bill, except for one significant difference which the leadership hopes the Senate will now confront. After prolonged debate on the substance of the literacy test measure, the leadership asked the Senate to invoke cloture. The Senate refused. The leadership asked a second time, and again the Senate refused and passed on to other business.

The leadership was reluctant to suggest to the Senate that it invoke cloture on the literacy test bill. It is equally reluctant to do so now. The leadership always entertains the hope that Members themselves will see that the right of full individual expression by each Member in this body—the right to oppose or uphold any point of view in debate—is tempered by the constitutional responsibility of the Senate as a whole to perform its legislative functions.

But sometimes, Mr. President, passions rise and dedication to a particular point of view becomes so intense as to obscure this interrelationship. To meet this contingency, the Senate has rule XXII, the rule of cloture. It is a rule of equal validity with all other rules. It is an essential part of the present procedural machinery of the Senate, despite the historic reluctance of the Senate to invoke it. The fact is that rule XXII is the only rational way in which a preponderant majority of the Senate—in the last analysis—may restrain individual Senators or a small group of Senators in order that the Senate as a whole may get on with the constitutional business of the Senate.

Mr. President, the leadership does not presume to lecture the Senate now or at any time. But it must point out that the Senator from Montana cannot invoke cloture. The Senator from Illinois cannot invoke cloture. Call them by the exalted names of majority leader and minority leader. Add the adjective "distinguished." Praise them as legislative geniuses or condemn them as legislative incompetents. Call them strong or weak. Call them smart or dull. In the end, each still has but one vote—one for the Senator from Montana, one for the Senator from Illinois. And, Mr. President, two votes are not enough to invoke cloture. It requires, as the Senate knows, two-thirds of the Senators present and voting to invoke cloture. One-third present and voting can reject it.

The leadership was willing to be saddled with responsibility for the Senate's failure to reach a vote in the literacy test measure. It is willing to be saddled with the responsibility in this instance, if the effort to invoke cloture which is about to begin should fail once again. But the Senator from Montana and the Senator from Illinois will cast their two votes—their two votes—for cloture now, as they did then. So beyond the leadership, it is up to every Member of this body to face the responsibility of a vote for or against cloture. With all due respect, a vote against cloture, after the most extensive debate of an issue, would appear to be not an act of virtue. It would appear to be with all due respect, an act of evasion.

In the opinion of the leadership, the Senate did not face its responsibilities in the case of the literacy test measure by its failure to invoke cloture then. It is the hope of the Senator from Montana, which I am sure is shared by the Senator from Illinois, that it will not fail again in the present situation. For if the move for cloture is not successful, the leadership will have no alternative but to acknowledge that the Senate, under its present rules, desires to evade this issue despite the fact that it has had an exceptionally extensive parliamentary consideration.

If the leadership listened to the pleas of those who are loath to face the facts of Senate life under its rules, it would either seek to lay aside H.R. 11040 without further ado and move on to other business, or submit H.R. 11040 to a trial by endurance and recrimination. For, in truth, those are the only alternatives to cloture which present themselves. The leadership prefers, in what it believes to be the long-range interests of the Senate itself and the Nation, to submit the issue to a trial by reason under rule XXII. It is the hope of the leadership that Senators who have understandable reluctance with respect to this rule will consider carefully the alternatives. The one, to move off this measure, is the path of retreat from responsibility. The other—trial by endurance—is the path of ruthlessness, in truth, of cruelty particularly to Members who may not be in the best of physical health at the end of a long and frustrating session, which has already witnessed the death of four Members and the serious illness of others.

May I reiterate that the leadership always has personal reluctance in resorting to rule XXII, preferring that this body proceed on the basis of self-restraint and mutual accommodation. It had this reluctance in the literacy test bill. It has it with respect to H.R. 11040.

But this reluctance the leadership resolves now, as it did then, by proposing that the Senate proceed under rule XXII rather than by the obnoxious alternatives which present themselves. This is the course which the leadership proposes. It will be for the Senate as a whole—as it invariably is—to dispose.

Therefore, Mr. President, on behalf of the minority leader and myself, under rule XXII, I send to the desk a petition for cloture, containing the requisite signatures, and ask that it be read.

Mr. KEFAUVER. Mr. President, will the Senator yield?

The ACTING PRESIDENT pro tempore. Under the rule the Presiding Officer is required to state the motion to the Senate. If there is no objection, the clerk will read the motion. Is there objection? The Chair hears none, and the clerk will read the motion.

The legislative clerk read as follows:

> We, the undersigned Senators, in accordance with the provisions of rule XXII of the Standing Rules of the Senate, hereby move to bring to a close the debate upon H.R. 11040, the communications satellite bill:
>
> Mike Mansfield, Everett M. Dirksen, Thomas H. Kuchel, Hubert H. Humphrey, Warren G. Magnuson, John O. Pastore, Oren E. Long, Clifford P. Case, J. Glenn Beall, Prescott Bush, Harrison Williams of New Jersey, Dennis Chavez, Kenneth B. Keating, Hugh Scott, Gordon Allott, E. J. McCarthy, Benjamin A. Smith, Clair Engle, Claiborne Pell, Lee Metcalf, Stuart Symington, Jennings Randolph, and J. K. Javits.

Mr. MANSFIELD. Mr. President, I have been keeping the Senator from Louisiana [Mr. Long], who has been most kind and courteous and considerate, from taking the floor. I hope that if any questions are directed to me that factor will be kept in mind, because the Senator from Louisiana is due that consideration.

I now yield to the Senator from Tennessee.

Mr. KEFAUVER. Mr. President, I appreciate that the genial and thoughtful majority leader yields to me for a minute or two.

I believe that attention should be called, in expressing regret that the motion for cloture has been filed, to the fact, in the first place, that those of us who are opposed to the pending bill have been most cooperative and thoughtful in trying to see to it that no important legislation has been blocked from consideration by the Senate. We will be that way in the future.

I call attention also to the fact that on or about June 25 the communications satellite bill was brought up and made the pending business. We had enough Senators who wanted to speak on the matter for a long time, and we could have debated at length the motion to withdraw the satellite bill and to take up some other matter; however, we knew that the bill for an increase in the debt limit had to be passed, for the welfare of the country, and we knew that certain taxes had to be considered, and also knew that certain other important laws were expiring on June 30th. Therefore we did not resist. In fact, we cooperated with the majority leader in setting aside the satellite bill for the purpose of considering these most important bills that had to be passed by June 30.

If we had wanted to be obstinate and if we had wanted to force a proposal that the bill go over until the next session of Congress, we could simply have continued the debate at that time when we had the Senators available, and it would have been necessary for an agreement to have been reached that the bill go over until the next session; otherwise, the Government of the United States might have come to a standstill.

I call the attention of the majority leader to the fact that in late July, when the satellite bill was taken up again, the Senator from Arizona [Mr. Hayden] had a continuing resolution for appropriations, which it was absolutely necessary to adopt to meet the payrolls of Federal employees and to continue the spending of money for that purpose. We could have continued to talk at that time and could have objected to bringing up the continuing resolution offered by the chairman of the Committee on Appropriations. Instead, we cooperated and offered no objection when the acting majority leader, the Senator from Minnesota [Mr. Humphrey], presented the continuing resolution and when it was passed, a few days before August 1.

We made no objection to meetings of the Finance Committee while the Senate was in session, for the rest of this session, because we realized that the tax bill and other bills were before the Finance Committee. That was not done in the case of other extended debate.

I call attention to the fact that those of us who were in town and who oppose the bill, with the exception of the Senator from Utah [Mr. Moss], who was speaking at the time, had a meeting yesterday afternoon, at which we discussed the question of our strategy. There was no decision made that we would endeavor to talk this bill to death, or only endeavor to talk so long that it would have to go over to the next session. We did feel that there were several Senators who had not had an opportunity to talk on the bill, such as the Senator from North Dakota [Mr. Burdick], who has been trying to get the floor, and who has some deep convictions about it. The Senator from Texas [Mr. Yarborough] was here last night to talk on the bill. Many other Senators have not had a chance to talk on the bill on its merits. Furthermore, several others of us want to talk further on the bill. We feel that it has not been fully diagnosed.

We know that there are several "sleepers" in the bill which must be pointed out to the American people. There is no decision unduly to debate the bill at any undue length. We do feel that since the bill is so unprecedented and involves matters of great public policy, it ought to be fully diagnosed, and that amendments ought to be offered and debated in due course.

I do not want at this time to point out the ways in which the bill is unprecedented in the history of this country, other than in two aspects. This is the first time that I know of when a corporation has been proposed to be formed with part of it to be a Government part, and the other a private part. This is the first time in the history of our country when the President of the United States has been put in the picture of having a part in the direction of a private corporation.

There is grave doubt as to what the international law is with respect to satellites that go around the earth.

Mr. GORE. Mr. President, will the Senator yield?

Mr. MANSFIELD. I should like to yield the floor so the Senator from Louisiana [Mr. Long], who has been waiting to get the floor, may speak.

Mr. KEFAUVER. Will the Senator let me have the floor in my own right?

Mr. MANSFIELD. No; the purpose is to let the Senator from Louisiana have the floor. He very graciously consented to let me go ahead. Insofar as I can do so, I shall see to it that the Senator from Louisiana gets the floor. I yield first, however, to the Senator from Tennessee for a question.

Mr. GORE. I wish to point out to my colleague that the proponents of the bill allege that the President would have power of direction over this corporation. If that were true, as the Senator says, that would be a precedent in American life, and I believe an unfortunate one; but that does not happen to be the case.

The word used in the bill is "supervision," not "direction." I have been unable to find a legal interpretation of "supervision"; indeed, some authorities say that in this context it would have no legal meaning.

Mr. KEFAUVER. I appreciate the comments of my esteemed colleague from Tennessee. The bill provides, for the first time in the history of the Nation, that the President shall help a private corporation; shall foster it. Yet he is to have no control over it. I think that understanding is correct.

I call attention to the fact that the hearings held by the Committee on Foreign Relations were placed on the desks of Senators only yesterday. Not many of us have the good fortune to be members of that committee. I have tried to read some of the testimony, but I have not had a chance to read it all. The Committee on Foreign Relations—both the majority and the minority—have not made a report concerning what took place, and will not, as I understand, until Monday. I think the Senate should have an opportunity to study these great foreign relations and international law questions.

I point out also that, aside from the fact that many of us feel that this proposal is an unwarranted giveaway, it is admitted that the Government—the taxpayers as such—will receive nothing in return for what they have spent, not even a preferred rate. That is not merely a feeling held by several Senators. A great former President, who fights for what he thinks is right, regardless of the consequences, Harry Truman, very definitely has the same feeling.

Mr. DOUGLAS. Mr. President, may we have order in the Chamber?

The ACTING PRESIDENT pro tempore. The Senator from Tennessee will suspend his remarks until the Senate is in order.

The Senator may proceed.

Mr. KEFAUVER. Mr. President, this would be the first time in the history of the United States that one type of carrier would be allowed to control another. It has been a policy, established for more than 100 years, that one type of carrier may not control a competing type. In other words, there are laws providing that the railroads cannot control the shipping lanes, the canals, the barge lines. There are laws to the effect that the railroads cannot control the airlines, and vice versa. Those laws have been enacted for a very sound reason of public policy; that is, that one type of carrier would not be interested in developing another type, would not be interested in making obsolete its own equipment. What would the railroads do with the airlines? They would not particularly want to develop them. That is natural.

In this instance, we are considering a remarkable new method of communication, different from anything else in the communications field in the history of the world. It ought to be competing with other types of communications carriers. But the bill, breaking all precedents in American history, would turn the new medium over to the very people who now control the other types of transmission. It is most important in all of this consideration that the United States take a big part in the development of the international space communications satellite system. That is of paramount importance. As time goes on, other countries will put up communications satellites.

Under the bill, the Government would be helpless to decide what kind of communications system the United States will have. We know that under the bill, A.T. & T. is committed to a low-orbit system. Suppose in 2 years, as almost everyone thinks will be the case, it is found that in order to have a successful system it will be necessary to have a high-orbit satellite. The President of the United States and the Federal Communications Commission could not make and enforce a decision that this Government should move from one system to the other. Our destiny would be left in the hands of a private corporation.

Mr. MANSFIELD. Mr. President, I should like to have the distinguished Senator from Louisiana [Mr. LONG] receive the recognition which he deserves. Then if he wishes to yield to the Senator from Tennessee, that will be another matter. I hope the Senator from Tennessee will agree to that proposal, because there is an understanding that that will be the case.

Mr. KEFAUVER. If my majority leader wishes me to stop talking——

Mr. MANSFIELD. No; let the Senator from Louisiana get the floor and yield to the Senator from Tennessee, if he so desires.

Mr. President, I yield the floor.

Mr. KEFAUVER. Mr. President, perhaps I could pursue the colloquy later with the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, if there is no objection, I shall be willing to accommodate any Senator. I so announced this morning. If there is no objection on the part of the leadership, I shall be glad to yield for any purpose, provided that I not be taken off the floor.

Mr. MANSFIELD. I should like to see any Senator try to do that.

Mr. SALTONSTALL. Mr. President, will the Senator from Louisiana yield, without losing his right to the floor?

Mr. LONG of Louisiana. Mr. President, I yield to the Senator from Massachusetts provided I do not lose my right to the floor.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. SALTONSTALL. Mr. President, in his statement, the majority leader said that he and the minority leader might be strong or weak, or might be intelligent or dumb. I commend them for being strong and for being intelligent.

I think the Senate has debated this matter almost to the point of absurdity. The bill has been considered by four committees, and has been debated on the floor of the Senate for quite a long time. Every Senator is entitled to his vote. All I ask is that we be given the opportunity to vote. I think there should be free debate. We have the rule of cloture. If the cloture rule is invoked, each Senator will be entitled to 1 hour for debate.

I commend the majority leader and the minority leader for presenting the cloture motion. I shall vote in favor of cloture, because regardless of whether we believe this is the proper solution of the problem, we are entitled to express our opinion. I say this because I believe in what is being done this morning.

Mr. PROXMIRE and Mr. GORE addressed the Chair.

The ACTING PRESIDENT pro tempore. Does the Senator from Louisiana yield; and if so, to whom?

Mr. LONG of Louisiana. Mr. President, reserving my right to the floor, I yield to the Senator from Wisconsin for a parliamentary inquiry.

Mr. PROXMIRE. Mr. President, for the information of the Senate, when will the vote come on the cloture motion which has just been filed—at what time on what day?

The ACTING PRESIDENT pro tempore. Under the rule, the vote will come 1 hour after the Senate meets on the following calendar day but 1. If the Senate is in session on Monday, the vote will come 1 hour after the Senate convenes on Tuesday.

Mr. PROXMIRE. I thank the Chair.

Mr. MANSFIELD. Mr. President, may I intervene?

Mr. LONG of Louisiana. I yield to the Senator from Montana, provided I do not lose the floor.

Mr. MANSFIELD. I hope that the Senate will agree that when we recess or adjourn tonight, we will convene at 10 o'clock on Monday morning next; and that at the appropriate time, when the debate has been concluded on Monday night, the Senate will convene at 12 o'clock the next day. The leadership will try to arrange the schedule on that basis. I simply wished to raise the possibilities, so that the Senate might be aware of what the schedule will be.

The ACTING PRESIDENT pro tempore. Is the Senator from Montana proposing a unanimous-consent request at this point?

Mr. MANSFIELD. No.

Mr. LONG of Louisiana. I am happy the Senator from Montana is not making that request now, because I should like to consult with other Senators to consider whether we might oppose it.

Mr. President, I now yield to the Senator from Tennessee, without losing my right to the floor.

Mr. GORE. Mr. President, I have heard rumblings and rumors that the pressure is on for cloture absenteeism. In my opinion, the only way the cloture motion can prevail next Tuesday is if Senators who voted against cloture on the civil rights bill should be absent when the vote comes on this motion.

Cloture absenteeism: Let the country keep its eyes open. Let the people know that in order to vest monopolistic control of a vast new and valuable medium of communication, the pressure is on for Senators to be absent when the vote is taken. Absenteeism—cloture absenteeism. If the pressure succeeds, we shall hear the cry "cloture absenteeism" for a long time to come.

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I am delighted to yield to my good friend from Florida.

Mr. HOLLAND. I wish the Senator from Tennessee would give me his attention. The Senator from Tennessee has remarked that there is pressure on Senators who have formerly voted against cloture on civil rights measures to absent themselves next Tuesday. I am sure the Senator from Tennessee has no information to that effect with reference to the two Senators from Florida, who have stated quite openly that they expect to be here and to vote for cloture next Tuesday.

Mr. President, so far as I am concerned, I wish to say that I think the distinguished majority leader and the distinguished minority leader would have been weak, instead of strong, if they had not asked for cloture under this situation.

What is it? This matter went first to the Space Committee; and, after exhaustive hearings there, it came out with the affirmative votes of the 15 members of that committee. Second, this matter went to the Committee on Commerce; and, after exhaustive hearings there, it came out with the affirmative votes of 15 of the 17 members of that committee. Third, after two periods of futile filibustering on the floor of the Senate, this matter went to the Foreign Relations Committee; and it came back to the Senate with the affirmative votes of 13 of the 17 members of that committee—meaning that out of the 49 Senators on those 3 committees, only 6 have not been willing to cast affirmative votes for the approval of this important measure.

We have here a measure which not only has had exhaustive hearings, and not only has had almost unanimous support by these three committees—and, Mr. President, let me say that in my brief 16 years of service in the Senate, I do not recall any other measure which has gone to three standing committees of the Senate—but we also have a situation under which the President, the specific expressions of the members of the Cabinet who are affected, and the specific expressions of the members of every branch of the Government which is affected are strongly in support of this measure; and, above all else, Mr. President, we are dealing with a matter on which we have a chance to move forward in connection with a discovery which is the product of the genius and the industry of our Nation, both the private industry and the scientific members of our National Government, and which has beggared description in its effect, not only upon our own people and upon our friendly neighbors throughout all the earth, but also upon those who are not friendly to us.

So, Mr. President, here we stand, like a boy with a new, shiny toy, who does not know what to do with it, but does not want to let anyone else touch it. I hope the Senate will not permit itself to be put in so ridiculous a position in the eyes of the Nation and in the eyes of the world.

I rise primarily to say that some of the Senators who customarily have voted against cloture in connection with civil rights measures will be voting for cloture in connection with this measure. I also wish to say that I think every Senator would vote for cloture if the pending matter related to a declaration of war under a necessary situation, or to a national defense appropriation under a critical military threat, or to some other necessary measure under situations very close and important to the general welfare of the country.

The question before us, Mr. President, is this: Do we believe the importance of this measure to be such that we should move forward with it and should express the will of the Senate in regard to it? Mr. President, speaking for myself, I say I believe this is such a measure.

After allowing ourselves the approximately 14 days of debate which already have elapsed and the 16 days which will elapse before the vote is taken on the cloture motion, as we near the end of this session and as we near the end of this Congress, I believe we are allowing ourselves to appear ridiculous in the eyes of the world, and, specifically, in the eyes of our Nation; and I believe that Senators who take the opposite position will experience that reaction from their constituency, because I do not believe the average citizen of this country wants to see this body show itself to be supine, futile, and unable to permit the will of a vast majority of its membership, who represent the vast majority of the people of the Nation, to be expressed on a matter as important as this one is.

Mr. GORE. Mr. President——

Mr. KEFAUVER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. Mr. President, I previously yielded to the Senator from Florida, who wished to ask a question of the junior Senator from Tennessee [Mr. GORE]. I yield now to him, and thereafter I shall be glad to yield to the senior Senator from Tennessee.

Mr. GORE. Mr. President, the distinguished senior Senator from Florida has referred to the will of the people with respect to this bill. Perhaps he would like to know of an event of which I am aware. An official of one of the large television networks advised me that the network had cleared 1 hour for debate, one evening during the coming week, by four Senators on this question. He said he had no difficulty in obtaining the acceptance of his invitation by Senators who oppose the bill; but after 2½ days he reported to our group that among the approximately 80 Senators who now favor this bill, he was unable to find 2 Senators who, on television, would go before the American people and defend the bill. Perhaps some will later become willing to do so.

The sentiment against this bill is rising. It was referred to the Space Committee, and was reported by it unanimously. Then it was referred to the Commerce Committee, and two votes were registered there against it. Then it was referred to the Foreign Relations Committee, and four Senators there registered their opposition to the bill.

Mr. President, this is a very, very important bill. Yesterday, only one Senator spoke on the satellite bill. I call attention to the fact that that speech was a very able one. I heard a good deal of it, and that was the first time that Senator had had an opportunity to speak on the bill.

Other Senators who are opposed to the bill have not yet had an opportunity to speak on it. Yesterday evening, one Senator of that group was on his feet, seeking recognition to speak, when the Senate took its recess, until today.

Yet, Mr. President, under these circumstances, although not even one amendment has been voted upon, a cloture petition has been filed.

I seek to offer an amendment which would place in the bill a provision to preserve the primacy of the President of the United States in connection with the negotiation of agreements between our country and other countries.

Last year, when the President sent to Congress his message on this bill, he advised Congress that the executive branch of the Government would either conduct or supervise the negotiations with other countries. And when the administration's bill arrived here, it contained such a provision. But that provision had subsequently been stricken out; and I say to the Senate that there is not now in the bill a provision to prohibit the proposed corporation, if created, from entering with a whole series of foreign countries into secret political agreements which might prejudice the foreign policy of the U.S. Government.

Now a motion for cloture is made. The distinguished senior Senator from Florida [Mr. HOLLAND] advises he will be present and that he will vote for it. This does not surprise the junior Senator from Tennessee. I heard the distinguished senior Senator from Florida make some remarks many days ago which left me with the impression, rightly or wrongly, that he could hardly wait to vote for cloture on this proposal.

No; I would not expect pressure and persuasion to be applied successfully to the senior Senator from Florida to be absent. He will be present, I am sure, and vote for cloture enthusiastically, I am sure, however erroneously, under these circumstances.

I was referring to those Senators who cannot conscientiously vote for cloture. I am referring to those Senators who believe that the U.S. Senate is the last bastion of free debate in the world. I am referring to those Senators who will not vote for cloture on a civil rights matter, and who do not wish to vote for cloture in this instance.

The rumor I hear is that the pressure is on for absenteeism of those who would not vote in favor of cloture.

I wish to make my position plain in that regard. Cloture absenteeism—let the country keep its eyes open. The satellite bill, in my humble opinion, is contrary to the public interest. I feel this deeply. Instead of the Senate's making a spectacle of itself, as some have asserted, I think in this case the Senate is living up to the grand tradition of this body when a small group of Senators, usually referred to as a little band, stand, but stand resolutely, to protect the public interest.

Oh, George W. Norris stood for 15 years to keep the great Muscle Shoals project from being given away. Not one filibuster did he engage in to save this project for the people, but three or four or five. Finally, there was and there is the TVA.

Perhaps that is not a project which the senior Senator from Florida has favored. But look where this Government of ours invites distinguished foreign visitors who come to this country to visit. Almost invariably, their first stop is the Tennessee Valley Authority project.

I also remind the Senate that in World War II, when there hung in the balance control of the air, the one area in the United States that had the necessary supply of power, at the critical time, to provide the aluminum for our airplanes was the Tennessee Valley.

I point our further that at the critical conference with President Roosevelt, when Dr. Einstein had opened up the possibilities of a weapon that would end the war, a courageous decision was made to undertake to build an atomic bomb. There was but one area in America where there was sufficient power to do it. That was the area served by the TVA.

In the case of the TVA, a great resource of national power was saved for the people by a valiant little band of Senators who were willing to filibuster and to take the personal, physical, and political abuse that was heaped upon them, such as is being heaped upon this little band now, in order to prevent this national resource from being given away.

I am proud of the traditions of the Senate. I am proud of this body as a citadel of free debate. I am proud to be associated with a band of Senators, however small it is—may their number grow, and it has grown a little in the last few days—who are willing to take the scathing editorials, who are willing to resist the blandishments and pressures, to fight for the people's interests as we see them and as we earnestly and sincerely believe are involved in this case.

Mr. KEFAUVER and Mr. HOLLAND addressed the Chair.

Mr. LONG of Louisiana. Mr. President, I had agreed to yield to the senior Senator from Tennessee, and I have not been entirely courteous to him. I would like to yield to him at this time, because when I took the floor I had indicated that I was going to yield to my very able friend, the senior Senator from Tennessee, who is chairman of the Subcommittee on Monopoly and Antitrust. When we look at the committees that considered the bill, that is the only committee where the bill really belonged. It was never sent there for one reason. I think it was known what fate the bill would receive if it ever got to the subcommittee of which the distinguished senior Senator from Tennessee is chairman. The bill has been in every committee except the one where it belongs.

The PRESIDING OFFICER. (Mr. Hickey in the chair). The Senator from Louisiana yields to the Senator from Tennessee.

Mr. KEFAUVER. May I say to the Senator from Louisiana that we never could get the bill before us. We obliquely got into the matter by having hearings on it even though the bill was not before us. The hearings were convincing that this was the biggest, most gigantic giveaway in the history of the United States. There is no protection for independent businessmen. There is no protection under the antitrust laws.

I was going to comment on the statement of the Senator from Florida that, in case of war, he would have no compunctions against voting for cloture. I would not, either, in a matter of the safety of the United States. But does the Senator from Florida feel that the creation of a monopoly which would carve out the antitrust laws for the purpose of giving away a resource that has been paid for by the taxpayers is on an equality with the threat of war or a great national emergency?

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield to me to make a reply?

Mr. LONG of Louisiana. I yield to the distinguished Senator from Florida with the same understanding.

Mr. HOLLAND. The Senator from Florida does not feel that this matter is on a complete parity, of course, with the matter of cloture as against an immediate need for a declaration of war if our Nation were attacked or with the need for passing a defense appropriation in the event we were in an emergency. The Senator from Florida is simply pointing out that Senators must use some discrimination, some judgment, in the matter of application of cloture; and the Senator from Florida thinks that is one of the things the Senate has frequently failed to do.

The Senator from Florida has voted for cloture before. He voted for cloture when there was an important bill pending in the Senate to provide that the atomic power potentials, which had been created through our genius, be used for peaceful uses.

As in this instance, a small group was trying to prevent the passage of the bill.

Mr. KEFAUVER. And did.

Mr. HOLLAND. The bill was passed with some very considerable amendments.

The point I am making is that every Senator must in his own mind discriminate as between those things which are of sufficient importance to the Nation to require a solution—and an early solution—and those things which in his judgment are not.

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. HOLLAND. I will in a moment.

The Senator from Florida thinks that this is one of those things as to which an overwhelming majority of the Senate should speak. It is a matter which, as I have already said, was subjected—for the first time in my history in the Senate of 16 years—to referrals to three standing committees. It received a favorable vote of 43 of the 49 Members, and the hostile vote of only 6. It involves our prestige and our ability to get further prestige, by deciding, in the judgment of the vast majority, what is the appropriate setup through which we can develop and utilize this important discovery. The Senator from Florida thihks that this is a matter in which a vast majority of the Senate should be allowed to speak. That is his position. That is the reason why, in this second instance, he proposes to vote for cloture.

Mr. KEFAUVER. Mr. President, will the Senator yield to me so that I may ask the Senator from Florida another question?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may do so without prejudice to my rights.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KEFAUVER. I am sure the Senator from Florida would want Senators to have an opportunity to express their deep and sincere convictions.

Does not the Senator know that the Senator from Alaska [Mr. Bartlett] has not had an opportunity to speak on this bill, and wants to speak at length?

Does not the Senator know that the Senator from North Dakota [Mr. Burdick] was in the Chamber, ready to speak, when it was not possible to get a quorum, and has not had an opportunity to speak?

Does not the Senator know that the Senator from Michigan [Mr. McNamara] is anxious to express himself about this bill and has had no opportunity to speak?

Does not the Senator know that although the Senator from Texas [Mr. Yarborough] was interrupted, when at one time he had the floor for a short time, that the Senator from Texas has a very strong, well-conceived, and persuasive speech which he has had no opportunity to give? The Senator was present last night to deliver his speech and the Senate could not get a quorum. There was no one to hear the Senator.

Would the Senator want to cut off all these distinguished Senators?

Mr. HOLLAND. Mr. President, the Senator from Florida does not want to cut anybody off.

Mr. KEFAUVER. He is doing it.

Mr. HOLLAND. If the Senator will let me make answer, the Senator from Tennessee knows full well that those who have cut off these distinguished Senators are the Senators who, for instance, all day long a week ago last Saturday declined to put in their appearance, so as to have a quorum.

Mr. KEFAUVER. The Senator is mistaken about that. The Vice President himself ordered a quorum. The Senator knows that. He should not misstate the facts.

Mr. HOLLAND. The Senator from Florida never misstates the facts. The Senator from Florida was here to listen to the speech by the distinguished Senator from Oregon, who said she had been waiting all during the time of our obtaining a quorum in the early part of that day, only to hear her again ask for another quorum, without making her speech, prolonging that long display of ineptitude and futility into late in the day of a week ago last Saturday.

Mr. KEFAUVER. The Senator knows what happened.

Mr. HOLLAND. The Senator from Florida was sitting here last night, willing and anxious to hear his distinguished friend from Texas. He noted that the willingness to raise the point of no quorum did not come from the friends of the bill but came from those who are not for it.

If the Senator from Tennessee thinks that there is any way to make Senators stay in the Chamber to listen to arguments with which they are not in sympathy, he is mistaken.

That has happened not only in this debate but also quite frequently. The responsibility for the long delay in the exasperating and frequent calls for a quorum is not on the Senators who favor the bill but instead is on the shoulders of those who oppose it, including the distinguished Senator from Tennessee.

Mr. KEFAUVER. Let me point out to the Senator from Florida that on a week ago last Saturday we did not ask for a live quorum to start the session, but the Vice President said that a quorum had to be obtained.

Does not the Senator feel that if a Senator has an important speech to make he ought to be able to get a majority of Senators here to listen to him? Does not the Senator feel that if the subject has such great importance and such urgency, with respect to the passage of this ridiculous giveaway bill, that Senators ought to be willing to come to the Chamber—at least half of them—and keep the business of the Senate going?

Mr. HOLLAND. The answer to that, Mr. President, would be that not nearly half of the Senators believe in the assumption made by the Senator from Tennessee. All of the Senators, with the exception of some 13 or 14, thereabouts, feel that the bill not only is not a ridiculous bill but also is a necessary bill, and that the ridiculous aspects of this whole matter consist of the display of futility which has been brought on by the long and extended—this is the third instance of it—group of filibusters by the Senators who do not favor passage of the bill.

Mr. LONG of Louisiana. Mr. President, I should like to claim the floor long enough to make a remark or two, since officially I do have the floor.

Mr. HOLLAND. If the Senator will permit me to say one more thing, I should like to complete my answer.

It is true that the Vice President called for the first quorum a week ago last Saturday. He was forced to do that because of the fact that the Senate was not able to get a quorum on the night before.

Mr. KEFAUVER. That was not our fault.

Mr. HOLLAND. It was in part the fault of the distinguished Senators. I repeat again that three Senators who declined to appear all during the day on that Saturday, though they were known to be in town, were among those Senators who are filibustering against this bill.

It is as impossible as can be for the Senator to put the onus on that vast majority of Senators who want the bill to pass and decline to assume the responsibility for this fiasco, which is upon himself and those few who stand with him.

So far as the Senator from Florida is concerned, he makes no criticism of the convictions of Senators. The Senator from Florida merely feels that there is a time, a place, an occasion when the Senate should be allowed to vote on a matter such as the pending one. He thinks this is one of those times.

For this matter to languish since June, when it was first called up, until this date, now in August, is, the Senator from Florida thinks, an unforgivable thing from the standpoint of the unwillingness of the Senate as a whole to come to grips with the problem which involves enormously the prestige of our Nation in all of the world, and which demonstrates a willingness to tie up the Senate on a matter on which the Senator from Florida thinks it should not be tied up but should be allowed to express its will.

Mr. DOUGLAS. Mr. President, will the Senator from Louisiana yield to me?

Mr. LONG of Louisiana. Mr. President, if Senators will permit, I wish to claim the floor, to say just a word or two. After that I shall be glad to yield again, if Senators wish to speak.

I wish to say that the best definition of a filibuster which the junior Senator from Louisiana ever heard was that stated by a former Senator from Nevada, the late George Malone, who said, "A filibuster is a long speech with which you disagree. If you agree with it, it is profound debate."

I would say that those of us who are opposing this bill have not done a single thing to filibuster. We have not even begun to do the things which some of us Senators have done, as confederates, fighting civil rights bills. In fact, we have not even made up our minds to conduct a filibuster; but we are trying seriously to beat the bill. We have talked about how far to go and we have tried to determine how best to fight this bill.

I have insisted, with respect to debate, that we ought to debate the bill for a while and then determine whether we are ready to vote, and if so, how soon. We are not ready to enter into a unanimous-consent agreement at this time. I am frank to tell my good friends that when one is asked to enter into a unanimous-consent agreement he must consider the facts as they exist. If he thinks he lacks a majority but he thinks he is making headway in the debate, he would be rather foolish to make a unanimous-consent agreement.

I am going to yield to my good friend from Illinois, who spent more time than I spent discussing the gas bill, and I thought the gas bill was a wonderful bill.

Mr. DOUGLAS. One of the best things the Senator from Illinois has ever done was to help kill that gas bill.

Mr. President, I ask unanimous consent that the Senator from Louisiana may yield to me without losing his right to the floor.

Mr. LONG of Louisiana. Mr. President, I desire to yield on that condition, and I ask unanimous consent that I may so yield without prejudice to my rights to the floor.

The PRESIDING OFFICER. Is there objection to the request of the Senator from Louisiana? The Chair hears none, and it is so ordered.

The Senator from Illinois is recognized.

Mr. DOUGLAS. Mr. President, I think the record in this matter needs to be set straight.

Day before yesterday the distinguished majority leader said that the communications satellite bill had been debated by the Senate for 13 days. This morning the distinguished Senator from Florida [Mr. Holland] said that it had been debated by the Senate for 16 days. I think in their arithmetic they included the 8 or 9 days that the matter was before the Senate Committee on Foreign Relations. But during that time there was little or no debate upon the measure before the body of the Senate. So that the actual days of debate before the Senate, in my judgment, have not exceeded 7 or possibly 8 days. During the period in which the bill was being considered by the Foreign Relations Committee, there was time for substantive legislation to be considered by the Senate, although the leadership brought up very minor bills, and, in fact, objection from the Republican side of the aisle prevented the all-important farm bill from being considered.

So I think that to date it cannot be charged that the debate has been excessive in amount.

During the course of the debate I have been struck by the very few affirmative arguments that have been made for the bill. It is true that the distinguished senior Senator from Rhode Island [Mr. Pastore] did make a very excellent statement, for which he is to be commended. But in the main, the supporters of the bill have contented themselves, as the Senator from Florida has contented himself, with merely saying that the members of the committees favor the bill, and, therefore, we should approve the measure. We have great respect for our committees, but if Senators do not have the right of independent judgment on these questions, I think we might pass a rule that any bill supported by members of a committee should pass without debate. But I do not believe that we should abdicate our functions in that respect at all. I think that the question before the Senate should be considered and considered carefully.

On the question as to who is responsible for holding up measures, the Senator from Florida implies that it has been those opposed to the bill who allegedly have prevented the Senate from functioning. The Senator from Illinois canceled a number of engagements this morning in order to come to the Senate Chamber to help the Senator from Montana get a quorum. When he arrived here, he was informed that it was not the intention to ask for a quorum. I verified that information at the desk from the Parliamentarian. I notice that the Senators who voted yesterday against the tabling motions of the Senator from Montana, and who therefore can be presumed to be somewhat lukewarm on the bill, seem to be present in considerable number. The senior Senator from Tennessee [Mr. Kefauver] and the junior Senator from Tennessee [Mr. Gore]—that State has very distinguished Senators—are present. The Senator from Ohio [Mr. Young], who voted against two tabling motions yesterday, is present. The great Senator from Texas [Mr. Yarborough] is present. The Senator from Louisiana [Mr. Ellender] is present. The Senator from Illinois has been on the periphery of the controversy and has not come to a final decision on the question. He had looked forward to added debate in which he could explore with other Senators the question as to who should control the corporation.

Mr. MANSFIELD. Mr. President, will the Senator yield to allow me to answer some of his allegations?

Mr. DOUGLAS. When I finish, I shall be very glad to yield.

The Senator from Tennessee inadvertently referred to the corporation as a public-private corporation. I am sure he did not mean that. The corporation would be a private corporation. There would be only 3 directors from the Government and 12 chosen from private industry. The Government would own no stock in the proposed corporation whatsoever. Six of the directors would be named by corporations, not more than three from any one corporation. Then six would be elected by individual stockholders under cumulative voting. But I wish to see that subject explored very thoroughly before the Senator from Illinois can make up his mind as to how he will vote.

I notice that while a majority of those who voted against tabling yesterday are present on the floor of the Senate, there are very few supporters of the measure who have come to the floor of the Senate. I see going out of the Chamber our beloved friend, the senior Senator from California, of the Republican Party.

Mr. KUCHEL. Only for a minute.

Mr. DOUGLAS. I mention the fact that he was present because as I look across to the Republican side of the aisle I do not see a single Senator present. I do see our beloved majority leader, the Senator from Montana [Mr. Mansfield] present, and the distinguished Senator from Florida, who has made such a great appeal for cloture, which I am sure will obtain great support. I am not quite certain where my good friend, the senior Senator from Louisiana [Mr. Ellender] stands on the question. We are always happy to have him present. I do not know whether he will be for cloture, against cloture, or an absentee.

Mr. ELLENDER. I am against cloture.

Mr. DOUGLAS. Well, the Senator from Louisiana has an open mind on this question just as does the Senator from Illinois.

Mr. President, I see present those who are opposed to the bill, and those who are in doubt about the bill are also present. I do not see many who favor the bill. We are ready to answer a quorum call, and if the majority leader will approve, I am ready to ask for a quorum, and then we will see who are the absentees.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I will not yield for that purpose. As an accommodation to Senators, whose health needed a little restoration, I promised there would not be a live quorum.

Mr. DOUGLAS. I am ready for a live quorum. I should like to be recorded as being present.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I do not object if the Senator wants it.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I should like to complete my comment, and then I shall yield. I do not object to a live quorum, but I assured the majority leader and the minority leader that I would not ask for it today. I could not yield for that purpose without the concurrence of the majority leader and the minority leader.

I now yield to the Senator from Illinois, so that he may yield to the Senator from Montana.

Mr. MANSFIELD. Mr. President, I wish to set a number of things straight for the Record. The Senator has mentioned that there has not been enough time for debate. The Senator may recall that 2 weeks ago today we had two quorum calls in an attempt to get a quorum. I think we got the necessary 50 within a matter of 10 hours twice. So it was a wasted session. I think the Record will bear out that statement.

This morning the majority leader made it a point, insofar as he knew their attitudes, to call all those who were opposed to the bill at their offices and at their homes to request them to be here because there was a possibility of a request being made by the leadership this morning.

At the beginning of the session today I made the following statement:

> I wish to comment on my calculations concerning the time spent by the Senate in consideration of the space communications bill. Yesterday, I noted—as is to be found on page 15088 of the Record—that this measure had been thoroughly studied by five committees in the Senate, and by one in the House, and had been the subject of well over 3,000 pages of testimony, which took 45 days to present. I wish to make clear, if it was not already so, that these 45 days and 3,000 pages represent a total of the time spent in both the five Senate committees and the single House committee. I may add that the total pages of hearings recited did not include those of the Foreign Relations Committee which are now available and swell the total.

I also said:

> I also mentioned that this measure had consumed 308 pages of the Record, during 14 days. This figure was incorrect; actually, there had been 308 pages of debate in 12 days on the Senate floor, or 358 pages of debate in 14 days in both the House and Senate. Yesterday's proceeding raised these totals.

Then I made this statement:

> I make this statement in order to make sure that the Record is clear, and to correct a misstatement which I made yesterday.

Therefore, I hope that the Record is clear.

So far as the session of two Saturdays ago is concerned, when there was an attempt made to continue the debate on this subject, it took 5 hours after we had convened that morning to establish a quorum. The question of no quorum was raised again immediately, and it took another 5 hours to get a quorum.

The result was that no business was transacted at that time. I wish to repeat that the leadership tried to call all Members whom it knew to be in opposition to the bill, either at their homes or in their offices, to try to get them to be present at approximately 9 o'clock this morning; furthermore, when the Senate convened this morning the majority leader tried to get a unanimous-consent agreement to have a quorum call, to be called off at the end of 15 minutes, to allow time for Senators in opposition to the bill to be present. I do not know what more we could have done. However, I wished to state for the Record answers to the questions that have been raised and that I felt should be answered.

Mr. DOUGLAS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. The Senator from Illinois has the floor under the unanimous-consent agreement that I may yield to him.

Mr. DOUGLAS. I am deeply obliged to our beloved majority leader for the record which he has made. He did call me up this morning, or his office called me. I do not know why he assumed that I was necessarily opposed to the bill. I have taken the position consistently that I am on the fence.

Mr. MANSFIELD. I called those who were opposed or who I thought were in doubt. I did the best I could with the limited knowledge at my disposal.

Mr. DOUGLAS. Those who are opposed or in doubt broke engagements to come to the floor in order to help the majority leader. However, his supporters did not come to the floor. There was no one on the Republican side except the whip and the Senator from Nebraska.

Mr. MANSFIELD. Oh, Mr. President——

Mr. DOUGLAS. He had very few supporters.

Mr. MANSFIELD. I believe it only fair to say that at the time the proposals were raised there were 10 or 15 Members present on the other side of the aisle, and perhaps more.

Mr. KUCHEL. I assure my beloved friend from Illinois that that is the fact. We had an excellent representation on this side.

Mr. DOUGLAS. Was it as good as on two Saturdays ago when even the sponsor of the bill was not on the floor?

Mr. MANSFIELD. Insofar as the meeting which was held two Saturdays ago is concerned, there was a majority of the proponents of the bill present on the floor. There was a noticeable absence of those who were opposed to the bill. I believe the Record should show that, and the Record will show that.

Mr. DOUGLAS. Let the Record show that those who are either opposed or in doubt are here this morning. I am ready to suggest the absence of a quorum, to see who is absent this morning. I am ready to suggest the absence of a quorum.

Mr. LONG of Louisiana. I do not yield for that purpose, because I have made a commitment that a live quorum would not be called. I hope the Senator understands that when one makes a commitment he is bound to honor that commitment.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. DOUGLAS. I yield.

Mr. KEFAUVER. Is it not a fact that on Saturday before last it took 10 hours to get a quorum present?

Mr. HOLLAND. Two quorums.

Mr. KEFAUVER. That would indicate a great apathy on the part of Senators who are supposed to be interested in this giveaway bill; otherwise they would respond to the quorum call.

Mr. DOUGLAS. That is my conclusion. I note that the distinguished senior Senator from Florida made this point many times in connection with civil rights bills. When our Southern friends were calling quorums every 2 hours to get those of us who were in favor of civil rights awake and to answer the quorum call during the night, I heard the Senator from Florida remark, when we came to the Chamber, that this was proof that people did not care about civil rights. If that was true in regard to civil rights, it is true now in connection with the pending bill.

Mr. MANSFIELD. When we spent 10 hours trying to get 50 Members to the floor 2 weeks ago, the distinguished Senator from Tennessee [Mr. Gore] and the distinguished Senator from Oregon [Mrs. Neuberger] were present. I will only go that far.

Mr. DOUGLAS. The Senator from Florida [Mr. Holland] has made an impassioned speech in behalf of the institution of cloture. I favored cloture in times past on civil rights questions, and I expect to continue to favor cloture. The Senator from Florida now seems to be also in favor of the institution of cloture. I hope that come January he will vote to change rule XXII, so that a majority of the Senate, after full and free debate, may proceed to consider a pending issue. I was really touched by the Senator's appeal for cloture. I believe his position will make a great impression in the North; that it will be realized that we are beginning to make inroads in the South, and that southerners are becoming converted to the idea of cloture. Perhaps his conversion will weaken the southerners' resistance to cloture. I will be very much interested in what happens.

I may say that those Senators who will absent themselves on Tuesday, while apparently they will not vote for cloture, they will be voting for cloture nevertheless, in effect, because they will be permitting northern and western advocates of turning this treasure over to the A.T. & T. to put cloture into effect. If they absent themselves, then although they will say, "I did not help to put cloture into effect," they will in reality be casting a half vote for cloture, and in effect the word can go out and will go out that they have all been converted to cloture. This will have a tremendous effect all over the country. It will indicate a weakening of the southern position. It would show that while the southerners will not vote for cloture, they will not vote against it. I believe the lesson will be pretty clear to the whole Nation.

Mr. HOLLAND. Mr. President, will the Senator yield?

The PRESIDING OFFICER. Does the Senator from Illinois yield to the Senator from Florida?

Mr. HOLLAND. I was asking the Senator from Louisiana to yield to me.

Mr. LONG of Louisiana. I had yielded to the Senator from Illinois with the understanding that he could yield to Senators. He could yield to the Senator from Florida if the Senator from Florida desired him to do so. Otherwise, I will be happy to yield to him.

Mr. HOLLAND. I will wait until the Senator from Illinois has completed his remarks. Then I will ask the Senator from Louisiana to yield to me.

Mr. DOUGLAS. I will make this proposal, Mr. President, that we broaden the cloture motion of the Senator from Montana so that it will apply to cloture on rule XXII. In that way we can proceed to vote on rule XXII without interminable debate.

I ask unanimous consent that the cloture motion of the Senator from Montana may be so modified as to provide for cloture on rule XXII.

Mr. MANSFIELD. I object. This was not in the agreement between the Senator from Louisiana and the Senator from Illinois. This was settled yesterday.

Mr. LONG of Louisiana. I want to be courteous to all Senators. I expect that every Senator wants to protect his rights. Does the Senator from Illinois wish to continue with his statement, or is he prepared to yield the floor?

Mr. DOUGLAS. I think I am prepared to yield the floor, except I do hope that some parliamentary way can be found to get cloture on rule XXII.

Mr. LONG of Louisiana. In that case I would suggest to my good friend that if he wants to get a civil rights measure voted on, he can submit it as an amendment, and when the cloture petition is voted on, he will have a chance to vote for civil rights by calling up that amendment under the gag rule that the Senator from Florida favors.

Mr. DOUGLAS. In other words, the Senator believes that this is a chance to get civil rights legislation enacted?

Mr. LONG of Louisiana. Of course. That can be done under the gag rule. He can call up a whole bushel of amendments. When the Senate is gagged, it is gagged on everything. He can put in his civil rights amendments and literacy test amendments, and every other kind of amendment he favors.

Mr. DOUGLAS. In other words, what I had merely suggested, now becomes a practicality.

Mr. LONG of Louisiana. The Senator had a real possibility of gagging this body.

Mr. DOUGLAS. I do not wish to gag this body. I believe in full and free debate. But after the debate has proceeded for a given period of time, then I think the Senate should have a chance to vote. At present, the rules do not permit that. I favor changing the rules. But I must say I am still on the fence. I should like to ask questions as to who will control the new corporation.

Mr. GORE. Mr. President, will the Senator from Louisiana yield?

Mr. HOLLAND. Mr. President——

Mr. LONG of Louisiana. Mr. President, who has the floor at this point?

The PRESIDING OFFICER (Mr. HICKEY in the chair). The Senator from Louisiana has the floor.

Mr. LONG of Louisiana. Under unanimous consent agreement, I had yielded to the Senator from Illinois, and he has the right to speak until he is ready to yield the floor. I do not wish to take him off the floor before he is ready to yield.

Mr. DOUGLAS. The Senator from Louisiana is very courteous.

Mr. GORE. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield to the Senator from Tennessee for a question.

Mr. GORE. Is it not a fact that the three directors whom the senior Senator from Illinois has described as being from the Government would not, in fact, be public directors at all, but would be fiduciary trustees for the stockholders? Once they became directors of the corportation, their responsibilities would be no different from those of any other directors. The only difference would be that they would have been appointed by the President. But the bill does not place any public responsibility upon them. Is it not a fact that they would be fiduciary trustees, and that their responsibility under the law and under the charter of the corporation would be no different from that of the directors nominated by A.T. & T.?

Mr. LONG of Louisiana. The Senator from Tennessee is exactly correct. That question was thoroughly explored before the Committee on Foreign Relations. There is no testimony to the contrary. In other words, unless the law expressly states to the contrary, a director's obligation is to the stockholders. He represents them, and he must act in their best interest. If there should be a conflict between the national interest and the interest of the stockholders, his duty would be to look after the interests of the stockholders rather than the national interest.

The Senator from Tennessee knows that we could not even have an amendment to the bill in this respect considered.

The procedure follows precisely the pattern of the natural gas bill. I wanted to vote for some of the amendments to the natural gas bill when it was before the committee. We were told that we should not amend the bill by so much as dotting an "i," changing a comma, or crossing a "t." We are not even to vote on correcting a grammatical error in the committee bill, because we were told that the President had promised to sign the gas bill, and it was not desired to give him any excuse whatever not to sign it. So we could not change even a grammatical error. The Senator from Tennessee may recall that we would not let a single amendment to the gas bill be voted on.

Oddly enough, when the bill reached the President, although he was committed to it, he called some of his good friends—this is but a rumor—and said, "I hate to do this; I would not want to do this to my best friend; but, in conscience, I just cannot sign it." That President was Harry Truman.

The communications satellite bill is following that exact pattern. We were told that no matter how horrendous, no matter how bad some of its provisions are—and surely the bill is contrary to the national interest—amendments cannot even be considered because we must not risk failure in conference.

Mr. GORE. Mr. President, will the Senator from Louisiana further yield?

Mr. LONG of Louisiana. I yield to the Senator from Tennessee provided I do not lose my right to the floor.

Mr. GORE. Is it not a fact that the Committee on Foreign Relations, following the esprit de corps which the Senator from Louisiana has described, refused to adopt even the amendments which the Secretary of State himself had suggested should be adopted?

Mr. LONG of Louisiana. I was never more amazed in my life, because the acting chairman of the committee, the distinguished Senator from Alabama [Mr. SPARKMAN] came before the committee and suggested amendments which he thought were appropriate to the bill. The Secretary of State said they were good amendments and expressed the hope that they would be adopted. Nevertheless, the Secretary of State was denied his right to have the amendments added to the bill.

Mr. LAUSCHE. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield to the Senator from Ohio, provided I do not lose my right to the floor.

Mr. LAUSCHE. Mr. President, I send to the desk two amendments. The first amendment would conform in language to related sections. The amendment is offered on behalf of myself and the distinguished senior Senator from Idaho [Mr. CHURCH]. It is a conforming amendment which includes reference to international bodies, as is presently the case in section 201(a)(4) and in section 402, where there is reference to any international foreign entity. This conforming amendment was approved by the Secretary of State, as is indicated on page 181 of the hearings of the Committee on Foreign Relations, and in a letter dated August 9, 1962, addressed to the chairman of the Committee on Foreign Relations by the Secretary of State.

Mr. President, I send the amendments to the desk and ask that they be read.

The PRESIDING OFFICER. Does the Senator from Louisiana yield for that purpose?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield for that purpose without prejudicing my right to the floor.

The PRESIDING OFFICER. Does the Senator desire to have the amendments read, or does he ask unanimous consent that the reading be dispensed with and that the amendments be printed in the RECORD.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield for the purpose of having the request of the Senator from Ohio granted, without prejudice to the continuation of my speech.

Mr. LAUSCHE. Mr. President, I ask unanimous consent that I be allowed to send the amendments to the desk to be read and to be printed in the RECORD.

Mr. LONG of Louisiana. Without prejudicing my rights.

The PRESIDING OFFICER. Is there objection?

Mr. KUCHEL. Mr. President, will the Chair please state the request?

The PRESIDING OFFICER. The Senator from Ohio, after the floor had been yielded to him by the Senator from Louisiana, asked unanimous consent to submit specific amendments. He further requested that the amendments be read and be printed in the RECORD.

Mr. KUCHEL. Are they amendments to the pending bill?

The PRESIDING OFFICER. The amendments are to the pending measure. Is there objection to the request of the Senator from Ohio?

Mr. KUCHEL. Mr. President, reserving the right to object, may I ask the able Senator from Ohio to explain further the purpose of the amendments?

Mr. LAUSCHE. The amendments are in conformity with a proposal made by the Secretary of State. One amendment will make two sections of the bill consistent and conforming. One section has particular language, and the other section does not have the same language. The purpose of the amendment is to make the language of the two sections conform.

Mr. KUCHEL. Was the amendment considered in the Committee on Foreign Relations, of which the Senator from Ohio is a member?

Mr. LAUSCHE. It was not.

Mr. GORE. Mr. President, reserving the right to object, I, too, have two amendments, one of which I have referred to on the floor of the Senate several times. It relates to one of the basic issues involved in this bill. We are in this parliamentary situation. A cloture petition having been filed, no amendment can be considered unless it is printed and read, or considered as having been read.

Further reserving the right to object, since it is necessary that the distinguished senior Senator from Ohio obtain permission to have considered an amendment which the Secretary of State himself approved, and which, incidentally, the Committee on Foreign Relations disapproved or declined to approve, I ask unanimous consent——

The PRESIDING OFFICER. May the first unanimous-consent request be acted upon?

Mr. GORE. Mr. President, I wish to add to the request or to amend the request, with, I hope, the approval of the senior Senator from Ohio, that my amendment, which would substitute the President's requested and recommended language for section 402 of the bill, be considered as read and be printed in the RECORD.

Mr. LAUSCHE. Mr. President, I have an amendment identical with the amendment which the Senator from Tennessee has now proposed. I said I would submit two amendments, but I should like to have the Senator from Tennessee join with me——

Mr. GORE. I should like to have the Senator from Ohio join with me. This is my amendment, which I offered in the committee.

The PRESIDING OFFICER. Does the Senator from Ohio enlarge his amendment to include the request of the Senator from Tennessee?

Mr. LAUSCHE. Yes; I have no objection.

The PRESIDING OFFICER (Mr. HICKEY in the chair). Is there objection to the modified request of the Senator from Ohio?

Mr. KUCHEL. Mr. President, will the Chair please state the unanimous-consent request as modified?

The PRESIDING OFFICER. The Senator from Ohio has requested unanimous consent that he be permitted to submit some amendments, and that request was modified by the request of the Senator from Tennessee [Mr. GORE] that one of his amendments—which apparently is in conformity with one of the amendments of the Senator from Ohio—also be included. There is a little conflict, in that the Senator from Tennessee asked that his amendment be included, as read and published in the RECORD, and the Senator from Ohio asked that his amendment be read.

Mr. LAUSCHE. Mr. President, I shall ask that my amendment be considered as having been read.

The PRESIDING OFFICER. Very well—that all of them be considered as having been read and be made a part of the RECORD.

Mr. KUCHEL. Mr. President, under the circumstances, I shall not object if these two Senators wish to submit amendments at this time.

Mr. KEFAUVER. Mr. President, reserving the right to object—although I shall not object—I point out that there are at the desk some amendments which have been there a long time; and I believe that Senators who have amendments at the desk should have an opportunity to have those amendments, too, treated as having been read.

The PRESIDING OFFICER. They will have that opportunity later on.

Mr. KEFAUVER. I ask unanimous consent, Mr. President, that other Senators who have amendments which are to be considered, have an opportunity to submit them and have them treated as having been read, and have them printed in the RECORD.

The PRESIDING OFFICER. Does the Senator from Louisiana yield for this purpose?

Mr. LONG of Louisiana. Yes, Mr. President, provided it is understood that I may do so without losing my right to the floor—and that was my original request. If such consent is given, I yield for this purpose.

The PRESIDING OFFICER. Does the Senator limit his request to printed amendments which are at the desk?

Mr. HOLLAND. Mr. President, I shall not object to such requests made by individual Senators in regard to specific amendments; but I certainly shall object to a request for a blanket or shotgun approach.

Mr. KEFAUVER. Then, Mr. President, I ask that the unanimous-consent request be modified, so as to include the printed amendments which are at the desk.

Mr. HOLLAND. I object. I think Senators who have amendments at the desk are completely entitled to have their amendments read, and I shall not object to any such request. But I do not think a blanket request of this kind is appropriate; and I object.

Mr. KUCHEL. Mr. President, I rise to a parliamentary inquiry.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield to the Senator from California, to permit him to propound a parliamentary inquiry, without prejudice to my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KUCHEL. First, Mr. President, has the unanimous-consent request of the Senator from Ohio been agreed to?

The PRESIDING OFFICER. It has not.

Mr. KUCHEL. Very well.

Second, under the Senate rules, what right does a Senator have to offer an amendment, now at the desk, to the pending bill?

The PRESIDING OFFICER. After a cloture motion is presented, whenever a Senator can obtain the floor in his own right, he may submit an amendment to the bill, and may have the amendment read—provided, of course, that the amendment is germane.

Mr. KUCHEL. Mr. President, I suggest to the able Senator from Ohio and to the able Senator from Tennessee that their rights will not be prejudiced if they wait, and obtain the floor at the conclusion of the remarks of the able Senator from Louisiana.

Mr. LONG of Louisiana. That may take some time.

Mr. KUCHEL. Then it will have to take some time. But I simply suggest, Mr. President, that 2 hours after the Senate convened, this morning, for the purpose of receiving intellectual stimulation from the able Senator from Louisiana, these unanimous-consent requests ought to be somewhat restricted.

I felt a speech bubbling up in my mind; and the able Senator from Louisiana was willing to permit me to speak, under a unanimous-consent agreement. But because I do not try to elbow my way past other Senators, I have remained silent. On that basis, Mr. President, I have the honor to object to the unanimous-consent request.

The PRESIDING OFFICER. Objection is heard.

The Senator from Louisiana has the floor.

Mr. LONG of Louisiana. Mr. President, let me say that I shall be glad to accommodate Senators as best I can. I do not desire to compel those who do not wish to listen to my remarks to remain in the Chamber and listen to them. I realize that it is necessary for Senators on the other side of the aisle to keep at least one of their group on the floor, so as to prevent the Republican Party from being abolished by unanimous consent. [Laughter.] Also, Mr. President, I realize that the leadership has to have some Senator present at all times to protect its position in connection with the pending bill.

Mr. KUCHEL. Mr. President, will the Senator from Louisiana yield for a question?

The PRESIDING OFFICER (Mr. Pearson in the chair). Does the Senator from Louisiana yield to the Senator from California for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. KUCHEL. With great pain, does the Senator from Louisiana recall that several years ago there was a request for unanimous consent to abolish the party which I have the honor to represent—the party founded by Abraham Lincoln?

Mr. LONG of Louisiana. I do not recall it with great pain. That request was almost agreed to. [Laughter.]

Mr. KUCHEL. That is what caused the pain.

Mr. LONG of Louisiana. Oh, now I understand; the Senator from California means it caused pain to him. Yes, Mr. President; I do recall that request for unanimous consent to abolish the Republican Party. However, it almost boomeranged, because later the distinguished Republican leader caught the Democratic Senators off the floor, and almost obtained unanimous consent to have Louisiana put out of the Union—although perhaps some might say that would not have been too bad.

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. Yes; provided I may obtain unanimous consent to do so without losing my right to the floor.

THE PRESIDING OFFICER. Without objection, it is so ordered.

Mr. HOLLAND. I wish to correct a misstatement in regard to the meaning of rule XXII. I understood several Senators to say that they intend to submit civil rights amendments to the bill. even if cloture is invoked. However, I call attention to the fact that rule XXII reads in part—on pages 23 and 24 of the Senate Manual as follows:

> No dilatory motion, or dilatory amendment, or amendment not germane shall be in order.

So there is neither the prospect nor the probability that any such amendment will be offered and acted upon.

I realize that the distinguished Senator from Illinois [Mr. Douglas] thinks of cloture only in terms of what he calls civil rights measures. But again I wish to call attention to the fact that it has been my position on this floor—and I announce it, for the Record, during the atomic energy debate in 1954; and I have reannounced it since that time—that the cloture rule is a two-edged sword. Not only is it a defensive measure against taking up and voting on some measure which as many as one-third of the Senators present feel would adversely affect the law and order and the peace of living in great areas of the Nation, but it is also an offensive weapon, open to the leadership—or, for that matter, to any sufficiently large group of Senators—when it is desired to have action taken upon a given measure. So I would never concede that the cloture rule means only that obstructionism will prevail, regardless of the issue which is involved.

I believe that the cloture rule works both ways. I am prepared to vote for cloture in connection with this measure; and that does not mean in any respect that my opinion in regard to what the able Senator from Illinois [Mr. Douglas] refers to as civil rights measures has changed in the slightest.

The Senator from Illinois and other Senators must recall that I have not been silent in connection with what I regard as civil rights matters, inasmuch as for nearly 14 years I have been an advocate of the so-called anti-poll-tax amendment.

The trouble with the Senator from Illinois [Mr. Douglas] is that he does not accord to other Senators the right to have any ideas of their own in regard to civil rights, if their ideas vary in the slightest from his; and he thinks the cloture rule is an abomination intended to prevent his ideas about civil rights measures from prevailing.

So far as I am concerned, I point out that up to this time the cloture rule has not prevented the taking of action on what I regard as civil rights measures. But the Senator from Florida does intend to resist any such measures by voting against cloture and to resist them on the floor of the Senate to the limit of his ability. As for other measures—and the Senator from Florida puts the pending measure in this group—that tremendously affect the welfare and prestige of our Nation, and in which every possible requirement of hearing has been fulfilled, and in which what the Senator from Florida regards the requirements of reasonable debate have been satisfied, he reserves the right to vote for cloture, as he has heretofore. I wanted to make that point clear in the Record.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HOLLAND. I yield, if I may, to the Senator from Tennessee.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may permit the Senator from Florida to yield on that basis without prejudicing my rights to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. GORE. The Senator is aware, I am sure, that a ruling of the Chair on the question of germaneness is subject to appeal and decision by majority vote of the Senate, and that question is decided without debate. So my friend and able colleague, the senior Senator from Florida, need not feel too secure in his enthusiasm for cloture on this measure that a majority vote of the Senate will not make a civil rights amendment in order to be voted upon under the cloture restriction.

Mr. HOLLAND. The Senator from Florida is quite willing to recall that some dozens of times there have been amendments offered as riders to important pending legislation which did involve civil rights. Uniformly they have been voted down by respectable majorities. The Senator from Florida has no doubt at all that the same course will be followed in this matter. I wanted to reassure my friends who evidently did not understand the meaning of the cloture rule that it did not envisage calling up and passing any amendment that is not germane.

Mr. GORE. Mr. President, will the Senator yield?

Mr. HOLLAND. If I may protect fully the rights of the junior Senator from Louisiana.

Mr. GORE. The junior Senator from Tennessee was not one of those who was suffering from any misunderstanding of the rule, if the Senator from Florida meant to include him, but the junior Senator from Tennessee is fully aware of the situation he has just stated—that the question of germaneness is within the decision of the majority of the Senate—not two-thirds, but a majority of the Senate—and that the question can be decided on appeal without debate. So the Senator who is so enthusiastically for cloture on this measure, but so enthusiastically opposed to it on others, should devote good, long thought over the weekend to considering this matter.

Mr. HOLLAND. The Senator from Florida has had a good, long thought on this matter since he heard it in the Space Committee back in April and May, and he has been waiting for a chance to vote for this measure all that time. He thinks now, when 43 out of 49 members of three standing committees have voted to bring this bill to the floor, it puts the Senate in a ridiculous posture to have a group of so-called liberal Senators prevent the Senate from expressing the will of what the Senator from Florida thinks is the great majority not only of the Senate, but the will of the great majority of the American people.

I thank the Senator from Louisiana for yielding to me.

Mr. YARBOROUGH. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. For a question or for an insertion?

Mr. YARBOROUGH. Yes. I ask unanimous consent that the Senator from Louisiana may yield to me for the purpose of a unanimous-consent request that six amendments that I had placed on the desk on the 15th day of June 1962, designated "EE," "FF," "GG," "HH," "II," and "JJ" be filed here and considered as read.

Mr. CASE. Mr. President, reserving the right to object, it seems to me matters of procedure of this sort and how we are going to conduct our procedures ought to be within the regulation of the majority leader. I would like to reserve the objection until the majority leader indicates how such procedures shall be followed.

Mr. LONG of Louisiana. Mr. President, in this instance I cannot understand the Senate. I have been around here for 14 years. This is the first time in 14 years I have heard somebody object to the reading of an amendment. This is still America; is it not?

Mr. CASE. I am not objecting. I am reserving the right to object. I think the majority leader should decide the type of procedure he wants to have followed in our sessions from now on.

Mr. GORE. Mr. President, reserving the right to object——

Mr. LONG of Louisiana. Has it already been objected to?

Mr. GORE. The Senator from New Jersey reserved the right to object. He did not object.

Mr. President, reserving the right to object, a major share of the testimony and the consideration of the Senate Foreign Relations Committee was on the question of section 402, which involves the primacy of the President, on the one hand, or the initiative of the proposed corporation, on the other, for the negotiation and conclusion of agreements with foreign countries. I have repeatedly referred in debate to this fact. I have said I would offer an amendment to substitute for the provision in the bill the identical provision recommended by President Kennedy. Now, after the cloture motion is made, I am denied unanimous consent to submit the amendment, and by one single objection, after the making of the cloture motion, the Senate may be denied the right even to vote upon the amendment.

This shows how premature is the cloture motion. Not only have several Senators had no opportunity to speak even one time against the bill, but now we find objection to the submission by members of committees that have considered this measure of far-reaching amendments for consideration by the Senate. I think that is quite an extreme situation, and I regret very much that the Senate has rushed pellmell, in its enthusiasm to ramrod the passage of the bill, into such an untoward parliamentary situation.

Mr. KEFAUVER. Mr. President, will the Senator yield for a parliamentary inquiry?

Mr. LONG of Louisiana. I yield for a parliamentary inquiry, preserving my rights to hold the floor.

The PRESIDING OFFICER. Does the Senator from Louisiana yield for that purpose?

Mr. LONG of Louisiana. I ask unanimous consent that I may yield for a parliamentary inquiry, reserving my rights to the floor, and I ask the Chair to protect my rights to the floor, but I am glad to accommodate the Senator.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. KEFAUVER. Mr. President, did not the Chair, when the Senator from Wyoming [Mr. HICKEY] was presiding, rule that Senators, when they got the floor individually in their own right, could offer amendments and ask that they be read or considered as read and printed in the RECORD?

The PRESIDING OFFICER. Yes; the Chair did make that ruling.

Mr. HOLLAND. Mr. President——

Mr. KEFAUVER. That is the ruling which stands at the present time?

The PRESIDING OFFICER. Yes.

Mr. LONG of Louisiana. Mr. President, I yield to the Senator from Florida, reserving my rights.

Mr. HOLLAND. Mr. President, I wish to protect the rights of the Senator from Louisiana in every way.

The PRESIDING OFFICER. Is there objection? Without objection, it is so ordered.

Mr. HOLLAND. I have been advised by the majority leader that I should object, for him, to any requests of the nature mentioned by the Senator from Texas and the Senator from Tennessee, until such time as the Senator from Louisiana has completed his speech. The majority leader has called attention to the fact, as shown by the ruling of the distinguished Presiding Officer, that every Senator has the right to offer amendments and to have them considered as read.

I have already served notice by what I said several minutes ago that I would have no objection to the several introductions, and neither would the majority leader, but he thinks, anxious as we have been, waiting as we have been, expectantly to hear the eloquent words of the distinguished Senator from Louisiana, that we should be afforded that opportunity at long last. So the majority leader has asked me to object to further requests for yielding, so that we may hear the eloquence of the distinguished junior Senator from Louisiana on this subject.

I thank the Senator.

Mr. LONG of Louisiana. Mr. President, if a gag rule is to be voted on by the Senate, the Senator from Florida is not going to have that opportunity, unless he wants to hear only a part of my speech, because I have a rather lengthy speech which I should like to deliver. I am sure it would be impossible to complete it today, unless I talk to empty chairs until midnight.

I have no objection to that. I should like to accommodate Senators if they wish to convenience themselves by asking that an amendment be read, rather than wait until the end of my speech.

Frankly, I say to my good friends, it may be some time before I complete my speech. I think they ought to be on notice that such is the case. If a Senator merely wishes to have an amendment read and to go about his business, if he is not anxious to hear my speech, I am not anxious to compel him to stay, especially if he has a closed mind on the subject.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. Reserving my rights, I shall do so.

Mr. HOLLAND. The time is now limited. The vote on the cloture motion will take place Tuesday.

Mr. LONG of Louisiana. That is correct.

Mr. HOLLAND. There is no point in any Senator, including the distinguished Senator from Louisiana, speaking at great length. Every Senator is protected by the time limitation. There is no reason for concern.

I am sure my distinguished friend from Texas has no concern. I note that his amendments are printed and have been lying on the desk since June, so there must not be any immediacy about the matter. No Senator on this side of the aisle, and I am very sure no Senator on the other side of the aisle, will have any objection to any Senator, when he is recognized, sending forward amendments which he wishes to have read or considered as read, so that they will be available if and when cloture may be voted.

Mr. LONG of Louisiana. Mr. President, I hope that Senators are not going to insist upon continuing objections to the reading of amendments. I read from rule 22:

> Except by unanimous consent—

This is what happens after the gag rule is voted on by the Senate, after we are put in the legislative straitjacket by the gag-rule vote:

> Except by unanimous consent, no amendment shall be in order after the vote to bring the debate to a close, unless the same has been presented and read prior to that time.

We are hearing objections now. If these objections persist and continue, this will mean that a great number of Senators who have amendments to offer, striking at what we believe to be the evil nature of the bill—even amendments approved by the administration itself, by the President or by the Secretary of State—may be barred from presenting the amendments, as a result of the right of Senators to object. This is brutality, the likes of which the Senate has never experienced in its existence.

I ask Senators to imagine that situation. Objections are heard even to the reading of amendments, with respect to which the Senate would be limited to a vote after the gag rule is voted in the Senate.

I hope that these objections will not persist, because it would be something of which the Senate would not be proud in years to come.

I express the hope that eventually Senators who take this position will relent and permit amendments to be regarded as read. For the 14 years to which I can attest, all a Senator has had to do was to send an amendment to the desk and have it printed, without any Senator saying anything one way or another. Usually, if some Senator looked at it, he would not object to dispensing with the reading of the amendment. I cannot recall that there has ever been a time, in my 14 years in the Senate, when a Senator has objected to a request to dispense with the reading of an amendment.

Mr. HOLLAND. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield to my distinguished friend for a question.

Mr. HOLLAND. In the first place, there is no disposition to prevent a Senator from having an amendment presented and considered as read, because there will be ample time between now on Tuesday at 1 o'clock to have that done. No Senator, except the opponents of the bill, has even suggested a lengthy speech. If Senators want to prevent their own friends or associates from having an opportunity to offer amendments, they are the only ones who will have an opportunity to do that.

In the second place, perhaps because of his modesty, I think my distinguished friend has overlooked the real meat in the statement I was asked by the majority leader to make; which is that we are very desirous of hearing the eloquent speech of the distinguished Senator from Louisiana. We are going to invoke the rule as to yielding for anything other than a question, until the distinguished Senator has concluded.

I thank the Senator for yielding.

Mr. LONG of Louisiana. I thank the Senator. If my good friend wants to be formal with me and wants to object to the slightest deviation from the rules, he is privileged to do so. As one who has had considerable experience in these debates, when we southerners have gotten together to fight to the bitter end, I have known how to handle myself on the floor. I shall be here for a long time, and can speak whether the Senator objects or does not object. I will make my speech, and try to treat Senators with the greatest courtesy.

I wanted to accommodate Senators. As a practical matter, I told Senators that so far as I could govern the situation, there would be no live quorum calls. Four Senators have died in the past year. So far as I am concerned, if some Senator wants to take the day off, to get some fresh air, feeling that might improve his health or prolong his life, he does not have to listen to my speech. I hope he will read it in the RECORD. Perhaps his administrative assistant will read it and, if he finds something challenging, will pass the word along as a suggestion to his Senator, "This is something deserving attention."

I know the problem concerning the health of Senators and what happens late in a session. I am trying to accommodate Senators, to help them discharge their obligations.

I shall have no hard feelings and no recriminations about how this fight winds up, one way or the other. Long ago I learned that I could not continue my service in this body and maintain my mental health if I worried about what the Senate might do in regard to passing a bill against my will. If I am satisfied with my position, I will not be worried, regardless of what the final result may be with respect to the cloture or gag rule, aimed to destroy the work of the Senate, this Senator will not vote that way, and he thinks his duty requires him not to worry about the outcome.

I now yield to my distinguished friend, the Senator from Florida [Mr. HOLLAND], reserving my rights to the floor.

Mr. HOLLAND. We all know that the Senator from Louisiana will do what he regards to be his duty. He will do it ably and he will do it effectively. We want to hear his remarks. We propose to be gracious.

I am not going to raise a certain rule against the Senator now which I could raise as to the place the Senator has taken to make his speech, because I think he should be allowed to speak from wherever he wants to speak. I shall be as gracious as the distinguished Senator has been to me throughout the morning.

I invite attention to the fact that we have been about this business for 2½ hours, during which I am sure the distinguished Senator has lost much time to get across his thought-provoking ideas. I hope he will not be interrupted now except for a question.

Mr. LONG of Louisiana. Mr. President, I hope my good friend will take another look at his rule book, because some time ago I had the impression that it was possible to make a Senator speak from his desk. I undertook to pursue that thought and discovered I was in error, after consulting the Parliamentarian.

I believe that was my impression on the day the former Republican leader, the late Senator Taft, undertook to put the Senator from Alabama [Mr. HILL] in his seat, under a similar impression. Thus we discovered there was nothing in the rules to make a Senator stand at any particular desk.

I should like to propound a parliamentary inquiry, and ask unanimous consent that it may not affect my rights.

Am I not correct in saying that a Senator can speak from any desk in this Chamber, unless the Senator to whom it belongs demands the desk, and not be in violation of the rule?

The PRESIDING OFFICER (Mr. HICKEY in the chair). The Chair is advised that there is no requirement in the rules that a Senator speak from any certain desk.

Mr. LONG of Louisiana. That was my impression. As a matter of fact, I am not going to make the point that the Senator from Florida is not sitting at his desk. He can sit wherever he wants to sit so long as the Senator to whom the desk belongs does not object.

Mr. HOLLAND. Mr. President, the Senator from Florida was trying to show a willingness to be gracious. If the rules do not permit the Senator to be gracious then he will not be permitted. The Senator from Florida is sitting where he is sitting, acting as majority leader, by appointment of the majority leader, during his absence.

Mr. LONG of Louisiana. I have lost all hope of persuading the Senator from Florida to my view in regard to the satellite communications bill, but I hope that I can at least persuade him to my view in regard to the rules of the Senate—that a Senator does not have to speak from his desk, and that a Senator may speak from the desk of any other Senator if the other Senator is willing to let him speak there.

The senior Senator from Louisiana [Mr. ELLENDER] gave me permission to speak from this desk, exactly as the majority leader gave my good friend, the Senator from Florida permission to sit where he is sitting.

Neither of us is violating the rules of the Senate. That is one thing upon which we can agree. There are a great number of things with respect to which I agree with my distinguished friend from Florida. I am happy that on at least that question we can agree. I hope we can agree on some other things.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the distinguished Senator from Louisiana may be permitted to yield to me for a question.

Mr. LONG of Louisiana. I do not need unanimous consent to yield to the Senator for a question.

Mr. YARBOROUGH. I ask the distinguished Senator to yield for a question.

Mr. LONG of Louisiana. Will the Chair put the question?

Mr. YARBOROUGH. Mr. President, I withdraw my request for unanimous consent.

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Texas for a question?

Mr. LONG of Louisiana. I yield.

Mr. YARBOROUGH. Mr. President, I rise with a great deal of hesitation, in view of the fact that 2½ hours have elapsed since the Senator from Louisiana became entitled to the floor. I do so only because I have not asked a question. I have been on my feet for more than an hour attempting to do so. In view of the fact that the Senator from Louisiana has yielded several times to the distinguished Senator from Florida for a question, and he readily agreed to yield, I ask him to yield to me for only one time.

I must state some facts as a predicate to my question.

Mr. LONG of Louisiana. I ask unanimous consent that I may permit the Senator from Texas to state a predicate to his question without losing my right to the floor.

The PRESIDING OFFICER. Without objection, it is so ordered.

Mr. YARBOROUGH. I intend to ask the Senator questions about the true functions of legislation. What is the true function of legislation? We have had a great deal of talk about futility.

Some have suggested that if we did not pass a bill every day, we would not be functioning legislatively. I ask the Senator from Louisiana if he does not think it is as much the function of a legislature to defeat evil legislation—and I think the bill is evil—as it is to pass good legislation.

Mr. LONG of Louisiana. Mr. President——

Mr. YARBOROUGH. I have not completed my question. I wish to ask the distinguished Senator from Louisiana if he does not think that one of the highest duties of a legislator is to oppose proposed legislation that would rob people of their rights and privileges. In that connection I call his attention to paragraph 6 of section 201 of the proposed bill.

Mr. LONG of Louisiana. I have yielded to the Senator so that he might ask one question.

Mr. HOLLAND. Mr. President, I object. The Senator is not asking a question.

Mr. YARBOROUGH. I submit that it is a question. I have not finished the predicate of my question. I will finish it in less than 3 minutes. I submit that I have the right to do so. I have been yielded to, and no one can cut me off except the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, I ask the Chair to protect my rights. I do not wish to lose my rights to the floor because the Senator from Florida cannot agree with the Senator from Texas.

The PRESIDING OFFICER. The Chair rules that the rights of the Senator from Louisiana are protected by his unanimous-consent request that the Senator from Texas might propound a predicate to his question.

Mr. LONG of Louisiana. I yielded to the Senator for a question, which I can do under the rule. I wish to protect my rights. The Senator from Florida and the Senator from Texas cannot agree.

Mr. YARBOROUGH. I am asking my question. I submit it is as germane as, if not more germane than, were the questions asked by the senior Senator from Florida. The question is along the same line. For example, the distinguished Senator from Florida warned us that we might hear from the country. I telephoned to my office and I find that the amount of mail and telegrams coming in is 20 to 1 in favor of our position.

Mr. HOLLAND. Mr. President, if the Senator will not confine himself to asking a question, I will object. I do not wish to do so, because I have nothing but the greatest respect for the Senator.

Mr. LONG of Louisiana. I am perfectly content to yield for a question, but I am a little surprised that my able friend, who is an outstanding lawyer and a great judge, cannot learn how to ask leading questions. I suppose he spent so much time opposing leading questions that he cannot ask them any more as an old "leading question" man. I can tell the Senator that everything he has been attempting to say could have been put in the form of a leading question.

Mr. YARBOROUGH. Mr. President, I was trying to save time.

Mr. LONG of Louisiana. I will not yield for that purpose. I will yield only for a question.

Mr. YARBOROUGH. Mr. President, I ask the distinguished Senator from Louisiana the following question: Does the distinguished Senator from Louisiana think that the provision in paragraph 6 of section 201, page 25, of the measure is in the public interest? It reads as follows:

> (6) take all necessary steps to insure the availability and appropriate utilization of the communications satellite system for such general governmental purposes as do not require a separate communications satellite system to meet unique governmental needs;

In other words, the provision requires the President to give the business of the U.S. Government to a private monopoly and would deny the Government of the United States the right to use the satellite system that its own scientists are building. The provision requires that the United States pay tribute. I ask the distinguished Senator from Louisiana that question in connection with the testimony of Edward Murrow before the Senate Committee on Foreign Relations.

Mr. Murrow said that for USIA to broadcast over the satellite system for 1 hour a day to the four corners of the world, the cost to the Government would be $900 million a year in rent to the proposed private monopoly. That right would be given to the corporation under that provision of the bill. The President must give the Government's business to the monopoly. I ask the Senator, Is that provision of the law in the public interest of the United States?

Mr. LONG of Louisiana. No.

Mr. YARBOROUGH. Mr. President, will the Senator yield for another question?

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Texas for a further question?

Mr. LONG of Louisiana. I yield.

Mr. YARBOROUGH. Does the distinguished Senator from Louisiana think that we are legislating properly only when we are passing bills? In connection with that question, I remind him of the statements made about the function of legislation and about this procedure being a study in futility. The distinguished Senator from Florida said it was ridiculous. In connection with my question, I refresh the memory of Senators by pointing out that that was the kind of attack that Hitler made on the Reichstag. Finally the Nazis burned down the building and dissolved the Reichstag to destroy parliamentary government. I ask the Senator if he thinks that the Senate must pass bills every day in order to be legislating properly?

Mr. LONG of Louisiana. No.

Mr. YARBOROUGH. Mr. President, will the distinguished Senator from Louisiana yield for another question?

The PRESIDING OFFICER. Does the Senator from Louisiana yield to the Senator from Texas for a further question?

Mr. LONG of Louisiana. I yield for a question.

Mr. YARBOROUGH. One question.

Mr. LONG of Louisiana. Only for a question.

Mr. YARBOROUGH. Does the distinguished Senator from Louisiana think that when a motion for cloture is being voted upon, absenteeism is true neutrality? Does the Senator from Louisiana think that if a Senator who is opposed to cloture absents himself, he is thereby being neutral in the fight over cloture?

Mr. LONG of Louisiana. I do not think he is being neutral. I think he is taking sides when he stays away.

Mr. YARBOROUGH. Is it not a fact that a Senator opposed to cloture who absents himself, if he were present and voting, would negative two votes on cloture; if he absents himself without a pair with two Senators for cloture, he is absolutely destroying his vote against cloture, at least by one-half of his voting power?

Mr. LONG of Louisiana. Yes.

Mr. YARBOROUGH. He is destroying his vote to that extent.

Mr. LONG of Louisiana. Mr. President——

Mr. YARBOROUGH. Mr. President, I have a number of other questions, but in deference to the capability of the distinguished Senator from Louisiana, I will defer the questions until later.

Mr. LONG of Louisiana. Mr. President, I cannot yield for an observation.

I wish to make one or two points about the cloture question, which was brought up today, and then I will go on to other questions.

First, I wish to make a statement for the benefit of the majority leader. Although he is not present, I hope he will read it in the RECORD. I think our majority leader is a great and honorable leader. He does not pull tricks on others, or take unfair advantage of them. That is one of the finest things about our majority leader. I have never known him to break his word, to break his commitment, or do anything which, by my standards, would be immoral conduct on the part of a Senator in discharging his duties toward his fellow Senators.

I admire and respect him for that. He has never heard a word of complaint from the junior Senator from Louisiana about the way he has conducted himself. We can disagree about the bill, but we cannot disagree about the honorable conduct of the majority leader. He has been fair. He tells us what he intends to do, and then undertakes to do it.

I think it would be a terrible mistake if he should succeed in invoking cloture in this body in order to pass a bill which we believe would create the most gigantic, oppressive monopoly of this century. That would be a very bad mistake. But he has a right to support the bill, and he has a right to seek gag rule in the Senate if he chooses to do so. I do not deny his right to do that, or quarrel with his privilege of making such an effort. As one Senator, I respect him for his right to do that. I hope he respects our right to oppose the bill as diligently and as persuasively as we can, and with all the sincerity we can muster, seeking to persuade other Senators to go along with us and vote against it.

The debate, at least to some degree, is doing what the other great debates of this body have done. The bill is a bad one. Those of us who are fighting it are convinced it is a horrible bill. This Senator is convinced that it is one of the worst bills he has ever seen in his life. I know it is one of the worst I have seen in the 14 years I have been in the Senate.

Of the bills mentioned by the majority leader, it is difficult to point out one of them which, from the economic point of view and from the point of view of the future of America, could be as bad as the one we are considering.

Frankly, we know what we are up against. I have noticed that some of the major newspapers have published editorials viciously attacking some of my colleagues for opposing the bill. I am sure the same thing will happen to this Senator. Why do they do that? Why is it that those who find so much evil in the bill cannot find a single newspaper that is upholding or supporting our position? There are some newspapers with a so-called liberal point of view that are doing so. As a practical matter, I do not think they could afford to uphold us. Economically, I do not think the press has the privilege of persuading the public how bad the bill is. I think the working press will file honest stories about the debate, and the most honorable newspapers will print those stories and will be fair in their presentation of the news.

Do not let any Senator expect to find any help on the editorial page. It is easy to see why.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I will yield in a moment. All one has to do is to take the two Washington newspapers, as a start, to see what happens. Let us look at all the advertising that the Chesapeake & Potomac Telephone Co. pays for in the Washington newspapers. That telephone company is a subsidiary of A.T. & T. That company can charge its advertising off to the people who use the telephones—to me, to the Presiding Officer, and to every other Senator and every citizen who uses that service, and even the Government itself, and everyone else in town. The newspapers make a nice profit out of this. However, we must understand that this telephone company does not have to put a single word of advertising in these newspapers downtown if they get to resent the attitude of one of these newspapers. If they do not like the attitude of a newspaper, they can remove their advertising from that paper. They are entitled to do so at any time.

Furthermore, I know a little bit about cross-lobbying. I have done some of it myself, before I came to the Senate. What is cross-lobbying? It works something like this: If A is trying to get through a bill, and B is trying to get through a bill, A can go to B and say, "If you can get this man to go along with you, I can get that man to go along with me. If you can get him to go along on my bill, I can get the other fellow to go along on your bill."

Let us take another example: Here is a telephone company and over there is an electric company, or a gas company. If I were a lobbyist I could go to one and say, "We have a parallel interest with you. This is our bill. It is something we want. You help us with this, and we will see if we cannot help you with some other bill that you may want. After all, we have a parallel interest."

These are privately owned public utilities, and the public pays for the advertising that is charged to the users in the rates they pay.

I am sure many Senators read the editorials in the great newspapers of the country on the day that Telstar went up. They all spoke about how tremendously important it was, what a great event it was, and what a great achievement on the part of A.T. & T., and then added what a fine thing it would be to pass the satellite bill. That all appeared on the editorial page. It appeared the first time that word went out that Telstar had gone up, even before A.T. & T. knew that they would be able to communicate with Telstar.

Drew Pearson had an article which appeared in the Washington Post, in which he spoke about a little country editor who made the mistake of criticizing the bill, and he spoke about an officer of A.T. & T. arriving at the editor's office to tell him that he must not know where his bread was buttered, and that he would be injured and would be hurt, and that his stockholders would not approve of his attitude because the newspaper might start to lose money if it lost advertising, as could be envisioned under the circumstances. I assume that that is what he said to him.

I have here an editorial which was printed on May 31, 1962, entitled "The Biggest Giveaway Yet." This was written by a little country editor expressing his opinion. I do not believe I will put the editorial in the Record now. There is no doubt that we are up against tremendous odds. It is unfair for those who have such fantastic power to scathe this little group who are fighting this bill, as we have been in the Senate. That is what is happening, though.

I was one of those who fought the basing-point bill. I believe the Senator from Tennessee was at that time in the House of Representatives, where he did not have the benefit of free debate. We fought that bill in the best way we could. We spent more time fighting the basing-point bill than we have spent fighting the pending bill. Eventually, after a couple of years, the proponents finally got that bill enacted and onto the President's desk, who, to their great surprise, vetoed the bill. That was the end of that. We could have saved a lot of time and a lot of effort if the President had told us that he was going to veto the bill. He did not tell us that he would veto it so we had to do the best we could. We had to fight it in the best way we saw fit. In any event, the bill did not become law. We are today fighting the pending bill in that same tradition.

I ask Senators to listen to this editorial. This is a front page editorial discussing this matter. This refers to an A.T. & T. lobbyist who called on this little country editor. Most of the little country editors are too small to take on a big company like this. However, I ask Senators to listen to what this editor said:

> Joe's loyalty to his company is a fine thing. But his company is asking him to do some very questionable things. He wants us to send our editorials to him before we print them, so he can check them for facts. This suggestion we do not favor.

Can Senators imagine how this giant corporation can kill editorial expressions even before such expressions are printed? It is fantastic. Here is this enormous power that exists in this monopoly, and yet we are told that we must make it bigger and we must pass laws to strengthen it.

I believe that history will look at this debate, unless I am mistaken, and say that this is one of the better examples of responsible debate against legislation not calculated to be in the public interest. My guess is that historians will tend to say that in the middle of the 20th century, an effort was made to pass a bill calculated to greatly strengthen and improve the position of a monopoly which had already become the greatest single monopoly in the world, and that certain Senators in the Senate who claimed to be strong advocates of free enterprise undertook to fight the bill and to make the distinction between monopoly and free enterprise, and explained that they favored competition rather than monopoly, where competition was possible.

I do not know what the verdict will be, but I hope history will judge us more kindly than the editorials which are scathing us.

There was something said about Senators not being here for a quorum call. In fairness it should be said—and I believe the majority leader will agree—that it is not up to the opponents of the bill to get a quorum present. Those who oppose the bill are not required to see that a quorum is present. As one who has opposed bills that I thought were bad, and who has engaged in debate which was described as a filibuster against civil rights measures, I have always regarded it as the duty of those who were pressing for the passage of the bill to see that a quorum was present.

Of course, that is the way it is now. I have no particular interest in speaking to an empty Chamber; I have done so before. If on Saturday some Senators hope to get additional rest, that is fine. I hope they will review my remarks and see what I have said on the subject when they return.

It seems to me that in this fight a decision has been made that no amendments are to be agreed to, no matter how well they are supported, no matter how sound the amendments may be. That was what happened in the Committee on Foreign Relations, and I suppose that sets the pattern for what will happen when the bill comes to a vote. Efforts will be made either to table the amendments or to vote them down without permitting the amendments to be considered in their own right.

Mr. President, on June 18 and 19, I discussed some of the issues involved in determining the future of a space communications system.

As you will recall, the principal points I made are these:

First. Since this area of space development is the first major fruit of our vast public expenditures, the decision we make with respect to space communications will have far-reaching political and economic implications because it will create a precedent for later solutions in other areas of human activity in space, and its consequences will be felt for generations.

Second. Because of an almost complete blackout by newspapers, radio, and television, our citizens are not aware of the great public issues involved. In addition, I expressed great doubt that my colleagues in the Senate, who are being called on to make decisions in this difficult field, could pass even an elementary examination in the subject matter and its implications.

Third. Instead of objective, unbiased information, we have been bombarded and almost overwhelmed with cliches, slogans, half-truths, and misinformation provided by the world's biggest private monopoly, the American Telephone & Telegraph Co. We have been subjected to lobbying activity the like of which I had never thought was possible.

Fourth. The United States, as a consequence of the excellent technical achievements of its NASA and DOD programs, has a tremendous opportunity to advance its position of prestige and world leadership, as well as to make a major gain toward the objective of preserving the free world, if it will now decide to use its present and future space achievements to this purpose. In my opinion, this should be the dominant factor in making the decisions on how to develop our technical achievements in space for the service of the Nation and mankind.

Fifth. We do not know at present what the potentialities of a satellite communications system will be and the actualities will probably exceed our imagination. Such a system will be able to be used in meteorology, space navigation and control, oceanography, space research, and other fields we cannot even conceive of at present.

Sixth. Every aerospace company, every communications company, except A.T. & T., and every scientist I have encountered, have stated that only with a synchronous high orbit system can we realize the full potentialities of a space communications system. This revolutionary new technology offers a threat to the existing methods of communication and can be used to introduce competition in this area. On the other hand, under this bill, H.R. 11040, this new technology can be used to strengthen the present monopoly.

Seventh. The American Telephone & Telegraph Co., which controls the conventional means of communication, is attempting to gain control of the new technology to protect its monopoly position by eliminating the possibility of competition. The Federal Communications Commission is being used by A.T. & T. to attain its objectives.

Eighth. The inevitable conflict of interest between competing technologies has been recognized by Congress, which has also traditionally limited common ownership of competing modes of transportation. I should like to cite as an example the Panama Canal Act of 1912, which is a part of the Interstate Commerce Act. This law prohibits ownership, control, lease, or any interest whatsoever, by a railroad in a common carrier by water with which the railroad does or may compete for traffic. The Civil Aviation Board also adopted the same interpretation as the Interstate Commerce Commission that ownership of air carriers by surface carriers could crush the competition of the air carriers.

Mr. President, the purpose of my amendment, which is now at the desk, seeks to carry out that philosophy. I understand that it is the pending amendment today.

May I inquire of the Chair if the pending amendment would prohibit the communications carriers from owning stock in the proposed corporation?

The ACTING PRESIDENT pro tempore. The amendment of the Senator from Louisiana designated "T" is the pending business.

Mr. LONG of Louisiana. Has that amendment been read?

The ACTING PRESIDENT pro tempore. The reading was waived, and the amendment was printed in the RECORD.

Mr. LONG of Louisiana. Under the rules of the Senate, in the event cloture is invoked, would that amendment be subject to being voted upon without unanimous consent?

The ACTING PRESIDENT pro tempore. The amendment would come under the provisions of the cloture rule.

Mr. LONG of Louisiana. And could be voted upon?

The ACTING PRESIDENT pro tempore. If cloture were adopted, the amendment would be eligible to be voted upon.

Mr. CASE. Mr. President, will the Senator yield for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. CASE. I assume that the ruling of the Chair means that the amendment is germane.

Mr. LONG of Louisiana. I am not concerned about the germaneness of the amendment.

Mr. CASE. I am not questioning that either; I simply wanted to be certain.

Mr. LONG of Louisiana. As a practical matter, is the Chair permitted to advise me whether the amendment is germane?

The ACTING PRESIDENT pro tempore. If the Chair were to rule on such a question, a point of order might be raised. However, in the opinion of the present occupant of the Chair, the amendment deals with communications carriers and is germane.

Mr. CASE. I raised the question only because the response of the Chair was that the amendment would be in order, which I assumed included a ruling that the amendment was germane within the rule.

Mr. LONG of Louisiana. The question of germaneness never arises unless some Senator challenges the germaneness of the amendment and makes the point of order that it is not germane. Then the question would be decided; and, of course, the ruling would be subject to modification by the Senate, because if there is an appeal from the ruling of the Chair, the question would be decided without debate. Will the Chair please advise me if I was not correct in my understanding?

The ACTING PRESIDENT pro tempore. Under the rule, all points of order, including questions of relevancy, and appeals from the decision of the Chair, are decided without debate.

The Senator from Louisiana has requested an opinion from the present occupant of the chair concerning the relevancy of the amendment which is pending at this time. In the opinion of the present occupant of the chair, that amendment is germane.

Mr. LONG of Louisiana. But the opinion of the present occupant of the chair cannot bind a future Presiding Officer.

The ACTING PRESIDENT pro tempore. That is correct.

Mr. LONG of Louisiana. The ninth point I made in my previous speech was that communications satellites will reduce considerably voice channel costs, but, if the communication carriers are active in the affairs of the satellite corporation, there is no indication that rate reductions will be commensurate with cost reductions, either for particular services or in the aggregate, or that rates will respond quickly to cost changes.

This means that the public, which paid for the development of a satellite communication system, will not receive the full benefits which the system will offer and which the public deserves.

Tenth. The operating expense items included by the Bell System and the base to which its earnings are related have not been subjected to any detailed examination by the Commission to determine the propriety of all amounts reported as plant investment and operating expenses. It is questionable, therefore, whether the criterion of a "reasonable rate of return" is really meaningful when the regulatory commission assumes little control over investment and expense items that go into the computation of the rate of return.

Eleventh. While it is true that interstate toll rates have fallen substantially during the whole course of A.T. & T.'s history, this is not a misleading fact. The crucial question is how closely correlated with cost reductions were these toll-rate reductions.

Twelfth. Interstate telephone rates are lower than intrastate rates. Apologists of the Federal Communications Commission then draw the conclusion that this agency, therefore, is actively protecting the public interest. To anyone acquainted with the facts, this conclusion is absurd. Although interstate telephone rates are lower than intrastate rates, the rate of return on interstate service, at least in the years for which we have data, is higher than that on intrastate service. There are several reasons for this situation. The most important one is that short-haul calls do not cover their total cost, while long haul calls generate revenues in excess of their total cost. Studies of six areas by the Bell System show that substantial losses were suffered in short-haul traffic in all six areas. The average intrastate call involves a shorter distance than does the average interstate call. In one sample made in the late 1940's, it was found that the average interstate call involved a distance of 204 miles, while for 18 States the average length of intrastate calls ranged from 9 to 54 miles. There is also data to show a positive relationship between the average distance of calls in each State and the profitability of intrastate toll business.

Another reason why intrastate toll rates are higher than interstate rates for the same distance is that State commissions allow relatively high intrastate toll rates, in order to subsidize local exchange service. State commissions find it more politically palatable to have tolls raised than to have local exchange rates raised.

As I have stated before, the claim that the Federal Communications Commission is responsible for lower interstate rates represents a desperate effort to show that the Federal Communications Commission in at least this respect is protecting the public interest. Unfortunately, however, this claim is completely baseless. I hope we can quietly lay this argument to rest, and can go on to consider some important issues involved in H.R. 11040, which provides for the establishment of a space communication system.

Today, I should like to begin a discussion of three very serious issues raised by this bill. They are the monopoly problem, the activities of the Federal Communications Commission, and the enormous economic and political power of the American Telephone & Telegraph monopoly. These important problems cannot be disposed of by refusing to acknowledge them; nor can they be evaded by irrelevant cliches and slogans.

Mr. President, today I am proposing to tell the Senate about matters which I do not believe the Senate has heard about previously. They should be discussed, however, and Senators should know about these matters before they vote on the pending bill.

At this time only a few Senators are on the floor, and for the most part these Senators have already made up their minds about the bill. However, Mr. President, it is important that all Senators understand these matters. I am frank to state to Senators that, so far as I am concerned, I have been studying this bill, off and on, for about a year and a half, and I am still learning a great deal about it—a great deal that is very relevant in connection with our reaching our decision as to whether the bill should be passed. In fact, I think I now know a great deal more about how the bill should be amended in order to make it suitable for passage by the Senate than I did before; and I had been studying the bill for more than a year and 3 months before I reached that decision.

II. MONOPOLY AND ANTITRUST PROBLEMS

Mr. President, if the communication carriers want to set up a satellite communication system jointly, why do they not just do it? Why is legislation needed?

The answer is that they would be violating the antitrust laws, the bulwark of our free enterprise system. H.R. 11040 is, in essence, proposed legislation designed to carve out an exemption from the antitrust laws.

Without legislation, the objective of H.R. 11040, the setting up of a joint venture, would violate sections 1 and 2 of the Sherman Act and section 7 of the Clayton Act, which are on the books to protect the public. This bill also appears to violate section 314 of the Federal Communications Act.

We must recognize that the bill is designed to overturn two very important and longstanding congressional policies.

First. In the past 25 to 30 years, many attempts have been made by the telegraph companies to frame legislation to permit some kind of permissive or mandatory merger of the U.S. international telegraph carriers. On each occasion, the Congress has refused to sanction such a merger. H.R. 11040 goes much further than seeking sanction for the international telegraph carriers only; this bill seeks to combine all forms of communications, both telegraph and telephone, domestic and international into one satellite corporation.

The inevitable conflict of interest between competing technologies has been recognized by the Congress, which also has traditionally limited common ownership of competing modes of transportation. For example, the Panama Canal Act of 1912, which is part of the Interstate Commerce Act, prohibited ownership, control, lease, or any interest whatsoever by a railroad in a common carrier by water with which the railroad does or may compete for traffic.

The committee report on the Panama Canal Act stated that:

> The apprehension of railroad-owned vessels driving competition from the canal may or may not be exaggerated, but it is certain that the evil, which is only anticipated there, already exists in the coastwise trade—as well as on our lakes and rivers.[1]

A Commerce Committee report issued in 1961 stated:

> The Motor Carrier Act of 1935 and the Transportation Act of 1940, were interpreted by the ICC, with the express approval of the Supreme Court of the United States, as giving the Commission the authority to limit to a very large extent rail ownership of motor trucking.[2]

The Civil Aviation Board which adopted the same interpretation as the Interstate Commerce Commission, reached the following conclusion:

> For the Board would not be justified in closing its eyes to the potential threat which the entry of surface carriers into this field would in many cases offer to independent air carriers or the effect which such participation might have upon the fulfillment of the policies of the act. Surface carriers engaging in air transportation would at times be under a strong incentive to act for the protection of their investment in surface transportation interest. Again, by reason of their superior resources and extensive facilities for solicitation, such carriers would often be the possessors of powerful competitive weapons which would enable them to crush the competition of independent air carriers.[3]

Many more examples can be supplied which make similar prohibitions. The Interstate Commerce Act, in particular, has numerous cautions and prohibitions against joint ownings which would tend to lessen competition in the transportation field.

As I have already stated, the American Telephone & Telegraph Co. is trying to create the impression that communication by satellite is merely a supplement to communication by undersea cables or land lines. As part of its propaganda, A.T. & T. refers to the satellite as a "cable in the sky." No other company takes the same view—not Lockheed, not Hughes, not RCA, not General Telephone and Electronics, not Bendix, not Philco; nor does the U.S. Army.

Let me quote once again General Sarnoff's statement before Senator Kefauver's subcommittee: This is an important statement, and I hope that it will be inculcated on the minds of my colleagues:

> I think I am not overstating the fact when I say to you that I regard the satellite communication as the most significant and the most vital development in the world of communications since I began over a half century ago. But we are only at the beginning. It is far from being a finished product. Certainly it is not a finished system. There is much yet to be learned before one can speak with certainty about a global operating satellite communication system.
>
> I think also that the satellite communication possibilities go beyond the mere extension of existing communications system. It is more than the so-called cable in the air, or a hightower in space. It is a revolutionary possibility of global communication, the limit of which no man, in my judgment, is competent enough to place at the present time.[4]

Communications by satellites will be a revolutionary new technology. It will be a threat to existing methods of communications. Let us not forget Federal Communications Commission Commissioner Craven's testimony before the House Space Committee.

Mr. Craven is as favorable to A.T. & T.'s view as is anybody in Government. He said:

> The main thing that I want to emphasize is that if we try to establish a separate system by satellites in competition with existing things, I am quite certain ultimately that the existing means of communication which are going to be necessary are not going to be able to survive economically.

JOINT VENTURES

With respect to joint ventures, the *United States* v. *Penn-Olin Company, et. al.* (Civ. 2282), filed on January 6, 1961, was the first civil antitrust complaint in which the Clayton Act had been used to challenge the "joint venture" techniques under which competing companies may combine to avoid, restrain, or lessen competition.

[2] National Transportation Policy, p. 140, report of Commerce Committee, U.S. Senate, June 26, 1961, Rept. No. 445, 87th Cong., 1st sess.

[3] Op cit., p. 142.

[4] Kefauver hearings, transcript pp. 724–725.

In describing the case, Assistant Attorney General Robert A. Bicks said:

> Joint ventures have become an increasingly popular means by which two or more companies may, without completely merging, pool their capital or technology to establish a new business entity. Whenever joint ventures are competitors in any line of business, their agreement and combination as well as acquisition of stock or assets, remain fully subject to the application of traditional Sherman and Clayton Act principles.
>
> There is no question that section 7 of the Clayton Act was designed by Congress to halt all mergers and acquisitions, regardless of form, having the proscribed adverse effects on competition.

Mr. Bicks added:

> The Penn-Olin complaint, which represents the Department's first challenge under section 7 of the Clayton Act to the acquisition by joint ventures of stock in a corporation of their own creation, highlights the anticompetitive consequences which may flow when substantial competitors merge part of their resources to form a new enterprise.[3]

The Chairman of the Federal Trade Commission recently stated:

> If two firms, each with a sizable share of the market for a commodity, pool their business into a joint venture, the effect—for all practical purposes—is similar to that of a merger. It is really the old "trust" technique in modern dress. The damage to competition is clear cut, and if possible, the move should be quickly halted. The particular device used to achieve the result is irrelevant. It is the effect upon competition that counts.[4]

Mr. President, we have here a situation where the communications carriers would participate in a joint venture to own and control a satellite communications system. The use of this system will be vital to the business of all parties concerned, like raw material to the steel companies.

The joint venturers will say that their relationship will be limited to the specific purpose of the joint venture; after that they go their own separate ways independently. It is apparently assumed that business firms can be members of an industrial family at some point in the productive process, but that when they reach the marketplace, they will compete for business like strangers.

This does not make sense. There are serious questions about the likelihood of maintaining the vitality of competition where intimate family relationships, in the form of joint ventures, exist beneath the surface. It is very doubtful, in my opinion, that business strategists will treat one another as belligerents in the kitchen if they are sweethearts in the parlor.

DOMINATION BY A.T. & T.

If ever a bill could be devised to insure domination by the American Telephone & Telegraph Co., this is it. A.T. & T. can own up to 50 percent of the stock. There is no limit to the amount a single carrier can own. Informed opinion, which includes Mr. Katzenback and Mr. Loevinger of the Justice Department, sets A.T. & T.'s share at about 40 percent.

That is what they expect A.T. & T. to own under this bill.

Under the Investment Company Act of 1940, any person who owns beneficially, either directly or through one or more controlled companies, more than 25 percent of the voting securities of a company shall be presumed to control such company—15 U.S.C.A. 80A, section 2(a)(a).

Under the Public Utility Holding Act of 1935, a holding company is defined as any company which directly or indirectly owns, controls, or holds with power to vote, 10 percent of the outstanding voting securities of a public utility company of a company which is a holding company.

A subsidiary of a holding company means any company 10 percent of whose stock is directly or indirectly owned, controlled, or held with power to vote, by such holding company—or by a company that is a subsidiary company of such holding company.

An affiliate of a specified company means (a) any person that directly or indirectly owns, controls, or holds with power to vote, 5 percent or more of the outstanding voting securities of such specified company; (b) any company 5 percent or more of whose outstanding voting securities are owned, controlled, or held with power to vote, directly or indirectly, by such specified company—15 U.S.C.A. 79b(a) (7), (8), and (11).

In fact, the Southern New England Telephone Co., in which A.T. & T. owns 19 percent of the stock, and the Cincinnati and Suburban Bell Telephone Co., in which A.T. & T. owns 29 percent of the stock, are both considered by A.T. & T. as being part of the Bell System—Kefauver hearings, page 608.

On Monday, June 25, 1962, the Supreme Court reaffirmed our fundamental belief in competition, in the preservation of the small, independent businessman, and again pointed to the danger of concentration of economic power. In the Brown Shoe Co. case, the Court held that acquisition of the largest independent chain of family shoe stores by the fourth largest shoe manufacturer, itself a leading shoe retailer, both directly and indirectly violated section 7 of the Clayton Act, as amended by the Celler-Kefauver Act of 1950. The considerations which led the Court to this conclusion are directly relevant here, and indicate that the acquisition of a powerful stock position in the corporation by other companies in related fields would similarly violate section 7.

To start with, the Court stressed:

> The dominant theme pervading congressional consideration of the 1950 amendments was a fear of what was considered to be a rising tide of economic concentration in the American economy.

And it approvingly quoted the following statement by Judge Learned Hand:

> Throughout the history of these [antitrust] statutes it has been constantly assumed that one of their purposes was to perpetuate and preserve for its own sake, and in spite of possible cost, an organization of industry in small units which can effectively compete with each other (*U.S.* v. *Aluminum Company of America*, 148 F. 2d 416, 429 (2d Cir. 1945)).

The Court went on to find that the acquisition of the leading independent family shoe chain by one of the leading shoe manufacturers would foreclose a substantial share of the retail shoe market to small manufacturers.

Exactly the same effect will result from organization of the satellite corporation as proposed by H.R. 11040—A.T. & T., RCA, General Electric, Lockheed and other large equipment manufacturers who will buy most of the stock will certainly try to use their inside position to allocate the bulk of the corporation's equipment procurement to themselves. In fact, A.T. & T. at present buys all but a negligible fraction of its equipment from its own subsidiary, Western Electric, and, as shown by testimony from small businessmen before my Monopoly Subcommittee, the Western Electric monopoly has seriously hurt many small businessmen by eliminating almost all of the telephone equipment market from the play of free competition. Passage of this proposed legislation will thus fly directly in the teeth of our professed concern for the plight of the small businessman and for the reduction of concentration.

And let there be no mistake about the possibilities of this—the General Electric Co. and others clamored for a chance to buy stock in the corporation because they feared A.T. & T. would funnel all satellite procurement to itself. Obviously, this was because they planned to use stockownership to get a piece of the pie for themselves. But what of the small businessmen who cannot afford to buy this stock except in negligible amounts?

One does not need full ownership to obtain such power. In the *Du Pont-General Motors* case, *U.S.* v. *E. I. du Pont de Nemours & Co.* (353 U.S. 586 (1957)), the Supreme Court found that Du Pont's 23-percent stockownership in General Motors gave it an unfair competitive advantage in the sale to General Motors of finishes and fabrics in violation of section 7.

The fallacy that wide ownership can possibly resolve these antitrust problems was exploded by that very decision. In footnote 56 of the majority opinion, the Court stated:

> The potency of the influence of Du Pont's 23 percent stock is greater today [than when first purchased] because of the diffusion of the remaining shares, which in 1947 were held by 436,510 stockholders; 92 percent owned no more than 100 shares each and 60 percent owned no more than 25 shares each.

The fact that there may be a few other large stockholders, none of whom can own more than 10 percent of the voting stock, does nothing to reduce the effect of the approximately 40 percent which A.T. & T. will have.

Moreover, the decision in the Du Pont-General Motors case did not turn on the number of directors Du Pont had. Du Pont had relatively few directors—never more than 6 or 7 of the board, which, between 1925 and 1947, had about 30—a smaller percentage than A.T. & T. will be able to have in the satellite corporation. In fact, Du Pont frequently had no more than 2 directors, even though, according to the Court, Du Pont had bought the stock for the express purpose of getting the General Motors business.

---

[3] Trade Regulation Reports, case 1583, p. 45061.

[4] "Joint Ventures: What Is Their Impact on Competition?" Address by Hon. Paul Rand Dixon before the Economic Club of Detroit on Mar. 12, 1962.

Mr. CHURCH. Mr. President, will the Senator yield to me, without losing his right to the floor, in order that I may send an amendment to the desk and make a short explanation of it?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I might yield for that purpose, reserving my rights to the floor.

Mr. CASE. Mr. President, reserving my right to object, I think, as I stated before, questions of procedure of this sort ought to be handled in accordance with the views of the majority leader. It is my understanding, still under my reservation, that the majority leader has suggested that all amendments be withheld until a Senator has the floor in his own right and offers them at that time.

I do not wish to press that point myself, but I shall reserve the right to object until the majority leader's representative can tell me whether that position on his part has been changed.

Mr. LONG of Louisiana. Mr. President, it is absolutely unthinkable to me that the Senate would deny a Senator the right to have an amendment read, or even to have it received at the desk and considered as having been read. I have never seen this happen in the 14 years I have served in this body.

I hope Senators will pardon me for gaining this impression, but it seems to me it is a courtesy that every Senator has had and has been granted, even during the filibusters of the past. Even then Senators had that right.

That right has existed as long as I have been a Member of this body. The privilege Senators are asking for was a privilege in this body when I used to sit up in the galleries in my knee breeches and watch my father hold this floor.

Now we are told that the Senate is to be gagged on Tuesday, and Senators are not to be permitted to have their amendments read. And an amendment cannot be voted on unless it has been read, as the Senator knows, except by unanimous consent.

What is going on here defies imagination. I cannot believe it. Why this is happening I cannot for the life of me understand.

At some times in the past, when some of us southerners were making our northern friends so angry they would "drink our blood" for opposing their civil rights bills, this privilege existed.

I regret that this is the case.

It is hard for me to believe that such is the case. I regret to say that the Senator saw it happen. A representative of the majority leader who I thought would fight to the bitter end to prevent something like this from happening in the Senate is taking the position I have described. I understand he is going to vote to gag the Senate on Tuesday and object to Senators——

Mr. SMATHERS. Mr. President——

The PRESIDING OFFICER. Does the Senator yield?

Mr. LONG of Louisiana. I am talking now. I cannot yield and talk at the same time. I never dreamed that the day would come when I would see such force exercised upon the Senate. Not only are Senators to be gagged and denied the right to talk about a bad bill, but we cannot even have amendments to the bill read. I regret that the request of the Senator was objected to.

Mr. CHURCH. I fully understand.

Mr. LONG of Louisiana. If the Senator will leave his amendment with me, and if the powers that are in control of the Senate do not become brutal, I will try to have the Senator's amendment read at the time I conclude my speech. I will try to protect the rights of others.

This will be difficult if a gag rule is to be forced on the Senate. I hope that when the gag-rule issue comes before the Senate, the Senate will vote that the proposed civil rights amendments to the bill are not germane, because it would be a travesty if, in addition to passing a bill that would create the greatest monopoly in the history of the country, the bill should also include amendments to ram some of the obnoxious civil rights proposals down our throats as well. I will do what I can to save the Senate from its own folly in the event something of that sort is attempted. I hope I shall have the cooperation of my friend from Florida in respect to any attempt to gag the Senate in respect to title 3, or voting rights. I hope I will have his support in any attempt to try to ram through the Senate a rule under which the Senate would not be able to debate whether the issue was relevant or germane; so we will save the Senator from his own folly if he seeks to have gag rule imposed.

Mr. SMATHERS. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. I yield for a question.

Mr. SMATHERS. There is nothing that pains me more than what I must do now, which is to object.

Mr. LONG of Louisiana. I hope it does not defeat the Senator. He has the same problem I have. I can tell the Senator that if there is any ramming through the Senate of an obnoxious civil rights amendment, I hope it does not defeat the Senator from Florida.

Mr. SMATHERS. I know my good friend would go so far as to make a speech for me or against me, whichever he thought would help me most, if I needed it. I appreciate that. I have always counted on his good will.

Mr. LONG of Louisiana. I do not know that my speech would actually hurt the Senator from Florida. He had better keep me out of the debate, if he thinks I would not speak for him.

Mr. SMATHERS. The Senator from Louisiana has made many wonderful speeches in my State. I have always been complimented. In most instances, he has been very charitable and generous in his treatment of me. When I have gone to Louisiana, I have tried to be equally charitable in my treatment of him. That is the way I am sure it will always be. No Senator knows more about how to conduct a filibuster than does the Senator from Louisiana. We are proud of him.

Mr. LONG of Louisiana. Mr. President, I have received that compliment from experts.

Mr. SMATHERS. In this particular case the Senator is well aware why Senators who wish to reach a vote on the satellite communications bill feel that it is necessary for the leadership to object to the reading of an amendment. No Senator understands the rules any better than does the Senator from Louisiana.

Mr. LONG of Louisiana. Mr. President, I cannot understand it. I never thought the day would come when I would see someone who speaks for the South, for the leadership, and for freedom on occasion come before the Senate seeking to gag the Senate and deny Senators even the right to have amendments read. Let us face reality. If a Senator cannot have his amendment read, he cannot offer it after the gag rule is imposed.

My friend, the Senator from Idaho [Mr. CHURCH], has left the Chamber. He has given up hope.

Mr. SMATHERS. Were he here, we might relent, but he has left.

Mr. LONG of Louisiana. I might offer it later so as to afford the Senate an opportunity to vote on the amendment. There is a possibility that it may be done later. I hope that members of the press will see the opportunity of continuing to get some advertising from A.T. & T. and its subsidiaries by printing the fact that it is being proposed to gag the Senate and not even permit amendments to the bill to be offered and considered. To me that is fantastic. I did not believe the leadership would persevere in such an effort. However, I have seen strange things which sometimes I cannot understand.

Mr. President, I was discussing the antitrust aspects of the bill, to which I would like to return.

The Brown Shoe opinion also found that Brown Shoe's retail outlets competed with Kinney and that the merger would eliminate also this kind of competition in many cities. The same result will flow from the acquisition of huge shares of stock in this satellite corporation by A.T. & T. with whom the satellite corporation will compete. Elimination of such competition is the inevitable result. It is, indeed, one of the prime purposes of permitting the carriers to control the satellite, according to Federal Communications Commission testimony before both my Monopoly Subcommittee—page 473—and the Kefauver subcommittee—332–333. Such deliberate suppression of competition could not be more offensive to our system of free enterprise, of which competition is its very lifeblood. If we eliminate competition, we eliminate the free enterprise system.

As I pointed out earlier, the fact that 100 percent ownership is not involved is irrelevant. In many cases, merely partial ownership has been held to violate section 7, because of the "reasonable probability"—which the Court reaffirmed as the appropriate test—that competition would be lessened. In a strikingly parallel situation, Benrus Watch Co. was enjoined from voting a 24-percent stock interest in Hamilton Watch Co. See *Hamilton Watch Co.* v. *Benrus Watch Co.*, 114, F. Supp. 307 (D., Conn.), aff'd, 206 F 2d 738 (2d Cir. 1953). The acquisition of this stock by a competitor was held to raise a danger of a lessening of competition. Benrus' right to elect just one director was held by the district court to give Benrus an opportunity "to persuade or to compel a relaxation of the full vigor of Hamilton's competitive effort," and that referred to just one director; here A.T. & T. will be able to have three.

Do you know, Mr. President, what percent is needed to control a company with a large amount of issued stock?

It is less than 5 percent—5 percent, Mr. President. Contrast this with the 40 percent that A.T. & T. would have.

But this does not tell the whole story, for the other communication carriers who may have slight participation in the satellite corporation are dependent to a considerable extent on A.T. & T. for their very existence. Western Union, RCA, and I.T. & T. lease facilities from the giant A.T. & T.

In addition to being common carriers, these corporations are also manufacturing concerns. Section 201(c) of the bill will not prevent any carrier from achieving a dominant competitive position. Furthermore, if one party dominates, that party will, in the first instance, set the technical specifications. It would be contrary to human nature to expect those specifications to follow anything but the technical ideas and approaches of those who set them. It requires no extended explanation that a party which sets specifications based on its ideas and concepts will have a significant edge in any ensuing "competitive bidding" for hardware produced to such specification.

To expect the Federal Communication Commission to insure effective competition is incredibly naive. And what pious purpose does it serve to say in section 201(c) that the Commission shall consult with the Small Business Administration and solicit its recommendations?

What does it mean? Can it be anything else but just plain window dressing?

As a member of the Small Business Committee, I am naturally interested in securing as great a participation as possible for the many dynamic small businesses of our Nation. H.R. 11040 would serve effectively to limit or preclude small business participation in this broad, rapidly growing area of our economy.

If, as under this bill, the communications carriers own 50 percent of a satellite communications corporation, we can reasonably assume that the manufacturing divisions or subsidiaries of the carriers will be providing most of the equipment.

Mr. President, a good example is the telephone you have in your home or office. Many small companies can manufacture these instruments to the strictest specifications, but the carriers would not purchase them. Western Electric supplies every telephone used by A.T. & T. and all 17 subsidiaries. The other carriers purchase their equipment from their own manufacturing subsidiaries. A small electronics concern that makes high-grade telephone equipment testified before my Monopoly Subcommittee that his company is prevented from growing by the marketing policies of the large telephone companies. In fact, his business was reduced to less than one-fifth of what it was some 10 or 12 years ago.[7] The National Telephone Cooperatives Association, on April 4, testified before Senator KEFAUVER's subcommittee that its members purchase their equipment on a competitive basis, that the quality is comparable with that of Western Electric, and that there are no difficulties in phasing in their equipment with that of the Bell System. The Federal Communications Commission, however, has been unable or unwilling to bring about competition in the purchase of equipment by the communications carriers—although it has always had the authority to do so.

Let me quote what a former chairman of the Federal Communications Commission said in testifying before the Senate Commerce Committee concerning the requirements of members of a proposed merger:

> There should be no place in the unified company for any such conflicts of interest. Controls must therefore be provided to assure that it contains no elements which are affiliated with foreign interests or connected with foreign operations. By the same token, the company should be divorced of affiliations with domestic communications operations, if we are to preserve separate domestic and international operations. Similarly, it should have no interlocking interests with communications manufacturing operations. The unified company will have dealings with these two fields for the exchange of traffic and the purchase of equipment, and the existence of the influence of these two fields within the unified company would jeopardize the effectuation of arrangements on these matters on an arm's length basis.
>
> The unified company should, therefore, be entirely free of any connections with alien interests, either in its ownership or its management. There should be no affiliation or connection of any kind, direct or indirect, between the unified company and persons having business interests within foreign countries or interests in domestic communications or communications-manufacturing activities.[8]

If we adopted these wise requirements today, almost every one of the major communications carriers would be excluded. That is what I am proposing in the amendment I have at the desk.

The Justice Department's recent and forced enthusiasm for H.R. 11040 cannot eliminate from the public record its concern over one-party domination. In its May 5, 1961, statement in Federal Communications Commission docket No. 14024 it said:

> The Department of Justice firmly believes that a project so important to the national interest should not be owned or controlled by a single private organization irrespective of the extent to which such a system will be subject to government regulation. (Statement, Department of Justice, p. 6.)
>
> It is therefore of vital importance to the national interest that no single private concern dominate satellite communication. (Statement, Department of Justice, p. 7.)

The position thus stated with respect to possible domination of the venture by a single private concern was reiterated by the representative of the Department of Justice attending the Federal Communications Commission's June 5 conference—transcript 30—and was emphasized in the most vigorous possible terms by Judge Loevinger in his appearance before the Judiciary Committee on June 14, 1961. These views were in full accord with the opening statement by Congressman CELLER, chairman of the committee, that it is "crucial" that the Commission "prevent any concern from obtaining a monopolistic, dominant or preferential advantage in ownership participation"—transcript 6—and prevent "any company or category of companies" from obtaining such a position in the ownership of and sale of equipment—transcript 7.

Coupled with the firm position of the Department of Justice and the Celler committee position, we have the June 15 statements of the chairman of the Federal Communications Commission before the same committee, Chairman Minow stated:

> And we are not—I want to be as emphatic on that as I can—we are not going to approve any plan that is going to give one company—whichever one it is—any domination of the joint venture" (transcript, p. 168).

That is what he said then; that is not what the bill provides.

The bill guarantees domination of this venture by A.T. & T.

Shortly before making this statement, Chairman Minow had assured the committee that "we are not going to do anything that does not take into full account the Department of Justice views—transcript 131—or "anything that is not going to comply with the antrust laws—transcript 131.

Here they are trying to carve out an exemption from the antitrust laws, an exemption a mile high and a mile wide.

Mr. Minow then stated:

> And we are searching for formulas which would insure that no—this is one of the tests of our first order—that no single company would be in any position where it could dominate and control the operation of the system.

In spite of all these noble arguments, in spite of the fact that H.R. 11040 violates practically every one of the President's requirements in his policy statement of July 1961—and I hope to discuss this at length at a later date—the administration has indiscriminately and blindly swallowed this bill.

Let me quote a statement by Representative CHET HOLIFIELD in opposing this satellite giveaway bill on the floor of the House on May 2:

> We are in a desperate cold war struggle with the Soviets, not only for the minds, but for the markets of free and neutral nations. If we are to be crippled with the deadweight of monopoly, managed prices, limited production, and unjustified profits, we cannot win. We are doomed to failure.

---

[7] Long Hearings, Vol. I, p. 321.

[8] Testimony of Mr. Porter, Chairman, FCC before Senate Interstate Commerce Committee, Mar. 22, 1945. Hearings on S. Res. 187, p. 176.

Listen to this strong statement by EMANUEL CELLER, chairman of the House Antitrust and Monopoly Subcommittee, in opposition to this bill:

> Much of the revenue from the satellite system will come from handling the messages on earth. Under my amendment the ground stations of the American part of the space satellite system shall be owned and managed by the corporation. This safeguard is necessary to enable the new corporation to make money, rather than handing its main source of income on a silver platter to the communications carriers.
>
> A.T. & T. has been boldly picketing the Halls of Congress advocating that the communications companies should be the sole beneficiaries of the communications satellite system. To grant the carrier the ground stations would make a gift to a few companies of a potential multimillion-dollar-a-year monopoly.

Actually, it is more than that: It is a multibillion-dollar-a-year monopoly.

> A.T. & T. does not come before the bar of the Congress with clean hands. It is an old offender. In 1953, the FCC negotiated with A.T. & T. a rate increase of approximately $65 million a year in long-distance telephone rates. The FCC granted this increase because it believed A.T. & T. was entitled to a 6.5-percent rate of return on net book cost.
>
> Since 1955, however, A.T. & T. has enjoyed a rate of return far in excess of 6.5 percent. In the years from 1955 through 1961, if A.T. & T.'s rate of return had been limited to 6.5 percent, long-distance telephone users would have saved approximately $985 million. Thus, over the past 7 years, A.T. & T. has overcharged the American public by nearly a billion dollars.

That is not my statement; it is the statement of the chairman of the Anti-Monopoly Subcommittee having jurisdiction of matters of this sort in the House. That is the statement of Representative EMANUEL CELLER, who is regarded by many as the leading expert on monopoly problems in the United States. He is a great lawyer and Representative from the State of New York. Mr. CELLER is chairman of the House Committee on the Judiciary. When he speaks about monopoly, he speaks with a deep knowledge of the subject. I have great respect for Representative CELLER.

> Late last month the Bureau of the Budget released a report on the FCC by a team of management consultants. This report, like the Celler Antitrust Subcommittee concluded that the FCC "has established no firm criteria governing such rates of return." Moreover the report noted that in 1960 Bell System's purchases from its wholly owned subsidiary, Western Electric, amounted to $1.8 billion "which amount becomes part of the rate base on which the Bell companies expect a rate of return. Apart from occasional review of periodic reports, no examination of the books of Western Electric or other leading telephone equipment manufacturers has been undertaken to determine the reasonableness of charges to the Bell System." This is a barbarous situation. Is the American public paying for this unexamined, high profit? Remember Western Electric is a wholly owned subsidiary of A.T. & T.
>
> A.T. & T. has successfully avoided regulation on earth. Divine guidance will be necessary to regulate A.T. & T. if it is permitted to expand its domain into space.
>
> A.T. & T. has proposed a low-random orbit system which would require scores of satellites and ground stations in order to obtain worldwide coverage. This proposal is made at a time when there is general agreement on the ultimate desirability of a system of three or four high-orbiting synchronous satellites, which would give global coverage and would be cheaper both to set up and to maintain. If the existing communications companies are permitted to own and operate a system of their choice, they will have a strong motive to retard its development and use in order to protect their vast investment in existing equipment and facilities, such as the undersea cables which A.T. & T. is still laying to this day.
>
> Space satellites will revolutionize communications as the airplane revolutionized travel. Air travel as we know it today would still be a mere version if Congress had delivered the budding airlines business into the hands of the existing and established railroads.

Mr. CELLER's amendment was not adopted, and in spite of his vigorous opposition, he voted for the bill. Mr. HOLIFIELD voted for the bill also.

Mr. President, the philosophy of H.R. 11040 violates every principle for which these Congressmen have been fighting for years.

The proponents of this bill say that by allowing firms other than the carriers to have an ownership interest in the satellite corporations, no matter how small the percentage, competitive bidding will be insured. At this point, of course, we do not know how many noncarriers will participate in ownership. The Justice Department's statement of May 1961, however, makes it clear that its thinking goes beyond the mechanics of competitive procurement to the very heart of the problem, to the "irresistable" opportunity to favor the purchase of equipment produced by the dominant company. In Federal Communications Commission docket 14024 Judge Loevinger stated:

> Regulation cannot eliminate the inherent advantage accruing to any communications concern which solely owns or controls a system. The continuing opportunity to favor its own facilities would always be present and would inevitably result in discrimination or suspicion of discrimination no matter how strict might be the policy of the dominant company to provide equal service to its competitors.

In the same docket is Judge Loevinger's assertion:

> The satellite communications system can well be a prime example of the effective operation of the free enterprise system and it is, therefore, of vital concern, of vital importance, to the national interest that no single private concern dominate satellite communication.

Is it not obvious, Mr. President, that under H.R. 11040, the A.T. & T. will be the dominant force in the space communications corporation operation?

Section 201(c)(2) provides that the Federal Communications Commission shall—

> insure that all present and future authorized carriers shall have nondiscriminatory use of, and equitable access to, the communications satellite system and satellite terminal stations under just and reasonable charges, classifications, practices, regulations, and other terms and conditions and regulate the manner in which available facilities of the system and stations are allocated among such users thereof.

This sounds fine. Certainly there can be rules as to equitable, nondiscriminatory treatment in connection with the use of available facilities. But rules can go only so far. Apart from the practical question of who, for example, would decide, in the first instance, what is fair, equitable, and nondiscriminatory in the day-to-day operation of the system, the real test of dominance lies in ownership, control, and management; it lies in who controls and determines fundamental financial questions. It lies in who determines whether the system should be expanded, and on what basis; in who determines how technical differences are resolved, and so on. If there is domination by the A.T. & T. as this bill assures, the critical decisions will, in reality, be made by that huge private monopoly.

In the words of Representative CELLER:

> American Telephone & Telegraph Co. so overshadows the others in assets, in importance, in prestige, it would mean, in essence, that the American Telephone & Telegraph Co. would dominate this situation.

This, in turn, would put A.T. & T. in a position to make the day-to-day determination of what could be to the detriment of the public.

Although such action will supposedly be subject to review by the Federal Communications Commission, such regulation from an external source is no substitute for "structuring" a system with a "built-in protection against domination and its results."

In summary, Mr. President, I raise the serious question of "domination" which this bill, H.R. 11040, fails to answer. Instead we are given a formula which assures domination of the system by the A.T. & T.

Since we would be in reality giving this great public resource as a gift to the American Telephone & Telegraph monopoly, let us be honest and aboveboard about it. Let us eliminate the window dressing which is designed merely to blind the eye and cloud our understanding.

Mr. President, in my judgment the enactment of this giveaway bill would constitute the most wanton and the most inexcusable piece of folly every perpetrated in our country. The enactment of this measure would haunt the Democratic Party for generations to come.

There was a time—and I hope there will be again—when the Democratic Party successfully held the mountain pass against privileged groups and against every attempt on the part of these groups to usurp the power of this Government and pervert it to their own purposes. Here we are again faced with this exact problem in a practical form; this is one of the issues posed by H.R. 11040. This issue can no longer be evaded or postponed.

Mr. President, in connection with the attempt in the press to state that we are filibustering against this bill, I should like to point out that I spent more than a year studying this subject matter. As chairman of the Antimonopoly Subcommittee of the Small Business Committee, I spent more than a year, with the aid of competent staff help, studying this matter and trying to comprehend it fully. After I had studied it for that length of time and had understood as much as I possibly could about it, I came to the Senate and said the bill should be defeated. This is my second speech to the Senate on this subject. I know that previously I spoke on the bill for about 8 hours. But this bill is so very bad that I believe Senators who thus far have felt they wish to vote for the bill should do themselves the justice of hearing several months of debate on it—unless they are willing to vote to junk the bill, which certainly should be done, because the bill is no good.

But certainly it is ridiculous for charges of filibustering to be made before I have completed my second speech on the bill and before many Senators have even made their first speech on it.

I realize the great public-relations power that is possessed by the Bell Telephone System and its subsidiaries, which include Southern Bell, Chesapeake & Potomac, and all the rest. Approximately 95 percent of all the telephones in the United States are owned by this company. So I realize the enormous power it has in connection with public relations through the press. Certainly the press should see that the people learn the truth about our side of the argument in regard to this measure; namely, that a serious monopoly problem is involved.

The chairman of the Antitrust and Monopoly Subcommittee of the Judiciary Committee condemns the bill as one of the worst he has ever seen; and I have been chairman of the Antimonopoly Subcommittee of the Small Business Committee ever since that committee was established, 14 years ago. This is one of the worst bills I have seen.

Unfortunately, most Senators seem to have become committed to favoring the bill, and evidently do not wish to hear speeches against it. For example, it was understood that today I would speak against the bill; and at this time we find only one or two Senators in the Chamber. But even if only a few Senators hear me, I shall speak against the bill.

Mr. President, such a situation has developed before. Out in the reception room there is the picture of Bob La Follette. He was selected as one of the five greatest U.S. Senators of all time. The picture of William Borah is not there, although his statue has been placed in the corridor between this Chamber and the rotunda.

Let me say that certainly the Republican Party is in very bad shape when it no longer has any Bill Borahs and George Norrises. In fact, the last one in that group who was in the Republican Party had to decide to leave it and come over to our side of the aisle. I refer to the senior Senator from Oregon [Mr. MORSE]. Apparently no place is left in the Republican Party for one who entertains those views.

However, Mr. President, the great men who have made those fights, and have persisted in them even when they have lost, are regarded by the great majority of American people as some of the very greatest U.S. Senators ever to serve. Thank God we have such men who are willing to stand up and fight for the maintenance of the antitrust laws.

Mr. President, as we stand here and fight against the effort to make it possible for the greatest monopoly in the world to escape the application of the antitrust laws which those great men helped put on our statute books, so as to maintain free enterprise and competition, sometimes I wonder whether we are really doing justice to those whom we respect, revere, and admire for the great fights they have made both to place antitrust legislation on the statute books and also to see to it that it remained there and was followed, and was strengthened whenever loopholes in it developed.

Mr. President, while I am on that subject, I wish to commend the two Senators from Tennessee [Mr. KEFAUVER and Mr. GORE] for their position in regard to this matter.

I have not always agreed with them; sometimes I have thought they were just as wrong as could be, at times when they opposed some of us in connection with some measures. Certainly I could not have disagreed with them more than I did on the basis of the position they took in regard to the tidelands bill. I was entirely in favor of the tidelands bill.

However, Mr. President, they have been here, in the forefront; and whenever they have gained the impression that a bill would give a great advantage to vested interest, at the expenses of the people, they have—without exception—"put on their fighting clothes" and have engaged in the battle.

The junior Senator from Tennessee [Mr. GORE] was probably the moving force in connection with preventing the Government's right to the patents developed as the result of its research work in the field of atomic energy from being given away, at the expense of the American people. He made a magnificently fight, and he pretty well won that fight. He won most of what he was fighting for in the atomic energy bill.

As one Member of this body, I had no idea of winning it. It seemed to me hopeless and a mere gesture. I suppose, if they had invoked cloture, that fight would not have succeeded and our investment in atomic energy would have been given away to a monopoly or to a few monopolies.

These two Senators are fighting now in the same tradition to see that this does not happen with respect to the pending legislation.

The senior Senator from Tennessee [Mr. KEFAUVER] has fearlessly, and without exception, fought to the bitter end against every bill that appeared to him to be one to establish a monopoly or to undermine the basic free enterprise structure of this Nation by means of monopolistic combines.

I recall, when the junior Senator from Louisiana first came to this body in 1949, the so-called basing point bill came up. It was an awful bill. It got through the Senate with no more than token resistance, almost by a unanimous consent agreement, but it contained the Kefauver amendment, and those big monopolistic concerns took a look at the bill and said, "Oh, my goodness, if that Kefauver amendment stays in there, we may as well not have a basing point bill." So they went to work to take it out, and succeeded in conference.

Senators will remember that killed the bill. With that provision out, we said, "If that is the way it is going to be, we are going to fight against the conference report." Senators will recall that the Senate adjourned without passing the bill. Subsequently, we came back the next year and fought the battle all over again. Well, that bill got through, but the President vetoed it, and we had the votes to uphold the veto, and we succeeded in killing that horrible bill.

After all, the preparations have been made to make the bill look desirable by going through several committees——

Mr. KEFAUVER. Mr. President, will the Senator yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. Does not the Senator recall that in the effort to get an amendment that would take away some of the monopolistic giveaway of the basing point bill, the Senator from Louisiana and other Senators joined in support of it, and at that time we were subjected to the same kind of carping criticism for trying to protect the public interest that is being leveled at us now; but later our position was sustained by the President of the United States, and by the country?

I say here that the Senator from Louisiana, not only in the basing point fight, but in the fight against the effort to give away patents on atomic energy, and in all other fights to prevent giveaways, which were "peanuts" compared to this one, the Senator from Louisiana has been a valiant fighter. I want to say publicly that his position has always been sustained by the public in his effort to protect the heritage of this country, even though his stand may have been unpopular at the time.

Mr. LONG of Louisiana. I thank the Senator from Tennessee. I greatly appreciate his compliment. I assert that he did not get to be chairman of the Antitrust and Monopoly Subcommittee just by accident. He became chairman of that subcommittee because the Senator from Tennessee had always exhibited a great interest in preserving free enterprise by resisting the growth of monopoly.

Even before he came to this body, the Senator from Tennessee had a reputation, as a Member of the other body, as one interested in strengthening the antitrust laws and in preserving the antitrust laws from the assaults of monopolies which would destroy and undermine the right of the people to expect free competition.

Had it not been for the Senator from Tennessee, I suspect the Nation would be in much worse shape than it is today insofar as concerns the right of small business to compete with large business and the right of monopoly to snuff out new competition. That is what we are fighting for here.

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. I appreciate the remarks of the Senator from Louisiana. Does the Senator agree with me that the reason why the cloture motion was filed today, cutting off the opportunity of many Senators who want to speak on the bill and who have not had an opportunity to do so, and cutting off any effectual ability to present amendments, of which there are many on the desk, is that the proponents of the bill are finding out that the public, the people, are catching on to what the bill is? The proponents of the bill know that the tide of public sentiment is turning against them. They know that, if the debate were carried on for a week or 10 days longer, the public would revolt against the provisions of this bill.

Does not the Senator agree with me that the reason why they are trying to ramrod through the bill at the present time is so public opinion will not be formed against the bill? We know that there is a lot of misinformation about it, and that when the American people get the message of the giveaway of the heritage of this country, as they are beginning to get the facts about this bill, they will not stand for it? The communications I and others who are opposed to the bill have been getting are in increasing volume. People who thought it was all right to begin with have changed their minds. A former President of the United States is speaking out against the bill.

So does not the Senator think that an effort is being made here to satisfy the lobby pressure and get the giveaway bill over before the public can catch on to what is going on?

Mr. LONG of Louisiana. I am not in complete agreement with the Senator, but I think I am correct when I say that there is nothing which upsets one who is for a piece of legislation more than seeing Members of Congress debate a bill, take it apart and criticize it with good arguments. They watch the opposition gain more and more votes. This is especially true when one has committed himself to getting a bill through or passed, and it is frustrating to see votes slipping away.

From the point of view of lobbyists, let us face the fact that American Telephone & Telegraph Co., with its 17 subsidiaries, could bring enough people in here not only to fill the galleries, but to fill Washington, D.C. Bear in mind that this is a $29 billion corporation already, the biggest that has ever existed in the history of mankind. I know it must frustrate these lobbyists to watch first one Senator and then another become convinced that this is a bad bill. We were told that when the bill went to a vote on the House floor there were only about eight votes against it in the House.

I suppose if it had been possible to bring the bill to a vote when the bill first came from the House of Representatives, more than half a dozen Senators would have voted against it. More than that will vote against it when a vote is reached on it, if the "gag rule" is put on the Senate. I am not sure that the proponents will succeed in putting the "gag rule" on it.

Mr. KEFAUVER. Mr. President, will the Senator yield for a further question?

Mr. LONG of Louisiana. I yield for a question.

Mr. KEFAUVER. Has not the Senator learned that a great many Members of the House of Representatives have regretted their votes exceedingly? That view has been expressed to me. The bill was brought to the House, and the picture that was painted was, "We must get on with this quickly, or we will lose out."

If there could have been a fair and free debate in the House of Representatives there would have been a very grave question as to whether the bill would have passed the House of Representatives.

Mr. LONG of Louisiana. Mr. President, there is no doubt whatever in my mind about that. If the House rules had permitted what the Senate rules permit—an opportunity to prepare an argument, to explain an argument, to develop an argument and to make a case—and if the bill had been subjected to 2 weeks of debate in the House of Representatives, a great many House Members would have voted against the bill who did not vote against it when it was brought before the House and, after a few hours of debate, put to a vote. When Members of Congress are permitted to develop their arguments and make their cases, as the Senator well knows, the result is usually a very different matter.

Mr. KEFAUVER Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield for a question, Mr. President.

Mr. KEFAUVER. Did the Senator see an example of the kind of lobbying which is going on—to pressure for the passage of the bill at the present time and to silence Senators who might oppose it—in the Washington Post and Times Herald the day before yesterday, in the article in which I believe Jack Anderson, substituting for Drew Pearson, reported that a small newspaper in Minnesota, with a circulation of about a thousand, dared to publish an editorial critical of A.T. & T.'s attempted grab of the communications satellite, explaining how the public relations director for A.T. & T. in Minnesota moved in and, first, canceled the advertisement in the little newspaper? Then he went into the town and admittedly talked to more than a dozen persons, to try to persuade them to withdraw their advertising from this little paper, which had a circulation of about 1,000, even implying, according to one witness, that the editor of the paper might be a Communist or communistically inclined.

But the brave editor of that little newspaper stuck by his rights and faced the big Goliath notwithstanding.

Is that not an example of the kind of lobbying which is going on all over the United States, by mammoth corporations which are interested in receiving the benefits of this giveaway?

Mr. LONG of Louisiana. I am sure they do it subtly. I do not believe they do it too brutally. The A.T. & T. has learned how to use its power with the greatest amount of finesse and discretion. It is the greatest monopoly in the world, and has been in this business for perhaps more than 100 years. I am sure this great company has learned how to use its finesse so as not to be more brutal than necessary.

My opinion is that the episode in Minnesota is not the standard procedure advocated by the company. It would desire to operate more subtly, by not renewing the advertising contract, or hinting to someone that the advertising contract would not be renewed with the newspaper, because the newspaper seemed to be "unsympathetic to free enterprise." Of course, "free enterprise" and "monopoly" are the same thing in the point of view of this company.

So in the name of "free enterprise" it would say that it would not be desirable to continue advertising in a newspaper which wrote socialistic or communistic ideas, or something like that, merely because the newspaper did not agree with the company with respect to the satellite communications bill.

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield to my friend for a question.

Mr. KEFAUVER. The conversations reported to have occurred with the head of public relations of A.T. & T., and the extreme pressures exerted by the 15 persons who were sent into this small town to try to ruin the little publisher who dared to criticize A.T. & T. have not been denied by the American Telephone & Telegraph Co. or its public relations expert; is that not true?

Mr. LONG of Louisiana. So far as I know, that has not been denied. I do not think it would have been said if it were not true.

The Senator made reference to the editorial. I saw the editorial. It is one of the few published by any newspaper in America dealing with the crux of the problem. Very few have dared to print anything about A.T. & T. overcharging the public in the past several years by more than a billion dollars.

We know what is the real purpose of the bill.

Mr. KEFAUVER. There is no question about what the purpose of the bill is.

Mr. LONG of Louisiana. We know what A.T. & T. fears. It is that the new communications satellite would make possible an enormous reduction in long-distance rates. That is what A.T. & T. fears. A.T. & T. thinks it had better get control, so that does not occur.

Let us face the facts. At present, if a person wishes to make a telephone call from here to Europe, it costs about $12 for 3 minutes. A serviceman who wishes to call his mother from Europe, to find out about a death in the family, or a tragedy in the family, who talks about 15 minutes, incurs a cost of about $50.

I am told that when the synchronous satellite is put into orbit, those who hope to have a major part in doing it—but not A.T. & T., for it is hard to get facts out of them; I am talking about the Hughes people, as an example—think that in a couple of years they could have the satellite up with some 1,200 channels for voice alone, and that with only 40 of those channels fully used, at 50 percent of the existing rates, they would be making a profit.

Mr. KEFAUVER. I heard the same testimony.

Mr. LONG of Louisiana. That shows the great possibilities with respect to reductions in long-distance telephone rates.

At present, if the telephone company puts through a call to Los Angeles, it probably has to go through about 50 or 100 microwave towers, each of which must relay the signal, because one cannot build a tower high enough for straight coast-to-coast sending line-of-sight by microwave. To do so would require two towers 300 miles high, one at each end.

There is another way to do this job. It is possible to put a satellite some 22,290 miles in space and send the signal to the satellite and relay it back, with only one relay. That would make it possible for a person to talk by relaying the signal only once from the sender in this city to the receiver, let us say, in Los Angeles.

To show how corrupt the bill is, there is much more telephone traffic between New York and Los Angeles than there is between New York and London. If the proposed system should be built, anyone who has the capsule, the communications satellite, naturally would wish to do business with persons who would talk between New York and Los Angeles. The distance is about the same as the distance between New York and London. There is not much difference in the distance. The two cities are somewhat similar in distance from New York. One would prefer to have the business between New York and Los Angeles, rather than the business between New York and London.

Why is there not something in the bill on that subject?

Mr. KEFAUVER. The bill discourages it.

Mr. LONG of Louisiana. Why discourage it?

Mr. KEFAUVER. Surely; why discourage it?

Mr. LONG of Louisiana. It would compete with the existing system. The company wants to charge for putting a telephone call through 50 microwave towers, and collect long distance rates for all those towers, although the call could be put through with one simple relay; namely, the satellite in space.

As the Senator knows, at a distance of 22,290 miles the satellite would appear to stand still and remain at one point at all times. It would go around the earth over the Equator at about 8,000 miles an hour. The satellite would be in the air about eight times as high over the earth as from the center of the earth to the earth's surface. The earth's surface moves at about 1,000 miles an hour. The result would be that the satellite would appear to stand still overhead at all times, exactly as appears to be the case with the north star, which one can see at any hour of the night. If one could see the satellite in the air, it would appear to be in one place. About the ideal position would be to have it southeast of where we are now. Then one could communicate by using it at all times. Using only one of those satellites, it would be possible to reach 92 percent of all the telephones in the world.

Mr. KEFAUVER. The same thing applies to television stations.

Mr. LONG of Louisiana. Or television stations. In my opinion, the Telstar is a bunch of junk. It is no good. Of course, editorials were written stating how good the system is. We could not use it now. We could not call anyone by Telstar. Does the Senator know why? Telstar is on the other side of the world. We could not reach it. For only 10 or 15 minutes every so many days the Telstar comes by so that messages could be sent by it. Would not the Senator be in a fix if he were trying to call his wife in Europe by Telstar? He would be better off to use the pony express.

Mr. KEFAUVER. Mr. President, will the Senator yield further for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. KEFAUVER. Does not the bill substantially commit the U.S. Government for all time to a low-orbit system—Telstar—and leave it in the hands of a corporation—not in the hands of the President or the Federal Communications Commission—to determine whether there is ever to be any change or not? In other words, whether we are to have the best system, which the Senator has described, or whether we are to have a system that within future years will be considered junk, is in the hands of a private corporation dominated by A.T. & T. We shall have lost our opportunity to have a better and more modern system that would enable us to have an international communications satellite in the world.

Mr. LONG of Louisiana. Mr. President, in my opinion the American Telephone & Telegraph Co. will, if it can, delay the development of that fantastic new communications system for radio, television, and long distance telephone conversations. It will deliberately delay the development and realization of that system, because the system would reduce what the A.T. & T. could charge with the existing system. When the circuits are secured, the A.T. & T. will use all the power it has in the Government—and the Senator knows that the Government is honeycombed with former A.T. & T. executives—to see that rate reductions come very slowly and gradually, if at all.

Mr. KEFAUVER. Yes. That is one reason why it does not want the debate to continue. Its executives know we will talk about the honeycombing of NASA, the Air Force, the Federal Communications Commission, and other Government agencies with alumni of A.T. & T. who are using their power to promote the A.T. & T. cause.

The Senator has said that A.T. & T. would use its influence to maintain a low-orbital system. The bill substantially provides for that. I call attention to pages 26 to 28 of the bill. Instead of the President having discretion to decide on the best system, the Senator will observe that subsection 7, on page 26 of the bill, provides:

> (7) so exercise his authority as to help attain coordinated and efficient use of the electromagnetic spectrum and the technical compatibility of the system with existing communications facilities both in the United States and abroad.

On page 28, subsection 4 provides:

> (4) insure that facilities of the communications satellite system and satellite terminal stations are technically compatible and interconnected operationally with each other and with existing communications facilities;

What is obviously meant is that whatever we agree upon—the A.T. & T. Andover low-orbit system, its satellite, and whatever else it may build, including low-orbital ground stations—the President would be required to see that they are coordinated with the existing facilities. Neither he nor the Federal Communications Commission would have power to order the corporation to see to it that we have the best system or that a change is made from a low-orbital system to a high-orbital system. That is the clear meaning of the bill. It cannot be read in any other way.

Mr. LONG of Louisiana. It is bad. In my opinion, it is evil. But there is a provision in the bill that is much worse than that.

Mr. KEFAUVER. I agree with the Senator. There are many evils in the bill.

Mr. LONG of Louisiana. I do not have the reference at my fingertips. The Senator may be more familiar with the technical provisions of the bill. The bill provides that when the Government puts its own satellite into space for military purposes, and only about 1 percent of the capacity in the Government circuit is added, the State Department and other Government agencies must use the A.T. & T. system, even though it may be no good, and although the Government has a satellite in space that is not being used.

Mr. KEFAUVER. The Senator is exactly correct. That is the provision of title II, section 201, subsection 6, in which it is provided:

> (a) the President shall—
>
> (6) take all necessary steps to insure the availability and appropriate utilization of the communications satellite system for such general governmental purposes as do not require a separate communications satellite system to meet unique governmental needs; and

"Unique" has been defined to mean, or the RECORD shows that it means, unless the Government is handling some kind of coded messages. In other words, all the Government commercial business, including USIA and the great number of messages that Agency must send, must go through the private corporation system, even though the Government might have its own satellite in space with unused channels. The Government must pay the commercial rate for using the commercial system. In other words, the proposal is not only a giveaway to begin with, but also it is a continuing giveaway by virtue of a subsidy. The Government would pay through the nose for the use of the system.

Mr. LONG of Louisiana. Ed Murrow has told us that if he is to do a reasonably creditable job of getting our story around the world in opposition to Communist propaganda, he requires use of telephone and cable facilities under existing methods at least 90 minutes a day to broadcast our side of the story to all countries to which he wishes to broadcast. He said that it would cost $900 million at present rates to use the A.T. & T. system. Congress will not provide the $900 million to do the job of fighting communism. He must settle for about 10 percent of that amount or less.

Mr. KEFAUVER. Mr. Murrow's budget is only $110 million.

Mr. LONG of Louisiana. If we should put the satellite in space, and we had enough money to operate the satellite, it would cost only a few million dollars extra to broadcast information around the world, through Ed Murrow, in our fight for democracy and freedom.

The proposed law would say, "Oh, no. You cannot do that. Give it to A.T. & T., even if you cannot afford it."

Who in his right mind would vote for that kind of measure? But that provision is in the bill.

Mr. KEFAUVER. It is on page 37 of the bill. It is very definite.

Mr. LONG of Louisiana. Under a gag rule of the Senate we would be asked to state that the Government may not use its own radio station. It may not use its own telephones and facilities for which it has paid and developed. After the Government has spent $25 billion and has reached the point it has reached we must enact a law that provides that the Government cannot have the system for the benefit of the people of our country.

That is ridiculous. The Senator from Tennessee ought to be defeated if he voted for that type of measure. I know he will not vote for it.

Mr. KEFAUVER. Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. I feel very much as did the Senator from Oregon. If I had to vote for the bill in order to keep my seat in the U.S. Senate, much as I love being here, I would never vote for the bill. I do not see how any Senator, in good conscience, could do otherwise if he would study the bill. It is a most one-sided and unfair bill. It would give away rights without any protection. The question is always what the President would do for the corporation, what NASA would do for the the corporation, what the State Department would do for the corporation. The corporation would do nothing for anyone, except to receive double returns and insure against Government use, insure great payments, and insure the absence of competition with existing carriers.

Mr. LONG of Louisiana. It is proposed to lock Uncle Sam in jail, and to hog-tie him and tie his hands and feet behind his back but leave his pockets open so A.T. & T. can get at his money.

Mr. KEFAUVER. That is why they are trying to rush this bill through.

Mr. LONG of Louisiana. I do not know why they are trying to rush the bill through. Under the rule, as the Senator knows, I must give those who propose the bill credit for the best possible intentions, otherwise I will be put in my seat. I am sure that they are motivated by the best motives in the world. I must say that if I want to keep the floor. Frankly, I respect those who are supporting the bill, but I do say that I have never seen a bill that is as completely indefensible as this one is, in that it is proposed that the Government cannot use its own Government-owned facilities to send Government messages. It is about as ridiculous as it would be to say that the Government cannot buy electric power from TVA, from those big dams the Government has built in Tennessee, and cannot buy electric power in order to light a bulb in a Government building.

Mr. KEFAUVER. Or that the Government cannot ship its own merchandise across the ocean in Government transports, but must pay commercial rates to the corporations that own the shipping lines.

Mr. LONG of Louisiana. If we go any further with this thing, we will be passing laws one of these days which will provide that an American soldier on the battlefield cannot fire a bullet against an enemy unless he has first paid that day's royalty to the company that manufactured the rifle.

It is ridiculous. The Senator knows it is ridiculous. That is why he is fighting the bill. Why should it be necessary to invoke the gag rule on Senators even to the point of not having a Senator read his amendments so that it would be possible to strike out some of this mischief? It is necessary to read an amendment before the gag rule goes into effect, or a Senator will not be in a position to offer his amendment. Has the Senator ever seen anything so ridiculous? I hope he will put his reply in the form of a question.

Mr. KEFAUVER. When Norris and La Follette and Shipstead carried on long debates, they would at least be allowed time to offer amendments and get them considered. They at least had an opportunity to speak. In the present situation the gag rule is applied before the case is developed, before the country is informed, and before Members of the Senate know all about this bill. It is a technical bill. I have never seen anything like it in the 24 years that I have been in Congress.

Mr. LONG of Louisiana. That is the way it appears to me. I regret that the Senate did not see fit to let the one committee consider the bill that should have considered it. That committee is the Judiciary Committee. This is a strictly antitrust problem. I am very much interested in antitrust matters, and this is certainly a matter that should have gone to the committee which has jurisdiction over antitrust laws.

It is not unprecedented for us to send a bill to more than one committee, if it contains various problems. For example, we used to send the foreign aid bill to both the Armed Services Committee and the Committee on Foreign Relations. Here is a bill that would fasten this monopoly on the backs of the people and stick them with it forever at a fantastic cost, with all kinds of conflicts of interest involved.

The Judiciary Committee has never been permitted to look at it. The Senator knows why. The reason is that the Subcommittee on Monopoly is headed by the senior Senator from Tennessee. There was good reason to keep it out of that subcommittee. That is one place where this subject would have been fully explored.

Mr. KEFAUVER. It should have been referred to our committee for consideration. If it had been referred to us, to the extent that I have any influence, it never would have come out in the shape it is in now. We would not be establishing a monopoly. We would not be giving our rights away. We would add some protection for the little people, whom the Senator is trying so hard to protect in his hearings, in the Small Business Subcommittee which he heads so well.

Mr. LONG of Louisiana. There is not much in the bill to protect them. I salute the Senator from Tennessee for trying to do everything in his power to bring to light these many shortcomings which have developed. I have tried to do some limited justice to the monopoly aspects of the measure, both today and in my previous speech on this subject.

Those who try to contend that this fantastic new monopoly should be created like to hide behind the argument that the Federal Communications Commission would be able to protect us from all of the evils that we have discussed. That is just not correct. I have gone into this matter at some length. I am in a position to say that I am satisfied that if people think that the Federal Communications Commission is going to protect them on the basis of this bill, they are laboring under a fancy illusion. It is incumbent on us, therefore, that we examine this record very carefully.

First, I would like to analyze the role of the Federal Communications Commission in regard to communications satellites, and then the effectiveness of the Federal Communications Commission's common carrier and especially telephone regulatory function.

My analysis leads to the conclusion, first, that the Federal Communications Commission has been and is using its public role to foster the interests of the communications common carrier companies, especially those of A.T. & T., in their efforts to obtain a private monopoly of communications satellites. This is, in my judgment, to the detriment of the interest of the general public.

It leads to the conclusion, second, that a shell game is being played on the rest of the administration, the Congress, and the American public in which the alleged "regulation" which the Federal Communications Commission is said to practice on the companies is the shell beneath which lies an uncontrolled private monopoly.

It leads to the conclusion, third, that neither this Federal Communications Commission nor any other so-called regulatory machinery is capable of coping with the fantastic grant of privilege which would be given away by a decision to turn the communications satellites over to the private corporation which this bill seeks to establish.

1. ROLE OF FEDERAL COMMUNICATIONS COMMISSION IN COMMUNICATIONS SATELLITES

What has been the role of the Federal Communications Commission in regard to communications satellites?

The Federal Communications Commission has the responsibility for allocating to nongovernmental uses the radio spectrum in the United States. This is a technical matter clearly within its range of expertise in this special field.

Is the Federal Communications Commission possessed of expertise on communications satellite technology? Only to the extent that it is told about it by the military and civilian procurement and research and development agencies of the Government and by private industry. It conducts no substantial original research or development work in this area itself. Mr. Minow testified that the Federal Communications Commission has no scientists or engineers.

Mr. President, I shall digress from what I am about to say concerning the authority of the Federal Communications Commission.

The junior Senator from Louisiana feels a little put upon to be treated as though he were really conducting a filibuster, when as a practical matter he is not doing that at all. I believe that I ought to know what constitutes a filibuster. I have been in many filibusters. I have participated in filibusters and have helped to organize them. I am not ashamed of filibustering. A filibuster has respectability where I come from.

I have been chairman of the Subcommittee on Monopoly of the Committee on Small Business. Since that committee and the Subcommittee on Monopoly were created about 14 years ago, I have spent much time studying the subject of monopoly. I think I can prove to the satisfaction of anyone that what I am saying about the monopolistic aspects of the bill and the inability of the Federal Communications Commission to cope with the communications aspect of the bill is correct. I believe I am presenting evidence that needs to be presented, and much of it is being presented today for the first time. As I recall, this is my second speech on the bill, and what I am saying today is a part of the preparation I had made before the bill was ever called up, and which I felt the Senate should understand before it voted on the bill.

Something has been said about the failure of the Senate to obtain a quorum 2 weeks ago today. I was not here on that day. I was seeking to have myself reelected to this office. I was in Louisiana, running, and incidentally, running pretty good. If I had not been there, I might have risked not getting as many votes as I did. Of course, I might have done just as well had I stayed up here because by endorsing some of the other candidates, I might have chased off someone who might otherwise have been interested in voting for me. Nevertheless, I did go to Louisiana, and the Senate had to operate without me. It is necessary for Senators to return to their States when they are running for office, especially if they are in trouble. If they do not go home, and they are defeated because they have not done so, they should be criticized for their failure to go home and state their case.

I hoped this bill would not have been brought abruptly to a vote a week ago last Saturday, when I could not be here, because I wanted to have the opportunity to explain my views, as I am now doing.

Mr. HOLLAND. Mr. President, will the Senator from Louisiana yield, without losing his right to the floor?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield to the Senator from Florida without losing my right to the floor.

The PRESIDING OFFICER. Is there objection? The Chair hears none, and it is so ordered.

Mr. HOLLAND. Mr. President, I am sure I speak for every other Member of the Senate, as I speak for myself, when I say we are all very happy not only about the renomination of the distinguished junior Senator from Louisiana, but also because he has prevailed so overwhelmingly. We are glad that he attended to his home fires. It was not possible to insist upon a vote while he was away, and I think the Senator knows that.

The Senator from Louisiana has been a little overmodest in his statement concerning his participation in filibusters. Not only has he participated; he has participated very, very effectively. It is my humble judgment that he has such great knowledge and technique in that field that sometimes, when he is not filibustering, as he stoutly maintains is the case now, he creates the impression, at least among some of his friends, that he may be filibustering. If we have gained a false impression of the matter, we apologize to our distinguished friend. We are happy that he will be back with us.

Mr. LONG of Louisiana. I thank the distinguished Senator from Florida. I have the highest regard for both the Senators from Florida. In my judgment, both of them are great statesmen.

I know the senior Senator from Florida [Mr. HOLLAND] does not have an election coming up soon; so he has no problem in that connection. But I certainly hope the junior Senator from Florida is successful in his election. Even though I think he is making a very bad mistake in connection with this bill, I hope it does not harm his chances of success in the election. I hope it does not turn the voters of his State to the Republican Party—from disappointment about the attempt to use a gag rule in the Senate.

I thank the Senator from Florida for his kind remarks, and I appreciate the source.

So, Mr. President, at this time I wish to discuss briefly the qualifications of the Federal Communications Commission to do this job. Is the Federal Communications Commission possessed of expertise on communications satellite technology? Only to the extent that it is told about it by the military and civilian procurement and research and development agencies of the Government and by private industry. So, Mr. President, as a practical matter the Federal Communications Commission is not qualified to do this job. It conducts no substantial original research or development work in this area itself. Mr. Minow testified that the Federal Communications Commission has no scientists or engineers.

2. AUTHORITY OF FEDERAL COMMUNICATIONS COMMISSION

The only other basis for concern with communications satellites which the Federal Communications Commission has rests on the statement of legislative purpose for the creation of the Commission which says:

> For the purpose of regulating interstate and foreign commerce in communication by wire and radio so as to make available, so far as possible, to all the people of the United States a rapid, efficient, nationwide, and worldwide wire and radio communication service with adequate facilities at reasonable charges.

That quotation is from the Communications Act of 1934, as amended, section 1—a section of the act which directs the Commission to keep itself informed as to technical developments and improvements in wire and radio communication, so that the benefits of new inventions and developments may be made available to the people of the United States—section 218. Another section authorizes the Commission to study new uses for radio, provide for experimental uses of frequencies, and generally encourage the larger and more effective use of radio in the public interest—section 303g. Certain regulatory responsibilities as to the reasonableness of rates and the provision of service by common carriers are also included.

The Communications Act of 1934, as amended, however, does not give the Federal Communications Commission authority to prescribe the organizational form for the conduct of a communications activity. It does not give it authority to determine when and how business organizations engaged in common carrier communications may conduct foreign relations for the United States. It does not give it authority to determine when and how communications common carriers may merge. Indeed, mergers of cable and radio companies are forbidden—section 314. The act does not even give the Commission explicit authority to recommend to Congress amendments to the act or new legislation—except with respect to safety of life and property—section 4(k).

3. H.R. 11040 CREATES MERGER OF COMMUNICATIONS CARRIERS

In effect, the pending bill proposes the creation of a merger of the international carriers. It is, therefore, relevant to consider the kinds of public policy consideration which have been taken into account in connection with earlier attempts at merger. We are here dealing with, first, the American Telephone & Telegraph Co., which enjoys a monopoly of oversea telephone service; and second, two companies which share the undersea telegraph cable business, and which divide the great bulk of the oversea radiotelegraph traffic. They are RCA Communications, Inc., and the International Telephone & Telegraph Co.

Over the past 30 years, a number of efforts have been made by telegraph companies and by assorted Government agencies to get agreement among themselves and from Congress on legislation which would permit some kind of permissive or mandatory merger of these cable and radio carriers. As the report of the President's Communications Policy Board said, in 1951:

> Proposals for merger of American companies providing cable and radiotelegraph services have provoked vigorous debate ever since radio emerged as a practical means of international communications.
>
> The traditional American policy against monopoly has affected this debate throughout. Fundamental to this problem is the possibility offered by radio of providing, with relatively small capital outlay, circuit capacity exceeding the normal requirements of international communications. This raised difficult economic questions of cost of service, and the future profitability of cables in the face of radio competition.
>
> Several of the companies have asked permission to merge in the hope of avoiding deficits. From time to time, some Government departments have favored consolidations for reasons of national defense, conservation of radio frequencies, or for other reasons, while other Government departments have opposed consolidation. Some of these agencies have shifted their positions from time to time on the desirability of one or another form of merger. At no time have all the interested executive agencies been in agreement on this issue. As of May 1950, this was still the case.
>
> The move for merger in the field of international record communications [telegraph] has never been able to win complete congressional support because of traditional resistance to monopoly. Numerous hearings have been held by committees of the Congress, but no legislation has resulted (p. 151–152).

Here we see that there is a genuine tradition of congressional opposition to a merger, when essentially the same factors as those in connection with the communications satellites are involved, or when a concern with a vested interest in a potentially obsolete technique desires to obtain freedom from competition from a new and more economical technique. Also, we must remember that during all these decades, proposals to merge telephone-voice communications with recorded communications were not even given serious consideration.

4. DESTRUCTION OF GOVERNMENT-OWNED COMMUNICATIONS SYSTEM AFTER WORLD WAR II

Two attempts to get congressional approval for the merger of these international telegraph common carriers are directly relevant to the present communications satellite issue. The first of these was in 1945, when hearings on Senate Resolution 187 were held before the Senate Committee on Interstate Commerce. We were then at the end of World War II; and the testimony from the Army, the Navy, and the Federal Communications Commission was that the Army radio communications system alone consisted of some $162 million worth of the latest type of equipment, which would be dismantled. Of this equipment, $116 million worth was overseas; and General Ingles testified that about half of it would not need to be moved in order to serve commercial purposes. At that time the combined net investment for international service of all of the international common carriers was not quite $52 million, and they had a total of 6,000 employees. Considerable interest was expressed in the utilization of this latest type radio plant, scattered around the world. But the equipment was dismantled and disposed of. That was the most recent giveaway of a publicly owned communications system prior to H.R. 11040, the present proposal in connection with communications satellites.

Let me quote from the testimony submitted at one of those hearings. Mr. Porter, then Chairman of the Federal Communications Commission, was testifying:

> Mr. Porter. I believe that the gentlemen of this committee have had the privilege of witnessing the tremendous modern and efficient Army and Navy communications system which have been built up during the war. In his testimony before your committee, Admiral Redman gave you some indication of the Government's investment in the Navy system alone, which, as you know, is smaller than that of the Army.
>
> The Chairman (Senator Burton Wheeler). Frankly, when you take into consideration the investment that the Government already has and if you further take into consideration that there are only 3,000 employees in this industry in this country, I am rather inclined to agree with what Owen D. Young said some years ago, that perhaps international communications ought to be owned completely by the Government.
>
> I am not in favor of Government ownership, generally, largely because of the fact that we have built up a tremendous bureaucracy and increased centralization of power. But here is quite a different situation, it seems to me, where we are dealing with an instrumentality of such national importance to the Army and the Navy in time of war, and to our Government generally. When we have this tremendous Government investment, if you are proposing to turn it over to a private monopoly, I will confess I am extremely doubtful about it.
>
> One thing is important. It seems to me, and I do not want to lose sight of that fact—that to transfer all of this equipment to some private monopoly might have a very bad effect.
>
> Mr. Porter. That is the point I was going to undertake to discuss.
>
> Senator Capehart. Mr. Chairman, I think that is a most important factor.
>
> The Chairman. Yes, I would not like at the moment to see turned over to a monopoly this tremendous establishment which has been created by our military in time of war; at any rate, not without proper safeguards. I do not want to be understood as favoring a monopoly; I do not want to see a monopoly established and be owned privately with this tremendous amount of equipment which has been purchased and paid for by the Government. It is a very perplexing problem.
>
> One suggesion that occurs to me, from what I have heard so far, is that perhaps it would be better—looking at it from the standpoint of the betterment of the country as a whole and the peace and security of the Nation in the future, and also from the standpoint of the businessmen of this country—to have this system in Government hands. Then we would be able to direct the carrier to go into various areas and territories whenever it is beneficial to the general public, and not simply on the basis of giving service to derive a profit for a private company.

5. CONFLICT OF NATIONAL INTERESTS

In the same 1945 hearings the Chairman of the Federal Communications Commission, Paul A. Porter, advised Congress about a number of points where the public interest was not identified with that of the common carriers. He pointed out the "deadly parallel" between the possibility of a merged company favoring its investment in an obsolete technology and the experience of British Cables and Wireless. He warned that—

> Managements of communications companies may at times be in a position of serving interests other than our own national interests. At the International Communications Conference held in Warsaw in 1936, at which the United States was represented by its Government officials, a number of persons connected with our U.S. carriers were present and actively participated in the conference as members of delegations of certain Latin American countries. Such situations and the circumstances whereby our carriers may, because of the necessity of protecting their local interests at foreign points, engage in political activity within the foreign country, raise serious considerations which I think this committee should take into account. A glance at a chart which I have submitted will show the extensiveness of the interests of the I.T. & T. in foreign countries. Its large financial stake in business ventures in foreign countries is indicative of the potential conflict of its interest as an operator of U.S. communications with its interest in the protection of foreign holdings.

At this point, Senator Burton Wheeler, chairman, said:

> They were able to play politics sometimes to aid in the development of their own commerce or business and to the detriment of their own country, but always to protect their own interests in foreign countries.

Mr. Porter agreed, stating that 73 percent of the total I.T. & T. investment represented investment in subsidiaries and was in companies whose principal assets were in subsidiaries located in foreign countries. The Federal Communications Commission in 1945 took the position that—

> The interests of any company that has as much as 73 percent in foreign countries cannot be as strongly allied with the interests of this country as one which is owned solely and entirely by interests in this country.

And it summarized its position on this and related conflicts of interest in a way which contrasts very sharply with the policy of the present Federal Communications Commission. The position of the Federal Communications Commission was that—

> There should be no place in the unified company for any such conflicts of interest. Controls must therefore be provided to assure that it contains no elements which are affiliated with foreign interests or connected with foreign operations. By the same token, the company should be divorced of affiliations, if we are to preserve separate domestic and international operations. Similarly, it

> should have no interlocking interests with communications manufacturing operations. The unified company will have dealings with these two fields for the exchange of traffic and the purchase of equipment, and the existence of the influence of these two fields within the unified company would jeopardize the effectuation of arrangements on these matters on an arm's-length basis.
>
> The unified company should, therefore, be entirely free of any connection with alien interests, either in its ownership or its management. There should be no affiliation or connection of any kind, direct or indirect, between the unified company and persons having business interests within foreign countries or interests in domestic communications or communications-manufacturing activities.

6. FEDERAL COMMUNICATIONS COMMISSION ESPOUSES MERGER OF TELEGRAPH CARRIERS TO MEET COMPETITION OF TELEPHONE COMPANY

The other proposed merger legislation for international telegraph common carriers was that of 1959. In the hearings before the Senate Interstate Commerce Committee in that year, the Federal Communications Commission, contrary to 1945 when it did not approve the proposed merger, espoused the merger proposal which the major telegraph carriers desired. In doing so it ignored the elements affecting the national interest to which, as I have shown, the 1945 Commission gave serious consideration. The rationale for the Federal Communications Commission's position in 1959 was in essence this: The telephone company had in the mid-1950's opened its transatlantic voice cable which permitted broad-band service. The military required integrated voice-record service which could be accommodated by either the Bell cables or by similar cables which might be laid by a telegraph carrier. It was outside the financial capacity of each of the major telegraph carriers to build competitive broad-band cables. While the telegraph carriers were then in sound financial conditions, their future was jeopardized by their inability to provide competitive facilities. Therefore, permissive merger of the telegraph carriers was recommended. It is relevant to the present situation in regard to communications satellites to note that the Federal Communications Commission told the Senate committee:

> Authorization to the carriers to provide such a facility [broad-band cable] jointly would, in essence, create the very merger which is the subject of the legislation under consideration without any of the safeguards for the public interest which are not embodied in the bill and the Commission's suggested amendments.

At that time the military endorsed the Federal Communications Commission's recommendations, but the Department of Justice opposed them. I want to emphasize, however, that the Federal Communications Commission in those hearings was pursuing the genuine historical tradition of maintaining competition between the voice—telephone—services and the record—telegraph—services, and that there was no suggestion from any quarter that a merger of telephone and record communications was desirable. Indeed, the Commission emphasized the relative weakness of the combined telegraph carriers in relation to the telephone giant as an argument for the merger:

> It would appear to us that the only opportunity for the international telegraph industry to maintain its competitive position as against telephony would be to permit it to merge, and to encourage it to secure as quickly as possible the broad band facilities essential to modern service. The maintenance of internal competition in the international telegraph industry today would adversely affect competition between telegraphy and telephony in the 1960's. In this connection we note that at present the seven competing telegraph carriers in the United States have a combined rate base of less than $82 million, whereas the plant of A.T. & T.'s Long Lines Division alone approximate $1¼ billion.

The fate of this merger proposal was the same as that of its predecessors. Congress refused to approve it.

Mr. President, this proposed merger type of bill which is before us completely dwarfs anything ever carried in that proposal to permit the telegraph companies to merge. It makes it look like a flea compared to an elephant.

Now I wish to discuss the problem of satellites being integrated into the communications technology.

7. SATELLITES PERMIT INTEGRATION OF COMMUNICATIONS TECHNOLOGY

Into this setting came communications satellites. And they brought with them a technology which invites operational integration, not just of cable and wireless telegraphy, but of voice and record communications. Whereas historically there had been a clear distinction between the capacities of equipment for handling telegraph communications and telephone communications, communications satellites obliterate these distinctions. They provide a high-capacity accommodation for all previous electronic communications services and they open up the possibility of new types of service.

But an important distinction must be made. Integration and unification of communications equipment, as a matter of actual operation, does not necessarily require integration and unification of the business or other organizations which administer the actual operations. Otherwise we could not have had integrated operation of transatlantic telephone cables where the organization at one end is a government agency and the organization at the other end is a commercial company. Integration of communications technology and operations is now possible through the satellites, not only for part of an industry, but for the communications equipment of a whole nation, and even perhaps within the foreseeable future for the whole world. We are not yet prepared to create the kind of world operating organization, today, which would exercise managerial control over the communications satellites for all nations. But both technological pressures and the need to avoid nuclear destruction must push us inevitably in this direction.

At the national level we have not faced the problem of organization and control of the satellites on its merits. If we did, we would have to consider this problem as composed of two parts: First, what kind of physical plant, with how much integration and unification of the facilities, both on the ground and in orbit, do we want to have? And, second, recognizing that many different kinds of organizations might share in the use of that plant, what kinds of organizations do we want to have? Some of the questions we have to ask—(a) Do we want to see the old telegraph and cable organizations merged into one entity? (b) Do we want to see them merged with the telephone organization into a much bigger entity? (c) Do we want to have a communications satellite organized under separate ownership? A decision in favor of separate ownership for the satellites would permit and encourage competition either between the existing common carriers, or between a merged telegraph-cable company on the one hand and the telephone company on the other. In this event, the undesirable effects of private monopoly would be checked if not eliminated.

8. ROLE OF A.T. & T. AND FEDERAL COMMUNICATIONS COMMISSION IN DETERMINATION OF SATELLITE COMMUNICATIONS POLICY

Before these questions could be even discussed, the American Telephone & Telegraph Co., the world's biggest private monopoly, was prepared to make its move to fit the satellites to its organizational and policy pattern.

And the Federal Communications Commission, judged by its words and actions, was ready to do its prompting. I have already mentioned that in the preceding several decades, the furthest the Federal Communications Commission went in advocating international common carrier merger was to espouse one limited to the telegraph carriers. And it did that with appropriate respect for the legislative prerogative of Congress. But beginning in early 1961, in the course of sponsoring private ownership of communications satellites, the role of the Federal Communications Commission became one of creating an organization and policy which would accomplish operational unification—de facto merger—of the major international common carriers of both telephone and telegraph traffic, and of placing this merged entity firmly in the hands of private monopoly. In this connection, General Sarnoff, in his testimony before the Harrison committee, says that the inevitable result of the privately owned satellite corporation would be merger of the carriers in a legalized monopoly. The intended effect of the Federal Communications Commission's plans was to create the desired private organization and policy and then to present it as an accomplished fact for congressional rubberstamping. The telegraph carriers willy-nilly are to be carried along. RCA was not too happy about the A.T. & T.-dominated monopoly. Western Union opposed certain important features of the plan. Of the major telegraph carriers, only I.T. & T. seems happy with the plan.

Mr. GORE. Mr. President, will the Senator yield?

The PRESIDING OFFICER (Mr. Hickey in the chair). Does the Senator yield?

Mr. LONG of Louisiana. I yield for a question.

Mr. GORE. Mr. President, would the Senator mind obtaining unanimous consent so that I might read from the news ticker for his edification?

This message came in on the teletype. The Senator may wish to read it.

Mr. LONG of Louisiana. Mr. President, the Senator handed me a message from the ticker. Since there has been so much objection to mere Record insertions—something which is ordinarily permitted on the floor of the Senate—I will read what the Senator from Tennessee [Mr. Gore] brought in:

> Portland, Oreg.—The Western States Democratic Conference has decided to urge further hearings on a bill to establish private ownership of U.S. space communications.
>
> A news release from Sylvia Nember, Portland, executive secretary of the conference, said: "In view of a statement of President Truman and testimony at hearings raising serious unanswered questions, we request postponement of congressional consideration of the Telstar bill for several months to allow full hearing and resolution of issues raised."

That is interesting. The Western Conference of Democrats has called upon the party not to put the gag rule on those of us who are talking about the bill. They have asked us not to apply the gag rule, but to give the subject further study.

Mr. GORE. Mr. President, will the Senator yield for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. GORE. Does not the Senator think that action indicates that as the country learns about the bill, opposition to its passage is growing?

Mr. LONG of Louisiana. The Senator is correct. I find this amusing. I recall the time when Harry Truman—God bless him, for he sincerely tried to do the best he could—attempted to apply a gag rule to us Confederates on a civil rights bill. Now he is assisting some Confederates and the rest of us in trying to prevent the application of a gag rule to the bill before the Senate. It is an odd turn of events.

Senator can talk all they wish about those of us who are opposing the bill being a handful of liberals. We have one of the most respected leaders of the Democratic Party of all times on our side. I predict that his name will grow greater with history, and his luster will shine evermore for some of the courageous decisions that he made while he was President of the United States and prior to the time he became President. He is a man who understands the monopoly problem. As a Senator, he served on the Committee on Commerce. He has vetoed monopolistic bills. The Senator knows it as well as I do.

Mr. GORE. Without revealing any illustrious names, does not the Senator expect that if the debate continues for a few more days, as we fully expect it will, more illustrious leaders of the Democratic Party will join in opposition to passage of the bill?

Mr. LONG of Lousiana. There is no doubt about it. Senators must be educated to find out what the bill is all about. For example, if I wished to tell someone where to go to find out what a mischievous thing the bill is, I would like to have him read my speech. I have delivered only a quarter of it since I started some time ago. I hope to complete about half of my presentation by the time I suspend for the day. It will take a while longer for me to make my presentation-in-chief on the bill. The subject is very complicated.

I believe the Senator knows that members of some of the executive departments have been bludgeoned to give their approval to the monstrosity that is before the Senate. The Senator knows that they have been bludgeoned into going along with the proposal. I cannot tell what I know, for it would violate my code of ethics to say something that was told me in confidence. The Senator knows how the measure was pushed through some of the departments. After recommendations were presented, they proceeded to drop many of them.

How do Senators think the Secretary of State likes to go along with the proposal? While Secretary of State of the United States, in effect he would be doing the bidding of a private company. He should be outraged.

Our Ambassador to the United Nations said that the United Nations must be considered in connection with the proposal. Other countries do not agree that we even have a right to put a satellite in space. Only for the International Geophysical Year program was it agreed that we would have the right to put one up. It might be a violation of what might be someone else's property rights. That argument was thrown out. I believe the distinguished chairman of the committee studied the question and concluded that it was nothing but a new way of doing what we had already been doing, and should be considered only in that light. The Acting Ambassador to the United Nations, speaking for Mr. Stevenson—I suppose, because Mr. Stevenson was not available at the moment—said that to make such a statement was like saying that a nuclear explosion was only another way of setting off a firecracker.

That is how much sense he thought the Space Committee made in the bill when all reference to the United Nations was eliminated. After all, it must be agreed within the United Nations that we have the right to put a satellite over someone else's property.

Frankly, it is a serious question. Those in charge of the bill do not want to talk about it. They want to push it through. They want to slip it through in a cloud of ignorance and a smokescreen of misinformation. The Senator well knows that the least helpful witnesses we could find to tell us what the bill is all about were those who were supposed to own and control the system—the American Telephone & Telegraph Co. itself. To get information out of them, it must be pulled out as one would pull teeth—and I mean wisdom teeth.

Mr. GORE. Mr. President, will the Senator yield for a question?

Mr. LONG of Louisiana. I yield.

Mr. GORE. Does the Senator recognize the following statement as the words of an official of the U.S. Government:

> Now, the fourth part of the space program looks toward the establishment of a global system of communications satellites. Space technology has opened enormous possibilities for international communications. Within a few years satellites will make possible a vast increase in the control and quality of international radio, telephone, and telegraph traffic. In addition, something new will be added: the possibilities of relaying television broadcasts around the globe.
>
> This fundamental breakthrough in communication could affect the lives of people everywhere. It could forge new bonds of mutual knowledge and understanding between nations. It could offer a powerful tool to improve literacy and education in developing areas. It could support world weather services by speedy transmittal of data. It could enable leaders of nations to talk face to face on a convenient and reliable basis.
>
> The United States wishes to see this facility made available to all states on a global and nondiscriminatory basis. We conceive of this as an international service.

Mr. CARLSON. Mr. President, a point of order.

The PRESIDING OFFICER. The Senator will state the point of order.

Mr. LONG of Louisiana. Mr. President, I did not yield for a point of order. If the Chair wishes to put a Senator in his seat, he may do so. But I have the floor. I yielded for a question. I did not yield for any other purpose. Since Senators wish to be technical, I too, shall be technical.

Mr. President, who has the floor?

The PRESIDING OFFICER. The Senator from Louisiana.

Mr. LONG of Louisiana. That is what I thought. I yield to the Senator from Tennessee [Mr. Gore] for a question.

Mr. GORE. Does the Senator recognize the words I have read, which I completed reading except for two lines, as the words of an official of the U.S. Government?

Mr. LONG of Louisiana. If I recall correctly, Adlai Stevenson, as Ambassador to the United Nations, made that statement.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I will yield for a question. I hope the Senator will confirm whether I am correct in what I have said.

Mr. GORE. Will the Senator concede that he is well acquainted with the views of Adlai Stevenson?

Mr. LONG of Louisiana. I am familiar with with a number of views of Adlai Stevenson. He is a diplomat, and I am familiar with his views in that field, and I am also familiar with his views with respect to free enterprise. He is in favor of free enterprise rather than big monopolies, although I believe he made his best fees as a lawyer representing A.T. & T.; nevertheless, he does believe in free enterprise and in competition.

Mr. GORE. Does the Senator know that Adlai Stevenson is the representative of the U.S. Government and is its official spokesman in the councils of the United Nations?

Mr. LONG of Louisiana. That is entirely correct.

Mr. GORE. I should like to ask the Senator if the concluding sentence of these remarks of the statement of Mr. Adlai Stevenson represents the position of the U.S. Government as conveyed to the United Nations by Ambassador Stevenson, the concluding sentence being, "We would like to see United Nations members not only use this service, but also participate in its ownership and operation, if they so desire"?

Mr. LONG of Louisiana. Yes; that is entirely correct. The committee simply disposed of what Mr. Stevenson was recommending and threw it all out. In other words, Mr. Stevenson was saying to them, "You must get the United Nations to work with you on this thing. If you don't work with them, the Russians will say you do not have any right to put it up there, and they might shoot it down, just to be done with it." That is what they did with Francis Gary Powers.

Mr. GORE. Mr. President, will the Senator yield further?

Mr. LONG of Louisiana. I yield for a question.

Mr. GORE. Does the Senator recall that when Dr. Dryden, the head of NASA, was before the committee, the junior Senator from Tennessee asked him what would be the result if the United States had placed a communications satellite in orbit without the attainment of the requisite ability to make it a viable system, and another country with the requisite capability placed their satellite in a similar orbit on the same wavelength, and the answer of Dr. Dryden was, "Complete confusion"?

Mr. LONG of Louisiana. That is correct. The people who are fighting to get this bill through and to turn this over to A.T. & T. before we even see what it is, do not even want to talk about these things. They want to gloss all this over. It is quite amusing the way the A.T. & T. people come to talk to one about all this. They say, "It's no good. It won't work. It is not going to be worth much."

It reminds me of the way a lease seeker goes to a farmer and says to him, "Oh, there couldn't possibly be any oil on your land." Half the time he already has a core sample obtained from someone who has drilled a well a quarter of a mile down the road from this farmer, which shows that there is a tremendous amount of oil, and that the chance of finding oil on the farm is about 50 to 1 that it is there. Nevertheless, this man will say to the farmer, "Oh, it is no good; there could not possibly be any oil under your land."

Their attitude has been to try to persuade us that this satellite would not work, that it is no good, that it could not succeed. Their attitude is that, well, they want this merely because they are in that kind of business and they ought to have it even though it will not be any good.

The people who really know something about this say that this space satellite will make present radio and television systems look like nothing at all. They say that in 10 years we will be able to broadcast programs to half the world at one time. All that will be necessary to do will be to develop an atomic reactor-operated battery, and to put this satellite 22,000 miles out in space to broadcast television programs over five or six channels at the same time in different languages.

What does A.T. & T. say about that? They say that would not work. It never could work, they say, because people in Europe have a different kind of tube, of different dimensions than we have in our television sets. Anyone knows that if five or six programs were being beamed at the same time off a satellite, and they were able to see this excellent entertainment, people would buy the television tube of the proper dimension. It is the same as when television first came in. People did not have television sets, but they bought them after a while. The first ones were not very good. After a while people got new sets. I dare say that there are few people today who have television sets that are more than 10 years old. They bought the new sets when the changes were made. The same thing was true when FM radios first came in, when they used a different frequency band. People bought new sets.

Mr. President, here is the big money bill of Congress. This is the billion-dollar bill. This is the big one. A.T. & T. tries to make it appear that this is nothing at all. Why would they try to put the gag rule on the Senate and try to ram this bill through, if they thought this thing was no good? They want to ram this through so people will not hear any more statements like the ones made by Harry Truman, and about the kind of action that the Western Conference has taken. Thank the merciful Lord for unlimited debate in the Senate. The people will hear about this.

Perhaps they will be able to gag us and to hogtie us and to ram this bill through the Senate. Maybe they will be able to do it. They could not do it with civil rights. Apparently some Senators who would not vote to gag the debate on civil rights may vote to gag us now on this measure, which would create a tremendous monopoly. There are some Senators who apparently will vote for cloture on this measure. I do not know how they can bring themselves to do it. Mr. President, let us face it: with all the power that the NAACP has, they do not have the power of A.T. & T.

Mr. President, every Senator and Congressman, I am sure, has been visited by A.T. & T. task forces from their home areas. The lobbying has been such as was never seen before in Congress, although it has been in pretty good taste. I believe the telephone company is trying to use the carrot more than the stick.

When I was running for office I was surprised that my opponent was not better financed. I thought he was financed well enough, but not as well as I thought he would be, because I thought that anyone who would uphold the position of A.T. & T. would be very handsomely financed indeed. I was surprised that his campaign against me was not more lavishly financed.

I was constantly confronted with being called a Socialist or a Communist. I suppose I have been called a Socialist so many times, for believing in competitive free enterprise, and have been called a Communist so many times, that I have almost gotten used to it. I suppose if I am a Socialist, there must be a good many of them in Louisiana, because I received over 80 percent of the votes.

So far as public evidence is concerned, the industry's campaign through Government agencies began before the Federal Communications Commission's open involvement. In October 1960, the Administrator of NASA in a speech said:

> Traditionally, communications services in this country have been provided by privately financed carriers competing with one another to serve the public interest under Federal controls and regulations. There seems to be no reason to change that policy with the advent of communications.

On December 30, 1960, a White House statement released by Mr. Haggerty used virtually the same words. The Federal Communications Commission's first public statement on the campaign was released on February 28, 1961, and it consisted of a most curious document, headed "Memorandum of Understanding Between Federal Communications Commission and NASA on Respective Civil Space Communications Activities," the relevant operative provisions of which were that both agencies affirm the following propositions as guidelines for the coordinated conduct of their respective activities:

> 1. The earliest practicable realization of a commercially operable communication satellite system is a national objective.
>
> 2. The attainment of this urgent national objective in the field of communications may be accomplished through concerted action by existing agencies of Government and private enterprise.
>
> 3. The statutory authority of NASA and the Federal Communications Commission appears adequate to enable each agency to proceed expeditiously with the research and development activities necessary to achieve a commercially operable communication satellite system. Special problems which may arise in connection with the regulation of a commercially operable system are being explored by both agencies, and may result in legislative recommendations at a later date.
>
> 4. In accordance with the traditional policy of conducting international communications services through private enterprise subject to Government regulation, private enterprise should be encouraged to undertake development and utilization of satellite systems for public communication services.
>
> * * * * *
>
> 7. The Federal Communications Commission in appropriate cooperation with other Government agencies, will continue to direct its activities in this field toward the development of communications policy and the implementation and utilization of space telecommunications technology through the licensing and regulation of U.S. common carriers.

USURPATION OF POLICYMAKING POWER BY FEDERAL COMMUNICATIONS COMMISSION

Now let us review the activities of the Federal Communications Commission in the past year.

First. Its acts of commission.

The Federal Communications Commission's most important act of commission in regard to communications satellites was, in my opinion, the usurpation of policymaking power which this "Memorandum of Understanding" revealed. It is clear that the Federal Communications Commission has no statutory basis for making national policy concerning the style of organization and operation of a radical technical innovation such as communications satellites. And the many provisions of the Communications Act which apply the antitrust laws to various features of the commercial activities within the Federal Communications Commission's regulatory powers, together with the legislative history of proposals for merger of international communications carriers would seem to leave the Federal Communications Commission no legal footing for this usurpation. And indeed the Commission sometimes speaks to Congress in terms which suggest that a legal basis for its activities is obvious or unnecessary. Thus, Commissioner Craven, speaking for the Federal Communications Commission before the Small Business Committee's Monopoly Subcommittee last August, said:

> The Commission's efforts * * * are based upon the conviction that satellite communications will and should take its place within the framework of our private enterprise system, under which public communications facilities are owned and operated by private companies subject to Government regulation. This conviction is consistent with congressional policy expressed in the Communications Act of 1934, as amended.

The Federal Communications Commission's treatment of the question of its policymaking authority is utterly absurd. For while the act which created the Federal Communications Commission permits the private operation of communications carriers, it does not prescribe it.

In other words, the Commission has proceeded as though the act requires it to take such action, which it does not. It would be equally valid to argue the opposite: by remaining silent on the ownership of the then-known means of communications, Congress reserved a free hand for itself with respect to such new techniques as the satellites. You will not find in the hearings or debates on this act any prophetic vision of communications satellites, nor of the problems of policy and organization which they present. Indeed, where the service was inherently, that is, technically, monopolistic, as in the case of the licensing of the radio spectrum, Congress determined that the monopoly should be public property. And it is obvious that in their international character, communications satellites have more characteristics in common with the radio spectrum than with a telephone or telegraph line. On this basis, one could argue that the legislative history of the Communications Act would support a publicly owned operation and no other.

In enunciating its policy on the ownership and regulation of communications satellites, the Federal Communications Commission asserts that as the guardian of the public interest in these matters it knows that the public interest coincides with the policy it is pursuing. There is no question that the policy the Federal Communications Commission is pursuing is essentially the same as that of the American Telephone & Telegraph in particular and of the common carriers in general. It follows inevitably and logically, that the Federal Communications Commission conceives the public interest to be identical with that of these industries. In short: what is good for A.T. & T. is good for the country.

In order to make this policy credible, the Federal Communications Commission and others who pursue the industry's policy have had to rewrite our history. Thus, whoever wrote President Kennedy's letter of February 7 to accompany the submission of the administration bill to Congress was constrained to say:

> Throughout our history this country's national communication systems have been privately owned and operated, subject to governmental regulation of rates and service. In the case of the communications satellite operation, our studies have convinced us that the national objectives outlined above can best be achieved in the framework of a privately owned corporation, properly chartered by the Congress.

The first of these sentences is simply untrue. Throughout our history this country's national communication system—the Post Office—still remains under public ownership. It was the Post Office Department which nurtured Morse's telegraph invention into existence in 1844.

Mr. President (Mr. PROXMIRE in the chair), in the first of our historic giveaways, the telegraph was given into private hands, where it was exploited for private privilege, and failed of development here in the way its development occurred in other countries. By the end of the century, there had been introduced in Congress more than 70 bills to authorize public ownership of the telegraph. Nineteen times, committees of the House or committees of the Senate reported on such bills—17 times, favorably. Yet because of the political power of private monopoly, never were the bills passed.

The process was repeated in connection with radio. Both radiotelegraphy and radiotelephony were principally innovated by the Government. By 1914, the policy of the Wilson administration called for Government ownership and operation of radio, as well as the telephone and the telegraph. In 1917, by Executive order the Navy took over the operation of radiotelegraph and radiotelephone stations, and operated such commercial service as did not interfere with the war program, including the communication of news and a daily shipping bulletin of maritime news. When the President assumed control of the telegraph, telephone, and cable systems in July 1918, the Secretary of the Navy, Josephus Daniels, testified that the Government "should control and own telegraph, telephone, and all means of communication permanently," as also did Postmaster General A. S. Burleson. The Government in its own right had by then acquired a sufficient patent position to dominate the radio field. The second great giveaway in our communications history was the process by which this public ownership structure was dismantled and all telephone and telegraph common carriage by wire and radio was turned over to private corporations, after World War I.

Nor is it true, Mr. President, that our privately owned communications carriers have always been subject to governmental regulation of rates and service. There was no national regulation of communications carriers even in name alone, prior to 1910. The Interstate Commerce Commission, to which some regulatory authority was then given, did virtually nothing to use that power. And the Federal Communications Commission, which in 1934 succeeded the Interstate Communications Commission in regulating common carriers, has done precious little since then to protect the users of the telephone service. The Federal Communications Commission, which now seems to roar like a lion about how rigorously it regulates the industry—when the industry's interests are served by such roaring—resembles more a mouse when, representing the general public interest, it confronts the industry.

If, as I contend, the first act of commission of the Federal Communications Commission in connection with this matter was to enter into the policy formulated in the NASA-Federal Communications Commission alliance, its second large act of commission was in connection with the way it has pursued this policy. With a vigor which it does not display when it comes to regulating the common carrier industry in the interest of the general public, it turned to the matter of creating a "consortium"—as it called it—of the private companies which operate the common carrier services internationally. The Commission's bias in favor of serving the carriers' interest, rather than the public interest, was openly displayed in its "first report" in docket 14024. It referred to "interested carriers" as "acting under the aegis of the Commission"— a term also used commonly by A.T. & T. spokesmen. According to Webster's New International Dictionary, second edition, 1952, "aegis," means "figuratively, a shield, protection or defense." So that use of the word by the Federal Communications Commission may be regarded as a revealing and accurate slip. That report announced a meeting to plan this consortium, after reciting, among the reasons for this action, the belief that "the international carriers themselves are logically the ones best qualified to determine the nature and extent of the facilities best suited to their needs," and that a proposal for space hardware industries to be included in the consortium might "result in disrupting operational patterns that have been established in the international common carrier industry."

The Commission was also solicitous to arrange things so that its "ad hoc committee" would not run afoul of the antitrust laws.

A striking example of the propensity of the Federal Communications Commission to promote and defend the plans of the common carrier industry for communications satellites is its opposition to core features of the administration bill, in testimony before the Senate Space Committee and the House Committee on Interstate and Foreign Commerce. The Federal Communications Commission is, after all, part of the administration; and if it opposes the administration policy, what interest other than that of the industry which it "regulates," does it represent? A particularly revealing portion of this opposition was the Federal Communications Commission's criticism of the administration bill—"Which can be construed to permit entities such as the Government, who otherwise would be customers of the carriers, to directly lease channel facilities from the satellite corporation."

> In our opinion, such a construction would raise a most serious question of policy that should be carefully considered. For, this could result in the satellite corporation competing directly with the common carriers, and possibly deprive those carriers of essential revenues, thereby leading to financial difficulties for the carriers. (Quoted in Telecommunications Reports, Mar. 5, 1962, p. 26.)

The Federal Communications Commission, when confronted with the claims of the taxpayers and the claims of the industry to returns on their investments, seems unhesitatingly to prefer the interests of the industry.

Mr. President, I note with interest that the distinguished Senator from Illinois [Mr. DOUGLAS] has returned to the floor. He was in the Chamber earlier today, and heard some of the first parts of my speech. I regret that he has not been able to hear all of it. I hope that the Senator from Illinois—who, I know, has an open mind, not a closed mind—will read all of my speech in the RECORD, so he will be fully apprised of what I have had to say.

Certainly I do not believe that the Federal Communications Commission has in the past had, or has now, the ability effectively to regulate the A.T. & T. I think I can clearly document that case, and I am in the process of doing so. It may take a little time; but I have already made about half of my speech, and in a few more hours I shall be able to present more of it.

Mr. DOUGLAS. Madam President, I regret that I have not heard all of the Senator's speech——

The PRESIDING OFFICER (Mrs. NEUBERGER in the chair). Does the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. DOUGLAS. May I ask some technical questions of the Senator from Louisiana?

Mr. LONG of Louisiana. Certainly the Senator from Illinois may ask a question, and I should be glad to yield for a question.

Mr. DOUGLAS. Is it correct that on July 24, 1961, President Kennedy set forth the policy requirements which would govern the ownership and operation of a satellite communications system?

Mr. LONG of Louisiana. I do not recall the exact date; but I do recall the President's policy statement, and it was a good one. In fact, when I read it, I said, "There won't be any satellite communications system bill," because in that statement President Kennedy said, among other things, that there must be the possibility of maximum competition; and I said, "A.T. & T. will never go for that, and therefore will keep the bill from being passed." So, frankly, I thought then that the bill was dead. But when the bill finally reached us, it provided for just the opposite.

Mr. DOUGLAS. Does the President's policy statement also provide that there must be full compliance with the antitrust laws and with the regulatory controls of the U.S. Government?

Mr. LONG of Louisiana. Yes. But when these people began to make their plans about how to proceed in violation of the law, they got fellows from the Department of Justice to meet with them, to help them plan the consortium; and those people from the Department of Justice tried to help plan just what these people wanted—all of which helps build a giant, powerful monopoly, instead of moving in the opposite direction, as the President's statement indicated would be done.

Mr. DOUGLAS. Then is it the belief of the Senator from Louisiana that the pending bill does not meet the requirements which President Kennedy laid down in his policy statement of July 24, 1961?

Mr. LONG of Louisiana. In my judgment—and I have documented this, and I hope the Senator from Illinois will read all of my speech, particularly some of the parts he has missed while he has necessarily been out of the Chamber—it would not be possible to find a way more completely to fail to meet the requirement of the President's policy statement that there shall be the maximum possibility of competition and full compliance with the antitrust laws, than to do what this bill calls for, for it calls for just the opposite.

Mr. DOUGLAS. May I ask if the Senator does not believe that the whole idea of the corporation provides for a monopoly?

Mr. LONG of Louisiana. In my judgment, it provides for a monopoly. It organizes what little competition there is in the telephone industry into a cartel.

Mr. DOUGLAS. And is there an exemption from the antitrust laws by the terms of the legislation?

Mr. LONG of Louisiana. Let me put it this way: This cartel could not be organized in the absence of the law which these people are trying to have enacted in Congress, because it would be flying directly in the face of a number of provisions of the antitrust laws designed to prevent this kind of thing.

Mr. DOUGLAS. What limit is there in the bill as regards individual ownership by any one of the communications carriers?

Mr. LONG of Louisiana. It is stated that the carriers cannot own more than 50 percent of the voting stock. As a practical matter, the Senator knows, as well as I do, that the American Telephone & Telegraph Co. is expected to own about 40 percent of the stock. That is what I learn from persons who have worked on the bill and have consulted about it have estimated. The Senator has made enough speeches on the subject to know that one does not have to own 50 percent of the stock to control a corporation. In many cases, it has been held that a publicly held corporation, whose stock ownership was widely diffused, could be controlled by one who had as much as 5 percent of the corporate stock.

Mr. DOUGLAS. It is true, is it not, that in the Du Pont-General Motors case, Du Pont was ordered to sell its General Motors stock because it owned 23 percent of it?

Mr. LONG of Louisiana. The Senator is correct.

Mr. DOUGLAS. The Supreme Court held that 23 percent ownership gave Du Pont complete control over General Motors, did it not?

Mr. LONG of Louisiana. That is correct, and the stock ownership was broken up on that basis.

Here is a bill that would let American Telephone & Telegraph own 40 percent of the stock. Actually, it could hold 50 percent of the stock. Under the provisions of subsection (c) it might maneuver the situation around so that it could own as much as 99 percent of the stock.

Mr. DOUGLAS. Is it not true that, legally A.T. & T. could own 50 percent?

Mr. LONG of Louisiana. Of the voting stock; but if we consider the nonvoting stock, bonds, debentures, and the other supports of the corporation, there is no limit to how much of that A.T. & T. could own. It is even provided that the cost of the stock could be put in A.T. & T's. rate base.

Mr. DOUGLAS. Is it not true that, under the Investment Company Act of 1940, any person who owns, either directly or through one or more controlled companies, more than 25 percent of the voting securities of a company, shall be presumed to own such company?

Mr. LONG of Louisiana. That is not a bad presumption; and that is the law.

Mr. DOUGLAS. The citation is 15 United States Code 80a-2(9).

Mr. LONG of Louisiana. The Senator knows why that is in the law.

How can people, with any kind of logic, expect us to believe that if A.T. & T. owned it, A.T. & T. would not control it, that American Telephone & Telegraph Co. would not be strengthening its own monopoly under this bill, when it is quite clear, and all the precedents show, that if they had this much ownership of it, they would own it?

Mr. DOUGLAS. Is it not true that the Deputy Attorney General, Mr. Katzenbach, who helped draft the bill, admitted that it is likely A.T. & T. will probably own 35 to 40 percent of the company?

Mr. LONG of Louisiana. Yes; but it might be a lot more than that.

Mr. DOUGLAS. Of the voting stock.

Mr. LONG of Louisiana. Incidentally, I think one reason why Telstar is operating now is that it will lose money. I cannot prove this, but I think I am correct in my judgment, because it makes sense, and I have discussed it with others who think it is true: American Telephone & Telegraph want it to lose money for quite a while. They do not have to have that money. It is a $29 billion corporation. They are in no big hurry to make money on it. If they lose money on it they will run the shoe clerks out, if I may use a poker player's expression. Telstar cannot make money. It is very expensive and impractical.

Suppose the Senator wanted to call somebody in Europe. He would have to wait until next week, when the satellite was between Andover and Germany. It would not be in position until then, and then only for 10 minutes. If it came over at 7:30 in the morning, and the Senator was a late sleeper, he would not be able to get up in time to make the telephone call. He would do better by relying on the pony express, or he might get the message there quicker if he used an oceangoing turtle.

Mr. DOUGLAS. Is it not true that the company would have to put up some 25 to 40 low-altitude satellites to cover the points between North America and Western Europe?

Mr. LONG of Louisiana. To establish contact between the 2 points for 24 hours I understand there would have to be about 50, provided they could be spaced the right way and kept in the right orbit, which is not very easy. But if global coverage were desired, with the synchronous satellite system—which is the only practical way to do it—three of them could be put in orbit and there would be global coverage.

Mr. DOUGLAS. At a distance of 22,000 miles.

Mr. LONG of Louisiana. At 22,290 miles.

Mr. DOUGLAS. As compared with 293 miles.

Mr. LONG of Louisiana. If global coverage were desired with the Telstar system, there would have to be 400 satellites up there. In view of the launching schedule at Cape Canaveral, even if four or five were launched at a time, it would take 2 years to put all that junk up there, and the first ones would be obsolete by the time the last ones were up.

I can tell the Senator that, based on the present launching schedule at Cape Canaveral, it would take 2 years to get enough of the satellites in orbit at the right places to be able to provide coverage between here and West Europe. It would take 2 years of firing the satellites, even if they were fired in multiples as skyrockets are fired, with the skyrockets bursting in different directions.

Keep in mind, my colleague, that by the time all the satellites were shot into orbit, some of the first ones would be out of operation because of the high radiation existing in those altitudes.

Mr. DOUGLAS. I heard the Senator make a very able speech some weeks ago on this subject, and I then looked at the bill and I saw that the bill provides that there can be competitive telecommunications satellites. Does the fact that, in all probability, A.T. & T. will start off with a low-orbit series of satellites mean that there could not subsequently be launched a high-orbit series?

Mr. LONG of Louisiana. I believe the Senator will find the provision states it is not precluded. I do not believe the Senator will find it expressly authorizes these other systems.

Mr. DOUGLAS. It permits them? Why could there not be the high-orbit satellites as well as the low-orbit ones?

Mr. LONG of Louisiana. It could be done.

One of the things which is so outrageous, in my judgment, is that under the bill the corporation would have both the low- and high-altitude satellites. The corporation would own them all, except those the Government would own. Then, in addition, the Government would be forbidden to utilize the Government satellites which it would send up for other than its unique needs, which I assume might refer to coded messages.

That makes about as much sense as saying that the Government, having constructed all of the TVA dams along the Tennessee River, is to be forbidden to use Government power to operate the lights in the Government buildings, and would have to buy the power from some private company at commercial rates.

Mr. DOUGLAS. Does the Senator from Louisiana think, after A.T. & T. or a private corporation had made a large investment in a low-orbit satellite system, that it would then carry out a further investment in a high-orbit satellite system, which would make the first system obsolescent?

Mr. LONG of Louisiana. The second system would have to carry the burden of all the money "frittered away" on the first system. That would not make sense. The corporation would try to keep both systems on the books. Even if the corporation could not keep them on the books, when it wrote off the first system it would still charge the users of the second system all of the money required to keep solvent, or it would be "in the red" for a long period of time.

Another reason which might help one to arrive at the conclusion that there is a heavy conflict of interest involved and that the American Telephone & Telegraph Co. does not want the system to make a profit any time soon is the fact that the task force of the communications common carriers recommended that this be owned by a nonprofit corporation and that they run it.

Mr. DOUGLAS. Which task force was that?

Mr. LONG of Louisiana. The book which I hand to the Senator shows that.

All this "mess" got started in this way. The Federal Communications Commission called in an ad hoc committee. This would have been in violation of the law, except that a Department of Justice man was sent in with these people. These are the names:

American Cable & Radio Corp.
American Telephone & Telegraph Co.
Hawaiian Telephone Co.
Press Wireless, Inc.
Radio Corp. of Puerto Rico.

Some of these fellows only have a wireless, like between Puerto Rico and this country, for example:

South Puerto Rico Sugar Corp.
Tropical Radio Telegraph Co.
The Western Union Telegraph Co.

These people were brought together. They were asked to propose what should be done with the satellite.

These people had a direct conflict of interest, because the new satellite threatened to make obsolete the existing system. These people then came in with their report, telling what they thought should be done. They contacted me. I suppose they contacted other Senators, trying to get an agreement among Senators and Representatives in Congress to push the bill through, as they recommended. They recommended a nonprofit corporation for the satellite. That was to own the system. As I recall, they were going to run it.

The book which the Senator has in his hand spells out their proposal. They did not want the satellite to make money. They wanted the money to be made on the ground, through the ground lines and sending stations. They did not want the satellite itself to make any money. So they recommended that it be a nonprofit corporation which would handle the satellite.

So I say that these people are not interested in seeing that the satellite be a great commercial success certainly any time soon. That is supported by the fact that their recommendation was that it should be owned by a nonprofit corporation.

Mr. DOUGLAS. In order to clinch this point, would the Senator from Louisiana permit me to read the passage in question, with the understanding that the Senator would not lose his right to the floor?

Mr. CARLSON. Madam President, I demand the regular order.

Mr. LONG of Louisiana. Madam President, the Senator only asked me a question.

The PRESIDING OFFICER. The Senator may yield only for a question.

Mr. LONG of Louisiana. I shall read it myself:

> The plan proposed for U.S. interests contemplates the formation of a nonprofit satellite corporation to develop, construct, operate, manage, and promote the use of the satellite system, other than ground stations, in accordance with public interest objectives. Unlike the proposal for a common carriers' common carrier, ownership of the U.S. portion would be in the participating carriers and not in the satellite corporation.

Then it goes on.

I shall undertake to provide for the Senator, as soon as I can discover it, how the directors were to be set up. It was planned that the board which would control would be the fellows on that ad hoc committee. I believe they were so generous as to include one more common carrier, General Telephone. That is about the full extent of what they were willing to do.

Mr. DOUGLAS. The Senator is correct in saying, is he not, that it was to be a nonprofit corporation.

Mr. LONG of Louisiana. That was the proposal.

Mr. DOUGLAS. Is it not true that that has been changed in the bill now before us?

Mr. LONG of Louisiana. Yes; it has been changed. What I find objectionable is that it still would be controlled by those who have a conflict of interest.

I ask the Senator to keep in mind the fact that the telephone rate from here to Europe is about $12 for 3 minutes. If the Senator's son were in Europe, trying to call home to wish his mother a happy birthday, if he talked for about 10 minutes he would have to pay $50.

We are told by the Hughes people, who have a contract in this field to put up one of the synchronous satellites, that they feel they could put this system up within a couple of years with 1,200 channels. I believe there are only about 60 connections to Europe now. They say they could put up this system with 1,200 channels, and that when they were in a position to obtain full utilization of only 40 of those channels, at 50 percent of the existing rate of $12 for 3 minutes, or only $6 for 3 minutes, they would be making a profit.

But there is more of a conflict. The really big money would not be involved in telephone calls to Europe at all. The big money would be in the United States, where there is heavy traffic. There are many times as many circuits between New York and Los Angeles as there are between New York and London, and the difference in the distance is not too great as between those other points. That is where the big money is to be found. That is where the big interest lies.

If the synchronous system were in space, a profit could be made using only 40 channels. Why should the system not provide domestic service? Instead of pushing the signal through 50 of the microwave towers, why not push it through the satellite one time? That would be one sending and receiving set, on the satellite. By using that there could be tremendous savings as a result of efficiency, I would imagine.

This whole thing has never been even explored, considered, or advocated as a way of providing cheaper telephone service between New York and Chicago, or Chicago and Los Angeles, or Chicago and New Orleans. It has only been conceived of and discussed on the basis that it would provide a service overseas, internationally.

The big savings and the tremendous profits which could be made, and the great service to the American people, would be the domestic service. That is to be precluded from all consideration.

Mr. DOUGLAS. Madam President, may I ask the Senator another question?

Mr. LONG of Louisiana. That shows who drew up this proposal. Who would want to keep out the domestic service? American Telephone & Telegraph and its subsidiaries. They would be the ones who would not want to provide domestic service, because they want the people to keep using their old obsolete facilities, which are on the books, at the old rates.

The Senator knows as well as I do that the rate base has never been attacked by the Federal Communications Commission in its whole 27 years of history.

Mr. DOUGLAS. Could the Senator inform me whether it would be possible, under the corporation setup, for suppliers of equipment to own a share in the corporation which is to be set up?

Mr. LONG of Louisiana. It would be possible for them to own some; but what good would that do?

Mr. DOUGLAS. I am speaking of suppliers.

Mr. LONG of Louisiana. Surely. They could buy some stock. Let us suppose there were a little company that manufactured supplies and equipment which bought 1 percent of the stock. That would involve a lot of money, but even if it did buy it, the company would be outvoted. Even on a cumulative basis, the company would not get anything for the vote.

Mr. DOUGLAS. Yes; but did not the Court find that one reason why Du Pont control over General Motors should be broken up was that Du Pont was a supplier of paints and other items which General Motors bought, and, therefore, they felt that suppliers should not be able to control or be in a position to control operating companies which used their supplies and equipment? Might not that same thing happen in the case of the proposed corporation?

Mr. LONG of Louisiana. I should imagine, however, there are probably other paint manufacturers, such as Sherwin-Williams or some other company, that might own stock in General Motors. No one is concerned about that one way or the other. That would not get them any business for General Motors. It is the big fellow who owns 25 percent of the stock who could get the business and did get it.

Mr. DOUGLAS. Might not General Motors or Westinghouse buy a very large share of the company in order to buy supplies and equipment from them?

Mr. LONG of Louisiana. They could buy some of it. They might be able to protect their investment to some extent in doing so. But one must keep in mind that over 50 percent of the stock of the proposed corporation is blocked out for the communication carriers to begin with. My pending amendment would undertake to point up the fact that communication common carriers should be precluded from owning any of the stock. Fifty percent is enough to guarantee control.

Mr. DOUGLAS. Does not the Senator think that the supplier should be precluded from owning some of the stock of the purchaser?

Mr. LONG of Louisiana. That point could well be argued.

Mr. DOUGLAS. It is not prohibited in the bill in question.

Mr. LONG of Louisiana. It is not prohibited. From an antitrust point of view, the bill is a hodgepodge bill. It is not a good one. That is my view as chairman of the Monopoly Subcommittee of the Select Committee on Small Business. I am happy to say that my view is no different from that of the distinguished Senator from Tennessee [Mr. KEFAUVER], who is chairman of the Subcommittee on Antitrust and Monopoly Legislation of the Committee on the Judiciary, which ordinarily has legislative jurisdiction over that kind of monopoly problem.

Mr. DOUGLAS. Would the Senator yield for a question on reimbursement of Government costs?

Mr. LONG of Louisiana. Yes; I yield for a question.

Mr. DOUGLAS. Is it not true that when the public purchases the equity or property of a private corporation under the due process clauses of the Federal Government and various State constitutions, they must pay private parties for the value of the property which is thus taken over?

Mr. LONG of Louisiana. Oh, yes. There is no question about that. If Government takes something from any corporation, as the Senator knows, the corporation must be paid everything that the property is worth. We might wind up by paying more than the property is worth.

Mr. DOUGLAS. Has not a large proportion of the basic research and development which is involved in satellite communications been at the expense of the National Government?

Mr. LONG of Louisiana. My understanding of the question, based on discussion with engineers and others, is that the problem is regarded as being 90 percent space problems and 10 percent communication problems. In other words, the big problem is getting the satellite in space and keeping it in the right position. As far as building the kind of radio sending and receiving set that could relay the signals back and forth, part of the expense of that research and development has been on the part of Government, and part of it has been private. Most of the research on that subject has been done.

Mr. DOUGLAS. Is there any provision in the bill which would require the proposed private corporation to reimburse the Government for the expenses which the Government has incurred in developing the space satellite system?

Mr. LONG of Louisiana. The only reimbursement the Government would get would be the cost of putting one missile up there into space. The number of missiles that the Government would use for that purpose, including the fantastic Government investment of more than $25 billion in exploring outer space, would not be reimbursed.

In my judgment, if we wished so to provide, we could license a corporation which would reimburse the Government the $25 billion of the whole cost. I make that statement because the system has fantastic potentialities. We are told that it is estimated that the space communications system in 10 years will be doing a business of $100 billion a year.

I refer not only to telephone business, but also to worldwide communication, including the transmission of weather information, television, radio, and documents. I believe that $1 billion would include the equipment also. We are told that in 10 years the industry will be an industry earning $100 billion annually.

Mr. DOUGLAS. Would not the Senator think that a good amendment to the bill would be one that would provide that the private communications company should reimburse the Government for the cost which the Government has experienced in the research and development necessary for the launching of the system?

Mr. LONG of Louisiana. If the corporation intends to keep its rates high, it certainly ought to be made to do so. Of course, if the public were to receive the benefit of great rate reductions, which are conceivable as the result of the new developments, perhaps the corporation could not afford to do that. But if the Senator wished to arrange so that the Government would receive something in return for its cost, that is one way we could start to reduce the national debt.

Mr. DOUGLAS. If the principle that the public should reimburse private interests for property which the public takes is sound, is not the principle that a private interest should reimburse the public for property which private interests take also sound?

Mr. LONG of Louisiana. The Senator is correct. I cannot find anything to argue about in his statement. We did that with the rubber plants. Of course, the rubber plants were not as large as A.T. & T. But the people who got the rubber plants were made to pay the Government on a competitive basis what we thought the rubber plants were worth. It appears that a small- or a medium-size corporation is charged the full price of a facility it might receive, but the largest corporation on earth, we are told, should receive a facility for practically nothing.

Mr. DOUGLAS. Instead of saying that the Government owns the proposed developments, would it not be better to say that the people own the developments?

Mr. LONG of Louisiana. Yes, that is true. When the Government owns something, I always think of it as being owned for the benefit of 180 million people in the country. I am not wedded to the idea that the communications satellite system should be Government-owned.

Mr. DOUGLAS. Neither is the Senator from Illinois.

Mr. LONG of Louisiana. I personally like the idea of turning the system over to a private corporation. But I feel that it should be done in a way that would create what the President stated in his message. There should be maximum possible competition. We should make these fellows compete. Here is an opportunity to make the A.T. & T. monopoly compete with others. We have an opportunity to start some real competition in the field.

It seems to me that the Government should develop the system to the point at which we have the possibility of competition. Then we ought to let somebody go in there and compete with that company and see what they can do with a new system.

When we chartered airlines, we did the same thing. We would not permit rail carriers to have airlines. If the railroads owned the airlines, they would have done all they could to keep the airlines from undermining their existing rate base and providing a more efficient service. They would have done what they could to protect their existing investment in the railroads, which enormously exceeded their investment in any other technology. The same thing would have been true with regard to the waterways. The Senator knows as well as I do that if we permitted the railroads to own the water carriers, users would be charged the same price whether goods went by land or by water.

Does the Senator recall the fight over the basing point price when the seller was charging the same price, whether the product was moved by rail or water?

Mr. DOUGLAS. What would the Senator from Louisiana say to the claim that was made that it is necessary to pass the pending bill now, if we are going to get a space communications satellite system?

Mr. LONG of Louisiana. What would I say? I would say baloney.

Mr. DOUGLAS. That argument has been used again and again.

Mr. LONG of Louisiana. Baloney.

Mr. DOUGLAS. Can the Senator prove that it is baloney?

Mr. LONG of Louisana. I believe I can prove it is foolish. There is no merit to the argument.

Mr. DOUGLAS. Will the Senator proceed to do so?

Mr. LONG of Louisiana. The Telstar is up there. Even if it is only half as good as they claim it is, it is up there. The Government launched Telstar for A.T. & T. There is a satellite up there even without the bill.

Mr. DOUGLAS. Would A.T. & T. pay for any more communications satellites unless the bill was passed?

Mr. LONG of Louisiana. I do not know. If it is any good, they might pay for it. I have a very low regard for the low-orbit satellites for communications purposes. After studying the subject for 16 months or so, I am convinced that the only good one, the one worth anything, is the synchronous satellite system that is available for 24 hours, with which three satellites can provide worldwide continuous service. The Russians are getting ready to put up that kind of a satellite. They have the missile power to do it. They may not be as good from the standpoint of communications as we are, but they do have the missile power. The reason that we are so slow in getting one up there is that we do not have the missile power. I would like to read from this newspaper report:

> The Soviet Union—

Now, I ask Senators to bear in mind that these Russians have a way of putting these things up there without advertising it 2 or 3 years in advance, just as they did with Sputnik No. 1 and Sputnik No. 2. These things are up there in space before we know anything about it.

I read from this press release from East Berlin:

> BERLIN.—The Soviet Union plans to send up two communications satellites to beam propaganda programs around the world, an East Berlin newspaper said today.
>
> The Berliner Zeitung said the Soviet twin satellites would be put in orbit shortly but added they were still being fitted out.
>
> The newspaper report said each satellite would transmit on three different linear systems, over six channels so the transmissions could be received on various types of television sets.

In other words, they are going to send a television signal that can be received on television sets. I have been contending that that kind of thing can be done. Evidently they are going to do it.

Mr. DOUGLAS. The present system does not broadcast directly to the set, but simply to the ground stations; is that correct?

Mr. LONG of Louisiana. The Telstar satellite is available for only a few minutes. It is necessary to get it between Andover, Maine, and the station in Europe. They have the ground station on a turntable arrangement. It works as though one were trying to balance an elephant on the edge of a knife—so much precision is required to make it work exactly right and to make it possible to receive the signal, because the ears of the ground station antenna must be trained precisely in the right direction. Even then the signal lasts only for a very short time, and can be used only when the satellite is directly between two points.

The synchronous type satellite would be stationed at a point over the equator, and it would appear to remain in one spot as the earth revolved beneath it. The other stars would appear to rotate, but not the satellite. It would appear to be stationary in one spot in the sky. It would be as if a microwave tower had been built 22,000 miles high. With that system we would be able to relay signals back and forth. This could be used to broadcast around the entire world simultaneously, and it could be used to provide television programs.

Mr. DOUGLAS. It would be received directly by sets?

Mr. LONG of Louisiana. I do not believe we can do that right now, because we do not have the battery power, except by solar battery, to pick up the sun's rays, and to use the sun's rays for transmission. We do not have the lift power to put a large enough battery up there now. Perhaps the Russians can do it because they can lift heavier objects than we can in order to do this job. At such time as we can develop the atomic reactor battery that will be required I believe we will have reached that goal. In fact we are getting pretty good at it even now. I hold in my hand an article entitled "Triple-Satellite Shot Acclaimed as Major Atom and Space Feat."

Therefore, when we get the battery that can give us more sending power, we will be able to transmit the signal directly from the satellite to the television sets.

The newspaper report—and I do not know how accurate it is, but apparently there must be something to it—states that the satellite would transmit on three different linear systems, over six channels, so the transmissions could be received on various types of television sets.

Mr. DOUGLAS. By television sets, not television stations? In other words, if we stick to the low satellite system and the Russians put into effect a high system, they will be able to have direct communication with all the television sets in the world.

Mr. LONG of Louisiana. Yes; that is what they are talking about in this article.

Mr. DOUGLAS. And have a monopoly on television communications; is that correct?

Mr. LONG of Louisiana. Yes. Dr. Trotter, who is with General Telephone has stated before the Monopoly Subcommittee of the Small Business Committee:

> A random orbit system could discredit us before the world as a leader in space communications if Russia establishes a stationary satellite system. If the United States went ahead with a low-random orbit system it would be possible for Russia to hold back until we were deeply committed to this system and had launched perhaps two-thirds of the satellites and then with three satellites the Russians could establish a truly worldwide system before our limited system was even in operation.

I would say that the kind of thing that the Russians are talking about would be a synchronous satellite system, because I do not know how they could televise to all the world with two satellites, unless they were using the synchronous-type satellite system. There would be fringes that would not be covered. Perhaps they would put one of the satellites in position to cover the Eurasian Continent and one to cover the United States and Europe. That would leave some uncovered zones in the Pacific. I would like to read further from this news release.

> The satellite first will carry only two special programs originating in the Soviet Union.
>
> However, the newspaper added, an exchange of programs between continents would be very nice "providing the programs of the United States reach a suitable level and serve peaceful aims bringing peoples closer together."

That is matter worth thinking about.

I raised the question with the Secretary of State, and he did not have any answer for it. What are we going to do after we charter this thing and protect A.T & T. and strengthen the monopoly, and help them get every kind of possible rate from the users, and then the Russians object to our charging the neutral nations for the use of this thing? Suppose they put one up there. This is not so prohibitive as one would think. We think that a launching would cost about $5 million, perhaps $4 million for the missile and $1 million for the capsule. Let us suppose that we put a couple of these things up there, and then the Russians object to it. Suppose they object to our letting this American monopoly make a profit, and they put one up there and offer the service free to the whole world with the use of two or three Russian satellites. We could not meet their offer, even though we had been up there first.

Speaking of broadcasting by television and radio, I suppose the old song, "The Best Things in Life Are Free," could be beamed to the whole world, but the words would be changed to read:

> This satellite belongs to everyone
> It's put here for you and me
> Don't tune in on that Telstar
> That's owned by A.T. & T.
>
> The flowers in spring,
> The birdies that sing
> The sunbeams that shine
> They're yours, they're mine
> And love can come to everyone
> It's not a monopoly.

[Laughter.]

Mr. KEFAUVER. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. Apropos the colloquy which the Senator has had with the distinguished Senator from Illinois as to the urgency of the bill, is it not true that Dr. Welsh, Mr. Webb, and everyone else who has anything to do with this project say that all the research and development that can be done is going along at full steam, regardless of whether or not the bill passes at the present time?

Mr. LONG of Louisiana. That is correct. It is not necessary to pass the bill to give the satellite to A.T. & T. It can get it even now. We are doing it in the case of Telstar. A bill is not needed for that purpose. The purpose of the bill is to authorize a monopolistic consortium, to let all the companies get together under one tent, in violation of the antitrust laws. The bill is needed to hogtie the hands of the Secretary of State, and to say that the U.S. Government cannot use its own communications system to send out its own messages.

But the bill is not needed to give Telstars to A.T. & T. A.T. & T. can get 50 Telstars without the bill.

Mr. KEFAUVER. Is it not also true that the Government has a contract with the Hughes Aircraft Co., under which the Hughes Co. is rapidly developing a Syncom satellite, to be placed in orbit at 22,900 miles; that we have the firepower to place it in orbit; and that this project will determine the workability of and will show what can be done with a high-altitude satellite?

Also, is it not true that the Signal Corps, which has been to some extent taken over by the Air Force in its communications satellite work, has the Advent program, which is a high-altitude Syncom satellite, and that the corporation could do nothing until it was decided what kind of system would be used?

Mr. LONG of Louisiana. I have been amused to read from the reports why the bill is needed. To me, it is rather amusing, because while the proponents try to give the impression to the newspapers that the bill is needed in order to put a low system in orbit, the fact is that the very committees which reported and recommended that the bill be passed did not make such a claim. Their claims and reasons are unimpressive to me, but they have not told us the real reasons why the bill is needed. The bill is needed in order that no one else may have a satellite in competition with the proposed corporation.

I refer Senators to page 265 of the hearings on the Communications Satellite Act of 1962 before the Committee on Foreign Relations. Listen to this:

> Senator Gore. Under present law as I understand your testimony, Dr. Dryden, the space agency has not undertaken to confine the research and development in this field to one particular company or group?
>
> Dr. Dryden. That is correct. We have financed at Government expense a development by the Radio Corp. of America and another by the Hughes Aircraft Co.
>
> Senator Gore. Then you would supply to any other company having the requisite technical capabilities, the services which you supplied to A.T. & T.?
>
> Dr. Dryden. That is correct, sir.
>
> Senator Gore. If this bill passes, would you expect other concerns to enter the field?
>
> Dr. Dryden. If the bill passes and the corporation is set up, I think we would interpret this desire to contribute to the early realization of an operational system to mean that we would cooperate—in accordance with the provisions in the bill before you—with the corporation, and that this would——
>
> Senator Gore. Exclusively?
>
> Dr. Dryden. So far as this offer that I just spoke of, of launching satellites for private interests, so to speak.
>
> Senator Gore. In other words, if this bill passes, then it will be the position of the Space Administration that you would not enter into negotiations with any other American citizen or American concern for the launching of communication satellites? Did you not put it that way in your statement?
>
> Dr. Dryden. Yes.

Mr. KEFAUVER. In other words, there would be no opportunity to test the Hughes high-altitude satellite, because the Government would have committed it to A.T. & T.?

Mr. LONG of Louisiana. No; Hughes could launch it, but Hughes could not own it. The corporation would own it; the monopolistic consortium would own it; no one else could have it.

Why is the proposed legislation needed? Whom do the proponents think they are kidding? In view of all these facts, why the legislation now?

Here is the report Hughes acted on.

Mr. KEFAUVER. The Hughes Aeronautics Co.

Mr. LONG of Louisiana. I refer to the report of the House Committee on Interstate and Foreign Commerce.

> WHY LEGISLATION NOW?
>
> In view of all of these facts which make the establishment of a global communications satellite system very much a thing of the future, the question might be asked why it is necessary to enact legislation now, and why the establishment of a communications satellite corporation cannot await the conclusion of the international agreements upon which the establishment and operation of such a global system depend. The answer to this question is very clear.
>
> If a national policy of private ownership and operation of the U.S. portion of the international system is to be assured, the instrumentality therefor must be established now. If this instrumentality is not created

> at the earliest possible date, all planning for U.S. participation in the international system will have to be done by Government agencies. Our private communications carriers, especially in view of the antitrust laws, will be prevented from cooperating effectively with each other and with the Government agencies in preparing effective plans for U.S. participation in the international system.

That did not stop this crowd from getting together in a room in violation of law. They were called in and were told that somebody from the Attorney General's office would be present to assist the group that went into the consortium. That did not stop the group from getting together and coming forth with the ad hoc committee plan. That is so much "baloney." Perhaps I had better use a better word to show some respect for the House committee; but the reason is that if the antitrust laws can be violated, the Government cannot use the Government facilities to do Government work; and if the Government has its own satellite in orbit, it cannot use it; therefore, the Government is supposed to go to work for the A.T. & T. whenever A.T. & T. calls upon the Government.

Mr. KEFAUVER. Did not the Rand Corp. study, made and paid for by NASA, conclude that this proposal must be left flexible, and not frozen into one kind of situation or into a low-orbit system, until it could be determined what would be the most effective kind of space communications system?

Mr. LONG of Louisiana. That is correct. Rand Corp. made a study, and the recommendation of the Rand Corp. was not blinded by the fear that this new method of communication might make obsolete, and even unprofitable, many of the monopolistic operations of the present monopoly.

Mr. KEFAUVER. Is it not also true that several knowledgeable witnesses from large corporations have testified that the proposed corporation would have nothing to do for a year and a half except to sit on its hands; and did they not also testify that until the proper kind of system had been decided upon, the corporation could not even meet the requirements of the Securities and Exchange Commission to study the kind of system needed in order to conform with the financial requirements of the SEC?

Mr. LONG of Louisiana. That is correct.

Mr. DOUGLAS. Mr. President, will the Senator from Louisiana yield for a question?

Mr. LONG of Louisiana. I yield for a question.

Mr. DOUGLAS. The Senator from Illinois is keeping his mind open on this subject, but another argument has been advanced time after time to the effect that the bill must be passed in order that the United States may be represented at the forthcoming international conference, which I understand is to be held in the fall of 1963.

That argument has been used again and again. Will the Senator state whether he thinks it is a correct argument; or, if not, why not?

Mr. LONG of Louisiana. Such agreements can be negotiated in two ways. Incidentally, the important thing to negotiate about is the assignment of wavelengths, because there are only a certain number of positions in space and only a certain number of bands in the spectrum. So the assignment of wavelengths is the important thing.

The United States has conducted such negotiations with other governments, and has done so by means of representatives sent by the President of the United States. On the other hand, if it were felt that, in addition, the assistance of representatives of certain private companies is needed, they could be invited to attend, too.

Mr. DOUGLAS. Is it true that such agreements have been negotiated by our Government—not by private companies, such as the National Broadcasting System, for example?

Mr. LONG of Louisiana. Yes, always.

Mr. DOUGLAS. So the Government could, by itself, handle the negotiations for the assignment of the wavelengths?

Mr. LONG of Louisiana. Of course; and private groups interested in that matter could have their representatives there, too. All of us know the Government is honeycombed with former representatives of A.T. & T.

Mr. KEFAUVER. Mr. President, will the Senator from Louisiana yield?

The ACTING PRESIDENT pro tempore. Does the Senator from Louisiana yield to the Senator from Tennessee?

Mr. LONG of Louisiana. I yield.

Mr. KEFAUVER. Will not our country be in a much stronger position at the 1963 conference if representatives of the Government of the United States, rather than representatives of a private, monopoly corporation, participate?

Mr. LONG of Louisiana. Of course.

Furthermore, let me point out that most of the other countries of the world have state-owned telephone systems. Certainly that is the system the Russians have; and they contend they will refuse to negotiate with any American monopoly. So if it is necessary to reach such an agreement, so that there will not be duplication in the use of various wavelengths, representatives of our Government should be sent there. Otherwise the Russians would refuse to negotiate.

So far, we have certainly gotten along fairly well by having representatives of our Government participate in such negotiations—including those in connection with the International Geophysical Year.

Mr. SPARKMAN. Mr. President, will the Senator from Louisiana yield?

Mr. LONG of Louisiana. I yield.

Mr. SPARKMAN. I ask unanimous consent, Mr. President, that the Senator from Louisiana may yield to me, for the purpose of having read at the desk, by the clerk, an amendment which I have at the desk.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield for that purpose—although I say to my good friend, the Senator from Alabama, that if there is to be objection, I may conclude——

Mr. SPARKMAN. Let me point out that this is not submitting an amendment.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana?

Mr. CARLSON. Mr. President, reserving the right to object, let me say that I understand that the Senator from Alabama wishes to have read by the clerk an amendment which the Senator from Alabama already has at the desk.

Mr. SPARKMAN. That is correct.

Mr. CARLSON. I shall not object.

The ACTING PRESIDENT pro tempore. Without objection——

Mr. GORE. Mr. President, reserving the right to object, I should like to have the request amended, so as to have the clerk read two short amendments which I send to the desk.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. CARLSON. Mr. President, reserving the right to object, let me ask whether these amendments have already been submitted.

Mr. GORE. No, they have not.

Mr. CARLSON. Then I must object.

Mr. SPARKMAN. Mr. President, let me say that there is a difference between my amendment and the amendments referred to by the Senator from Tennessee. My amendment has already been at the desk.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana?

Mr. CARLSON. Mr. President, I shall have to object to a request to have additional amendments read at the desk. I shall not object to a request to have the clerk read amendments which already are at the desk.

The PRESIDING OFFICER. Objection is heard.

Mr. LONG of Louisiana. Mr. President, I am sorry that one of my friends who is supporting my position is objecting to the reading of this amendment. It is most unusual to have such an objection made. Even if Senators on the Republican side of the aisle, including the minority leader, have fallen into this error, I hope the Senator from Tennessee [Mr. GORE], who is on my side of the issue, will not fall into the same error.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana to have the amendment of the Senator from Alabama read by the clerk?

Mr. GORE. Mr. President, reserving the right to object—although I have not objected—let me say that I do not understand why the reading of my amendment is objected to, whereas there is no objection to having the clerk read the amendment of the distinguished, able, and lovable junior Senator from Alabama [Mr. SPARKMAN], who is one of the proponents of the pending bill.

Mr. SPARKMAN. Let me say, Mr. President, that my amendment has been at the desk since some time in June.

Mr. GORE. But my amendment has been lying on my desk all day. I do not quite understand this double standard. I do not object to having the amendment of the Senator from Alabama read, and I do not quite understand why my Republican friend would object to having my amendments read.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana that the amendment of the Senator from Alabama [Mr. SPARKMAN] be read by the clerk, with the understanding that in that connection the Senator from Louisiana will not lose the floor?

The Chair hears no objection; and the clerk will proceed to read the amendment of the Senator from Alabama.

Mr. SPARKMAN'S amendment was read by the legislative clerk, as follows:

On page 27, line 17, beginning with "and the Commission shall consult" strike out all through "maintenance and repair." on line 24.

On page 30, strike the period on line 18 and insert "; and", and, after line 18, insert the following:

"(12) in order to insure that small business concerns are given an equitable opportunity to share in the procurement programs of the corporation and communications common carriers for property and services (including but not limited to research, development, construction, maintenance and repair), cooperatively develop with the Small Business Administration within four months after the effective date of this Act a small business contracting program to be applicable to the contracting and procurement activities of the corporation and to those contracting and procurement activities of communications common carriers which relate to the development, establishment, maintenance, repair and operation of the communications satellite system (including communications satellites and associated equipment and facilities) and satellite terminal stations. The program shall contain such provisions as may be necessary to (A) enable small business concerns to have an equitable opportunity to compete, either directly or as subcontractors, for contracts and procurements for property and services (including but not limited to research, development, construction, maintenance, and repair) awarded in the implementation and effectuation of the purposes of this Act, and (B) enable the Small Business Administration to obtain from the corporation and communications common carriers such reasonably obtainable information concerning contracts and procurement, including subcontracts thereunder, awarded in the implementation and effectuation of the purposes of this Act. In the event the Federal Communications Commission and the Small Business Administration cannot reach agreement on any matter with regard to the development of the small business contracting program, the matter in disagreement shall be submitted to the President who shall make the final determination. The small business contracting program developed pursuant to this paragraph shall be incorporated into the rules and regulations to be promulgated by the Commission pursuant to paragraph (11) of this subsection."

Mr. SPARKMAN. I thank the Senator.

Mr. GORE. Mr. President, will the Senator yield?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may yield, reserving my rights to the floor, for a similar request by the Senator from Tennessee.

The ACTING PRESIDENT pro tempore. Is there objection?

Mr. GORE. Mr. President, I send to the desk a brief amendment, which I ask the clerk to read.

Mr. CARLSON. Mr. President, reserving the right to object, the distinguished Senator from Tennessee well knows the rules of the Senate and he knows he can secure permission to read amendments in his own right, following the regular order of Senate procedure, and he should not request the clerk to read them. Therefore I object.

The ACTING PRESIDENT pro tempore. Objection is heard.

Mr. LONG of Louisiana. Mr. President, may I ask that the clerk send me that amendment? I believe I can solve the problem.

I hold in my hand an amendment intended to be proposed by the Senator from Tennessee [Mr. GORE] to H.R. 11040, to provide for the establishment, ownership, operation, and regulation of a commercial communications satellite system, and for other purposes, viz—which I guess means "namely"—

Beginning with line 3, page 38, strike out all to and including line 14, page 38, and insert in lieu thereof the following:

"FOREIGN NEGOTIATIONS

"SEC. 402. The corporation shall not enter into negotiations with any international agency, foreign government, or entity without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements and arrangements with any such agency, government, or entity shall be subject to the approval of the Department of State."

I ask the Chair if that amendment has been read.

The ACTING PRESIDENT pro tempore. No.

Mr. LONG of Louisiana. Well, I tried.

The ACTING PRESIDENT pro tempore. If the Senator from Louisiana will permit the Chair to state it, in order to be officially before the Senate the amendment must be submitted and read by the clerk, and if it were submitted and read by the clerk the Senator from Louisiana would lose the floor.

Mr. LONG of Louisiana. Well, Mr. President, all I am talking about here is the fact that under the cloture rule, when a gag rule is put on the Senate, an amendment must have been read in order to be eligible to be considered. It seems to me, since the amendment has been read to the Senate, it should be eligible.

The ACTING PRESIDENT pro tempore. Will the Senator permit the Chair to make a statement?

According to the rule, the reading requirement of the rules has been met if the amendment has been read by the secretary or by the Senator proposing it. Is the Senator from Louisiana proposing the amendment?

Mr. LONG of Louisiana. I propose it on behalf of the Senator from Tennessee and myself.

The ACTING PRESIDENT pro tempore. It does not comply with the rule.

Mr. LONG of Louisiana. Does the Chair mean that, if we are both on the amendment, neither one of us can read it?

The ACTING PRESIDENT pro tempore. The Senator from Louisiana may read the amendment over and over and over, but before it can be officially presented to the Senate it must be read by the clerk or the Senator proposing it.

Mr. LONG of Louisiana. Mr. President, after a while I will withdraw my amendment and let the Senator from Tennessee propose his so it can be read. It seems to me it is a sad day when a Senator cannot have his amendment read. So I withdraw my amendment.

Mr. GORE. Mr. President, I send an amendment to the desk and ask that the clerk read it.

Mr. CARLSON stood.

Mr. GORE. I am recognized in my own right, and I yield to no one for objection or anything else.

Mr. CARLSON. Mr. President, a parliamentary inquiry.

Mr. GORE. I do not yield for a parliamentary inquiry until the clerk reads the amendment. I do not yield for a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee lost the floor when the amendment was submitted.

Mr. CARLSON. Mr. President——

Mr. GORE. Mr. President——

The ACTING PRESIDENT pro tempore. The Senator from Kansas will state his parliamentary inquiry.

Mr. GORE. Mr. President, a point of order.

The ACTING PRESIDENT pro tempore. The Senator will state it.

Mr. GORE. When a Senator is recognized in his own right——

The ACTING PRESIDENT pro tempore. The Senator from Tennessee was recognized.

Mr. GORE. And submits an amendment to the Chair and asks for its reading, that is a parliamentary right to which he is entitled, and a parliamentary inquiry does not lie until the amendment is reported.

The ACTING PRESIDENT pro tempore. The Senator's amendment will be read in due time. The Senator is correct, but there is a hiatus between the time when the Senator submits the amendment and the time when the amendment is read, where he loses the floor, and the Senator from Kansas may, in his own right, submit a parliamentary inquiry.

Mr. GORE. I do not mind the Senator's enjoying the hiatus, if my amendment is read.

The ACTING PRESIDENT pro tempore. The amendment of the Senator will be read in due time. The Senator from Kansas is recognized for a parliamentary inquiry.

Mr. CARLSON. Mr. President, my parliamentary inquiry was going to be whether or not the Senator from Louisiana [Mr. LONG] relinquished the floor. I did not hear him state it.

Mr. LONG of Louisiana. Mr. President, I rise only to say that I was in my chair when the Senator asked the question.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee was recognized in his own right, and he offered the amendment. The clerk will read the amendment.

The legislative clerk:

Mr. GORE proposes:

Beginning with line 3, page 38, strike out all to and including line 14, page 38, and insert in lieu thereof the following:

"FOREIGN NEGOTIATIONS

"Sec. 402. The corporation shall not enter into negotiations with any international agency, foreign government, or entity without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements and arrangements with any such agency, government, or entity shall be subject to the approval of the Department of State."

Mr. GORE. Mr. President, a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator from Tennessee will state it.

Mr. GORE. What is the business pending before the Senate?

The ACTING PRESIDENT pro tempore. There is no pending business. Does the Senator from Tennessee desire that his amendment be made the pending business?

Mr. GORE. I sent it to the desk and asked that the clerk read it. It is the pending business.

The ACTING PRESIDENT pro tempore. The pending business is the amendment immediately offered by the Senator from Tennessee.

Mr. GORE. Then it will be eligible to be voted on Monday, and I shall ask for a vote immediately upon the convening of the Senate Monday.

The ACTING PRESIDENT pro tempore. The Senator is correct, of course.

Mr. KEFAUVER. Mr. President, will the Senator from Tennessee yield for a unanimous-consent request?

The ACTING PRESIDENT pro tempore. The Senator from Tennessee is recognized.

Mr. KEFAUVER. Mr. President, I ask the Senator from Tennessee to yield.

The ACTING PRESIDENT pro tempore. Does the junior Senator from Tennessee yield to the senior Senator from Tennessee?

Mr. GORE. I yield to the senior Senator from Tennessee for a question.

Mr. KEFAUVER. For a unanimous-consent request, with the understanding that he does not lose the floor?

Mr. GORE. I must say that my understanding with the junior Senator from Louisiana [Mr. LONG], who was in the course of delivering a very able speech, was that I would ask him to yield to me only for the purpose of submitting my amendment. I feel that I must not yield for any purpose, but let the Senator from Louisiana regain the floor.

Mr. LONG of Louisiana. I do not mind.

Mr. GORE. The junior Senator from Louisiana informs me that he does not mind, so I ask unanimous consent that I may yield to the senior Senator from Tennessee, without prejudicing my rights to the floor, for the purpose which the senior Senator from Tennessee has in mind, of submitting an amendment to be read and to lie on the table.

Mr. CARLSON. Mr. President, reserving the right to object——

The ACTING PRESIDENT pro tempore. Is there objection to the request of the junior Senator from Tennessee?

Mr. CARLSON. I object.

The ACTING PRESIDENT pro tempore. The Senator from Kansas objects.

Mr. KEFAUVER. Before the Senator objects——

Mr. GORE. Mr. President, I yield for a question.

Mr. KEFAUVER. Reserving the right to object, may I explain what I was trying to do?

Mr. KUCHEL. Mr. President, the regular order.

The ACTING PRESIDENT pro tempore. The regular order is called for. The junior Senator from Tennessee.

Mr. LONG of Louisiana. Mr. President——

The ACTING PRESIDENT pro tempore. Does the junior Senator from Tennessee yield to the junior Senator from Louisiana?

Mr. GORE. I yield the floor.

Mr. LONG of Louisiana. Mr. President, I should like to make a parliamentary inquiry.

The ACTING PRESIDENT pro tempore. The Senator will state it.

Mr. LONG of Louisiana. I have a number of amendments to be proposed. If I read these amendments as amendments I intend to offer, will the amendments be eligible to be considered in the event that a gag rule is voted on the Senate?

The ACTING PRESIDENT pro tempore. The Senator's amendments should be read at the desk before the vote on cloture is taken, and, in the event cloture is adopted, before cloture is adopted.

The Senator can submit the amendments now and have them read and they will be eligible for consideration in the event cloture is adopted.

Mr. LONG of Louisiana. Very well. I send to the desk a number of amendments and ask that they be read by the clerk.

The ACTING PRESIDENT pro tempore. The amendments will be read by the clerk.

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that the reading of the amendments may be dispensed with, and that they may be considered as read, unless Senators merely wish to sit around and listen to the clerk read them.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana?

Mr. KUCHEL. Mr. President, what is the request?

The ACTING PRESIDENT pro tempore. The Senator from Louisiana asks unanimous consent that the amendments he is submitting be considered as having been read, be printed, and be eligible for consideration in the event cloture is adopted.

Mr. KUCHEL. Mr. President, reserving the right to object——

The ACTING PRESIDENT pro tempore. The Senator from California reserves the right to object.

Mr. KUCHEL. What is the pending question?

The ACTING PRESIDENT pro tempore. The pending question is on agreeing to the amendment offered by the junior Senator from Tennessee.

Mr. KUCHEL. The Senator from Louisiana now desires to have his amendments read?

The ACTING PRESIDENT pro tempore. The Senator wishes to have his amendments read in order that they may be read and eligible for consideration.

Mr. KUCHEL. Did the Senator from Tennessee purport to yield to the Senator from Louisiana?

Mr. LONG of Louisiana. He did not yield. I have the floor.

The ACTING PRESIDENT pro tempore. The Senator from Louisiana was recognized after the junior Senator from Tennessee yielded the floor. The Senator from Louisiana has the floor at this time.

Mr. KUCHEL. And the Senator asks unanimous consent that his amendments be considered as read, and printed in the RECORD?

The ACTING PRESIDENT pro tempore. That is the understanding of the Chair of the unanimous-consent request.

Mr. LONG of Louisiana. I first asked——

Mr. KUCHEL. Wait a minute, I say to my colleague.

Mr. President, what are the parliamentary rights of an individual who has the floor? Can he ask unanimous consent to get the amendments in? If denied consent, then what will happen?

The ACTING PRESIDENT pro tempore. The Senator has a right to have the amendments read. Senators can sit and listen to the amendments read. The Senator asked unanimous consent to have the amendments considered as read and printed, to be taken up at a later time, in order to meet the requirements of the rule.

Mr. KUCHEL. I am glad to tell my friend that I have no objection.

Mr. LONG of Louisiana. I will get them in, anyway, but I thank my delightful friend from California for his thoughtful consideration.

Mr. CARLSON. Mr. President——

The ACTING PRESIDENT pro tempore. The Senator from Kansas reserves the right to object.

Mr. CARLSON. Is the pending amendment the amendment offered by the Senator from Tennessee [Mr. GORE], or has he withdrawn the amendment, or what has happened?

The ACTING PRESIDENT pro tempore. The junior Senator from Tennessee [Mr. GORE] has offered an amendment, which is the pending question.

The Senator from Louisiana has sought to offer amendments in his own right, after recognition, to be read and to be considered under the rule at a later date. The Senator now has asked unanimous consent that the amendments be considered as having been read, rather than having them read by the clerk.

Is there objection to the request of the Senator from Louisiana?

Mr. KUCHEL. Mr. President, again reserving the right to object, does the

Senator contemplate speaking on those amendments now?

Mr. LONG of Louisiana. If the Senator requires me to have the amendments read, it will take quite a while before I can get around to talking, because it will take the clerk some time to read all of them. If the Senator will give consent, then we shall be winding up sometime within the next 20 minutes.

Mr. KUCHEL. The Senator does not contemplate speaking at length on these amendments?

Mr. LONG of Louisiana. Not now.

Mr. KUCHEL. Then I urge my colleagues to agree to the unanimous-consent request. [Laughter.]

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana? The Chair hears none, and it is so ordered.

The amendments are as follows:

On page 38, strike out lines 3 through 14, inclusive, and insert in lieu thereof the following section:

"CONDUCT OF FOREIGN BUSINESS NEGOTIATIONS

"SEC. 402. Except as provided by this section, the corporation may not enter into negotiations with any international organization, foreign government or foreign governmental entity. Whenever any such negotiation is required for the fulfillment of the objects of the corporation, it shall notify the Department of State as to the nature and purpose of the negotiations desired. Subject to the direction of the President, the Department of State will conduct and supervise any such negotiations with the assistance of duly authorized representatives of the corporation. No agreement with any international organization, foreign government, or foreign governmental entity may be entered into by the corporation without the approval of the Department of State."

On page 30, line 22, immediately after the section number "SEC. 301.", insert the subsection designation "(a)".

On page 31, line 2, immediately following the period, insert the following new sentence: "The Articles of Incorporation and bylaws of the corporation, and any amendment thereof, shall contain provisions effective to carry into effect the requirements of this Act, as determined by the Attorney General.".

On page 31, between lines 4 and 5, insert the following new subsections:

"(b) All powers conferred upon the Commissioners of the District of Columbia by sections 7(c), 88, 89, and 90 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 901 and the following) also may be exercised with respect to the corporation by the Attorney General of the United States in the name of the United States. It shall be the duty of the Attorney General in the name of the United States to enforce compliance by the corporation with the requirements of this Act relating to the corporation, and for that purpose he shall have all powers conferred by sections 120 and 149 of that Act upon the Commissioners of the District of Columbia.

"(c) Notwithstanding the provisions of section 17 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 908d), all shares of the stock of the corporation of any class issued at any time shall be sold for a uniform price, and no share of the stock of the corporation may be issued in exchange for any consideration other than the payment of a sum of money equal to that price.

"(d) Notwithstanding the provisions of section 18 and section 55 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 908e, 922), all shares of voting stock issued by the corporation shall be included in its stated capital, and no such share shall be entitled to any preferential right in the assets of the corporation in the event of its involuntary liquidation.

"(e) Notwithstanding the provisions of section 23 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 908j), no stockholder in the corporation which is a communications common carrier shall have any preemptive right to acquire additional shares of the stock of the corporation, and the corporation may not issue shares of its stock to officers or employees of the corporation without first offering such shares to its stockholders and to the public.

"(f) Notwithstanding the provisions of section 30 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 914), stockholders of the corporation may not establish any voting trust for the purpose of conferring upon one or more trustees the right to vote or otherwise represent their shares.

"(g) Notwithstanding the provisions of section 33 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 916a), the number of directors of the corporation may not be increased or decreased by any amendment to the bylaws of the corporation.

"(h) Notwithstanding the provisions of section 36 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 916d), the presence of at least two directors appointed by the President, by and with the advice and consent of the Senate, shall be required to constitute a quorum of the board for the transaction of business of the corporation.

"(i) Notwithstanding the provisions of section 37 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 916e), no executive committee may be established by the board of the corporation to exercise any authority conferred upon the board unless that committee includes at least two of the directors appointed by the President by and with the advice and consent of the Senate.

"(j) Notwithstanding the provisions of section 40 or section 41 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 917, 917a), no share of the voting stock of the corporation shall have any preferential right to receive dividends, or to receive any preferential treatment in the event of the liquidation of the corporation.

"(k) Notwithstanding the provisions of section 45 of the District of Columbia Business Corporation Act (D.C. Code, title 29, sec. 920), the Attorney General and each director of the corporation appointed by the President by and with the advice and consent of the Senate, or any duly designated representative thereof, at all times during the business hours of any day may examine all books and records of the corporation without regard to his possession of shares of stock in the corporation.

"(l) Notwithstanding the provisions of section 59 and section 60 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 924, 924b), no stockholder or any class of stockholders may be accorded any preferential treatment with respect to the redemption of shares, or the purchase of redeemable shares, of the corporation.

"(m) Notwithstanding the provisions of sections 64, 65, 66, 67, 68, 69, 70, 71, 72, and 73 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 927–927l), the corporation may not merge or consolidate with any other corporation, or establish any subsidiary corporation, unless such action is expressly authorized by legislation hereafter enacted by the Congress.

"(n) Notwithstanding the provisions of sections 74 and 75 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 928–929), the corporation may not sell, lease, exchange, mortgage, pledge, or otherwise dispose of all or substantially all of its property or assets unless such action is expressly authorized by legislation hereafter enacted by the Congress.

"(o) Notwithstanding the provisions of sections 76, 77, 78, 79, 80, 81, 82, 83, 84, 85, 86, and 87 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 930–930k), the corporation may not effectuate its voluntary dissolution unless such action is expressly authorized by legislation hereafter enacted by the Congress.

"(p) Notwithstanding the provisions of sections 122, 123, 124, 125, 126, 127, and 137 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 937–938d, 948), the articles of incorporation of the corporation may not be revoked, and its right to engage in business may not be terminated or suspended, by the Commissioners of the District of Columbia unless such action is expressly authorized by legislation hereafter enacted by the Congress.

"(q) Notwithstanding the provisions of sections 141 and 142 of the District of Columbia Business Corporation Act (D.C. Code, title 29, secs. 952–952a), the corporation may not be reincorporated unless such action is expressly authorized by legislation hereafter enacted by the Congress."

On page 37, line 13, immediately after the word "Act", insert the words "except as otherwise provided by this Act."

On page 38, between lines 14 and 15, insert the following new section:

"SECURITY PROVISIONS

"SEC. 403. (a) The corporation shall establish such security requirements, restrictions, and safeguards as the President shall determine to be necessary in the interest of the national security.

"(b) The Civil Service Commission is authorized to conduct such activity or other personnel investigations of officers, employees, agents, and consultants of the corporation, communications common carriers, and contractors and subcontractors, actual or prospective, as the board of directors of the corporation may determine to be required for the protection of the national security. If information obtained through any such investigation indicates that the individual who is the subject of that investigation may be of questionable loyalty to the Government of the United States, the matter shall be referred to the Federal Bureau of Investigation for the conduct of a full field investigation, the results of which shall be furnished to the board.

"(c) Whoever willfully violates, attempts to violate, or conspires with any other person to violate any regulation or order promulgated by the board of directors of the corporation for the protection or security of any part of the communications satellite system, any satellite terminal station, any associated equipment, and facilities, or any laboratory or other facility related to or used in connection with the communications satellite system, of the corporation, any communications common carrier, or any contractor or subcontractor of the corporation or any such common carrier, shall be fined not more than $5,000, or imprisoned not more than one year, or both."

On page 38, line 16, strike out the section number "403", and insert in lieu thereof the section number "404".

On page 39, line 15, strike out the section number "404", and insert in lieu thereof the section number "405".

On page 26, line 12, immediately after the words "public interest", insert a comma and the words "except that any such cooperative research conducted in whole or in part through the expenditure of any funds appropriated to the National Aeronautics and Space Administration shall be subject to the provisions of section 305 of the National Aeronautics and Space Act of 1958 (42 U.S.C. 2457)".

On page 37, between lines 13 and 14, insert the following new section:

"PROPERTY RIGHTS IN INVENTIONS

"SEC. 305. (a) Whenever any invention is made in the course or incident to the performance of any contract entered into by or on behalf of the corporation, such invention shall be the exclusive property of the corporation, and if such invention is patentable, a patent therefor shall be issued to the corporation notwithstanding any other provision of law upon application made by the corporation, unless the corporation, acting in conformity with policies and procedures adopted by the board of the corporation, waives all or any part of the rights of the corporation to such invention in compliance with the provisions of this section. No patent may be issued to any applicant other than the corporation for any invention which appears to the Commissioner of Patents to have significant utility in the development or operation of a communications satellite system, a satellite terminal station, or associated equipment and facilities unless—

"(1) the applicant files with the Commissioner, with the application or within thirty days after request therefor by the Commissioner, a written statement executed under oath setting forth the full facts concerning the circumstances under which such invention was made and stating the relationship (if any) of such invention to the performance of any contract of the corporation; and

"(2) the corporation transmits to the Commissioner a written certification to the effect that such invention is not subject to the provisions of this section.

Copies of each such statement and the application to which it relates shall be transmitted forthwith by the Commissioner to the corporation.

"(b) Each contract entered into by the corporation with any part for the performance of any scientific, technological, or developmental activity shall contain effective provisions under which such party shall furnish promptly to the corporation a written report containing full and complete technical information concerning any invention, discovery, improvement, or innovation which may be made in the performance of such activity.

"(c) Under such regulations as the board of the corporation shall adopt, in compliance with the provisions of this section and with the approval of the Commission, the corporation may waive all of or any part of its proprietary rights under this section with respect to any invention or class of inventions made or which may be made by any person or class of persons in the performance of any activity required by any contract of the corporation if the corporation determines that its financial interests will be advanced thereby. Any such waiver may be made upon such terms and under such conditions as the corporation shall determine to be required for the protection of its financial interests. Each such waiver made with respect to any invention shall include provisions effective to reserve an irrevocable, nonexclusive, nontransferable, royalty-free license for the practice of such invention throughout the world by or on behalf of the corporation, the United States Government or any department, agency, or instrumentality thereof, or any foreign government pursuant to any treaty or agreement with the United States. Each proposal for any waiver under this subsection shall be referred to an Inventions Authority which the corporation shall establish. Such Authority shall accord to each interested party an opportunity for hearing, and shall transmit to the board of the corporation its findings of fact with respect to each such proposal and its recommendations for action to be taken with respect thereto.

"(d) Subject to approval by the Commission, the board of the corporation shall determine, and promulgate regulations specifying, the terms and conditions upon which licenses will be granted by the corporation for the practice by any nongovernmental person of any invention for which the corporation holds a patent.

"(e) The corporation shall take all suitable and necessary action to protect any invention or discovery in which it has any proprietary interest. The corporation shall take appropriate action to insure that any nongovernmental person who acquires any proprietary interest in any invention of discovery under this section will take appropriate action to protect that invention or discovery.

"(f) As used in this section—

"(1) the term 'person' means any individual, partnership, corporation, association, institution, or other entity;

"(2) the term 'contract' means any actual or proposed contract, agreement, understanding, or other arrangement, including any assignment, substitution of parties, or subcontract executed or entered into thereunder; and

"(3) the term 'made,' when used in relation to any invention, means the conception or first actual reduction to practice of such invention."

On page 37, between lines 13 and 14, insert the following new sections:

"NEGOTIATION OF CONTRACTS BY THE CORPORATION

"SEC. 306. (a) Except as otherwise provided by this section, purchases of and contracts for any property or services by the corporation shall be made exclusively by public advertisement for bids, and by the acceptance by the corporation of the lowest bid submitted by a responsible bidder who is qualified to furnish such property or services. Advertisement for any bid shall be published in such manner and at such time as to enable the maximum number of qualified and responsible bidders to participate in the bidding in response thereto. In each instance, the corporation shall furnish promptly, upon request made by any qualified prospective bidder, full particulars concerning the specifications and requirements contemplated with regard to that purchase or contract.

"(b) Under such regulations as the board of the corporation may adopt with the approval of the Comptroller General, the corporation may make negotiated purchases and contracts when it is determined by the president of the corporation, or by not more than one vice president designated by him for that purpose, as to any particular purchase or contract that—

"(1) the aggregate cost of the purchase or contract to the corporation will not exceed $10,000;

"(2) advertisement for bids would imperil the military security of the United States, as determined by the Secretary of Defense;

"(3) an emergency requirement of the corporation exists which will not admit of the delay incident to advertisement for bids;

"(4) the contract is to be made exclusively for the procurement of the personal or professional services of one or more individuals or service to be rendered by a university, college, or other educational institution;

"(5) the purchase or contract is to be made exclusively for the procurement of property or services of a technical or special character for which it is impracticable to secure competition; or

"(6) all bids received after advertisement are unreasonable or have not been independently arrived at in open competition.

"(c) Each determination made pursuant to any paragraph of subsection (b) shall be (1) made in writing, (2) accompanied by a full and complete statement of the facts and circumstances which justify negotiation in reliance upon that paragraph, and (3) available for inspection by any director of the corporation for not less than five years. Except as otherwise provided by regulations adopted by the Attorney General, a true and correct copy of each such determination made under paragraph (5) or (6) of subsection (b) shall be transmitted promptly to the Attorney General.

"(d) In all negotiated procurements of the corporation proposals shall be solicited from the maximum number of qualified sources consistent with the nature and requirements of the supplies or services to be procured, and written or oral discussions shall be conducted with all responsible offerors who submit proposals within a competitive range, price, and other factors considered.

"REQUIREMENTS OF NEGOTIATED CONTRACTS

"SEC. 307. (a) Except as provided in subsection (b) of this section, contracts negotiated pursuant to section 306 may be of any type which in the opinion of the corporation will promote the best interests of the corporation. Every contract negotiated pursuant to section 306 shall contain a suitable warranty by the contractor that no person or selling agency has been employed or retained to solicit or secure such contract upon an agrement or understanding for a commission, percentage, brokerage, or contingent fee, excepting bona fide employees or bona fide established commercial or selling agencies maintained by the contractor for the purpose of securing business, for the breach or violation of which warranty the corporation shall have the right to annul such contract without liability or in its discretion to deduct from the contract price or consideration the full amount of such commission, percentage, brokerage, or contingent fee.

"(b) The cost-plus-a-percentage-of-cost system of contracting shall not be used, and in the case of a cost-plus-a-fixed-fee contract the fee shall not exceed 10 per centum of the estimated cost of the contract, exclusive of the fee, as determined by the president of the corporation at the time of entering into such contract (except that a fee not in excess of 15 per centum of such estimated cost is authorized in any such contract for experimental, developmental, or research work and that a fee inclusive of the contractor's costs and not in excess of 6 per centum of the estimated cost, exclusive of fees, as determined by the president of the corporation at the time of entering into the contract, of the project to which such fee applicable is authorized in contracts for architectural or engineering services). Neither a cost nor a cost-plus-a-fixed-fee contract nor an incentive-type contract shall be used unless the president of the corporation determines that such method of contracting is likely to be less costly than other methods or that it is impractical to secure property or services of the kind or quality required without the use of a cost or cost-plus-a-fixed-fee contract or an incentive-type contract. All cost and cost-plus-a-fixed-fee contracts shall provide for advance notification by the contractor to the corporation of any subcontract thereunder on a cost-plus-a-fixed-fee basis and of any fixed-price subcontract or purchase order which exceeds in dollar amount either $25,000 or 5 per centum of the total estimated cost of the prime contract; and the corporation, through any authorized representative thereof, shall have the right to inspect the plans and to audit the books and records of any prime contractor or subcontractor engaged in the performance of a cost or cost-plus-a-fixed-fee contract.

"(c) All contracts negotiated without advertising pursuant to authority contained in this Act shall include a clause to the effect that the Comptroller General of the United States or any of his duly authorized representatives shall until the expiration of three years after final payment have access to and the right to examine any directly pertinent books, documents, papers, and records of the contractor or any of his subcontractors engaged in such contracts or subcontracts.

"(d) No contract negotiated by the corporation shall contain any profit formula that would allow the contractor increased fees or profits for cost reductions or target cost underruns, unless the contractor has certified that the cost data submitted by the contractor in negotiations for the determination of the target cost or price was current, accurate, and complete. Each such contract shall contain provisions effective to insure that the target cost or price shall be adjusted to exclude any sums by which it may be found after audit by the corporation or by the Comptroller General that the target cost or price was increased as a result of any inaccurate, incomplete, or noncurrent data."

On page 32, line 20, immediately following the period, insert the following: "Compensation of the president and of all other officers of the corporation shall be fixed at levels which shall have been determined by the Commission to be reasonable.".

On the page 32, line 24, immediately following the period, insert the following:

"No individual at any time may serve as an officer, agent, or attorney of the corporation if he is affiliated with any other communications common carrier. For the purposes of this subsection, an individual shall be deemed to be affiliated with another such common carrier if he is an officer or director, or holds legal title to or any beneficial interest in more than 100 shares of the stock of any class, of such other common carrier or of any corporation which is a parent or subsidiary corporation of such other common carrier. As used in this subsection—

"(1) the term 'parent corporation' means a corporation which has control over another corporation;

"(2) the term 'subsidiary corporation' means a corporation which is subject to control by another corporation; and

"(3) the term 'control', when used with respect to any corporation means (A) the beneficial ownership of more than 25 per centum of the share capital of any class of that corporation, or (B) the exercise in fact of control over the policies or activities of that corporation by contract or otherwise."

On page 23, line 23, strike out the words "sections 303 and 304", and insert in lieu thereof the words "sections 303, 304, and 404".

On page 39, between lines 13 and 14, insert the following new section:

"ANTITRUST LAW COMPLIANCE

"SEC. 404. (a) Whenever the corporation contemplates entering into any contract with any other communications common carrier, it shall before entering into that proposed contract transmit promptly to the Attorney General a true and correct copy thereof, a full and complete written statement concerning the purpose and effect thereof, and such other information as the Attorney General may consider necessary for determination whether that contract, if entered into, would tend to create or maintain any situation inconsistent with the antitrust laws.

"(b) Within a reasonable time thereafter, the Attorney General shall transmit to the corporation his written opinion on the question whether that contract, if entered into, would have any such effect. A copy of each opinion so transmitted to the corporation shall be transmitted to the Commission."

On page 39, line 15, strike out the section number "SEC. 404.", and insert in lieu thereof the section number "SEC. 405.".

Beginning with the words "Six members" in line 3, page 32, strike out all to and including the word "corporation" in line 6, page 32, and insert in lieu thereof the words "other members of the board shall be elected annually by the stockholders. Not more than an aggregate of six members of the board may be elected by those stockholders who are communications common carriers or persons affiliated with any communications common carrier".

On page 32, line 16, immediately following the period, insert the following: "For the purposes of this subsection—

"(1) the term 'persons affiliated with any communications common carrier' includes (A) any corporation which is a parent or subsidiary corporation of any such common carrier, and (B) any individual who is an officer or a director, or who holds legal title or any beneficial interest in more than 200 shares of the stock of any class, of any corporation which is a parent or subsidiary corporation of any such common carrier;

"(2) the term 'parent corporation' means a corporation which has control over another corporation;

"(3) the term 'subsidiary corporation' means a corporation which is subject to control by another corporation; and

"(4) the term 'control', when used with respect to any corporation, means (A) the beneficial ownership of more than 25 per centum of the share capital of any class of that corporation, or (B) the exercise in fact of control over the policies or activities of that corporation by contract or otherwise."

On page 27, line 2, immediately after the word "Commission", insert the words "to the extent deemed appropriate by the Administration in the public interest".

On page 27, line 6, immediately after the word "system", insert the words "to the extent deemed appropriate by the Administration in the public interest".

On page 30, between lines 18 and 19, insert the following new subsection:

"(d) The National Aeronautics and Space Administration shall furnish aid, assistance, service, and facilities to or for the corporation in compliance with subsection (b) under such terms and conditions as it shall prescribe with the approval of the President. The Administration shall have no obligation under subsection (b) to furnish aid, assistance, service, or facilities to or for the corporation during any period in which the corporation is in default, in whole or in part, upon its obligation to reimburse the Administration for aid, assistance, service, or facilities previously furnished by the Administration to or for the corporation, or during any period in which the corporation fails to comply with terms and conditions established pursuant to this subsection."

On page 23, line 23, strike out the words "sections 303 and 304", and insert in lieu thereof the words "sections 303, 304, and 401."

On page 24, line 12, strike out the word "and" where it appears immediately following the semicolon.

On page 24, line 14, strike out the period and insert in lieu thereof a semicolon and the word "and".

On page 24, between lines 14 and 15, insert the following new paragraph:

"(11) the term 'communications satellite service' means the rendition or furnishing in any manner, by the corporation or by any other communications common carrier, of any service or facility required for, or directly or indirectly incident to, any telecommunication made or to be made in whole or in part through the use of a communications satellite system, any satellite terminal station, or any associated equipment, and facilities."

On page 37, line 16, immediately following the section designation "SEC. 401.", insert the subsection designation "(a)".

On page 37, lines 20 through 22, strike out the words "provision of satellite termination station facilities by one communication common carrier to one or more other communications common carriers", and insert in lieu thereof the words "rendition or furnishing of any communications satellite service".

On page 38, between lines 2 and 3, insert the following new subsection:

"(b) Within five years after the date on which a communications satellite system is placed in operation, and at least once during each period of five calendar years thereafter, the Commission upon its own initiative shall enter upon a hearing to determine whether each rate, charge, practice, or regulation made or used by each communications common carrier for or in connection with the rendition or furnishing of communications satellite service is just, reasonable, and not unreasonably discriminatory."

On page 24, line 12, strike out the word "and".

On page 24, line 14, strike out the period, and insert in lieu thereof a semicolon and the word "and".

On page 24, between lines 14 and 15, insert the following paragraph:

"(11) the term "reimbursable basis", when used in relation to any service rendered by any department or agency of the United States for or on behalf of the corporation or any other communications common carrier, means the reimbursement of that department or agency by the corporation or such other common carrier for all costs incurred directly or indirectly by that department or agency incident to the rendition of service, as such costs are determined pursuant to regulations promulgated by that department or agency with the approval of the Comptroller General."

On page 30, line 25, immediately after the words "shall be", insert the following: "organized under the District of Columbia Business Corporation Act. It shall be".

On page 31, line 2, immediately after the period, insert the following: "The principal offices of the corporation shall be in the District of Columbia, but it may establish offices, agencies, and facilities at such other places as the board of directors may determine to be required to fulfill the objects of the corporation as prescribed by this Act."

On page 38, line 2, immediately after the period, insert the following: "The corporation shall conduct its activities (1) in compliance with the provisions of this Act and all rules and regulations promulgated thereunder by any department or agency of the United States, and (2) subject to all pertinent provisions of any treaty or agreement by the United States with any foreign government so long as those provisions remain in force."

On page 38, line 2, immediately after the period, insert the following: "The corporation shall transmit to the President, the National Aeronautics and Space Council, and the National Aeronautics and Space Administration such information concerning the status and activities of the corporation as the President may determine from time to time to be required for the administration of the provisions for subsections (a) and (b) of section 201 of this Act."

On page 33, line 7, strike out "$100", and insert in lieu thereof "$50".

On page 34, line 12, immediately after the period, insert the following: "Voting stock of the corporation held by any communications common carrier shall not be eligible for inclusion in the rate base of that common carrier."

Beginning with word "Such" in line 20, page 34, strike out all to and including line 2, page 35, and insert in lieu thereof the following: "No communications common carrier shall be eligible to hold, directly or indirectly, legal title to or any beneficial interest in any such securities, bonds, debentures, or other certificates of indebtedness of the corporation. Under such terms and conditions as the President may prescribe, the Secretary of the Treasury is authorized from time to time to acquire and hold in the name of the United States securities, bonds, debentures, or certificates of indebtedness of the corporation issued under this subsection in such amount as the President may approve. For that purpose, the Secretary is authorized to use a public-debt transaction the proceeds obtained from the sale of any securities issued under the Second Liberty Bond Act, as amended, and the purposes for which securities may be issued under that Act are extended to include the purchases of securities, bonds, debentures, or certificates of indebtedness authorized by this subsection. All purchases and redemptions of such securities, bonds, debentures, or certificates of indebtedness shall be treated as public-debt transactions of the United States. All income therefrom accruing to the United States shall be deposited in the Treasury as miscellaneous receipts."

On page 34, line 17, strike out the word "The", and insert in lieu thereof the words "With the approval of the Commission, the".

On page 31, line 17, immediately after the words "consisting of", insert the word "nine".

Beginning with the words "Six Members" on page 32, line 3, strike out all to and including the word "corporation" on page 32, line 6, and insert now in lieu thereof the following; "Other members of the board shall be elected annually by the stockholders who hold voting stock. Not more than three members of the board may be elected by stockholders who are common carriers or individuals affiliated with any communications common carrier."

On page 32, line 11, strike out the word "three", and insert in lieu thereof the word "one".

On page 33, line 24, strike out the word "Fifty", and insert in lieu thereof the words "Thirty-three and one-third".

On page 34, line 11, strike out the figures "50", and insert in lieu thereof the figures "33⅓".

On page 35, line 3, strike out the words "20 per centum", and insert in lieu thereof the words "10 per centum".

On page 35, lines 5 and 6, strike out the words "which are held by holders other than authorized carriers".

On page 32 (at the end thereof), after line 24, insert the following new subsection:

"(c) The corporation, its officers and its directors as such, shall not contribute to or otherwise support or assist any political party or candidate for elective public office."

On page 23, line 23, strike out the words "sections 303 and 304", and insert in lieu thereof the words "sections 303, 304, and 404".

On page 39, between lines 13 and 14, insert the following new section:

"CONTROL IN TIME OF WAR

"Sec. 404. In time of war or national emergency declared by the President or by the Congress, the President, through the Secretary of Defense, may take possession and assume control of all or any part of any communications satellite system of the corporation, or any satellite terminal station or associated equipment and facilities of the corporation or any other communications common carrier, for the use of any of the armed forces of the United States. So far as is necessary, he may use any such system, station, equipment, or facility to the exclusion of other traffic."

On page 39, line 15, strike out the section number "Sec. 404", and insert in lieu thereof the section number "Sec. 405".

On page 38, line 20, immediately after the word "Act", insert the words "or any rule or regulation promulgated by the Commission under this Act."

On page 39, between lines 5 and 6, insert the following:

"(b) Whoever, being an officer, director, employee, agent, or representative of the corporation or any other communications common carrier, with intent to defraud the corporation or the United States Government or any department or agency thereof, (1) knowingly omits to make or makes any false or misleading entry in any book or record of the corporation or of such other carrier, or (2) knowingly makes any false or misleading report or statement with respect to the conduct of the business of the corporation or such other carrier, shall be fined not more than $10,000, or imprisoned not more than ten years, or both.

"(c) Whoever, being an officer, director, employee, agent, or representative of the corporation or any other communications common carrier, with intent to defraud the corporation or the United States Government or any department or agency thereof, in connection with the performance of any duty arising from his occupancy of any such status knowingly solicits or receives directly or indirectly from any source any compensation, rebate, or other valuable consideration to which he is not lawfully entitled, shall be fined not more than $10,000, or imprisoned not more than ten years, or both."

On page 39, line 6, strike out the subsection designation "(b)", and insert in lieu thereof the subsection designation "(c)".

On page 39, line 10, strike out the subsection designation "(c)", and insert in lieu thereof the subsection designation "(d)".

On page 22, line 2, immediately after the period, insert the following: "The Congress reserves to the United States the right to plan, initiate, construct, own, manage, and operate, as a part of the communications satellite system, such satellite terminal stations and associated equipment and facilities as may be required from time to time to serve the communications needs of the United States Government and its departments, agencies, and instrumentalities."

Beginning with line 9, page 29, strike out all to and including line 19, page 29, and insert in lieu thereof the following:

"(7) grant such authorizations for the construction and operation of satellite terminal stations by the corporation, and by such departments and agencies of the United States as may be authorized to construct and operate such stations, as will best serve the public interest, convenience, and necessity. In granting such authorizations preference shall be given to stations of departments and agencies of the United States;".

On page 23, lines 19 to 22, strike out the words "has the same meaning as the term 'common carrier' has when used in the Communications Act of 1934, as amended", and insert in lieu thereof the words "means any person engaged, as a common carrier for hire, in intrastate, interstate, or foreign communication by wire or radio, or in intrastate, interstate, or foreign radio transmission of energy (except that a person engaged in radio broadcasting shall not, insofar as such person is so engaged, be deemed a common carrier)".

On page 24, line 7, immediately after the words "as amended,", insert the words "or pursuant to the provisions of this Act".

On page 37, between lines 13 and 14, insert the following new subsection:

"(d) Except as otherwise specifically provided by this Act, no person other than the corporation may own or operate any satellite terminal station within the United States or any of its territories and possessions as a part of the communications satellite system."

Beginning with line 9, page 29, strike out all to and including line 19, page 29, and insert in lieu thereof the following:

"(7) grant such authorizations for the construction and operation by the corporation of satellite terminal stations as will best serve the public interest, convenience, and necessity;".

Mr. LONG of Louisiana. Mr. President, I have 11 amendments which are merely technical, which were proposed by various members of the Committee on Foreign Relations while the bill was before that committee, which Senators would like to propose. I believe, in order to propose these amendments, I shall have to offer them for myself, on behalf of myself and the other Senators who offered them. I should like to have it understood that I do not necessarily associate myself with the amendments, but I only wish to make them eligible to be voted upon.

I send to the desk a number of amendments—11 in number—and ask that the clerk read the amendments. I ask unanimous consent that the reading of the 11 amendments may be dispensed with.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana? Without objection, the amendments will be received and printed; and, without objection, the reading of the amendments will be dispensed with.

The amendments are as follows:

On page 25, line 20, section 201(a)(5) is amended by adding after the semicolon the following: "and for the determination of the most constructive role for the United Nations;".

On page 25, line 13, strike out "or with" and insert in lieu thereof the following: "and with the United Nations and other".

On page 38, strike out lines 2 through 14 and insert in lieu thereof the following:

"CONDUCT OF FOREIGN NEGOTIATIONS

"Sec. 402. The corporation shall not enter into negotiations with any international agency, foreign government, or entity, without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements with any such agency, government, or entity shall be subject to the approval of the Department of State."

On page 37, between lines 13 and 14, insert the following new subsection:

"(d)(1) In furnishing telecommunication service through the communications satellite system, the corporation shall give priority of transmission to communications of the United States Government for which priority is requested by the President of the United States not less than one and one-half hours of the daily transmittal time of the satellite communication system. The corporation shall have no power to alter, amend, or edit the form or content of any such communication.

"(2) Such transmissions and communications shall, at the request of the President, be carried by the corporation at a price not to exceed the cost of such service, as computed by the Federal Communications Commission."

On page 37, between lines 13 and 14, insert the following new subsection:

"(d) In consideration for the authority conferred upon the corporation by this Act, the corporation, under such regulations as the President shall prescribe, shall provide telecommunication services without charge for communications of a public service nature, not exceeding one hour of the daily transmittal time of the satellite communication system as such communications shall be defined by such regulations."

On page 40, after line 14, insert the following new section:

"CREATION OF EDUCATIONAL RESERVE FUND

"Sec. 405. (a) There is hereby created on the books of the Treasury of the United

States a fund to be known as the 'Educational Reserve Fund'. The Educational Reserve Fund shall consist of revenue received through payment as described by subsection (b).

"(b) In consideration of the privileges granted by this Act, any corporation engaged within the United States or any territory or possession thereof in furnishing for hire channels of communication through the use of communications satellites, shall annually set aside for the Educational Reserve Fund, an amount equal to 10 per centum of the net proceeds of such corporation, as defined by the Federal Communications Commission. Such revenue shall be paid into the Fund in conformity with such regulations as the Secretary of the Treasury shall prescribe.

"(c) Such fund shall be available for the support of any statutory program for Federal aid to public educational institutions and programs hereafter enacted by the Congress, including, but not limited to, primary, secondary, higher, and graduate levels and programs such as educational television, international education and exchange scholarship."

On page 28, line 14, strike out "Institute forthwith appropriate proceedings under section 214(d) of the Communications Act of 1934, as amended, to".

On page 30, line 11, strike out ", in accordance with the procedural requirements of section 214 of the Communications Act of 1934, as amended,".

(NOTE.—The effect of this amendment would be to direct the corporation to comply with decision of the Secretary of State referred to in section 201(c)(3) that such action should be taken in the national interest.)

Page 34, line 12, section 304(b)(2) is amended by adding, at the end of the section, the following: ", and no such communications common carrier shall at any time own more than 10 per centum of such shares issued and outstanding."

Page 34, line 12, section 304(b)(2) is amended by adding, at the end of the section, the following: ", and no such communications common carrier shall at any time own more than 10 per centum of such shares issued and outstanding."

Page 36, line 3, section 304 is further amended by adding, at this point, a new section (g), as follows:

"(g) The limitations applicable to voting stock in the above sections shall also be applicable to all other securities of the corporation."

Strike out all after the enacting clause and in lieu thereof insert the following: "That this Act may be cited as the 'Communications Satellite Authority Act'.

"DECLARATION OF POLICY AND PURPOSE

"SEC. 2. The Congress hereby declares that in order to promote international cooperation and to foster international understanding and peace, it is the policy of the United States to expand and improve international communications by providing leadership in the establishment of a global communication system at the earliest practicable time, making full use of the contributions which can be made by the Government and by private enterprise, and to insure that the benefits of such a system are secured for the betterment of all mankind and all states irrespective of their economic and scientific development. In order to achieve these goals, the Congress hereby provides for ownership and operation of the United States portion of the communications satellite system and invites all nations to participate in the system.

"DEFINITIONS

"SEC. 3. As used in this Act—

"(1) The terms 'private communications carrier', 'common carrier', and 'carrier' mean any person engaged as a common carrier for hire, in interstate or foreign communication by wire or radio or in interstate or foreign radio transmission of energy, including persons engaged in radio and television broadcasting.

"(2) The terms 'communications satellite system', 'satellite system', and 'system' include satellites, ground stations, associated ground control and tracking facilities, and other related facilities comprising a system for global communication by satellite, except that any reference to foreign ownership of a 'communications satellite system', 'satellite system', or 'system' refers only to the satellite portion of the system.

"COMMUNICATIONS SATELLITE AUTHORITY ESTABLISHED

"SEC. 4. (a) There is hereby created a corporation, to be known as the Communications Satellite Authority (hereinafter referred to as the 'corporation'), whose purpose and object shall be to develop, construct, launch, operate, manage and promote the use of a communications satellite system, and to foster research and development in the use of space.

"(b) In order to assure a structure of organization and control which will assure maximum possible competition and development of an economical system, the benefits of which will be reflected in communications rates, the corporation shall, as an agent of the United States, acquire, own and operate the United States portion of the communications satellite system, provided however, that where appropriate in the national interest, the corporation may contract with any other person for the operation of some or all of the communications satellite system. The corporation may not enter into such a contract where the effect thereof may be to substantially lessen competition in any line of commerce in any section of the country, or tend to monopoly.

"(c) The corporation shall lease communication channels on a nondiscriminatory and equitable basis to all persons authorized by the Federal Communications Commission to transmit communications via satellites, and shall provide facilities for governmental needs, as a part of the commercial system or separately when required to meet unique Government needs which cannot in the national interest be met by the commercial system.

"(d) The corporation, under the foreign policy guidance of the President, and pursuant to agreements made by the President with the advice and consent of the Senate, shall provide opportunities for foreign participation in the use of communications satellites, through ownership or otherwise upon an equitable and nondiscriminatory basis.

"(e) The corporation, under the foreign policy guidance of the President, and pursuant to agreements made by the President with the advice and consent of the Senate, shall provide technical assistance to the less developed states in the development of their communication facilities so that they may make effective use of communications satellites and become an effective part of a global communication system.

"BOARD OF DIRECTORS OF THE CORPORATION

"SEC. 5. (a) The board of directors of the corporation (hereinafter referred to as the 'board') shall be composed of nine members.

"(b) Four directors shall be designated by the President, and shall include an Assistant Secretary of State, the Administrator of the National Aeronautics and Space Administration, the Chairman of the Federal Communications Commission, and an additional member designated from officers of other departments and agencies of the United States. Directors so designated shall be known as 'governmental directors'.

"(c) Five directors shall also be appointed by the President, by and with the advice and consent of the Senate, solely on the basis of established records of distinguished achievement, from citizens of the United States in private life who are eminent in science, engineering, technology, education, administration, or public affairs. One of these five may be a representative of the communications industry. Directors so appointed shall be known as 'private directors'. The President shall appoint a chairman of the board from the private directors of the board. The chairman shall serve for a term of two years and may be reappointed for one or more additional terms as chairman.

"(d) The private directors first designated or appointed under this Act shall be designated or appointed for terms expiring two, four, six, seven and eight years after the effective date of this Act, respectively. Each private member of the board thereafter designated or appointed (other than a member designated or appointed for the unexpired portion of the term of an individual who is one of the initial members of the board) shall have a term of office expiring eight years from the date of the expiration of the term for which his predecessor was appointed.

"(e) Any private member appointed to fill a vacancy in the board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

"(f) Each governmental director of the board may designate another officer of his department or agency to serve on the board as his alternate in his unavoidable absence. Each alternate member so designated shall be designated to serve as such by and with the advice and consent of the Senate, unless at the time of his designation he holds an office under the United States Government to which he was appointed by and with the advice and consent of the Senate.

"(g) Vacancies in the board shall not impair the powers of the board to execute its functions. Five members shall constitute a quorum for the transaction of the business of the board.

"(h) Each private director shall receive compensation at the rate of $22,500 per annum, which compensation shall be paid by the corporation from funds of the corporation. Each governmental director while serving as such shall receive the compensation provided by law for the office held by him in the department or agency of the United States from which he was selected. If the compensation so received by any governmental director does not equal the compensation received by private directors, that governmental director shall be paid from funds of the corporation an additional amount which, when combined with the compensation so received, will equal the compensation received by private directors. Nothing contained in this section shall be construed to reduce the compensation provided by law for any governmental director in his capacity as an officer of a department or agency of the United States.

"(i) Members of the board while engaged in the performance of duties of the board shall receive from funds of the corporation necessary travel expenses and a per diem allowance in lieu of subsistence computed in accordance with the provisions of section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2).

"(j) Members of the board who are private directors shall during their continuance in office devote their full time to the work of the corporation.

"(k) No director other than the communications industry representative provided for in section 5(c) of this Act, may have any financial interest in any communication carrier corporation engaged in the business of 'wire communications' or 'radio communications' as defined in the Communications Act of 1934, as amended.

"(l) A director may be removed from the board by the President upon a determination by the President, after notice and an opportunity for hearing, that such director has been guilty of malfeasance or nonfeasance in the performance of his duties as a director.

"(m) Each member of the board, before entering upon the duties of his office, shall subscribe to an oath or affirmation to support the Constitution of the United States and to faithfully and impartially perform the duties imposed upon him by this Act.

"DUTIES OF THE BOARD

"Sec. 6. (a) The board shall—

"(1) formulate all policies and programs for the development, construction, launching, operation, management, and promotion of the United States portion of the satellite communication system;

"(2) foster research and development in the field of space telecommunications; and

"(3) formulate policies and programs which will assist newly developing countries, and provide an effective global system as soon as practicable.

"(b) The board shall—

"(1) meet upon the call of the chairman, but not less than once in each month; and

"(2) direct the exercise of all the powers of the corporation.

"EXECUTIVE SECRETARY

"Sec. 7. (a) The board, without regard to the civil service laws, shall appoint an executive secretary from civilian life, who shall receive compensation at the rate of $25,000 per annum. Under the supervision and direction of the board, the executive secretary shall be responsible for the execution of all programs and policies formulated by the board, and shall have administrative control over all personnel and activities of the corporation unless otherwise specified in this Act.

"(b) The board, without regard to the civil service laws, shall appoint such other officers, employees, attorneys, and agents of the corporation as may be necessary for the performance of its duties; shall fix their compensation and define their duties; shall require bonds of such of them as the board may designate; and shall prescribe rules and regulations to fix responsibility and to promote efficiency in the operations of the corporation.

"(c) The board, without regard to the civil service laws, shall appoint a treasurer and such assistant treasurers as it may deem necessary, each of whom shall give such bonds for the safekeeping of the securities and moneys of the corporation as the board may require.

"(d) Any appointee of the board may be removed in the discretion of the board. No officer or employee of the corporation shall receive compensation at any rate in excess of that of members of the board.

"(e) In the appointment of officials and the selection of employees for said corporation, and in the promotion of any such employee or official, no political test or qualification shall be permitted or given consideration. All such appointments and promotions shall be based exclusively upon merit and efficiency. Any member of the board who is determined by the President, after notice and opportunity for hearing, to be guilty of a violation of this subsection shall be removed from office. Any appointee of the board who is determined by the board after notice and opportunity for hearing, to be guilty of a violation of this subsection shall be removed by the board from his office or employment in the corporation.

"COOPERATION OF NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

"Sec. 8. (a) The corporation is hereby authorized—

"(1) to cooperate with the National Aeronautics and Space Administration for the purpose of obtaining launch vehicles for the satellite system which will facilitate an economical and efficient development of an operational system, launching the satellites and associated services, and consulting with the National Aeronautics and Space Administration on the technical specifications for satellites and ground stations and the location of such stations; and

"(2) to consult with the National Aeronautics and Space Administration for the purpose of coordinating all research and development programs carried out by the Corporation with research and development programs carried out by private aerospace corporations, private communications carriers, other corporations, and governmental departments and agencies under the supervision of the National Aeronautics and Space Administration in order to guarantee rapid and continuous scientific technological progress in a global communication system.

"(b) The National Aeronautics and Space Administration is authorized and directed to furnish to the corporation such facilities, services, supplies, and information as the corporation may require for the performance of its duties. Any expenses so incurred by the National Aeronautics and Space Administration on behalf of the corporation shall be reimbursed by the corporation from its funds. Any sums so received by the Administration shall be credited to the current appropriations of the Administration, and shall be available to the Administration for obligation and expenditure within the fiscal year in which such sums are received.

"COOPERATION OF FEDERAL COMMUNICATIONS COMMISSION

"Sec. 9. (a) The Federal Communications Commission is authorized and directed to—

"(1) render to the corporation such assistance as may be required to insure that the communications satellite system established by the corporation will be technically compatible with and operationally interconnected with existing terrestrial communication facilities; and

"(2) establish such rules and regulations as may be required to regulate all oversea communication rates established by private communication carriers for the use of facilities of the communications satellite system, and to insure that all such rates are reasonable and related to the cost of leasing channels from the corporation.

"(b) Under such rules and regulations as it shall prescribe, the Federal Communications Commission shall determine the eligibility of United States communications carriers to use the communications channels provided by the corporation, and shall insure equitable and nondiscriminatory access to the system by present and future authorized private communications carriers.

"ASSISTANCE FROM OTHER GOVERNMENT AGENCIES

"Sec. 10. (a) The board is hereby authorized to obtain from any department, agency, or instrumentality of the United States with the consent of the head thereof, such facilities, services, supplies, advice, and information as the corporation may determine to be required to enable it to carry out its duties. So far as practicable, the corporation shall utilize the facilities and services of such departments, agencies, and instrumentalities.

"(b) Under the direction of the President, each such department, agency, and instrumentality shall furnish to the corporation, upon a reimbursable basis, such facilities, services, supplies, advice, and information as the corporation may require for the performance of its obligations.

"(c) Any invention or discovery made by any officer or employee of the corporation in consequence of the performance of his duties, or by any officer or employee of the Government of the United States in the rendition of service for the corporation, and title to any patent which may be granted thereon, shall be the sole and exclusive property of the corporation. The corporation is authorized to grant under any such patent such licenses as may be authorized by the board. The board may authorize the payment to any such inventor such sums from the income received by the corporation from the sale of licenses under the patent granted for his invention as it deems proper.

"ASSISTANCE FROM PRIVATE INDUSTRY AND INDIVIDUALS

"Sec. 11. (a) There shall be a Space Communication Advisory Committee to advise the corporation on scientific and technical matters relating to materials, production, and research and development required for the establishment and operation of the communications satellite system. The Committee shall be composed of nine members, who shall be appointed from civilian life by the President from individuals specially qualified by training and experience to render such advice. They may be persons associated with the communications and aerospace industries.

"(b) Each member of the Committee shall hold office for a term of six years, except that (1) any member appointed to fill a vacancy occurring prior to the expiration of the term for which his predecessor was appointed, shall be appointed for the remainder of such term, and (2) the terms of office of the members first taking office after September 1, 1962, shall expire, as designated by the President at the time of appointment, three at the end of two years, three at the end of four years, and three at the end of six years, after September 1, 1962.

"(c) The Committee shall designate one of its own members as Chairman. The Committee shall meet at least four times in every calendar year.

"(d) Members of the Committee shall receive a per diem compensation not exceeding $100 for each day spent in meetings or conferences, and shall be reimbursed for necessary traveling and other expenses incurred while engaged in the work of the Committee.

"GENERAL POWERS OF THE CORPORATION

"Sec. 12. (a) Except as otherwise specifically provided in this Act, the corporation shall have succession in its corporate name, and shall have power to—

"(1) sue and be sued in its corporate name;

"(2) adopt and use a corporate seal, which shall be judicially noticed;

"(3) adopt, amend, and repeal bylaws:

"(4) make, perform, and enforce contracts as authorized by this Act;

"(5) purchase or lease and hold such real and personal property as it deems necessary or convenient for the performance of its obligations, and to dispose of any personal property held by it;

"(6) acquire real estate for the construction and operation of ground stations and tracking facilities;

"(7) acquire real property by condemnation, in the name of the United States of America, the title to real property so acquired to be taken in the name of the United States of America for the use of the corporation as the agent of the United States to carry into effect the purposes of this Act;

"(8) convey to any person or corporation, by deed, lease, or otherwise, any interest in real property possessed by the corporation when such property no longer is needed by the corporation for the purposes of this Act;

"(9) transfer to any other department agency, or instrumentality of the United States any part of any real property in the possession or under the control of the corporation when such property no longer is needed by the corporation for the purposes of this Act;

"(10) enter into, perform, and enforce contracts and agreements of every kind and description with any person, firm, association, corporation, municipality, county, State, body politic, or government or colony or dependency thereof in order to develop, construct, launch, operate, manage, and promote the United States portion of the communications satellite systems;

"(11) make such expenditures, and enter into such contracts, agreements, and arrangements, upon such terms and conditions and in such manner as it may deem necessary, including the compromise or final settlement of all claims and legal actions by or against the corporation; and, notwithstanding the provisions of any other law governing the expenditure of public funds, the General Accounting Office, in the settlement of the accounts of the Treasury or other accountable officer or employee of the corporation, shall not disallow credit for, nor withhold funds, because of any expenditure which the board shall determine to have been necessary to carry out the provisions of said Act; and

"(12) determine upon and establish, except as otherwise provided by this Act, a system of administrative accounts, and the form and content of contracts and other business documents of the corporation.

"(b) The corporation shall have such other powers as may be necessary or appropriate for the exercise of the powers herein specifically conferred upon the corporation.

"PROCUREMENT OF SUPPLIES AND SERVICES

"SEC. 13. (a) Except as otherwise provided by this section, all purchases and contracts for supplies or services, except for personal services, made by the corporation, shall be made after advertising in such manner and at such times sufficiently in advance of opening bids, as the board shall determine to be adequate to insure public notice and opportunity for competition.

"(b) Advertisement under subsection (a) shall not be required when it is determined under such regulations as the board shall prescribe that—

"(1) an emergency requires immediate delivery of the supplies or performance of the services;

"(2) repair parts, accessories, supplemental equipment, or services are required for supplies or services previously furnished or contracted for; or

"(3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed $500, in which case such purchases may be made in the open market.

"(c) In making purchases or contract awards, the board may consider such factors as relative quality and adaptability of supplies or services offered, the supplier's financial responsibility, skill, experience, record of integrity in dealing, and ability to furnish repairs and maintenance services; the time of delivery or performance offered; and compliance of the supplier with specifications prescribed by the corporation.

"FINANCIAL ACCOUNTABILITY OF THE CORPORATION

"SEC. 14. (a) The corporation shall maintain its principal office within, or in the immediate vicinity of, the District of Columbia. The corporation shall be an inhabitant and resident of the District of Columbia within the meaning of the laws of the United States relating to the venue of civil suits.

"(b) The board shall transmit to the President and to the Congress, in December of each year, a full and complete financial statement and report as to the activities and accomplishments of the corporation during the preceding fiscal year ending on June 30, including the total number of officers and employees of the corporation, and the names, salaries, and duties of those who receive compensation at the rate of $5,000 per annum or more.

"(c) The Comptroller General of the United States shall conduct an audit of the financial transactions of the corporation at such times as he shall determine, but not less frequently than once during each fiscal year. For that purpose, the Comptroller General or any representative duly designated by him shall have access to all records necessary to conduct any such audit. Copies of the report of each such audit shall be transmitted to the President of the United States, the Congress, and the chairman of the board of the corporation, and a copy thereof shall be retained for public inspection at the principal office of the corporation. No such report of audit shall be published until the corporation has had reasonable opportunity to examine any exceptions and criticisms made by the Comptroller General, to point out errors therein, to explain or answer such exceptions and criticisms and to file a statement which shall be published by the Comptroller General as a part of his report. The corporation shall reimburse the General Accounting Office for the cost of each such audit at such time and in such manner as the Comptroller General shall prescribe from time to time.

"(d) The corporation, its property, franchises, and income, are hereby expressly exempted from taxation in any manner or form by any State, county, municipality, or any subdivision or district thereof.

"CAPITAL AND REVENUE OF THE CORPORATION

"SEC. 15. (a) It is hereby declared to be the policy of this Act to make the corporation self-supporting and self-liquidating, and communication channels shall be leased at rates which in the opinion of the board will produce gross revenues in excess of costs.

"(b) The corporation is authorized to issue and sell bonds, in an amount not exceeding $500,000,000 outstanding at any one time, to finance the communications satellite program and to refund such bonds. The corporation may, in performing functions authorized by this Act, use the proceeds of such bonds for capital expenditures necessary for the development, construction, launching, management, operation, and promotion of the communications satellite system prescribed by this Act, and for research and development activities incident thereto.

"(c) Principal and interest on bonds issued by the corporation shall be payable solely from the corporation's net communication proceeds. As used in this section, the term 'net communication proceeds' means that portion of the annual gross leasing revenues of the corporation which remains after deducting the aggregate annual cost of launching, operating, maintaining, and administering the satellite system (including the ground stations and the tracking facilities) but before deducting depreciation accruals or other charges representing the amortization of capital expenditures, plus the net proceeds of the sale or other disposition of any communications satellite facilities or any interest therein, and shall include reserve or other funds created from such sources.

"(d) Notwithstanding any provision of this Act or any other provision of law, the corporation may pledge and use its annual net communication proceeds for the annual payment of the principal of and interest on said bonds, for purchases or redemption thereof, and for other purposes incidental thereto, involving creation of reserve funds and other funds which may be similarly pledged and used, to such extent and in such manner as the board deems necessary or desirable. The issuance and sale of bonds by the corporation and the expenditure of bond proceeds for the purposes specified herein, including additional construction of launching vehicles, satellites, and additional construction of ground stations and tracking facilities, shall not be subject to the requirements or limitations of any other law.

"BONDS ISSUED BY THE CORPORATION

"SEC. 16. (a) It is hereby declared to be the intent of this section to aid the corporation in discharging its responsibility for the advancement of a global communications system using space satellites, and the physical, social, and economic development of the United States by providing it with adequate authority and administrative flexibility to obtain the necessary funds with which to assure an ample number of oversea communication channels for such purposes by issuance of bonds or as otherwise provided herein, and this Act shall be so construed as to effectuate such intent.

"(b) Except as otherwise specifically provided by this Act, bonds issued by the corporation under this Act shall be negotiable instruments unless otherwise specified therein, shall be issued in such forms and denominations, shall be sold at such times and in such amounts, shall mature at such time or times not more than fifty years from their respective dates of issuance, shall be sold at such prices, shall bear such rates of interest, may be redeemable before maturity at the option of the corporation in such manner and at such times, and redemption premiums may be entitled to such relative priorities of claim on the corporation's net proceeds with respect to principal and interest payments, and shall be subject to such other terms and conditions, as the board of directors may determine.

"(c) At least fifteen days before the offer by the corporation of any issue of bonds for sale (exclusive of any commitment for any period less than one year) the corporation shall notify the Secretary of the Treasury as to the proposed amount, date of sale, maturities, terms and conditions, and the expected rates of interest of the proposed issue in the fullest detail. If the Secretary so requests, the corporation shall consult with him or with his designee with respect thereto, but the sale and issuance of such bonds shall not be subject to approval by the Secretary of the Treasury except as to the time of issuance, and the maximum rates of interest to be borne by the bonds. If the Secretary of the Treasury does not concur in a proposed issue of bonds hereunder within seven business days following the date on which he is advised of the proposed sale, the corporation may issue to the Secretary and the Secretary shall purchase interim obligations in the amount of the proposed issue which the Secretary is directed to purchase.

"(d) In case the corporation determines that a proposed issue of bonds hereunder cannot be sold on reasonable terms, it may issue to the Secretary interim obligations which the Secretary is authorized to purchase.

"(e) Obligations issued by the corporation to the Secretary may not exceed $150-000,000 outstanding at any one time. Any obligations so issued to the Secretary shall mature on or before one year from date of issue, and shall bear interest equal to the average rate (rounded to the nearest one-eighth of a percent) on outstanding marketable obligations of the United States with maturities from dates of issue of one year or less as of the close of the month preceding the issuance of the obligations of the corporation.

"(f) If agreement is not reached within eight months concerning the issuances of any bonds which the Secretary has failed to approve, the corporation may nevertheless proceed to sell such bonds on any date thereafter without approval by the Secretary in amount sufficient to retire the interim obligations issued to the Treasurer and such interim obligations shall be retired from the proceeds of such bonds.

"(g) The corporation may sell its bonds by negotiation or on the basis of competitive bids, subject to the right, if reserved, to reject all bids; may designate trustees, registrars, and paying agents in connection with said bonds and the issuance thereof; may arrange for audits of its accounts and for reports concerning its financial conditions and operations by certified public accounting firms; may, subject to any covenants contained in any bond contract, invest the proceeds of any bonds and other funds under its control which derive from or pertain to its communications satellite program in any securities approved for investment of national bank funds; may deposit said proceeds and other funds, subject to withdrawal by check or otherwise, in any Federal Reserve bank or bank having membership in the Federal Reserve System; and may perform such other acts not prohibited by law as it deems necessary or desirable to accomplish the purposes of this section. Bonds issued by the corporation hereunder shall contain a recital that they are issued pursuant to this subsection, and such recital shall be conclusive evidence of the regularity of the issuance and sale of such bonds and of their validity. The annual report made by the board to the President and to the Congress shall contain a full and detailed statement of all action taken by the corporation under this section during the year.

"(h) The corporation is authorized to enter into binding covenants with the holders of bonds issued under this Act (and with the trustees thereof, if any) under any indenture, resolution, or other agreement entered into in connection with the issuance thereof with respect to the establishment of reserve funds and other funds, adequacy of charges for supplying communication channels, application and use of net communication proceeds, stipulations concerning the subsequent issuance of bonds or such other matters not inconsistent with the Act, as the corporation may deem necessary or desirable to enhance the marketability of said bonds.

"(i) Bonds issued by the corporation hereunder shall be investments which may be accepted as security for all fiduciary trust, and public funds, the investment or deposit of which shall be under the authority or control of any office or agency of the United States. The Secretary of the Treasury or any other officer or agency having authority over or control of any such fiduciary, trust, or public funds, may at any time sell any of the bonds of the corporation acquired by them under this section. Bonds issued by the corporation hereunder shall be exempt both as to principal and interest from all taxation now or hereafter imposed by any State or local taxing authority except estate, inheritance, and gift taxes.

"APPROPRIATED FUNDS

"Sec. 17. (a) There are hereby authorized to be appropriated to the Secretary of the Treasury for disbursement to the corporation such sums as may be required for the performance of the functions of the corporation under this Act. Appropriated funds so disbursed to the corporation shall be repaid to the Treasury in conformity with the provisions of this section. Unrepaid disbursements of appropriated funds under this section may not at any time exceed $50,000,000 in the aggregate.

"(b) From net communications proceeds in excess of those required to meet the corporation's obligations under the provisions of any bond or bond contract, the corporation shall, beginning with the first fiscal year beginning after the effective date of this Act, make the following payments to the Secretary for deposit in the Treasury as miscellaneous receipts on or before December 31 and June 30 of each fiscal year—

"(1) a sum, computed as provided in subsection (c), as a return on the appropriation investment, if any, in the corporation's communications satellite facilities, as determined by the Director of the Bureau of the Budget; and

"(2) a sum in repayment of appropriation investment in the corporation in such amount as the Secretary of the Treasury shall determine to be available for that purpose without impairing the operations of the corporation.

Such payments shall continue to be made until the total appropriation investment in the corporation shall have been repaid.

"(c) The appropriation investment referred to in subsection (b) shall consist, in any fiscal year, of that part of the corporation's total investment assigned to communications satellite facilities as of the beginning of the fiscal year (including both completed facilities and facilities under construction) which has been provided from appropriations, or by transfers of property from other Government agencies without reimbursement by the corporation, less repayments of such appropriation investment made under this Act, or other applicable legislation. The payment as a return on the appropriation investment in each fiscal year shall be equal to the computed average interest rate payable by the Treasury upon its total marketable public obligations as of the beginning of said fiscal year applied to said appropriation investment.

"(d) Payments due to be made under this section may be deferred for not more than two years when in the judgment of the board of directors of the corporation such payment cannot feasibly be made because of inadequacy of funds, due to poor business conditions, emergencies, or other factors beyond the control of the corporation.

"REVENUE AND APPLICATION THEREOF

"Sec. 18. (a) The corporation shall charge rates for the use of communication channels which will produce gross revenues sufficient to provide funds for the operation, maintenance, and administration of its communications satellite system; provide for the servicing of outstanding bonds, including provision for and maintenance of reserve funds and other funds established in connection therewith; payments to the Treasury as a return on the investment of appropriated funds, if any; and for such additional margin as the board may consider desirable for purposes connected with the corporation's communications satellite system. Such overseas communication rates shall be fixed at levels which are as low as practicable.

"(b) The corporation shall, during each five-year period beginning with the first fiscal year beginning after the effective date of this Act, apply revenues in reduction (directly or through payments into reserve on sinking funds) of its capital obligations, including bonds and appropriation investments, or to reinvestments in the communications satellite system, at least to the extent of the combined amount of the aggregate of the depreciation accruals and other charges representing the amortization of capital expenditures applicable to its communications satellite system.

"ACCESS TO PATENTS AND TECHNICAL INFORMATION

"Sec. 19. (a) The corporation, as an instrumentality and agency of the Government of the United States for the purpose of executing its functions under this Act, shall have access at all times to information available in the Patent Office of the United States for the purpose of studying, ascertaining, and copying, all methods, formulae, and scientific information (not including access to pending applications for patents) necessary to enable the corporation to use and employ the most efficacious and economical process for the development of a communications satellite system, or any method for improving and cheapening overseas communication rates through the use of a communications satellite system, and any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the corporation shall have as the exclusive remedy a cause of action against the corporation for the recovery of reasonable compensation for such infringement. The district courts of the United States shall have jurisdiction to hear and determine such actions. This subsection shall not apply to any art, machine, method of manufacture, or composition of matter, discovered or invented by any officer or employee of the Government of the United States or of the corporation if such invention or discovery was made in the performance of obligations to the Government of the United States or to the corporation.

"(b) The Commissioner of Patents shall furnish to the corporation, at its request and without payment of fees, copies of documents on file in his office.

"PROPERTY RIGHTS IN INVENTIONS

"Sec. 20. (a) Whenever any invention is made in the performance of any work performed under any contract entered into by or on behalf of the corporation, such invention shall be the exclusive property of the United States, and if such invention is patentable, a patent therefor shall be issued to the corporation as agent of the United States notwithstanding any other provision of law upon application made by the Executive Secretary, unless the Executive Secretary, acting in conformity with policies and procedures adopted by the board, waives all or any part of the rights of the United States to such invention in compliance with the provisions of subsection (c) of this section. No patent may be issued to any applicant other than the corporation for any invention which appears to the Commissioner of Patents to have significant utility in the development or operation of a communications satellite system unless—

"(1) the applicant files with the Commissioner, with the application or within thirty days after request therefor by the Commissioner, a written statement executed under oath setting forth the full facts concerning the circumstances under which such invention was made and stating the relationship (if any) of such invention to the performance of any work under any contract of the corporation; and

"(2) the Executive Secretary transmits to the Commissioner a written certification to the effect that such invention is not subject to the provisions of this section.

Copies of each such statement and the application to which it relates shall be transmitted forthwith by the Commissioner to the Executive Secretary.

"(b) Each contract entered into by the corporation with any party for the performance of any scientific, technological, or developmental activity shall contain effective provisions under which such party shall furnish promptly to the Executive Secretary a written report containing full and complete technical information concerning any invention, discovery, improvement, or innovation which may be made in the performance of such activity.

"(c) Under such regulations as the board shall adopt in compliance with the provisions of this section the Executive Secretary may waive all or any part of the proprietary rights of the United States under this section with respect to any invention or class of inventions made or which may be made by any person or class of persons in the performance of any activity required by any contract of the corporation if the Executive Secretary determines that the public interest will be served thereby. Any such waiver may be made upon such terms and under such conditions as the Executive Secretary shall determine to be required for the protection of the public interest. Each such waiver made with respect to any invention shall include provisions effective to reserve an irrevocable, nonexclusive, nontransferable, royalty-free license for the practice of such invention throughout the world by or on behalf of the corporation, the United States Government, or any department, agency, or instrumentality thereof, or any foreign government pursuant to any treaty or agreement with the United States. Each proposal for any waiver under this subsection shall be referred to an Inventions and Contributions Authority which the Executive Secretary shall establish within the corporation. Such Authority shall accord to each interested party an opportunity for hearing, and shall transmit to the Executive Secretary its findings of fact with respect to each such proposal and its recommendations for action to be taken with respect thereto.

"(d) The board of the corporation shall determine, and promulgate regulations specifying, the terms and conditions upon which licenses will be granted by the corporation for the practice by any nongovernmental person of any invention for which the corporation holds a patent on behalf of the United States.

"(e) The Executive Secretary is authorized to take all suitable and necessary action to protect any invention or discovery in which the corporation has any proprietary interest. The Executive Secretary shall take appropriate action to insure that any nongovernmental person who acquires any proprietary interest in any invention or discovery under this section will take appropriate action to protect that invention or discovery.

"(f) The corporation shall be considered a defense agency of the United States for the purpose of chapter 17 of title 35 of the United States Code.

"(g) As used in this section—

"(1) the term 'person' means any individual, partnership, corporation, association, institution, or other entity;

"(2) the term 'contract' means any actual or proposed contract, agreement, understanding, or other arrangement, including any assignment, substitution of parties, or subcontract executed or entered into thereunder; and

"(3) the term 'made', when used in relation to any invention, means the conception or first actual reduction to practice of such invention.

"SECURITY PROVISIONS

"SEC. 21. (a) The corporation shall establish such security requirements, restrictions, and safeguards as the President shall determine to be necessary in the interest of the national security.

"(b) The Civil Service Commission is authorized to conduct such security or other personnel investigations of the corporation's officers, employees, and consultants, and its contractors and subcontractors and their officers and employees, actual or prospective, as the board deems appropriate; and if such investigation develops any data reflecting that the individual who is the subject thereof is of questionable loyalty to the Government of the United States the matter shall be referred to the Federal Bureau of Investigation for the conduct of a full field investigation, the results of which shall be furnished to the board.

"(c) Whoever willfully shall violate, attempt to violate, or conspire to violate any regulation or order promulgated by the board of directors of the corporation, the protection or security of any laboratory, station, base, or other facility, or part thereof, or any aircraft, missile, spacecraft, or similar vehicle, or part thereof, or other property or equipment in the custody of the corporation, or any real or personal property or equipment in the custody of any contractor under any contract with the corporation, or any subcontractor of any such contractor, shall be fined not more than $5,000, or imprisoned not more than one year, or both.

"PENAL PROVISIONS

"SEC. 22. (a) For the purposes of chapters 1, 7, 11, 15, 19, 23, 31, 37, 47, 93, 103, 105, and 115 of title 18 of the United States Code, the corporation shall be deemed to be a department of the Government of the United States, and officers, employees, and property of the corporation shall be deemed to be officers, employees, and property, respectively, of the United States.

"(b) Whoever, being an officer, employee, agent, or representative of the corporation, with intent to defraud the corporation or the United States Government or any department or agency thereof, (1) makes any false entry in any book or record of the corporation, or (2) makes any false report or statement with respect to the conduct of the business of the corporation, shall be fined not more than $10,000, or imprisoned not more than five years, or both.

"(c) Whoever, being an officer, employee, agent, or representative of the corporation or any department or agency of the United States, with intent to defraud the corporation, shall in connection with the performance of any duty arising from his occupancy of any such status solicit or receive directly or indirectly any compensation, rebate, or other valuable consideration to which he is not lawfully entitled, shall be fined not more than $5,000, or imprisoned not more than five years, or both.

"LEGISLATIVE RECOMMENDATIONS

"SEC. 23. The President shall from time to time transmit to the Congress his recommendations for such additional legislation as he may deem necessary or proper to carry out the purposes of this Act.

"SAVING PROVISIONS

"SEC. 24. (a) The right to alter, amend, or repeal this Act is hereby expressly declared and reserved to the Congress, but no such amendment or repeal shall operate to impair the obligation of any contract lawfully made by the corporation under any power conferred by this Act.

"(b) If any provision of this Act, or the application thereof to any person or circumstance, is held invalid, the remaining provisions of this Act, or the application of such provision to other persons or circumstances, shall not be affected thereby."

Strike out all after the enacting clause, and insert in lieu thereof the following: "That this Act may be cited as the 'Communications Satellite Act of 1962'.

"DECLARATION OF POLICY AND PURPOSE

"SEC. 2. (a) The Congress hereby declares that it is the policy of the United States to establish, in conjunction and in cooperation with other countries, as expeditiously as practicable a communications satellite system, as part of an improved global communications network, which will be responsible to public needs and national objectives, which will serve the communication needs of the United States and other countries, and which will contribute to world peace and understanding.

"(b) The new and expanded telecommunication services are to be made available as promptly as possible and are to be extended to provide global coverage at the earliest practicable date. In effectuating this program, care and attention will be directed toward providing such services to economically less developed countries and areas as well as those more highly developed, toward efficient and economical use of the electromagnetic frequency spectrum, and toward the reflection of the benefits of this new technology in both quality of services and charges for such services.

"AUTHORIZATION FOR ESTABLISHMENT OF COMMUNICATIONS SATELLITE SYSTEM

"SEC. 3. (a) Pending further legislation by the Congress, the National Aeronautics and Space Administration is authorized and directed to take such action in conformity with the provision of this Act as may be required to prepare plans and conduct research and development for, and place in operation at the earliest practicable time a space satellite communications system.

"(b) For the purposes of this Act, the Administration, in conformity with the provisions of the National Aeronautics and Space Act of 1958 may allocate its functions, by contract, lease, or otherwise, to public agencies and to private corporations in such manner as it shall determine to be best calculated to advance the national interest, except that no proprietary interest in any part of the system (including ground terminal stations and associated equipment and facilities) may be vested in any individual, partnership, corporation, association, or other business entity.

"(c) The Administration shall transmit to the Congress on January 1, 1963, and once in each period of six calendar months thereafter, a full and complete report concerning its activities under this Act and its progress in the accomplishment of the purposes of this Act.

"APPROPRIATIONS

"SEC. 4. There are hereby authorized to be appropriated to the Administration such sums as may be required to carry into effect the purposes of this Act."

On page 37, between lines 13 and 14, insert the following new subsection:

"(d) The corporation may not at any time directly or indirectly acquire, own, or control more than 50 percentum of the share capital or assets of any satellite terminal station situated in any foreign country or any associated equipment and facilities."

Mr. KEFAUVER. Mr. President, will the Senator yield to me for a unanimous-consent request, with the understanding that he will not lose his right to the floor?

Mr. LONG of Louisiana. Mr. President, I ask unanimous consent that I may do so.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana? The Chair hears none, and it is so ordered.

Mr. KEFAUVER. Mr. President, I have a number of amendments which have been submitted and which have been at the desk for some time, which I should like to have the clerk read. I ask unanimous consent that the reading of the amendments may be dispensed with, that they may be considered as having been read, and printed in the RECORD.

The ACTING PRESIDENT pro tempore. Is there objection to the unanimous-consent request by the senior Senator from Tennessee?

Mr. KUCHEL. Mr. President, reserving the right to object——

The ACTING PRESIDENT pro tempore. The Senator from California reserves the right to object.

Mr. KUCHEL. May I inquire of my beloved colleague whether he contemplates any general discussion of those amendments this evening?

Mr. KEFAUVER. I do not.

Mr. KUCHEL. Mr. President, I have no objection.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Tennessee? The

Chair hears no objection. The amendments will be received and printed, and the reading of the amendments will be dispensed with.

The amendments are as follows:

On page 24, lines 21 and 22, strike out "aid in the planning and development and foster" and insert in lieu thereof "plan, develop, and supervise".

On page 28, line 24, following "facilities" insert ", but only when such compatibility and/or interconnection are in the public interest".

On page 30, following line 4, insert the following subsection and renumber the succeeding subsections accordingly:

"(9) approve the bylaws of the corporation and each alteration made therein;".

On page 32, lines 3 through 6, strike out the sentence beginning with "Six" and insert in lieu thereof: "Six members of the board shall be elected annually by those stockholders who are not communications common carriers, and the remaining members of the board, not to exceed six, shall be elected annually by those stockholders who are communications common carriers in a number determined as follows: If such stockholders own in the aggregate not exceeding 15 per centum of the outstanding voting stock of the corporation, they shall elect one member; if they own in the aggregate in excess of 15 per centum but not exceeding 25 per centum, two members; if they own in the aggregate in excess of 25 per centum but not exceeding 35 per centum, three members; if they own in the aggregate in excess of 35 per centum but not exceeding 40 per centum, four members; if they own in the aggregate in excess of 40 per centum but not exceeding 45 per centum, five members; and if they own the aggregate in excess of 45 per centum, six members.".

Strike out all after the enacting clause and in lieu thereof insert the following: "That this Act may be cited as the 'Communications Satellite Authority Act'.

"DECLARATION OF POLICY AND PURPOSE

"SEC. 2. The Congress hereby declares that in order to promote international cooperation and to foster international understanding and peace, it is the policy of the United States to expand and improve international communications by providing leadership in the establishment of a global communication system at the earliest practicable time and to insure that the benefits of such a system are secured for the betterment of all mankind and all states irrespective of their economic and scientific development. In order to achieve these goals, the Congress hereby provides for ownership of the United States portion of the communications satellite system and invites all nations to participate in the system.

"DEFINITIONS

"SEC. 3. As used in this Act—

"(1) The terms 'private communications carrier', 'common carrier', and 'carrier' mean any person engaged as a common carrier for hire, in interstate or foreign communication by wire or radio or in interstate or foreign radio transmission of energy, including persons engaged in radio and television broadcasting.

"(2) The terms 'communications satellite system', 'satellite system', and 'system' include satellites, ground stations, associated ground control and tracking facilities, and other related facilities comprising a system for global communication by satellite, except that any reference to foreign ownership of a 'communications satellite system', 'satellite system', or 'system' refers only to the satellite portion of the system.

"COMMUNICATIONS SATELLITE AUTHORITY ESTABLISHED

"SEC. 4. (a) There is hereby created a corporation, to be known as the Communications Satellite Authority (hereinafter referred to as the 'corporation'), whose purpose and object shall be to develop, construct, launch, operate, manage and promote the use of a communications satellite system, and to foster research and development in the field of space telecommunications.

"(b) In order to assure a structure of control which will assure maximum possible competition and development of an economical system, the benefits of which will be reflected in overseas communication rates, the corporation shall be organized and operated as a communications common carriers' carrier. It shall acquire, own, and operate, as an agent of the United States Government, the United States portion of the communications satellites, and the ground stations and associated ground control and tracking facilities situated in the United States, territories, or dependencies thereof.

"(c) The corporation shall lease communication channels on a nondiscriminatory and equitable basis to all United States carriers authorized by the Federal Communications Commission to provide communications services via satellites, and shall provide facilities for governmental needs, as a part of the commercial system or separately when required to meet unique Government needs which cannot in the national interest be met by the commercial system.

"(d) The corporation, under the foreign policy guidance of the President, and pursuant to agreements made by the President with the advice and consent of the Senate, shall provide opportunities for foreign participation in the use of communications satellites, through ownership or otherwise upon an equitable and nondiscriminatory basis.

"(e) The corporation, under the foreign policy guidance of the President, and pursuant to agreements made by the President with the advice and consent of the Senate, shall provide technical assistance to the less developed states in the development of their communication facilities so that they may make effective use of communications satellites and become an effective part of a global communication system.

"BOARD OF DIRECTORS OF THE CORPORATION

"SEC. 5. (a) The board of directors of the corporation (hereinafter referred to as the 'board') shall be composed of nine members.

"(b) Four directors shall be designated by the President, and shall include an Assistant Secretary of State, the Administrator of the National Aeronautics and Space Administration, a Commissioner of the Federal Communications Commission, and an additional member designated from officers of other departments and agencies of the United States. Directors so designated shall be known as 'governmental directors'.

"(c) Five directors shall also be appointed by the President, by and with the advice and consent of the Senate, solely on the basis of established records of distinguished achievement, from citizens of the United States in private life who are eminent in science, engineering, technology, education, administration, or public affairs. Directors so appointed shall be known as 'private directors'. The President shall appoint a chairman of the board from the private directors of the board. The chairman shall serve for a term of two years and may be reappointed for one or more additional terms as chairman.

"(d) The private directors first designated or appointed under this Act shall be designated or appointed for terms expiring two, four, six, seven and eight years after the effective date of this Act, respectively. Each private member of the board thereafter designated or appointed (other than a member designated or appointed for the unexpired portion of the term of an individual who is one of the initial members of the board) shall have a term of office expiring eight years from the date of the expiration of the term for which his predecessor was appointed.

"(e) Any private member appointed to fill a vacancy in the board occurring prior to the expiration of the term for which his predecessor was appointed shall be appointed for the remainder of such term.

"(f) Each governmental director of the board may designate another officer of his department or agency to serve on the board as his alternate in his unavoidable absence. Each alternate member so designated shall be designated to serve as such by and with the advice and consent of the Senate, unless at the time of his designation he holds an office under the United States Government to which he was appointed by and with the advice and consent of the Senate.

"(g) Vacancies in the board shall not impair the powers of the board to execute its functions. Five members shall constitute a quorum for the transaction of the business of the board.

"(h) Each private director shall receive compensation at the rate of $22,500 per annum, which compensation shall be paid by the corporation from funds of the corporation. Each governmental director while serving as such shall receive the compensation provided by law for the office held by him in the department or agency of the United States from which he was selected. If the compensation so received by any governmental director does not equal the compensation received by private directors, that governmental director shall be paid from funds of the corporation an additional amount which, when combined with the compensation so received, will equal the compensation received by private directors. Nothing contained in this section shall be construed to reduce the compensation provided by law for any governmental director in his capacity as an officer of a department or agency of the United States.

"(i) Members of the board while engaged in the performance of duties of the board shall receive from funds of the corporation necessary travel expenses and a per diem allowance in lieu of subsistence computed in accordance with the provisions of section 5 of the Administrative Expenses Act of 1946 (5 U.S.C. 73b–2).

"(j) Members of the board who are private directors shall during their continuance in office devote their full time to the work of the corporation.

"(k) No director may have any financial interest in any communication carrier corporation engaged in the business of 'wire communications' or 'radio communications' as defined in the Communications Act of 1934, as amended.

"(l) A director may be removed from the board by the President upon a determination by the President, after notice and an opportunity for hearing, that such director has been guilty of malfeasance or nonfeasance in the performance of his duties as a director.

"(m) Each member of the board, before entering upon the duties of his office, shall subscribe to an oath or affirmation to support the Constitution of the United States and to faithfully and impartially perform the duties imposed upon him by this Act.

"DUTIES OF THE BOARD

"SEC. 6. (a) The board shall—

"(1) formulate all policies and programs for the development, construction, launching, operation, management, and promotion of the United States portion of the satellite communication system;

"(2) foster research and development in the field of space telecommunications; and

"(3) formulate policies and programs which will assist newly developing countries, and provide an effective global system as soon as practicable.

"(b) The board shall—

"(1) meet upon the call of the chairman, but not less than once in each month; and

"(2) direct the exercise of all the powers of the corporation.

"EXECUTIVE SECRETARY

"SEC. 7. (a) The board, without regard to the civil service laws, shall appoint an executive secretary from civilian life, who shall receive compensation at the rate of $20,500 per annum. Under the supervision and direction of the board, the executive secretary shall be responsible for the execution of all programs and policies formulated by the board, and shall have administrative control over all personnel and activities of the corportation unless otherwise specified in this Act.

"(b) The board, without regard to the civil service laws, shall appoint such other officers, employees, attorneys, and agents of the corporation as may be necessary for the performance of its duties; shall fix their compensation and define their duties; shall require bonds of such of them as the board may designate; and shall prescribe rules and regulations to fix responsibility and to promote efficiency in the operations of the corporation.

"(c) The board, without regard to the civil service laws, shall appoint a treasurer and such assistant treasurers as it may deem necessary, each of whom shall give such bonds for the safekeeping of the securities and moneys of the corporation as the board may require.

"(d) Any appointee of the board may be removed in the discretion of the board. No officer or employee of the corporation shall receive compensation at any rate in excess of that of members of the board.

"(e) In the appointment of officials and the selection of employees for said corporation, and in the promotion of any such employee or official, no political test or qualification shall be permitted or given consideration. All such appointments and promotions shall be based exclusively upon merit and efficiency. Any member of the board who is determined by the President, after notice and opportunity for hearing, to be guilty of a violation of this subsection shall be removed from office. Any appointee of the board who is determined by the board after notice and opportunity for hearing, to be guilty of a violation of this subsection shall be removed by the board from his office or employment in the corporation.

"COOPERATION OF NATIONAL AERONAUTICS AND SPACE ADMINISTRATION

"SEC. 8. (a) The corporation is hereby authorized—

"(1) to cooperate with the National Aeronautics and Space Administration for the purpose of obtaining launch vehicles for the satellite system which will facilitate an economical and efficient development of an operational system, launching the satellites and associated services, and consulting with the National Aeronautics and Space Administration on the technical specifications for satellites and ground stations and the location of such stations; and

"(2) to consult with the National Aeronautics and Space Administration for the purpose of coordinating all research and development programs carried out by the corporation with research and development programs carried out by private aerospace corporations, private communications carriers, other corpoations, and govenmental departments and agencies under the supervision of the National Aeronautics and Space Administration in order to guarantee rapid and continuous scientific technological progress in a global communication system.

"(b) The National Aeronautics and Space Administration is authorized and directed to furnish to the corporation such facilities, services, supplies, and information as the corporation may require for the performance of its duties. Any expenses so incurred by the National Aeronautics and Space Administration on behalf of the corporation shall be reimbursed by the corporation from its funds. Any sums so received by the Administration shall be credited to the current appropriations of the Administration, and shall be available to the Administration for obligation and expenditure within the fiscal year in which such sums are received.

"COOPERATION OF FEDERAL COMMUNICATIONS COMMISSION

"SEC. 9. (a) The Federal Communications Commission is authorized and directed to—

"(1) render to the corporation such assistance as may be required to insure that the communications satellite system established by the corporation will be technically comparable with and operationally interconnected with existing terrestrial communication facilities; and

"(2) establish such rules and regulations as may be required to regulate all overseas communication rates established by private communication carriers for the use of facilities of the communications satellite system, and to insure that all such rates are reasonable and related to the cost of leasing channels from the corporation.

"(b) Under such rules and regulations as it shall prescribe, the Federal Communications Commission shall determine the eligibility of United States communications carriers to use the communications channels provided by the corporation, and shall insure equitable and nondiscriminatory access to the system by present and future authorized private communications carriers.

"ASSISTANCE FROM OTHER GOVERNMENT AGENCIES

"SEC. 10. (a) The board is hereby authorized to obtain from any department, agency, or instrumentality of the United States with the consent of the head thereof, such facilities, services, supplies, advice, and information as the corporation may determine to be required to enable it to carry out its duties. So far as practicable, the corporation shall utilize the facilities and services of such departments, agencies, and instrumentalities.

"(b) Under the direction of the President, each such department, agency, and instrumentality shall furnish to the corporation, upon a reimbursable basis, such facilities, services, supplies, advice, and information as the corporation may require for the performance of its obligations.

"(c) Any invention or discovery made by any officer or employee of the corporation in consequence of the performance of his duties, or by any officer or employee of the Government of the United States in the rendition of service for the corporation, and title to any patent which may be granted thereon, shall be the sole and exclusive property of the corporation. The corporation is authorized to grant under any such patent such licenses as may be authorized by the board. The board may authorize the payment to any such inventor such sums from the income received by the corporation from the sale of licenses under the patent granted for his invention as it deems proper.

"GENERAL POWERS OF THE CORPORATION

"SEC. 11. (a) Except as otherwise specifically provided in this Act, the corporation shall have succession in its corporate name, and shall have power to—

"(1) sue and be sued in its corporate name;

"(2) adopt and use a corporate seal, which shall be judicially noticed;

"(3) adopt, amend, and repeal bylaws;

"(4) make, perform, and enforce contracts as authorized by this Act;

"(5) purchase or lease and hold such real and personal property as it deems necessary or convenient for the performance of its obligations, and to dispose of any personal property held by it;

"(6) acquire real estate for the construction and operation of ground stations and tracking facilities;

"(7) acquire real property by condemnation, in the name of the United States of America, the title to real property so acquired to be taken in the name of the United States of America for the use of the corporation as the agent of the United States to carry into effect the purposes of this Act;

"(8) convey to any person or corporation, by deed, lease, or otherwise, any interest in real property possessed by the corporation when such property no longer is needed by the corporation for the purposes of this Act;

"(9) transfer to any other department, agency, or instrumentality of the United States any part of any real property in the possession or under the control of the corporation when such property no longer is needed by the corporation for the purposes of this Act;

"(10) enter into, perform, and enforce contracts and agreements of every kind and description with any person, firm, association, corporation, municipality, county, State, body politic, or government or colony or dependency thereof in order to develop, construct, launch, operate, manage, and promote the United States portion of the communications satellite system;

"(11) make such expenditures, and enter into such contracts, agreements, and arrangements, upon such terms and conditions and in such manner as it may deem necessary, including the compromise or final settlement of all claims and legal actions by or against the corporation; and, notwithstanding the provisions of any other law governing the expenditure of public funds, the General Accounting Office, in the settlement of the accounts of the Treasury or other accountable officer or employee of the corporation, shall not disallow credit for, nor withhold funds, because of any expenditure which the board shall determine to have been necessary to carry out the provisions of said Act; and

"(12) determine upon and establish, except as otherwise provided by this Act, a system of administrative accounts, and the form and content of contracts and other business documents of the corporation.

"(b) The corporation shall have such other powers as may be necessary or appropriate for the exercise of the powers herein specifically conferred upon the corporation.

"PROCUREMENT OF SUPPLIES AND SERVICES

"SEC. 12. (a) Except as otherwise provided by this section, all purchases and contracts for supplies or services, except for personal services, made by the corporation, shall be made after advertising in such manner and at such times sufficiently in advance of opening bids, as the board shall determine to be adequate to insure public notice and opportunity for competition.

"(b) Advertisement under subsection (a) shall not be required when it is determined under such regulations as the board shall prescribe that—

"(1) an emergency requires immediate delivery of the supplies or performance of the services;

"(2) repair parts, accessories, supplemental equipment, or services are required for supplies or services previously furnished or contracted for; or

"(3) the aggregate amount involved in any purchase of supplies or procurement of services does not exceed $500, in which case such purchases may be made in the open market.

"(c) In making purchases or contract awards, the board may consider such factors as relative quality and adaptability of supplies or services offered, the supplier's financial responsibility, skill, experience, record of integrity in dealing, and ability to furnish repairs and maintenance services; the time of delivery or performance offered; and compliance of the supplier with specifications prescribed by the corporation.

"FINANCIAL ACCOUNTABILITY OF THE CORPORATION

"SEC. 13. (a) The corporation shall maintain its principal office within, or in the immediate vicinity of, the District of Columbia. The corporation shall be an inhabitant and resident of the District of Columbia within the meaning of the laws of the United States relating to the venue of civil suits.

"(b) The board shall transmit to the President and to the Congress, in December of each year, a full and complete financial statement and report as to the activities and accomplishments of the corporation during the preceding fiscal year ending on June 30, including the total number of officers and employees of the corporation, and the names, salaries, and duties of those who receive compensation at the rate of $5,000 per annum or more.

"(c) The Comptroller General of the United States shall conduct an audit of the financial transactions of the corporation at such times as he shall determine, but not less frequently than once during each fiscal year. For that purpose, the Comptroller General or any representative duly designated by him shall have access to all records necessary to conduct any such audit. Copies of the report of each audit shall be transmitted to the President of the United States, the Congress, and the chairman of the board of the corporation, and a copy thereof shall be retained for public inspection at the principal office of the corporation. No such report of audit shall be published until the corporation has had reasonable opportunity to examine any exceptions and criticisms, made by the Comptroller General, to point out errors therein, to explain or answer such exceptions and criticisms, and to file a statement which shall be published by the Comptroller General as a part of his report. The corporation shall reimburse the General Accounting Office for the cost of each such audit at such time and in such manner as the Comptroller General shall prescribe from time to time.

"(d) The corporation, its property, franchises, and income, are hereby expressly exempted from taxation in any manner or form by any State, county, municipality, or any subdivision or district thereof.

"CAPITAL AND REVENUE OF THE CORPORATIONS

"SEC. 14. (a) It is hereby declared to be the policy of this Act to make the corporation self-supporting and self-liquidating, and communication channels shall be leased at rates which in the opinion of the board will produce gross revenues in excess of costs.

"(b) The corporation is authorized to issue and sell bonds, in an amount not exceeding $500,000,000 outstanding at any one time, to finance the communications satellite program and to refund such bonds. The corporation may, in performing functions authorized by this Act, use the proceeds of such bonds for capital expenditures necessary for the development, construction, launching, management, operation, and promotion of the communications satellite system prescribed by this Act, and for research and development activities incident thereto.

"(c) Principal and interest on bonds issued by the corporation shall be payable solely from the corporation's net communication proceeds. As used in this section, the term 'net communication proceeds' means that portion of the annual gross leasing revenues of the corporation which remains after deducting the aggregate annual cost of launching, operating, maintaining, and administering the satellite system (including the ground stations and the tracking facilities) but before deducting depreciation accruals or other charges representing the amortization of capital expenditures, plus the net proceeds of the sale or other disposition of any communications satellite facilities or any interest therein, and shall include reserve or other funds created from such sources.

"(d) Notwithstanding any provision of this Act or any other provision of law, the corporation may pledge and use its annual net communication proceeds for the annual payment of the principal of and interest on said bonds, for purchases or redemption thereof, and for other purposes incidental thereto, involving creation of reserve funds and other funds which may be similarly pledged and used, to such extent and in such manner as the board deems necessary or desirable. The issuance and sale of bonds by the corporation and the expenditure of bond proceeds for the purposes specified herein, including additional construction of launching vehicles, satellites, and additional construction of ground stations and tracking facilities, shall not be subject to the requirements or limitations of any other law.

"BONDS ISSUED BY THE CORPORATION

"SEC. 15. (a) It is hereby declared to be the intent of this section to aid the corporation in discharging its responsibility for the advancement of a global communications system using space satellites, and the physical, social, and economic development of the United States by providing it with adequate authority and administrative flexibility to obtain the necessary funds with which to assure an ample number of oversea communication channels for such purposes by issuance of bonds or as otherwise provided herein, and this Act shall be so construed as to effectuate such intent.

"(b) Except as otherwise specifically provided by this Act, bonds issued by the corporation under this Act shall be negotiable instruments unless otherwise specified therein, shall be issued in such forms and denominations, shall be sold at such times and in such amounts, shall mature at such time or times not more than fifty years from their respective dates of issuance, shall be sold at such prices, shall bear such rates of interest, may be redeemable before maturity at the option of the corporation in such manner and at such times, and redemption premiums may be entitled to such relative priorities of claim on the corporation's net proceeds with respect to principal and interest payments, and shall be subject to such other terms and conditions, as the board of directors may determine.

"(c) At least fifteen days before the offer by the corporation of any issue of bonds for sale (exclusive of any commitment for any period less than one year) the corporation shall notify the Secretary of the Treasury as to the proposed amount, date of sale, maturities, terms and conditions, and the expected rates of interest of the proposed issue in the fullest detail. If the Secretary so requests, the corporation shall consult with him or with his designee with respect thereto, but the sale and issuance of such bonds shall not be subject to approval by the Secretary of the Treasury except as to the time of issuance, and the maximum rates of interest to be borne by the bonds. If the Secretary of the Treasury does not concur in a proposed issue of bonds hereunder within seven business days following the date on which he is advised of the proposed sale, the corporation may issue to the Secretary and the Secretary shall purchase interim obligations in the amount of the proposed issue which the Secretary is directed to purchase.

"(d) In case the corporation determines that a proposed issue of bonds hereunder cannot be sold on reasonable terms, it may issue to the Secretary interim obligations which the Secretary is authorized to purchase.

"(e) Obligations issued by the corporation to the Secretary may not exceed $150,000,000 outstanding at any one time. Any obligations so issued to the Secretary shall mature on or before one year from date of issue, and shall bear interest equal to the average rate (rounded to the nearest one-eighth of a percent) on outstanding marketable obligations of the United States with maturities from dates of issue of one year or less as of the close of the month preceding the issuance of the obligations of the corporation.

"(f) If agreement is not reached within eight months concerning the issuances of any bonds which the Secretary has failed to approve, the corporation may nevertheless proceed to sell such bonds on any date thereafter without approval by the Secretary in amount sufficient to retire the interim obligations issued to the Treasury and such interim obligations shall be retired from the proceeds of such bonds.

"(g) The corporation may sell its bonds by negotiation or on the basis of competitive bids subject to the right, if reserved, to reject all bids; may designate trustees, registrars, and paying agents in connection with said bonds and the issuance thereof; may arrange for audits of its accounts and for reports concerning its financial conditions and operations by certified public accounting firms; may, subject to any covenants contained in any bond contract, invest the proceeds of any bonds and other funds under its control which derive from or pertain to its communications satellite program in any securities approved for investment of national bank funds; may deposit said proceeds and other funds, subject to withdrawal by check or otherwise, in any Federal Reserve bank or bank having membership in the Federal Reserve System; and may perform such other acts not prohibited by law as it deems necessary or desirable to accomplish the purposes of this section. Bonds issued by the corporation hereunder shall contain a recital that they are issued pursuant to this subsection, and such recital shall be conclusive evidence of the regularity of the issuance and sale of such bonds and of their validity. The annual report made by the board to the President and to the Congress shall contain a full and detailed statement of all action taken by the corporation under this section during the year.

"(h) The corporation is authorized to enter into binding covenants with the holders of bonds issued under this Act (and with the trustees thereof, if any) under any indenture, resolution, or other agreement entered into in connection with the issuance thereof with respect to the establishment of reserve funds and other funds, adequacy of charges for supplying communication channels, application and use of net communication proceeds, stipulations concerning the subsequent issuance of bonds or such other matters not inconsistent with the Act, as the corporation may deem necessary or desirable to enhance the marketability of said bonds.

"(i) Bonds issued by the corporation hereunder shall be investments which may be accepted as security for all fiduciary trust, and public funds, the investment or deposit of which shall be under the authority or control of any office or agency of the United States. The Secretary of the Treasury or any other officer or agency having authority over or control of any such fiduciary, trust, or public funds, may at any time sell any of the bonds of the corporation acquired by them under this section. Bonds issued by the corporation hereunder shall be exempt both as to principal and interest from all taxation now or hereafter imposed by any

State or local taxing authority except estate, inheritance, and gift taxes.

"APPROPRIATED FUNDS

"SEC. 16. (a) There are hereby authorized to be appropriated to the Secretary of the Treasury for disbursement to the corporation such sums as may be required for the performance of the functions of the corporation under this Act. Appropriated funds so disbursed to the corporation shall be repaid to the Treasury in conformity with the provisions of this section. Unrepaid disbursements of appropriated funds under this section may not at any time exceed $50,000,000 in the aggregate.

"(b) From net communications proceeds in excess of those required to meet the corporation's obligations under the provisions of any bond or bond contract, the corporation shall, beginning with the first fiscal year beginning after the effective date of this Act, make the following payments to the Secretary for deposit in the Treasury as miscellaneous receipts on or before December 31 and June 30 of each fiscal year—

"(1) a sum, computed as provided in subsection (c), as a return on the appropriation investment, if any, in the corporation's communications satellite facilities, as determined by the Director of the Bureau of the Budget; and

"(2) a sum in repayment of appropriation investment in the corporation in such amount as the Secretary of the Treasury shall determine to be available for that purpose without impairing the operations of the corporation.

"Such payments shall continue to be made until the total appropriation investment in the corporation shall have been repaid.

"(c) The appropriation investment referred to in subsection (b) shall consist, in any fiscal year, of that part of the corporation's total investment assigned to communications satellite facilities as of the beginning of the fiscal year (including both completed facilities and facilities under construction) which has been provided from appropriations, or by transfers of property from other Government agencies without reimbursement by the corporation, less repayments of such appropriation investment made under this Act, or other applicable legislation. The payment as a return on the appropriation investment in each fiscal year shall be equal to the computed average interest rate payable by the Treasury upon its total marketable public obligations as of the beginning of said fiscal year applied to said appropriation investment.

"(d) Payments due to be made under this section may be deferred for not more than two years when in the judgment of the board of directors of the corporation such payment cannot feasibly be made because of inadequacy of funds, due to poor business conditions, emergencies, or other factors beyond the control of the corporation.

"REVENUE AND APPLICATION THEREOF

"SEC. 17. (a) The corporation shall charge rates for the use of communication channels which will produce gross revenues sufficient to provide funds for the operation, maintenance, and administration of its communications satellite system; provide for the servicing of outstanding bonds, including provision for and maintenance of reserve funds and other funds established in connection therewith; payments to the Treasury as a return on the investment of appropriated funds, if any; and for such additional margin as the board may consider desirable for purposes connected with the corporation's communications satellite system. Such overseas communication rates shall be fixed at levels which are as low as practicable.

"(b) The corporation shall, during each five-year period beginning with the first fiscal year beginning after the effective date of this Act, apply revenues in reduction (directly or through payments into reserve on sinking funds) of its capital obligations, including bonds and appropriation investments, or to reinvestments in the communications satellite system, at least to the extent of the combined amount of the aggregate of the depreciation accruals and other charges representing the amortization of capital expenditures applicable to its communications satellite system.

"ACCESS TO PATENTS AND TECHNICAL INFORMATION

"SEC. 18. (a) The corporation, as an instrumentality and agency of the Government of the United States for the purpose of executing its functions under this Act, shall have access at all times to information available in the Patent Office of the United States for the purpose of studying, ascertaining, and copying, all methods, formulae, and scientific information (not including access to pending applications for patents) necessary to enable the corporation to use and employ the most efficacious and economical process for the development of a communications satellite system, or any method for improving and cheapening overseas communication rates through the use of a communications satellite system, and any owner of a patent whose patent rights may have been thus in any way copied, used, infringed, or employed by the exercise of this authority by the corporation shall have as the exclusive remedy a cause of action against the corporation for the recovery of reasonable compensation for such infringement. The district courts of the United States shall have jurisdiction to hear and determine such actions. This subsection shall not apply to any art, machine, method of manufacture, or composition of matter, discovered or invented by any officer or employee of the Government of the United States or of the corporation if such invention or discovery was made in the performance of obligations to the Government of the United States or to the corporation.

"(b) The Commissioner of Patents shall furnish to the corporation, at its request and without payment of fees, copies of documents on file in his office.

"PROPERTY RIGHTS IN INVENTIONS

"SEC. 19. (a) Whenever any invention is made in the performance of any work performed under any contract entered into by or on behalf of the corporation, such invention shall be the exclusive property of the United States, and if such invention is patentable, a patent therefor shall be issued to the corporation as agent of the United States notwithstanding any other provision of law upon application made by the Executive Secretary, unless the Executive Secretary, acting in conformity with policies and procedures adopted by the board, waives all or any part of the rights of the United States to such invention in compliance with the provisions of subsection (c) of this section. No patent may be issued to any applicant other than the corporation for any invention which appears to the Commissioner of Patents to have significant utility in the development or operation of a communications satellite system unless—

"(1) the applicant files with the Commissioner, with the application or within thirty days after request therefor by the Commissioner, a written statement executed under oath setting forth the full facts concerning the circumstances under which such invention was made and stating the relationship (if any) of such invention to the performance of any work under any contract of the corporation; and

"(2) The Executive Secretary transmits to the Commissioner a written certification to the effect that such invention is not subject to the provisions of this section.

"Copies of each such statement and the application to which it relates shall be transmitted forthwith by the Commissioner to the Executive Secretary.

"(b) Each contract entered into by the corporation with any party for the performance of any scientific, technological, or developmental activity shall contain effective provisions under which such party shall furnish promptly to the Executive Secretary a written report containing full and complete technical information concerning any invention, discovery, improvement, or innovation which may be made in the performance of such activity.

"(c) Under such regulations as the board shall adopt in compliance with the provisions of this section the Executive Secretary may waive all or any part of the proprietary rights of the United States under this section with respect to any invention or class of inventions made or which may be made by any person or class of persons in the performance of any activity required by any contract of the corporation if the Executive Secretary determines that the public interest will be served thereby. Any such waiver may be made upon such terms and under such conditions as the Executive Secretary shall determine to be required for the protection of the public interest. Each such waiver made with respect to any invention shall include provisions effective to reserve an irrevocable, nonexclusive, nontransferable, royalty-free license for the practice of such invention throughout the world by or on behalf of the corporation, the United States Government, or any department, agency, or instrumentality thereof, or any foreign government pursuant to any treaty or agreement with the United States. Each proposal for any waiver under this subsection shall be referred to an Inventions and Contributions Authority which the Executive Secretary shall establish within the corporation. Such Authority shall accord to each interested party an opportunity for hearing, and shall transmit to the Executive Secretary its findings of fact with respect to each such proposal and its recommendations for action to be taken with respect thereto.

"(d) The board of the corporation shall determine, and promulgate regulations specifying, the terms and conditions upon which licenses will be granted by the corporation for the practice by any nongovernmental person of any invention for which the corporation holds a patent on behalf of the United States.

"(e) The Executive Secretary is authorized to take all suitable and necessary action to protect any invention or discovery in which the corporation has any proprietary interest. The Executive Secretary shall take appropriate action to insure that any nongovernmental person who acquires any proprietary interest in any invention or discovery under this section will take appropriate action to protect that invention or discovery.

"(f) The corporation shall be considered a defense agency of the United States for the purpose of chapter 17 of title 35 of the United States Code.

"(g) As used in this section—

"(1) the term 'person' means any individual, partnership, corporation, association, institution, or other entity;

"(2) the term 'contract' means any actual or proposed contract, agreement, understanding, or other arrangement, including any assignment, substitution of parties, or subcontract executed or entered into thereunder; and

"(3) the term 'made', when used in relation to any invention, means the conception or first actual reduction to practice of such invention.

"SECURITY PROVISIONS

"SEC. 20. (a) The corporation shall establish such security requirements, restrictions, and safeguards as the President shall determine to be necessary in the interest of the national security.

"(b) The Civil Service Commission is authorized to conduct such security or other personnel investigations of the corporation's officers, employees, and consultants, and its contractors and subcontractors and their officers and employees, actual or prospective, as the board deems appropriate; and if any such investigation develops any data reflecting that the individual who is the subject thereof is of questionable loyalty to the Government of the United States the matter shall be referred to the Federal Bureau of Investigation for the conduct of a full field investigation, the results of which shall be furnished to the board.

"(c) Whoever willfully shall violate, attempt to violate, or conspire to violate any regulation or order promulgated by the board of directors of the corporation, the protection or security of any laboratory, station, base, or other facility, or part thereof, or any aircraft, missile, spacecraft, or similar vehicle, or part thereof, or other property or equipment in the custody of the corporation, or any real or personal property or equipment in the custody of any contractor under any contract with the corporation, or any subcontractor of any such contractor, shall be fined not more than $5,000, or imprisoned not more than one year, or both.

"PENAL PROVISIONS

"SEC. 21. (a) For the purposes of chapters 1, 7, 11, 15, 19, 23, 31, 37, 47, 93, 103, 105, and 115 of title 18 of the United States Code, the corporation shall be deemed to be a department of the Government of the United States, and officers, employees, and property of the corporation shall be deemed to be officers, employees, and property, respectively, of the United States.

"(b) Whoever, being an officer, employee, agent, or representative of the corporation, with intent to defraud the corporation or the United States Government or any department or agency thereof, (1) makes any false entry in any book or record of the corporation, or (2) makes any false report or statement with respect to the conduct of the business of the corporation, shall be fined not more than $10,000, or imprisoned not more than five years, or both.

"(c) Whoever, being an officer, employee, agent, or representative of the corporation or any department or agency of the United States, with intent to defraud the corporation, shall in connection with the performance of any duty arising from his occupancy of any such status solicit or receive directly or indirectly any compensation, rebate, or other valuable consideration to which he is not lawfully entitled, shall be fined not more than $5,000, or imprisoned not more than five years, or both.

"LEGISLATIVE RECOMMENDATIONS

"SEC. 22. The President shall from time to time transmit to the Congress his recommendations for such additional legislation as he may deem necessary or proper to carry out the purposes of this Act.

"SAVING PROVISIONS

"SEC. 23. (a) The right to alter, amend, or repeal this Act is hereby expressly declared and reserved to the Congress, but no such amendment or repeal shall operate to impair the obligation of any contract lawfully made by the corporation under any power conferred by this Act.

"(b) If any provision of this Act, or the application thereof to any person or circumstance, is held invalid, the remaining provisions of this Act, or the application of such provision to other persons or circumstances, shall not be affected thereby."

On page 27, line 6, after the period, insert: "All inventions and other technology furnished by the Administration to the corporation shall be in the form of a nonexclusive license for which the corporation shall pay a reasonable royalty. Any inventions developed by the corporation from the inventions and technology furnished by the Administration shall be made available to the United States in the form of a nonexclusive royalty-free license."

On page 28, strike out lines 20 through 24 and renumber the succeeding subsections accordingly.

On page 21, line 9, after the semicolon, insert: "that each communications common carrier shall have the right to fully interconnect its communications system with the communications system of any other communications common carrier;".

On page 28, following line 24, insert the following and renumber the succeeding sections accordingly:

"(5) insure that any international communications common carrier has the right to interconnect its communications system on reasonable and nondiscriminatory terms with the domestic communications systems of any other communications common carriers to provide any services authorized by the Commission;".

On page 33, line 7, strike out "$100" and insert in lieu thereof "$10".

On page 34, line 20, delete the period and insert in lieu thereof the following: "which shall be sold at a price of $10 for each share and in a manner to insure the widest distribution to the American public and among the communications common carriers.".

On page 34, line 20, strike out all of subsection (c) beginning with "Such" and insert in lieu thereof the following: "Each issue shall be made in a manner to encourage the widest distribution to the American public and the communications common carriers.".

Strike out the sentence beginning with "In" on page 35, line 24, and ending with "carriers." on line 3, page 36, and insert in lieu thereof "In its determination of the public interest with respect to ownership of shares of stock in the corporation, the Commission shall promote the widest possible distribution of stock among the authorized carriers.".

On page 24, after line 25, insert the following new subsection:

"(2) decide whether the communications satellite corporation authorized under title III of this Act shall initially utilize a synchronous or nonsynchronous system and may decide at a future date that the corporation shall change from one system to the other."

On pages 25 and 26, renumber subsections of section 201(a) to conform with the new subsection (2).

On page 25, line 21, strike out "and appropriate utilization".

On page 31, line 14, add the following: "Such articles of incorporation shall thereafter be amended only upon the initiation by or the approval of the President."

On page 33, line 6, strike out "initially offered".

On page 33, strike out lines 12 through 18 and renumber the succeeding subsections accordingly.

On page 33, lines 19 through 24, strike out the sentence beginning with "Only" and ending with "control".

On page 34, lines 2 and 8, on page 35, lines 6, 12, 19, and 20, and on page 36, line 3, strike out "authorized" and insert in lieu thereof "communications common".

Beginning with line 12 on page 33, strike out everything through line 16 on page 34 and insert in lieu thereof the following:

"(b) No communications common carrier shall own any shares of stock in the corporation either directly or indirectly through subsidiaries or affiliated companies, nominees, or any persons subject to its direction or control."

Beginning with "Such" on page 34, line 20, strike out everything through page 35, line 2.

On page 27, line 3, strike out "feasible" and insert in lieu thereof "deemed appropriate by the Administration".

On page 32, line 24, immediately following the period, add the following: "Each such officer shall devote his full time and best efforts to the work of the corporation. No officer or director of the corporation shall have any financial interest of any kind in any communication carrier corporation or other entity engaged in the business of 'wire communications' or 'radio communications' as defined in the Communications Act of 1934, as amended, or in any corporation, partnership, or other entity from which the corporation purchases equipment or services."

On page 33, line 6, strike out "offered" and insert in lieu thereof "issued".

Beginning with "Such" on page 34, line 20, strike out everything through page 35, line 2, and insert in lieu thereof the following: "Fifty per centum of such nonvoting securities, bonds, debentures, and other certificates of indebtedness authorized for issuance at any time by the corporation shall be reserved for purchase by communications common carriers and such purchasers shall in the aggregate be entitled to make purchases of the reserved shares in a total number not exceeding the total number of the nonreserved shares of any issues purchased by other persons. At no time shall the aggregate of such nonvoting securities, bonds, debentures, or other certificates of indebtedness held by communications common carriers directly or indirectly through subsidiaries or affiliated companies, nominees, or any persons subject to their direction or control exceed fifty per centum of such nonvoting securities, bonds, debentures, or other certificates of indebtedness issued and outstanding.".

On page 34, line 23, following "shall", insert "not".

On page 25, line 20, strike out the semicolon and insert in lieu thereof the following: ", and for the determination of the most constructive role for the United Nations;".

On page 27, line 2, strike out "and".

On page 27, line 6, strike out the period and insert in lieu thereof "; and".

On page 27, following line 6, insert the following:

"(7) report annually to the Congress with respect to all contracts, licenses, negotiations, and other transactions between the corporation and the Administration.".

On page 34, lines 13 and 14, strike out "who is not an authorized carrier".

On page 34, line 14, strike out "such".

On page 35, line 10, strike out "section 45 (b)" and insert in lieu thereof "sections 45 (b) and 45(d)".

On page 35, lines 13 and 14, strike out "and copying set forth in that subsection" and insert in lieu thereof ", copying, and statement of affairs set forth in those subsections.".

On page 36, following line 3, insert the following:

"(g) No communications common carrier which owns more than 1 per centum of any class of stock of the corporation may sell apparatus, equipment, or services to the corporation in an amount exceeding $25,000 per annum, either directly or indirectly through any subsidiary, affiliated company, nominee, or any persons subject to its direction or control.".

On page 26, lines 10 and 11, strike out "cooperate with the corporation in research and development".

On page 26, strike out lines 10 through 12 and insert in lieu thereof the following:

"(2) to the extent deemed appropriate by the Administration in the public interest, cooperate with the corporation in research and development and require the corporation to engage in research and development on behalf of the United States in return for which the corporation shall receive reasonable reimbursement;".

On page 29, strike out lines 9 through 19, and insert in lieu thereof the following:

"(7) grant appropriate authorization to the corporation for the construction and operation of each satellite terminal station. No satellite terminal shall be owned or operated by any corporation, partnership, firm, or entity other than the corporation."

On page 30, lines 6 and 13, strike out "or carriers".

On page 37, lines 20 through 24, strike out the sentence beginning with "The" and ending with "Act."

On page 31, lines 2 through 4, strike out the sentence beginning with "The" and ending with "reserved."

On page 33, line 6, strike out "initially offered".

On page 33, line 8, strike out the period and insert in lieu thereof "and among the communications common carriers.".

On page 35, line 3, strike out "20" and insert in lieu thereof "5".

On page 35, line 6, strike out "authorized".

On page 38, strike out lines 3 through 14 and insert in lieu thereof the following:

"CONDUCT OF FOREIGN NEGOTIATIONS

"Sec. 402. The corporation shall not enter into negotiations with any international agency, foreign government, or entity, without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements with any such agency, government, or entity shall be subject to the approval of the Department of State."

On page 33, line 11, after the word "person", insert the following: "*Provided, however*, That Congress expressly reserves the right to direct the Commission to require any communications common carrier to divest itself of part or all of its voting stock in the corporation in an amount determined by Congress, such direction and determination, if any, to be made subsequent to review by Congress of the report by the Commission authorized and directed by title V of this Act."

On page 40, following line 14, insert the following:

"TITLE V—FEDERAL COMMUNICATIONS COMMISSION'S INVESTIGATION OF THE COMMUNICATIONS INDUSTRY

"Sec. 501. It is necessary, in aid of legislation by the Congress and for the use of governmental agencies, particularly with respect to space satellite communications and other rapidly advancing areas of communication technology; for the information of the general public; as an aid in providing more effective rate regulation; and for other purposes in the public interest; that accurate and comprehensive information be procured and compiled regarding both the domestic and international operations of American Telephone and Telegraph Company and other communication common carriers.

"Sec. 502. The Federal Communications Commission is hereby authorized and directed to investigate and report to the Congress no later than January 20, 1964, on the following matters with respect to the American Telephone and Telegraph Company and other communication common carriers, including all of their subsidiary, affiliated, associated, and holding companies, and any other companies in which any of them have any direct or indirect financial interest, or which have any such interest in them, or in which any of their officers or directors hold any office or exert any control or whose officers or directors hold any office or exert any control in them. The report shall give particular emphasis to all aspects of the following matters which have occurred since 1939:

"(a) The corporate and financial history, and the capital structure and the relationship of such company and of its subsidiary, affiliated, associated, and holding companies, including the determination of whether or not such structure may enable them to evade regulation or taxation, or to conceal, pyramid, or absorb profits, or to do any other act contrary to the public interest.

"(b) The extent and character of intercompany service contracts and all transactions between communications common carriers and their subsidiaries, affiliated, associated, or holding companies, and particularly between the American Telephone and Telegraph Company and the Western Electric Company and other manufacturers of electrical communication equipment; the cost of and sale prices of equipment, material, or devices to operating companies of users; the profits upon such sales and the effect of such sales upon the rates or upon the rate base of operating companies when used as a basis for charges; and the probable savings to operating companies and the public by purchasing equipment under a system of competitive bidding.

"(c) The reasonableness of rates and charges; and, the extent to which subscribers or users of communications services have borne the cost of research and development, including but not limited to the maintenance and support of Bell Telephone Laboratories, Incorporated.

"(d) The effect of monopolistic control upon the reasonableness of rates and charges, upon competition in the communications industry, and upon the character of services rendered, and any unfair or discriminatory practices.

"(e) The effect of mergers, consolidations, and acquisitions of control in the communications industry, including the determination of whether there has been any 'write-up' in the purchase price of property, equipment, or intangibles, the fairness of the terms and conditions of any merger, consolidation, or acquisition, and the public interest therein, and the effect thereof upon rates or service.

"(f) The accounting methods of the communications common carriers, particularly with reference to depreciation and reserve accounting, apportionment of investment, revenues, and expenses between State and interstate operations, employee pension funds, executive compensation, and valuation of properties for both rate and tax purposes.

"(g) The methods of competition by communications common carriers amongst themselves and with other companies including the determination of whether or not there has been any sale or refusal to buy from or sell to competing companies, or suppression of patents, and the expansion of communications common carrier companies into various fields.

"(h) Whether or not the communications common carriers have sought through propaganda or the expenditure of money or the control of channels of publicity to influence or control public opinion, legislative or administrative action, or elections.

"(i) All other matters in any way bearing on the reasonableness of rates and charges, quality of service, the extent of concentration, and competition in the communications industry.

"Sec. 503. As used in the resolution the term 'communications common carrier' shall include all subsidiary, affiliated, associated, and holding companies or corporations and all companies directly or indirectly associated or connected with telephone companies, either by direct or indirect stock ownership, interlocking directorates, voting trusts, holding or investment companies, or any other direct or indirect means.

"Sec. 504. For the purposes of this resolution the Federal Communications Commission is hereby authorized to hold hearings; to contract for stenographic reporting service; to utilize its regular personnel, facilities, jurisdiction, and powers insofar as practicable; and to employ for the purposes of this investigation such additional experts, including engineering, accounting, legal, and other assistants as may be found necessary, without regard to the provisions of other laws applicable to the employment and compensation of officers and employees of the United States; and to make such other expenditures, including necessary travel expenses, and expenditures for printing and binding, as it deems necessary. The Commission is also hereby authorized to have access to, upon demand, for the purposes of examination, and the right to copy, any books, papers, correspondence, memorandums, and other records of any person, partnership, company, or other organization being investigated, whether such books, papers, correspondence, memorandums, or records are in the possession of the company under investigation or are in the possession of other persons, firms, or corporations; to require by subpena the attendance and testimony of witnesses and the production of books, papers, correspondence, memorandums, and other records which the Commission deems relevant or material to the inquiry, at any designated place of hearing within the United States; to administer oaths and affirmations, to require persons, partnerships, companies, or other organizations to submit to the Commission in writing reports and answers to specific questions, furnishing such information as the Commission may require relative to the inquiry. Such reports and answers shall be made under oath or otherwise as the Commission may prescribe and shall be filed with the Commission within such reasonable period as the Commission may prescribe, unless additional time be granted in any case by the Commission. In case of contumacy or the refusal to obey any subpena or other order issued hereunder, the Commission may invoke the aid of any court of the United States, within the jurisdiction of which such inquiry is carried on, or where such party guilty of contumacy or refusal to obey resides or has his place of business, in requiring obedience to such subpena or other order and any such court of the United States shall have jurisdiction to issue its order enforcing such subpena or other order of the Commission in whole or in part; and any failure to obey such order of the court may be punished by such court as a contempt thereof. All process in such cases may be served wherever the defendant may be found.

"Sec. 505. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $3,265,900, to be made immediately available to the Federal Communications Commission for the purposes of the investigation and report herein authorized and directed, and the Commission shall make special reports to Congress on its progress and its findings in this investigation."

Strike out all after the enacting clause, and insert in lieu thereof the following:

"That (a) the President is authorized and requested to transmit to the Congress at the earliest practicable time a proposed plan, consistent with the provisions of this Act, for the creation of a corporation to establish and operate, in cooperation with Government agencies, a commercial worldwide communications system using communications satellites in space and related terrestrial installations.

"(b) Such plan shall contain appropriate provisions to insure that—

"(1) the corporation so established shall be privately owned;

"(2) the stock thereof shall be issued in such manner as to encourage the widest distribution to the American public;

"(3) such satellite communications system would be competitive with, and not merely supplemental to, existing systems of terrestrial communications;

"(4) such system could not become subject to direct or indirect ownership or control by one or more existing communications common carriers;

"(5) adequate capitalization is provided for the establishment and operation of the communications satellite system until such time as its revenues will assure the profitable operation thereof without governmental assistance.

"(c) Such plan shall contain such other provisions as the President may deem appropriate to provide for the establishment as expeditiously as practicable of a commercial communications satellite system, as a part of a global communications network, which will be responsive to public needs and national objectives, which will serve the communication needs of the United States and other countries, and which will contribute to world peace and understanding."

On page 20, line 12, after the word "needs" insert "for impartial and complete information"; and after the word "objectives" in the same line insert the following: "of an informed electorate and the success of the private, competitive economic system".

On page 30, line 25, immediately after the words "shall be", insert the following: "organized under the District of Columbia Business Corporation Act. It shall be".

On page 32, line 20, immediately following the period, insert the following: "Compensation of the directors, the president, and all other officers of the corporation shall be fixed at levels which shall have been determined by the Commission to be reasonable, but in no case shall such compensation be in excess of $35,000 per annum. It shall be unlawful for the corporation to adopt any stock option plan or similar plan of compensation for directors, officers, or other employees of the corporation. Any pension plan or retirement plan for directors and/or officers of the corporation shall be subject to approval by the Commission, and shall be fixed at levels determined to be reasonable in view of the compensation paid by the corporation to the individuals covered and the term of employment of such individuals with the corporation."

On page 38, following line 14, insert the following and renumber the succeeding sections accordingly:

"SEC. 403. The Communications Act of 1934, as amended, is amended as follows:

"(1) paragraph (2) of subsection (c) of section 222 of said Act is hereby repealed.

"(2) Notwithstanding any provision, in any consolidation or merger of domestic telegraph carriers heretofore approved by the Federal Communications Commission pursuant to said section 222 for the divestment of the international telegraph operations theretofore carried on by any party to the consolidation or merger and notwithstanding any order heretofore made by said Commission with respect to such divestment the consolidated or merged carrier resulting from any such consolidation or merger shall not be under any requirement for the divestment of its international telegraph operations."

Mr. LONG of Louisiana. Mr. President, I have a number of other amendments at the desk. They are printed and are at the desk. I believe, perhaps, there are two or three. I have two in my hand.

I ask unanimous consent that those amendments may be considered as read.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Louisiana?

The Chair hears none; and, without objection, the amendments will be considered as read.

The amendments are as follows:

Strike out all after the enacting clause, and insert in lieu thereof the following: "That (a) the President is authorized and requested to transmit to the Congress at the earliest practicable time a proposed plan, consistent with the provisions of this Act, for the creation of a corporation to establish and operate, in cooperation with Government agencies, a commercial worldwide communications system using communications satellites in space and related terrestrial installations.

"(b) Such plan shall contain appropriate provisions to insure that—

"(1) the corporation so established shall be privately owned;

"(2) the stock thereof shall be issued in such manner as to encourage the widest distribution to the American public;

"(3) such satellite communications system would be competitive with, and not merely supplemental to, existing systems of terrestrial communications;

"(4) such system could not become subject to direct or indirect ownership or control by one or more existing communications common carriers;

"(5) adequate capitalization is provided for the establishment and operation of the communications satellite system until such time as its revenues will assure the profitable operation thereof without governmental assistance.

"(c) Such plan shall contain such other provisions as the President may deem appropriate to provide for the establishment as expeditiously as practicable of a commercial communications satellite system, as a part of a global communications network, which will be responsive to public needs and national objectives, which will serve the communication needs of the United States and other countries, and which will contribute to world peace and understanding."

On page 33, line 11, after the word "person", insert the following: "*Provided, however,* That Congress expressly reserves the right to direct the Commission to require any communications common carrier to divest itself of part of all of its voting stock in the corporation in an amount determined by Congress, such direction and determination, if any, to be made subsequent to review by Congress of the report by the Commission authorized and directed by title V of this Act."

On page 40, following line 14, insert the following:

"TITLE V—FEDERAL COMMUNICATIONS COMMISSION'S INVESTIGATION OF THE COMMUNICATIONS INDUSTRY

"SEC. 501. It is necessary, in aid of legislation by the Congress and for the use of governmental agencies, particularly with respect to space satellite communications and other rapidly advancing areas of communication technology; for the information of the general public; as an aid in providing more effective rate regulation; and for other purposes in the public interest; that accurate and comprehensive information be procured and compiled regarding both the domestic and international operations of American Telephone and Telegraph Company and other communication common carriers.

"SEC. 502. The Federal Communications Commission is hereby authorized and directed to investigate and report to the Congress no later than January 20, 1964, on the following matters with respect to the American Telephone and Telegraph Company and other communication common carriers, including all of their subsidiary, affiliated, associated, and holding companies, and any other companies in which any of them have any direct or indirect financial interest, or which have any such interest in them, or in which any of their officers or directors hold any office or exert any control or whose officers or directors hold any office or exert any control in them. The report shall give particular emphasis to all aspects of the following matters which have occurred since 1939:

"(a) The corporate and financial history, and the capital structure and the relationship of such company and of its subsidiary, affiliated, associated, and holding companies, including the determination of whether or not such structure may enable them to evade regulation or taxation, or to conceal, pyramid, or absorb profits, or to do any other act contrary to the public interest.

"(b) The extent and character of intercompany service contracts and all transactions between communications common carriers and their subsidiaries, affiliated, associated, or holding companies, and particularly between the American Telephone and Telegraph Company and the Western Electric Company and other manufacturers of electrical communication equipment; the cost of and sale prices of equipment, material, or devices to operating companies or users; the profits upon such sales and the effect of such sales upon the rates or upon the rate base of operating companies when used as a basis for charges; and the probable savings to operating companies and the public by purchasing equipment under a system of competitive bidding.

"(c) The reasonableness of rates and charges; and, the extent to which subscribers or users of communications services have borne the cost of research and development, including but not limited to the maintenance and support of Bell Telephone Laboratories, Incorporated.

"(d) The effect of monopolistic control upon the reasonableness of rates and charges, upon competition in the communications industry, and upon the character of services rendered, and any unfair or discriminatory practices.

"(e) The effect of mergers, consolidations, and acquisitions of control in the communications industry, including the determination of whether there has been any 'writeup' in the purchase price of property, equipment, or intangibles, the fairness of the terms and conditions of any merger, consolidation, or acquisition, and the public interest therein, and the effect thereof upon rates or service.

"(f) The accounting methods of the communications common carriers, particularly with reference to depreciation and reserve accounting, apportionment of investment, revenues, and expenses between State and interstate operations, employee pension funds, executive compensation, and valuation of properties for both rate and tax purposes.

"(g) The methods of competition by communications common carriers amongst themselves and with other companies including the determination of whether or not there has been any sale or refusal to buy from or sell to competing companies, or suppression of patents, and the expansion of communications common carrier companies into various fields.

"(h) Whether or not the communications common carriers have sought through propaganda or the expenditure of money or the control of channels of publicity to influence or control public opinion, legislative or administrative action, or elections.

"(i) All other matters in any way bearing on the reasonableness of rates and charges, quality of service, the extent of concentration, and competition in the communications industry.

"SEC. 503. As used in the resolution the term 'communications common carrier' shall include all subsidiary, affiliated, associated, and holding companies or corporations and all companies directly or indirectly associated or connected with telephone companies, either by direct or indirect stock ownership, interlocking directorates, voting trusts, holding or investment companies, or any other direct or indirect means.

"SEC. 504. For the purposes of this resolution the Federal Communications Commission is hereby authorized to hold hearings; to contract for stenographic reporting service; to utilize its regular personnel, facilities, jurisdiction, and powers insofar as practicable; and to employ for the purposes of this investigation such additional experts, including engineering, accounting, legal, and other assistants as may be found necessary, without regard to the provisions of other laws applicable to the employment and compensation of officers and employees of the United States; and to make such other expenditures, including necessary travel expenses, and expenditures for printing and binding, as it deems necessary. The Commission is also hereby authorized to have access to, upon demand, for the purposes of examination, and the right to copy, any books, papers, correspondence, memorandums, and other records of any person, partnership, company, or other organization being investigated, whether such books, papers, correspondence, memorandums, or records are in the possession of the company under investigation or are in the possession of other persons, firms, or corporations; to require by subpena the attendance and testimony of witnesses and the production of books, papers, correspondence, memorandums, and other records which the Commission deems relevant or material to the inquiry, at any designated place of hearing within the United States; to administer oaths and affirmations, to require persons, partnerships, companies, or other organizations to submit to the Commission in writing reports and answers to specific questions furnishing such information as the Commission may require relative to the inquiry Such reports and answers shall be made under oath or otherwise as the Commission may prescribe and shall be filed with the Commission within such reasonable period as the Commission may prescribe, unless additional time be granted in any case by the Commission. In case of contumacy or the refusal to obey any subpena or other order issued hereunder, the Commission may invoke the aid of any court of the United States, within the jurisdiction of which such inquiry is carried on, or where such party guilty of contumacy or refusal to obey resides or has his place of business, in requiring obedience to such subpena or other order and any such court of the United States shall have jurisdiction to issue its order enforcing such subpena or other order of the Commission in whole or in part; and any failure to obey such order of the court may be punished by such court as a contempt thereof. All process in such cases may be served wherever the defendant may be found.

"SEC. 505. There is hereby appropriated, out of any money in the Treasury not otherwise appropriated, the sum of $3,265,900, to be made immediately available to the Federal Communications Commission for the purposes of the investigation and report herein authorized and directed, and the Commission shall make reports to Congress on its progress and its findings in this investigation."

Mr. YARBOROUGH. Mr. President, will the distinguished Senator from Louisiana yield to me so that I may make a unanimous-consent request?

Mr. LONG of Louisiana. I yield the floor.

The ACTING PRESIDENT pro tempore. The Senator from Texas [Mr. YARBOROUGH] is recognized.

Mr. YARBOROUGH. Mr. President, I ask unanimous consent that the six amendments I sent to the desk on June 15 may be considered as read, that the reading of the amendments may be dispensed with, and that they may be printed in the RECORD.

The ACTING PRESIDENT pro tempore. Is there objection to the request of the Senator from Texas? The Chair hears none, and it is so ordered.

The amendments are as follows:

On page 38, strike out lines 3 through 14 and insert in lieu thereof the following:

"CONDUCT OF FOREIGN NEGOTIATIONS

"SEC. 402. The corporation shall not enter into negotiations with any international agency, foreign government, or entity, without a prior notification to the Department of State, which will conduct or supervise such negotiations. All agreements with any such agency, government, or entity shall be subject to the approval of the Department of State."

On page 35, line 3, strike out "20" and insert in lieu thereof "5".

On page 35, line 6, strike out "authorized".

On page 33, line 6, strike out "initially offered".

On page 33, line 8, strike out the period and insert in lieu thereof "and among the communications common carriers.".

On page 31, lines 2 through 4, strike out the sentence beginning with "The" and ending with "reserved."

On page 29, strike out lines 9 through 19, and insert in lieu thereof the following:

"(7) grant appropriate authorization to the corporation for the construction and operation of each satellite terminal station. No satellite terminal shall be owned or operated by any corporation, partnership, firm, or entity other than the corporation."

On page 30, lines 6 and 13, strike out "or carriers".

On page 26, lines 10 and 11, strike out "cooperate with the corporation in research and development".

On page 26, strike out lines 10 through 12 and insert in lieu thereof the following:

"(2) to the extent deemed appropriate by the Administration in the public interest, cooperate with the corporation in research and development and require the corporation to engage in research and development on behalf of the United States in return for which the corporation shall receive reasonable reimbursement;".

Mr. YARBOROUGH. Mr. President, I should like to have the attention of the distinguished Senator from Louisiana for a minute.

In connection with the colloquy between the distinguished Senator from Louisiana and the distinguished junior Senator from Tennessee earlier, I understood there was read into the RECORD a resolution of the Western States Democratic Conference, of the 13 Western States, which has been meeting in the West, opposing the bill.

Mr. LONG of Louisiana. Mr. President, if the Senator will yield for a question, might I suggest that what was read into the RECORD was a brief note from the ticker to the effect that the Senator has stated. The resolution itself was not read.

Mr. YARBOROUGH. I thank the distinguished Senator from Louisiana.

I believe the Senator would be interested in knowing that his efforts have not gone unnoticed in this country. I hold in my hand a copy of a resolution I received today in my office from the steering committee of the Westwood Democratic Club of Beverly Hills, Los Angeles, Calif.:

AUGUST 2, 1962.

At a meeting held August 1, 1962, of the steering committee of the Westwood Democratic Club, the following resolution was adopted:

"We, the steering committee of the Westwood Democratic Club, wish to commend the public-spirited Senators who are conducting a principled fight for public control of the space communications program."

JAMES O. PALMER,
President, Westwood Democratic Club, Los Angeles, Calif.

(Copies of resolution sent to: President John Kennedy; Mr. Tom Carvey, president, California Democratic Council; Senators Kefauver, Morse, Neuberger, Gore, Long, Clark, Yarborough, Burdick, and Senate Majority Leader Mansfield.)

Though the next letter comes a distance far from my home, more than 1,000 miles, I wish to state that I have received many other communications. I think they are meant for all of the group of other Senators who are opposing this monopolistic giveaway. I read the letter:

AUGUST 7, 1962.

Senator YARBOROUGH,
Senate Office Building,
Washington, D.C.

DEAR SENATOR YARBOROUGH: Please accept my congratulations on the stand you took against the giveaway of our satellite communications system to the A.T. & T.

Keep up the good work.

Sincerely,

ERNEST TUTT.

WEST CORINA, CALIF.

I received another letter dated August 4, 1962, from Berkeley, Calif. I am from Texas. People over the country thousands of miles away know of the fight. I have before me a mere sampling of the messages. Since the main burden of the debate has been carried by the two Senators from Tennessee [Mr. KEFAUVER and Mr. GORE], the junior Senator from Louisiana [Mr. LONG], and the senior Senator from Oregon [Mr. MORSE], I wanted them to have the benefit of those messages, too.

The letter from Berkeley, Calif., reads as follows:

AUGUST 4, 1962.

MY DEAR SENATOR YARBOROUGH: From what I can glean from the Berkeley Daily Gazette (which is very little in the way of genuine news) I believe that you are opposed to the communications satellite bill because it would turn over to private corporations the management of space telecommunications. I fully approve of your stand, and hope that you will be able to hold out against the lobbyists.

I remember, 17 years ago, all the wonderful promises private industry made on the educational marvel of television. Since January of this year I have seen exactly two educational programs on television. When the Government turned over what should have been a public utility to private interests, that was the end of anything educational—or for that matter anything in the way of adult entertainment—in television. I consider it one of the greatest swindles of the American public in history.

I hope you will not allow the same thing to happen in the field of space communications.

Sincerely yours,

HILGER G. WALKER.

BERKELEY, CALIF.

I received another letter from California under date of July 30, 1962, as follows:

July 30, 1962.

Dear Senator Yarborough: Please continue the fight to keep the communication satellite system out of the grasping hands of A.T. & T. If A.T. & T. should gain control of this system any form of regulation would be totally impossible. It's hard enough to regulate them here on earth, what will happen when they are in the heavens. Please continue to fight for a Government-controlled system, and not the Kerr bill or the administration bill.

Respectfully yours,

John D. Zaver.

Fresno, Calif.

Mr. President, I take pleasure in reading a letter from my home county of Henderson in the eastern part of Texas:

August 8, 1962.

Hon. Ralph Yarborough,
U.S. Senate,
Washington, D.C.

Dear Sir: I am very much in favor of the fight you are making to keep Telestar. I feel otherwise we would be making a great mistake. Keep up the good work even though the odds seem to be against you. Because the odds are great but the action is right, I admire you very much.

I believe that we, the U.S. citizens, should own this marvelous thing and not give such tremendous wealth to corporations already much too powerful.

Thank you.

Johnnie M. Johnson.

Athens, Tex.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. LONG of Louisiana. Has the Senator noticed that while very few Senators have been present in the Chamber today for the debate, so far as the public is concerned, the galleries have been full almost all day?

Mr. YARBOROUGH. Yes. The Senator may be interested to learn something else in that connection. I asked two of the gentlemen on the elevators about the large number of people in the galleries. As the Senator from Louisiana knows, most of the young men who operate the elevators are students and are highly intelligent. They told me, the people here today have an inordinate interest in this subject. Most of the people who have come to the galleries today are Government employees who are opposed to this giveaway. That is why they are here. The elevator men heard those statements on the elevator. It is a tribute to the patriotism of the employees of the U.S. Government that they would take their Saturday vacation time to come to the Senate and listen, because they are opposed to the great heritage of the people of the United States being given away to one monopoly.

Mr. President, I see the Senator from Idaho [Mr. Church] is prepared to address the Chair. I shall take only 1 more minute.

I wish to read a message from Fort Worth, Tex. I am reading letters as samples from the large number of letters and telegrams I have received in support of my position. The quantity of such mail and telegrams exceeds anything in the way of approval communications I have received since I first came to the Senate. It is running 20 to 1. Generally the communications run 20 to 1 the other way. When I voted for foreign aid, the mail was about 20 to 1 against me.

But in number, it is the greatest quantity of approving messages I have received.

I next refer to a letter from Fort Worth, Tex. The writer states:

Fort Worth, Tex., *August 7, 1962.*

Senator Ralph Yarborough,
Washington, D.C.

Dear Senator: This is my first word to you—

I presume he means since I have been in the Senate—

and I am tardy about it, but I have admired your stand on keeping so international a thing as space communication satellites publicly owned and operated.

Another thing, even if you and the other defenders of public interests fail I will still give you my support.

Yours with respect,

Ben O. Miller.

These letters and telegrams show great understanding of the bill, despite the small amount of information that has been printed in the newspapers about what is involved.

I ask Senators to notice that phrase: "So international a thing as space communication satellites." The people understand. They have the intelligence to know what is at stake. If they had their way, the people would prevail.

I wish to point out another type of mail I have received. Generally, due to the issue of medical care, we have heard a great deal about doctors being opposed to progress. The opposition I get to the communications satellite bill comes from all groups of people. Every letter I have received from a medical doctor has indicated opposition to the proposed giveaway. I take my hat off for the stand of those people.

Here is a letter from Harry Fishbein, M.D.:

August 3, 1962.

Dear Senator: Congratulations on your effort to protect the public in the space communications bill.

Keep up the good work.

Sincerely,

Harry Fishbein, M.D.

P.S.—And I own A.T. & T. stock.

That is not the first letter I have received from a person saying, "I own A.T. & T. stock. It is good stock. I get good dividends, some tell me, but it is too much to give away space to them. I think they still can earn my dividends."

Here is another letter from a doctor in Lincoln, Nebr. He writes in part as follows:

I have followed your political career closely even though I have been out of the State of Texas for many years. I find you on the side of good legislation. Your stand on veterans' legislation is sound. Your recent remarks on the communication satellite bill which I have followed closely (Congressional Record) are good.

That is a medical doctor of keen perception who wrote me from Nebraska. He knows the issue. Let the people find out the issue and they will be with us. That is why the cloture petition was filed. The proponents are afraid that if the people find out what the issues are the outcome will be different.

Why are the proponents of the measure fearful of debate? Representatives of a television network came to the Senator from Tennessee [Mr. Gore] and another Senator—not myself—but one who has been more firmly identified with and knows the issues better than I, and those Senators agreed to debate the bill. The network agreed to 1 hour for education of the people on the issue. The Senator from Tennessee [Mr. Gore], who was too modest to say so, and the Senator from Oregon [Mr. Morse], the exponents of the position we take, said they would accept. The representatives of the broadcasting system returned days later and said that they had hunted among the proponents of the giveaway measure but could not find two of them who would appear on television and debate the issue before the people of the United States.

I do not think they are so much afraid of debate. I think they are afraid the people might find out what is contained in the bill and what is going on.

I make that statement based on letters I have received from people I do not know. Most letters, of course, are from people in my own State, but they are also from people in California, Nebraska, and other States.

Mr. LONG of Louisiana. Mr. President, will the Senator yield for a question?

Mr. YARBOROUGH. I yield.

Mr. LONG of Louisiana. Did I correctly understand the Senator to say that when an opportunity was accorded to all Senators who are fighting to push the bill through the Senate to appear on a nationwide television debate, with Senators who are against the horrible bill, they could not find a single Senator who would appear on television and debate the issue?

Mr. YARBOROUGH. Yes. Senators who are insisting on cloture because there is so much merit in the bill were afraid to talk before the whole American public on a nationally advertised program with 30 minutes free time. The Senator from Tennessee [Mr. Gore] and the Senator from Oregon [Mr. Morse] could not find opponents to meet them in such a debate.

Mr. KEFAUVER. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield.

Mr. KEFAUVER. Some of us always desire to appear on television. I am sure some of the proponents of the bill have also shared that desire. Has the Senator ever heard of Senators turning down an opportunity to appear on a nationwide television broadcast?

Mr. YARBOROUGH. In my whole life I have never heard of such a thing, particularly when only 2 Senators out of 80 Senators would be selected to sustain the position of the proponents. I point that out particularly because they would apply cloture and deny the constitutional right of other Senators to be heard.

Mr. LONG of Louisiana. Mr. President, will the Senator yield?

Mr. YARBOROUGH. I yield to the Senator from Louisiana.

Mr. LONG of Louisiana. Does it not appear strange that Senators who would apply a gag rule to the Senate do not care to be heard by the American people themselves?

Mr. YARBOROUGH. Well, I believe it pretty well illustrates why the effort is made to put into effect the gag rule. The ones responsible for it do not want this issue to be brought to the attention of the country, as this medical doctor writes to me, from Lincoln, Nebr., says. The proponents of the gag rule do not want the country to know what the issue is. This medical doctor took the time to write to me; and we all know how busy doctors are. He stated the heart of the issue when he said:

> The American people have paid the bill for the things that make this achievement possible. They should reap the maximum benefits. Most thinking American people will be with you as soon as the true nature of the issue is brought to their attention.

Mr. KEFAUVER. Mr. President, will the Senator yield for a question?

Mr. YARBOROUGH. I yield for a question.

Mr. KEFAUVER. I know that the Senator is a great historian, and that he has made a study of other efforts for gigantic giveaways, even though they were not as big as this one, and he knows about the pressures that were brought against Senator La Follette and Senator Norris and Senator Shipstead and other Senators. Is this a similar situation to the fight those great Senators fought to prevent a kind of giveaway that we are subjected to here? Is this the same sort of pressure to give something away in a hurry? If so, would the Senator elaborate on that subject?

Mr. YARBOROUGH. Yes. It is an amazing thing, that in the past, when small groups of Senators, just like our small group, were opposed to some giveaway, and when Senator Norris and Senator La Follette and Senator Sherman, of Illinois, opposed the giveaway, they were joined in those efforts in the great Northwest, in Montana and in Idaho. I wish the present occupant of the chair (Mr. METCALF presiding) would join with us, because I know his heart is with us——

Mr. KEFAUVER. I am sure it is.

Mr. YARBOROUGH. The heritage of his State is with us. Burton K. Wheeler joined Bob La Follette and McNary. Unfortunately there was a Democratic-Republican coalition, something like the present coalition, and at that time it was a group of Republican Senators who poured so much contumely and reproach upon them. They were called the "sons of the wild jackass." Nevertheless the efforts of these great Senators, after filibustering for 15 years saved the TVA. That is how TVA was saved, Mr. President. They also saved the national forests. I certainly thank the Senator from Oregon [Mrs. NEUBERGER], from that great State from which Senator McNary came, for living in the tradition of that great Senator McNary. The national forests were saved in the same way.

This is the first time in my service in the Senate that I have received such an outpouring of letters on a subject like this.

Incidentally, there is another difference, too, between what is happening now and what happened then. Then the newspapers called these men obstructionists and other things. There is a difference, however, because this time, despite the snide remarks, the people are already with us. At that time it took years for the people to be with those men who fought for the interests of the people. This time the people have caught the issue. This new invention, Telstar, caught the imagination of the people, and they know about it, and they are writing to us about it. They know that the Government did most of this. The people have learned that 99 percent of all the research in space and that all the space sciences in the United States have been paid for by the people of the United States out of withholding taxes on their salaries and on their earnings and wages. They know that they have paid for this.

Of course, it has been developed by a private corporation, but that is all under Government contract, with cost-plus provisions.

We intend that private companies would build the equipment. If the bill proposed by the distinguished Senator from Tennessee for Government ownership is made law, the Government would not go into the building of the equipment. It would not go into the telephone business or into the telegraph business, or the communications business. It would put the satellite in space. It would be like the Government's relationship to the Panama Canal.

The argument has been said that the Government cannot run anything efficiently. Whoever says that is apparently forgetting about the Panama Canal. Right now, the tolls through the Panama Canal are the highest in our history. They are $60 million a year, with $4 or $5 million in net profit. Ten years ago 40 percent of all the shipping through the Panama Canal was U.S. shipping. Today foreign commerce has grown so much with all the nations of the world that only 20 percent of the tonnage through the Panama Canal is American tonnage. However, we get the tolls on 80 percent of the foreign tonnage. We have done that because we decided not to put any shackles on the development of the Panama Canal. If we continue to develop this new communications system as we developed the Panama Canal, as other nations become more literate and raise their standard of living nearer to our standard of living, the time will come when we will be paid tolls, if we put up a responsible system and not turn it over to this gigantic corporation.

It would have been just as logical in the days of the building of the Panama Canal to turn it over to a steamship line, on the theory that the United States did not know the shipping business. We are told that because A.T. & T. knows the telephone business, that we should turn over the space satellite system to A.T. & T. It would have been as logical in 1903 to turn the Panama Canal over to Moore-McCormack or some other steamship line, because, it was said, the U.S. Government does not know the shipping business, and therefore, we should give them the Panama Canal.

At that time Teddy Roosevelt was in the White House. He would not listen to that kind of argument. The Panama Canal was not turned over to a shipping company. It was turned over to the Panama Canal Company, which is an instrumentality of the U.S. Government.

I wish to illustrate further how word is getting out on this matter.

I have here a telegram from Graham, Tex. It reads:

> Keep up the good fight for ownership. All people my town stand behind you.

We never had such a unanimity of opinion on anything in the 5⅓ years that I have been in the Senate. This is the vastest thing that I have ever seen in my service here. There has been nothing to touch this in extent during my service in the Senate.

Mr. President, when Columbus discovered America the average family in England was living in a one-room house, with a dirt floor, with no windows. That is how the average family lived. His discovery had a great influence on learning and on men's minds, and it stirred the spirit of curiosity, and certainly stirred people to better their standard of living, and created a desire for a change. The standard of living is still improving.

I predict that as we continue to use space for these peaceful purposes, its influence will be greater than the discovery of America had on Europe.

I have a letter which I received from Mr. H. D. Shoup, the manager of the Western Union Telegraph Co. at Nacogdoches, Tex. He says:

> AUGUST 8, 1962.
>
> Hon. RALPH W. YARBOROUGH,
> *U.S. Senator,*
> *Washington, D.C.*
>
> DEAR SENATOR: As a longtime employee of the Western Union Telegraph Co., nearing the age of retirement and with a keen interest in the future of the company. I wish to most strongly urge you to reject the Senate bill S. 2814.
>
> As you know, this bill will eventually give the giant American Telegraph & Telephone Co. a monopoly in the coming satellite communication system.
>
> The Federal Communications Commission has already given the Bell System authority to get into the written communication telegraph business in a way that is very unfair to our company. They only take over the cream of the crop by setting up systems for the larger accounts in each community, whereas, we must make our telegraph service available to every individual and deliver to every remote section of the city. In some cases, no doubt, the delivery cost to us is more than we got out of the telegram in the first place. Since the telephone company does not have to furnish this type of service, naturally they are very unfair competition. Something should also be done about this as well as defeating Senate bill S. 2814.
>
> If us taxpayers are going to have to foot most of the bill for the satellite system, then

certainly no one individual, or company, should be given a monopoly on it.

Knowing your record and your past sincere efforts in behalf of all of us, I feel sure you will do everything you possibly can to defeat this bill.

Yours very truly,

H. D. Shoup,
Manager.

I have received other messages of that nature from other persons who are alarmed by the squeeze which is threatened by the proposed monopoly. I ask unanimous consent that these and other messages I have received be printed at this point in the Record.

There being no objection, the messages were ordered to be printed in the Record, as follows:

Monahans, Tex., *August 8, 1962.*

Hon. Ralph Yarborough,
U.S. Senate,
Senate Office Building,
Washington, D.C.:

Please reject Senate bill 2814, keep satellite communications system free from monopoly.

Mrs. Bobbie Minor.

Palestine, Tex., *August 8, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Please oppose S. 2814. Giant telephone monopolistic A.T. & T. has already invaded telegraphic communications field destroying jobs.

Mr. and Mrs. H. S. Loyd.

Arlington, Tex., *August 9, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Keep up the good fight on the communications satellite bill.

Mr. and Mrs. Richard E. Barnes.

Paris, Tex., *August 9, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Please vigorously oppose Senate bill 2814. We, employees telegraph industry, don't want A.T. & T. monopoly satellite communications.

L. N. Guest.

San Angelo, Tex., *August 9, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Senate bill 2814 is an injustice to the American taxpayer.

Mrs. Delores Adams.

McKinney, Tex., *August 8, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

I urge you to reject Senate bill 2814, it would give a monopoly.

T. J. Holloway.

Plainview, Tex., *August 8, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Will appreciate your opposing Senate bill 2814. If passed will give too much domination by A.T. & T.

Eddie Wilcox.

Corsicana, Tex., *August 8, 1962.*

Senator Ralph Yarborough,
Senate Building, Washington, D.C.:

Strongly urge your vote, influence against S. 2814 communications satellite system. A.T. & T. is too monopolistic now.

E. W. Gruschow.

Del Rio, Tex., *August 8, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Senate bill 2814 should be rejected; in present form it gives A.T. & T. a monopoly.

A. O. George.

Amarillo, Tex., *August 9, 1962.*

Senator Ralph Yarborough,
Washington, D.C.:

Please reject Senate bill 2814 in the interest of all free Americans.

Juanita Sadler,
President, Commercial Telegraphers Union Local 10, Western Union Telegraph Co.

Mr. YARBOROUGH. Mr. President, without taking the time to read them all, I shall give a sampling of a number of messages I have received. I shall take only 2 or 3 minutes.

Here is one from Odessa, Tex.:

Respectfully urge you reject Senate bill S. 2814 and keep satellite communications free from monopoly.

C. S. Briggs.

Here is one from Port Arthur, Tex.:

Deepest thanks. Continue good fight to keep space satellite for U.S. public who bought it.

Samuel Schiffer.

Here is one dated August 10, from Fort Worth, Tex.:

We strongly support your courageous stand on the Telstar issue. We always knew you are on the side of the people, and our pride in your fine record continues.

With warm best wishes,

Charles and James Murphy.

Mr. President, the people are waking up. A cloture motion has been filed despite the fact that the bill has not been thoroughly debated. On our side, at least five Senators have not spoken a word on the bill. No Senator on our side of the question has yet delivered two speeches. Cloture motions have been filed before, but they were filed after Senators who were in the minority had each spoken a day or two. We have not had sufficient time to present our case. We who are opposed to the bill have not had time to make speeches.

The light as to what is at stake is just beginning to reach 180 million people.

The communications I have read are representative of the awakening that is taking place throughout the country. I have been receiving messages from west of the Mississippi. The people in that area of the country are being stirred up. I hope we shall have an opportunity to debate the bill until the country learns what is actually at stake.

Mr. CHURCH. Mr. President, for myself and on behalf of the distinguished senior Senator from Ohio [Mr. Lausche], I send to the desk an amendment to the bill and ask that it be read and printed in the regular manner, and lie on the table.

The PRESIDING OFFICER. The amendment will be stated.

The Legislative Clerk. On page 25, line 26, immediately after the word "needs," it is proposed to insert the following: "or if otherwise required in the national interest."

The PRESIDING OFFICER. The amendment will be received and printed, and will lie on the table.

Mr. CHURCH. Mr. President, the purpose of the amendment is to make the operative language of the bill itself conform with one of its most important declared purposes. Under the declaration of policy and purpose of the bill, section 102(d) reads:

> (d) It is not the intent of Congress by this Act to preclude the use of the communications satellite system for domestic communication services where consistent with the provisions of this Act nor to preclude the creation of additional communications satellite systems, if required to meet unique governmental needs or if otherwise required in the national interest.

The wisdom of this last clause "or if otherwise required in the national interest" is perfectly apparent. We cannot now foretell how well the corporate instrumentality established by this act will serve the needs of our people. If it should develop that the rates charged are too high, or the service too limited, so that the system is failing to extend to the American people the maximum benefits of the new technology, or if the Government's use of the system for, say, Voice of America broadcasts to certain other parts of the world, proves to be excessively expensive for our taxpayers, then certainly this enabling legislation should not preclude the establishment of alternative systems, whether under private or public management. And just as certainly is that gateway meant to be kept open, in case we should ever need to use it, by the language to be found in the bill's declaration of policy and purpose to which I have referred.

However, when it comes to the operative language of the bill itself, the all-important phrase "or if otherwise required in the national interest" has been left out. The pertinent part of the bill, section 201(a)(6), reads:

> (a) the President shall—
>
> (6) take all necessary steps to insure the availability and appropriate utilization of the communications satellite system for such general governmental purposes as do not require a separate communications satellite system to meet unique governmental needs;

It will be seen that the substantive part of the bill not only creates one monopoly, but requires the Government to use it, excepting only such Government use of a separate system as may be required to meet "unique governmental needs." All of the testimony before the Senate Foreign Relations Committee—that given by both the Secretary of State and the Secretary of Defense—bears out the fact that a very narrow definition is being given to the term "unique governmental needs." The legislative history of the bill, made before the committee, makes it clear that this term is meant to embrace only functions of a highly classified nature, extremely restricted in their scope. In effect, the gateway meant to be left open in the bill's declaration of policy and purpose is slammed almost shut in the substantive language of the bill itself.

The amendment would correct this serious defect in the bill by making the language of section 201(a)(6) conform with the language used in the last clause of section 102(d), adding "or if otherwise required in the national interest" to the substantive provisions of the bill.

This amendment has the approval of the Secretary of State and so, I take it, of the administration.

I think the amendment is very much in the public interest. I hope the Senate will adopt it.

Mr. LAUSCHE. Mr. President, I have joined the Senator from Idaho as a sponsor of the amendment. I think the amendment is sound and ought to be adopted. If it is not adopted, the bill is likely to lead to grave confusion at a later date, in the event the Department of Defense or the U.S. Information Agency seeks to establish a communications system of its own, not to broadcast secret military information, but to present to the people of the world the true image, the good image, of America.

An examination of the bill will reveal that the declaration of policy specifically states that the passage of the bill will not preclude the creation of additional communications satellite systems if they are required to meet the unique governmental needs or if otherwise required in the national interest.

As the Senator from Idaho understands, that language is contained in the declaration of policy.

When we consider the responsibilities imposed upon the President in a very vital section of that title, the language used states that new satellite systems may be created in order to meet unique conditions. The provision is devoid of any language warranting the establishment of a governmental satellite system if the public interest requires it.

Mr. CHURCH. The Senator from Ohio is absolutely correct.

Mr. LAUSCHE. I ask this question of the Senator from Idaho: Does not our amendment contemplate placing in the substantive part of the bill the same language that is included in the declaration of policy?

Mr. CHURCH. That is the purpose of the amendment; and in so doing we make certain that the door is left open for the Government to establish an alternative system, if experience should show that the national interest requires it. This might be done for many reasons that cannot now be foretold; but the language of the bill not only would establish a single instrumentality which would own and operate the communications satellite system, but would require that the Government use that instrumentality. The Government would be deprived of the right to set up any kind of alternative system except for "unique governmental purposes."

The Senator from Ohio has well pointed out, and I have tried to do so in my introductory statement, that the testimony of the Secretary of State and the Secretary of Defense before the Committee on Foreign Relations makes it perfectly clear that the term "unique governmental need" is very narrowly confined to highly classified functions. Therefore, the bill in its present form fails to carry out the declared policy and purpose which appears in the preamble of the bill.

Mr. LAUSCHE. Mr. President, will the Senator from Idaho yield?

Mr. CHURCH. I am happy to yield.

Mr. LAUSCHE. The report submitted by the Committee on Commerce, which took testimony and considered the bill, specifically states that the word "unique" applies to what would normally be secret military information being distributed around the world.

Therefore, Mr. Murrow testified that in the event the USIA decides it needs a satellite communications system to present to the people of the world the image of America, the cost to us will be $1 billion a year. So it may be advisable, for that purpose, to establish our own communications satellite system, in order to obviate such an inordinate expense. And if the amendment of the Senator from Idaho is adopted, we shall have this in reserve, to use it if we want to.

Mr. CHURCH. And we can be assured that the public interest will be fully protected if experience demonstrates that this is in the best interests of the country.

Mr. LAUSCHE. I thank the Senator from Idaho.

Mr. CHURCH. Mr. President, I am very much pleased that the Senator from Ohio joins me in submitting the amendment, and I hope the bill will be amended in this respect.

Mr. LAUSCHE. Mr. President, I send to the desk two amendments to the bill.

The ACTING PRESIDENT pro tempore. The amendments of the Senator from Ohio will be read.

Mr. LAUSCHE. Mr. President, I ask that the amendments be printed and treated as having been read.

The ACTING PRESIDENT pro tempore. Without objection, it is so ordered.

Mr. KEFAUVER. Mr. President, I send to the desk an amendment which has not previously been at the desk, and ask that the amendment be treated as read and printed in the RECORD.

The ACTING PRESIDENT pro tempore. Is there objection? Without objection, it is so ordered.

Mr. KEFAUVER. Mr. President, let me explain the amendment, for it is a very important one.

I think one of the defects of the bill which is fatal is that neither the President nor the Federal Communications Commission has the right to require a change from one system to another—that is to say, from a low-altitude system to a high-altitude communications system. That would be left entirely in the hands of the private corporation, which might not be in the best interests of the Nation.

This amendment gives the President the right to make that decision.

Mr. President, my brief remarks at this point will be rather technical. For some time I have wanted to analyze some of the grave inequities under various parts of the bill. I have not listed all of them. I know that not many Senators are now in the Chamber to follow a technical discussion of the bill. But I hope the Senators who are in the Chamber at this time will obtain a copy of the bill and will follow my presentation, line by line. If any statement I make is not correct, I shall be very glad to be challenged, although I believe my statements will be correct.

These technical but very important matters do not go to the philosophy of the bill, which I believe is wrong; neither do they relate to its foreign policy aspects, which have been thoroughly discussed by other Senators. But I believe the RECORD should contain my statement, so that Senators who study the bill and read the RECORD will see that the bill is very deficient, unclear, and unfair to the Government in many, many respects.

First, I turn to page 20, line 19, which deals with global coverage:

> In effectuating this program, care and attention will be directed toward providing such services to economically less developed countries and areas as well as those more highly developed—

That is indeed an intention which has been expressed by the President and by all of us who want the developing nations to have this opportunity. It is claimed that that can be done by relying upon section 214(d) of the Federal Communications Act. But apparently that section will not be sufficient, because even with section 214(d) of the act the Federal Communications Commission has never been able to get the A.T. & T. or the telephone companies to expand their service into the rural areas of the United States where the service may not be so profitable.

As a result, rural telephone cooperatives have had to be established for the purpose of getting telephone service to those who live in the rural sections of the United States.

Second, if Senators will turn—and, also, if any members of the press have copies of the bill and will follow this presentation, I shall appreciate it very much—to page 21, line 16, they will observe that it refers to the activities of the corporation, and states that the activities "of the corporation shall be consistent with the Federal antitrust laws."

Mr. President, what is "consistent with the Federal antitrust laws"? I do not know. Before the committee, I urged that the corporation be required to be responsible under the antitrust laws, in the same way that any other corporation must be. But for some reason such a provision has been omitted; and the bill does not provide that the corporation shall be subject to the penalties of the Sherman Act, the Clayton Act, or any of the other antitrust laws which apply to all other corporations. So the apparent intent here is not to bring this corporation under the antitrust laws—although I feel it is absolutely necessary that the corporation be brought under them if we are to have protection against further expansion of monopoly and if there is to be protection for small suppliers of hardware who might wish to produce electrical equipment or whatnot for the corporation.

Third, on page 21, we find this:

> (d) It is not the intent of Congress by this Act to preclude the use of the communications satellite system for domestic

> communication services where consistent with the provisions of this Act.

Mr. President, this provision, together with the history, shows what the Senator from Louisiana was saying—namely, that it is the intention of the corporation and of A.T. & T.—and it finds expression in the hearings and in this vague language—that the people of the United States not have the cheaper rates which will be possible between New York and Los Angeles or San Francisco by virtue of having satellites used—rates which would be very much cheaper than the rates for sending messages from one relay station to another.

Instead of this language, the bill should state that the intent is to encourage the domestic use, so that we can have lower telephone rates and lower rates for the transmission of radio and television programs and lower rates to send messages to Hawaii, Alaska, and other parts of the United States.

The fourth point relates to what the distinguished Senator from Idaho [Mr. Church] and the distinguished Senator from Ohio [Mr. Lausche] have been discussing. At the bottom of page 21, line 22, it is provided, in effect, that the Government shall not have any other system unless it is "required to meet unique governmental needs." As Senators have said, the interpretation of that language, in the hearings and the reports, is that it applies only to secret messages, usually coded. Suppose the Government had another system for its "unique governmental needs," coded messages, secret, military, and had other channels which Ed Murrow and the USIA could use to send messages to all parts of the world. This language would make it impossible for the Government to use it as an instrument of foreign policy to enable people to know the United States, and bring all peoples closer together.

I turn now to page 22, line 6:

> The term "communications satellite system" refers to a system of communications satellites.

Then, beginning on line 14, on the same page, it states—

> the term "satellite terminal station" refers to a complex of communication equipment located on the earth's surface—

That is, ground stations.

So this language, together with the language on page 29, line 9, providing that either the satellite corporation or one or more authorized carriers may own ground stations, means that it is anticipated in the bill, and will undoubtedly be the case, that A.T. & T. will have its own ground stations, which will be the funnel through which messages will have to come and go; or it may be the I.T. & T. This arrangement would give them the key to control over rates or charges.

It was anticipated in the President's bill that the ground stations be owned by the corporation, so that they would be under the jurisdiction of the provisions of the act and the jurisdiction, to some extent, of the President and the Federal Communications Commission. But the satellites have been very cleverly separated from the ground stations.

I have pointed out, on page 29, line 9, it is made clear that one or more carriers can own the ground stations. Of course, the corporation will not own a communications system unless it owns the ground stations too. So the ground stations are left in the hands of private corporations.

The President is asking the people of the United States to invest money in this corporation, but if the ground stations are to go to the carriers, it will probably be difficult for the corporation to make enough money to pay back the investment the people may make.

I turn now to page 25 of the bill. Here is something that is very important and unprecedented in the history of our Nation. I refer to subsection (6), line 21. This is what the President is required to do:

> Take all necessary steps to insure the availability and appropriate utilization of the communications satellite system for such general governmental purposes.

And so forth.

In other words, the President works for the monopoly. The President and the Government cannot use their own system to send their own messages. The President must work for the monopoly, without any reciprocal work of the monopoly corporation being done for the President.

Let us go to page 26——

Mr. LAUSCHE. Mr. President, will the Senator yield without losing the floor?

The PRESIDING OFFICER (Mr. Hickey in the chair). Does the Senator yield?

Mr. KEFAUVER. I yield.

Mr. LAUSCHE. The amendment of the Senator from Idaho and the Senator from Ohio applies to subparagraph (6) of section 201. In this section there has been omitted the language which is in the declaration of policy, that the satellite communications system may be established to meet unique governmental needs, and, as stated in the declaration of policy, to meet the needs of the public interest. In this paragraph the public interest is not mentioned.

Mr. KEFAUVER. It was very cleverly left out, and for a good purpose. What is desired is a continuing subsidy to the corporation. The President is to work for the corporation, so that, in the unique situation, if the Government establishes a system, it will not be used. Business is to be channeled through the commercial system probably at the same rates anyone else pays. That is a continuing subsidy even after the first giveaway to the communications carrier.

Mr. LAUSCHE. I thank the Senator.

Mr. KEFAUVER. I thank the Senator for his observation.

I turn now to page 26. I hope any Senator following the bill will look at page 26 for a moment. The President is also required to "exercise his authority so as to help attain coordinated and efficient use of the electromagnetic spectrum and the technical compatibility of the system with existing communications facilities both in the United States and abroad."

What does that mean? In my opinion, it means that the President shall be required to use the influence of the Presidency in behalf of a low-orbit system, which is to be compatible with existing communications facilities. The existing communications facilities, as of now and in the future, include the ground stations that A.T. & T. has at Andover, Maine, and the satellite which is going around the earth. So the President would be charged by law with making any further system compatible with existing facilities. They would tie us down irrevocably to a low-orbit system. In that connection, we should also look at page 28, line 20, wherein the Federal Communications Commission has to do something in that connection:

> Insure that facilities of the communications satellite system and satellite terminal stations are technically compatible and interconnected operationally with each other and with existing communications facilities.

Not only would the responsibility be put on the President, but also his hands would be tied to work with what A.T. & T. has. Also it would be made mandatory that the Federal Communications Commission work to assure compatability with what A.T. & T. has.

That is not right, Mr. President.

I ask Senators to look at page 26 of the bill. It refers to the National Aeronautics and Space Administration. It says that Administration shall "cooperate with the corporation in research and development to the extent deemed appropriate by the Administration in the public interest."

That is all one sided. NASA would be required to cooperate with the corporation in research and development, but there is no reciprocal requirement that the corporation cooperate with or give any assistance to NASA. It would be a one-way street.

I ask Senators to look again at page 26, near the bottom, subsection (5) which says that NASA shall "furnish to the corporation, on request and on a reimbursable basis, satellite launching and associated services required for the establishment, operation, and maintenance of the communications satellite system approved by the Commission."

If the corporation should start with the low-orbit system, NASA would have no discretion, but would have to cooperate and furnish boosters when the corporation wanted them, no matter how many that might be, and no matter what kind of adverse effect there might be on our space program. Boosters might be needed for that. Boosters might be needed for war or defense purposes. We are asked to write into law such a provision, no matter what the situation might be, no matter what great national emergency we might face. Regardless of the situation, NASA would have to furnish the corporation the boosters whenever the corporation called for them.

I ask Senators to look at page 27, line 11, in reference to insuring effective competition. The bill provides that the Federal Communications Commission shall "insure effective competition, including the use of competitive bidding where appropriate, in the procurement."

And so forth.

Under that language A.T. & T. or RCA could write its specifications so that only its own manufacturing company could meet the specifications.

For a long time the Federal Communications Commission has had the power to require competitive bidding, but practically all the hardware that A.T. & T. buys comes from Western Electric, and is manufactured by them. Of course, Western Electric has made good profits.

Mr. President, it is no wonder that the Senator from Alabama [Mr. SPARKMAN], chairman of the Select Committee on Small Business of the Senate, is worried about this section, because small manufacturers would not have a look-in. The big companies could write the satellite corporation's equipment specifications so that only their own suppliers would be able to meet them.

I ask Senators to take another look at page 27, where it is provided:

> The Commission shall consult with the Small Business Administration.

Mr. Horn, the Administrator of the Small Business Administration, wanted very much stronger language. He wanted it to provide that they shall follow the policy of the Small Business Administration.

The language does not provide that they shall follow the SBA advice, but says that all they would have to do is consult with the Small Business Administration. Then they could do anything they wished to do.

I ask Senators to turn to page 29 of the bill. This language deals with what the Federal Communications Commission has to do. On line 5 of page 29 it is stated that the Federal Communications Commission shall "approve technical characteristics of the operational communications satellite system."

The legislative history shows that this language would not give the Federal Communications Commission the power to require a change from a low-orbit to a high-orbit system, or a change to any other system, so that we could be sure to have the best system in the world. The Federal Communications Commission witnesses themselves testified that this language would not give them the power to require such a change.

That is the purpose to be served by the last amendment I sent to the desk. I feel that the President of the United States, or certainly the Federal Communications Commission or some department of the Government, ought to have a voice in deciding what kind of system we shall have, so that America will not be second or third in this race. We cannot leave that decision to a private corporation.

The purpose of a private corporation is to make money. That is well and good, but the Government may have an interest in an international system. The Government may have an interest in getting messages to other parts of the world, to the developing nations of the world. That decision cannot be left solely to a private corporation.

I ask Senators to turn to page 31 of the bill. We know that the President would appoint three of the directors, but there is one point which has not been brought out in this debate. The corporation is to act under the District of Columbia Business Corporation Act. The three directors the President would appoint would be fiduciaries, under corporation law, but not with respect to the President or the people of the United States. They would not have to even report to the President. They would have no responsibility to him. Under the District of Columbia corporation law they would have to work for the corporation, and they would have to do what was good for the corporation, not for the country, and not what the President wanted. They would not be responsible to the President in any manner whatsoever. No reports to the President would be required. Under the District of Columbia Business Corporation Act there is provision for a dissolution or merger of a corporation. Under the act the new corporation might be able to merge with A.T. & T. or I.T. & T. by a vote of its stockholders. There are no provisions to prevent those things.

There is nothing in the report about what might be done by the directors under the District of Columbia Business Corporation Act. I do not know why the District of Columbia Business Corporation Act was selected in the first place. There is a Corporation Act of California, of Alabama, and of Tennessee. Many States give more protection to the rights of stockholders than does the District of Columbia Business Corporation Act.

Under the District of Columbia Business Corporation Act could the directors meet and dissolve the corporation? Could anyone do anything about it? Could they merge? I do not think anybody can be sure about that?

I ask Senators to look again at page 31, at section 302, which says:

> The President of the United States shall appoint incorporators, by and with the advice and consent of the Senate, who shall serve as the initial board of directors until the first annual meeting of stockholders or until their successors are elected and qualified. Such incorporators shall arrange for an initial stock offering and take whatever other actions are necessary to establish the corporation, including the filing of articles of incorporation, as approved by the President.

Mr. President, no standards whatsoever are established. The bill does not provide whether the stock must be voting stock, how much stock there shall be, or what the value shall be. There are no assurances that they will be what the President has in mind in any respect.

On page 31, lines 13 and 14, appears a provision that the President shall approve the articles of incorporation. But amendments to the articles of incorporation could completely change the system. There is no provision that the President must give approval to the amendments to the articles of incorporation.

Furthermore, much could be done under the bylaws of a corporation. There is no provision in the bill that the President would have any authority whatsoever over the contents of the bylaws of the corporation.

On page 31, at line 16, the bill speaks of directors. It provides that three directors shall be elected by the President, six by the communication carriers, and six by other stockholders.

One might think that some of the directors ought to be persons representing the public interest, or interested in foreign policy. They ought to be outstanding businessmen, of course, but some of them ought to have a particular interest in the public.

If Senators will look at page 20, of the Senate committee's report, they will see what is meant by that provision. The report does not state what qualifications the directors ought to have. Yet the Senate committee report at page 20 states as follows:

> Your committee is hopeful that, in making his choices, the President will seek fair representation from the major political parties and a good cross section of the professions and industries which will be expected to take part in the U.S. commercial communications satellite effort. For example, it is hoped there will be incorporators drawn from both large and small communications common carriers.

But it does not say anything about selecting any of the directors from the public to represent the public viewpoint.

I call attention to page 32 of the bill. I am coming to a most important subject. I invite the attention of Senators to the fact that on page 32, beginning on line 6, provision is made that the carriers may elect six directors, without any requirement for buying any minimum amount of stock. In other words, when the corporation is formed, the carriers are entitled to one-half of the stock, but they might not buy more than $100,000 worth. There is no requirement that in order to elect their six directors they must buy any particular amount of stock. The carriers might put in only 1 percent of the amount that they have been allocated, and still might be able to elect their six directors.

The House bill required a minimum amount to be paid. It required that if the carriers bought 10 or 15 percent, they could elect one director. If they bought stock in a certain amount, they could elect two, and so on. But for some strange reason, that provision has been omitted from the bill. I suppose it was done purposely. Whatever the purpose, the result is that, without putting in one-tenth of 1 percent of the money that they are supposed to invest, the common carriers could still elect their six directors.

Further, as will be seen in the first paragraph of that page, of the six directors that the carriers could select, A.T. & T., or one company, could vote for only three directors. But we know that the small companies are dependent upon the larger A.T. & T. So that provision, for substantial purposes, means that A.T. & T. would control all six directors.

Furthermore, on page 32, there is supposed to be a conflict-of-interest provision beginning on line 22. It is provided that no officer of the corporation shall receive any salary from any other source other than the corporation during the period of his employment by the corporation. But a member of the board of directors of the A.T. & T. or I.T. & T. who was not an officer could be employed by and could even be president of the proposed corporation. A large stockholder of any of the other corporations could be an officer of the satellite corporation.

The provision ought to read:

> No person holding a financial interest in any communications carrier can be an officer or director of the satellite corporation.

We know that the principal officers of a corporation are often selected from among the directors, but most of the directors are not officers of the corporation.

I turn to page 33. The point which I am about to make is most important and has not yet been brought out. It is provided that stocks should be sold to the public:

> The shares of such stock initially offered shall be sold at a price not in excess of $100 for each share and in a manner to encourage the widest distribution to the American public.

The proposed corporation could offer $10,000 worth of stock in its initial issue. The public would have an opportunity to share in that. But Senators will note that the provision reads, "the initial offering." It could then come along and offer any additional amount, without giving the public any opportunity to buy any of the stock whatsoever.

Only the initial offer need be sold for $100 or less. Subsequent offers could be sold at any price. We know that stock may go up in value. It might be worth more than a hundred dollars. Of course, the shares could be split and kept at a hundred dollars. However, all the talk about the public having an opportunity to buy shares of stock and at a price the public can afford applies only to the initial issue and not to any other issue.

It will be seen also that this provision applies to the initial issue of the voting stock. However, we find that the carriers would be entitled to issue nonvoting stocks, bonds, debentures, and whatever they want to issue; and the public would have no right to buy any of it.

Corporations often issue stocks of various kinds which are not voting stock. So I believe the public ought to have an opportunity of buying nonvoting stock, debentures, bonds, or whatever else might be issued by the corporation.

The satellite corporation could finance itself by issuing almost no voting stock. It could finance itself by issuing bonds and debentures in which the public would have no right of participation.

On page 33, in line 12, there is reference to who may buy carrier stock. It says "authorized carrier." That means a carrier who has been approved by the Federal Communications Commission. I do not see why some little carrier in communications in Alabama or Tennessee should be excluded. I do not see why it should not have an opportunity to buy some stock set aside, as well as A.T. & T. and the large carriers. Why should authorization by a Government agency be required for participation in the purchase of stock?

On page 34 I call attention to line 13. It is provided that with respect to stock, other than that issued to the common carriers, no corporation and no person may own more than 10 percent of such stock. What about the communications carriers? It will be seen from line 11, page 34, that any one of them may purchase stock or can own stock up to 50 percent of the shares issued and outstanding, or all the stock reserved to the carriers. Why do we make that distinction and discrimination with respect to who may buy the public share of the stock, with carrier ownership allowed up to 50 percent in one case and not more than 10 percent in another case?

On page 34, at line 17, the corporation is authorized to issue, in addition to the stock authorized by subsection (a) of that section—subsection (a) applies to the voting stock—nonvoting securities, bonds, debentures, and other securities. As to those, there is no limit on how much any carrier may own.

A.T. & T. could own all the bonds and debentures and nonvoting securities, or any of the other communications carriers could own them without any limit whatever. We know that ownership of even nonvoting stock and debentures and bonds has a great deal of influence on any corporation.

So voting stock is not necessary in order to finance the corporation. It could be financed with bonds, for example, which the public would not have a right to buy.
